11.7 Brunswick and Smith Streets - Request for Interim DDOs

Executive Summary

Purpose

The purpose of the report is to outline:

(a) the proposed content of interim built form provisions for parts of Fitzroy and Collingwood;

(b) how the proposed interim built form provisions have been developed;

(c) the process to request interim provisions (i.e. a request for a Ministerial amendment to the Yarra Planning Scheme under Section 20(4) of the *Planning and Environment Act 1987,* and

(d) how permanent provisions are to be progressed.

Key Issues

To respond to increasing development pressure in the Fitzroy and Collingwood Activity Centres of Brunswick, Smith, Gertrude and Johnston Streets and the mixed use zone areas in Fitzroy East, officers have prepared draft interim Design and Development Overlays with advice of expert consultants to better guide development.

The work provides a strategically sound basis and a balance between being sensitive and/or protecting heritage character, sensitive residential interfaces and allowing development in less constrained areas. A balance has been struck to protect selected areas of the highest heritage consistency and allowing change in less restricted parts of the activity centres to ensure future housing capacity requirements are being met. The work builds on and supports the *Yarra Housing Strategy 2018* and the *Spatial Economic and Employment Strategy 2018*.

Financial Implications

The administrative fee to DELWP for requesting the Minister for Planning to introduce interim DDOs would be met within the existing budget.

PROPOSAL

In summary, that Council:

(a) note the officer report on the planning for the Fitzroy/Collingwood Activity centres and request for the Minister for Planning for an interim DDO schedules;

(b) note the preparation of the draft *Brunswick and Smith Street Built Form Review – Background Analysis Report,* individual Precinct Review reports and supporting heritage Analysis and recommendations prepared by Hansen Partnerships and GJM Heritage;

(c) endorse the interim Design and Development Overlay Schedules as in Attachment 11;

(d) request the Minister for Planning to introduce DDO schedules on an interim basis for the Fitzroy/Collingwood Activity centres, in accordance with the amendment documentation as outlined in the attachments;

(e) authorise the CEO to make any minor adjustments required to meet the intent of the above resolutions; and

(f) note a further report will be presented to Council in 2020 to request interim built form provisions for the stage 2 remaining precincts following further strategic work.

11.7 Brunswick and Smith Streets - Request for Interim DDOs

Reference: D19/184808
Authoriser: Director Planning and Place Making

Purpose

1. The purpose of the report is to outline:
   (a) the proposed content of interim built form provisions for parts of Fitzroy and Collingwood;
   (b) how the proposed interim built form provisions have been developed;
   (c) the process to request interim provisions (i.e. a request for a Ministerial amendment to the Yarra Planning Scheme under Section 20(4) of the *Planning and Environment Act 1987,* and
   (d) how permanent provisions are to be progressed.

Background

Managing Growth in Yarra's activity centres

2. Demand for housing within the City of Yarra is high due to its proximity to employment opportunities, existing infrastructure, heritage character and cultural offerings. This has led to increased levels of planning applications for multi-dwelling and commercial developments. This trend is supported by State and Local policy that directs employment and higher density of housing opportunities towards activity centres.
3. *Plan Melbourne* and the *Yarra Planning Scheme* generally direct job and housing growth towards major activity centres and to a lesser degree towards neighbourhood activity centres. The planning system in Victoria generally expects that major activity centres accommodate a higher rate of change than other areas.
4. Yarra's communities place great importance on planning provisions to better manage change and provide as much certainty as possible about future development outcomes. This includes ensuring a balance between maintaining heritage fabric in Yarra's activity centres and protecting sensitive residential interfaces whilst guiding new development and providing greater planning certainty.
5. To address these issues, Council is undertaking a program of preparing built form frameworks for its activity centres to enable the introduction of the interim Design and Development Overlays in the *Yarra Planning Scheme*, while permanent built form provisions are progressed. This work is well progressed in:
   (a) Johnston Street (interim provisions in place, amendment for permanent provisions currently being considered by the Minister for Planning);
   (b) Queens Parade (interim provisions in place, panel report received);
   (c) Swan Street (interim provisions in place, amendment for permanent provisions have been referred to a planning panel);
   (d) Bridge Road and Victoria Street (interim provisions in place, structure planning to inform permanent provisions underway); and
   (e) Collingwood South (interim provisions in place, structure planning to inform permanent provisions expected to commence in 2020).

Fitzroy and Collingwood Activity Centres

6. Within Fitzroy and Collingwood, there are several overlapping activity centres and mixed use areas. They include the Brunswick Street and Smith Street *Major* Activity Centres, the Johnston Street and Gertrude Street *Neighbourhood* Activity Centres and Mixed Use Zone areas adjacent to them. Built form provisions are being proposed for all these areas.

7. The Fitzroy and Collingwood activity centres are important for Yarra and the inner Melbourne area. They host a variety of employment, cultural and housing opportunities and they are known for their heritage retail strips and former industrial history. The area has transitioned from its industrial past to an area characterised by its vibrant retail, hospitality and arts and culture scene, with greater levels of residential and some office developments.

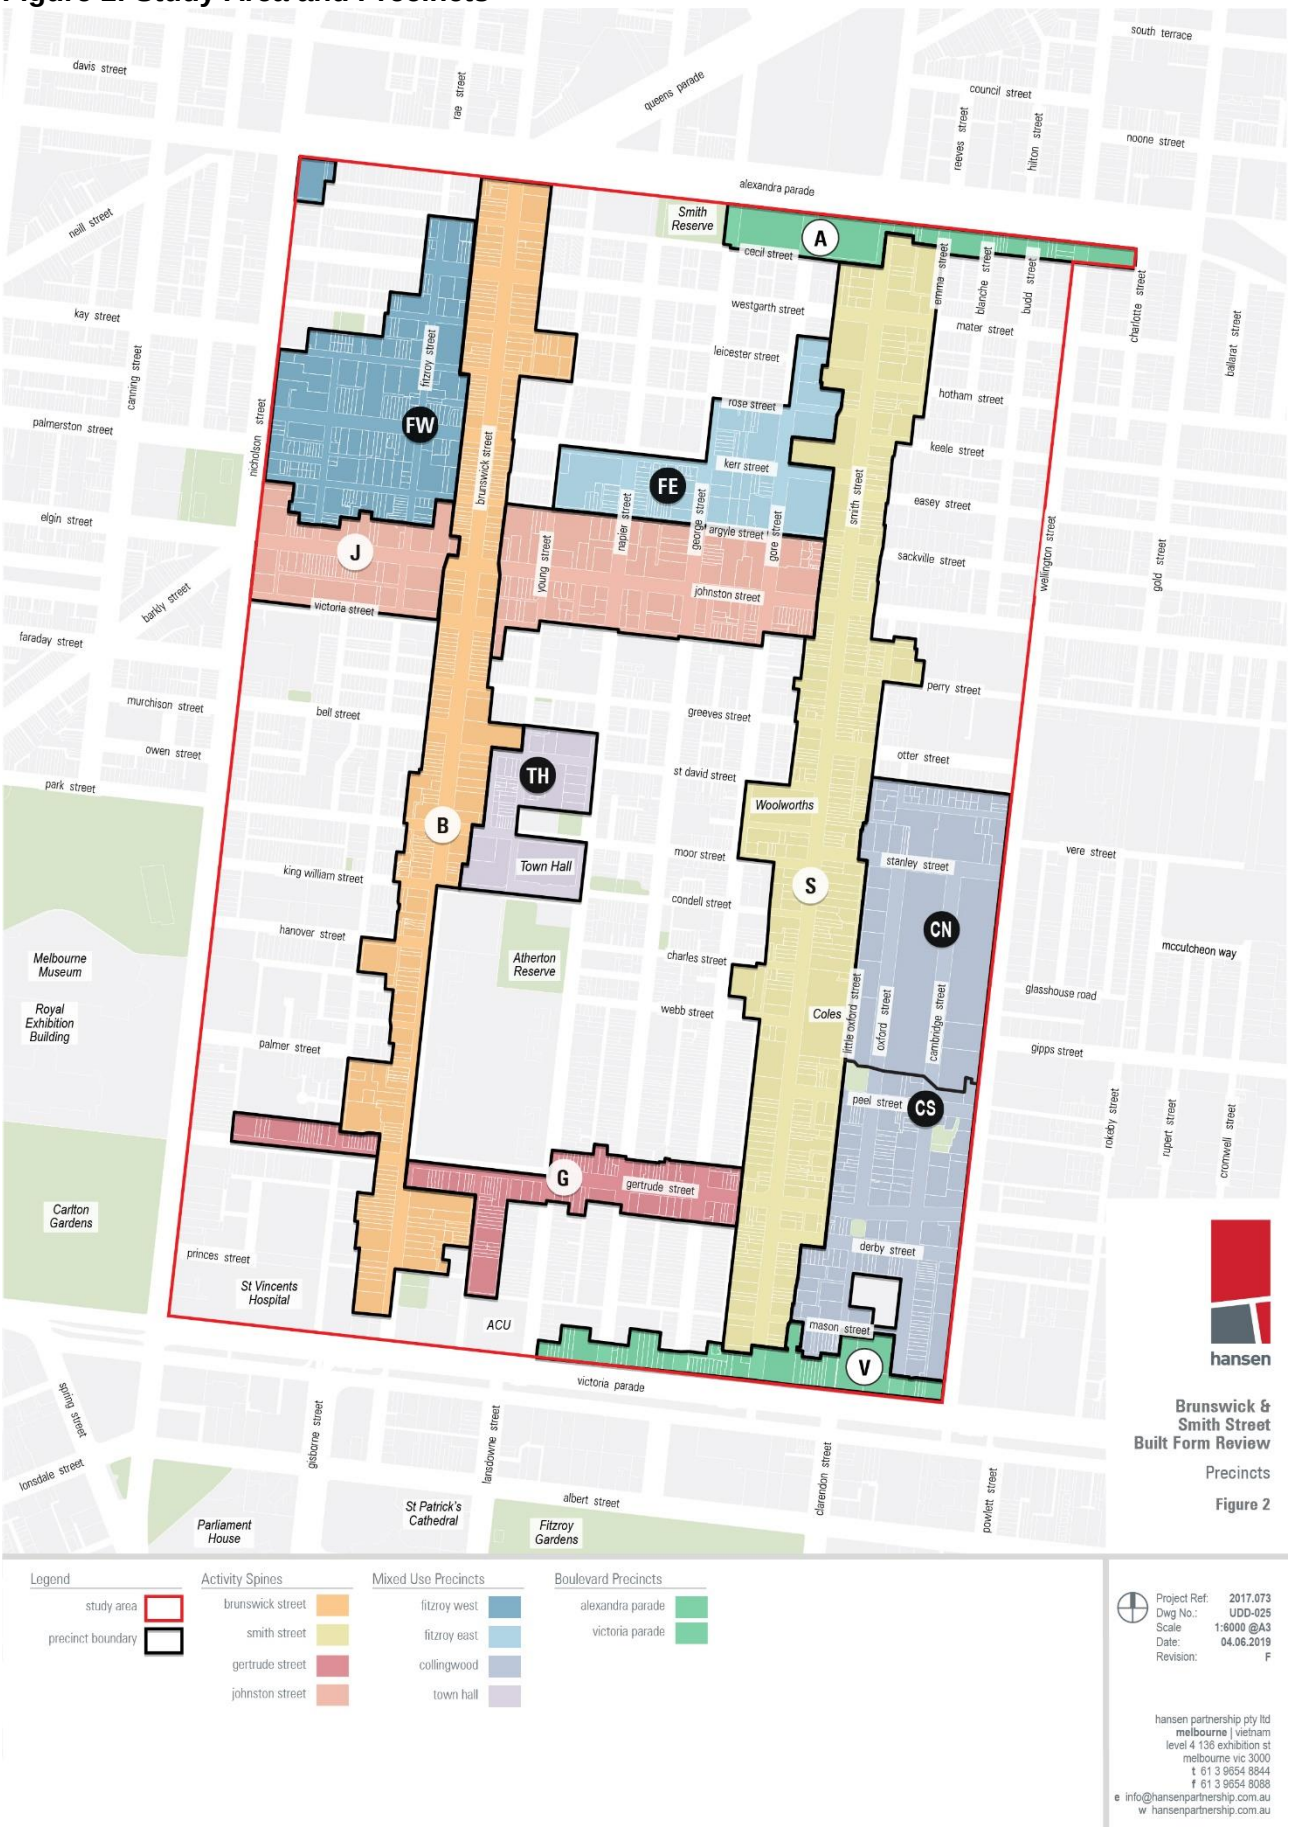
8. These activity centres are experiencing increased development pressure, however, the *Yarra Planning Scheme* currently provides limited guidance about the preferred built form outcomes, including building heights and setbacks.

9. The introduction of interim DDOs into the *Yarra Planning Scheme* would fill the gap in policy for these areas and provide strong guidance for new developments.

Discussion

10. Council has commissioned Hansen Partnership in association with GJM Heritage Consultants and Traffix Group to prepare a range of strategic work to underpin the introduction of interim DDO schedules for parts of Fitzroy and Collingwood into the Yarra Planning Scheme.

Study Area



11. The study area encompasses the suburb of Fitzroy and the western portion of Collingwood. It is bound by Victoria Parade, Nicolson Street, Alexandra Parade and Wellington Street.

12. It is a diverse area consisting of the major retail spines of Brunswick and Smith Streets, the neighbourhood centre strips of Johnston and Gertrude Streets, with mixed use areas and low scale residential pockets sitting behind.

13. The built form review included land within a Mixed Use Zone and Commercial 1 Zone (see Figure 1).

14. The study area does not include the area to the east of Wellington Street (broadly known as the Gipps Street precinct).

Figure 1: Study Area and Precincts

Approach

15. The interconnected nature of the Fitzroy/Collingwood activity centres means they are unique when compared to other retail strips within inner Melbourne. A more holistic approach was taken to respond to the inter-relationship across the centres. This allowed the recognition of commonalities and the differences across the precinct areas.

16. Council officers have considered recent planning applications, panel recommendations and VCAT decisions in the development of built form provisions for the area.

17. The most recent Panel Report for Amendment C231 Queens Parade recommends that future development can be restricted depending on certain urban conditions and, importantly, if growth can be accommodated nearby to offset the restriction. In summary these conditions include:

    (a) highly intact and consistent heritage streetscape;

    (b) fine grain subdivision patterns / narrow allotments;

    (c) urban context leading to high visibility of potential upper level development; and that

    (d) higher levels of growth can be accommodated within the precinct or centre nearby.

18. The learnings have been applied to this work and resulted in a nuanced outcome, as outlined in this report.

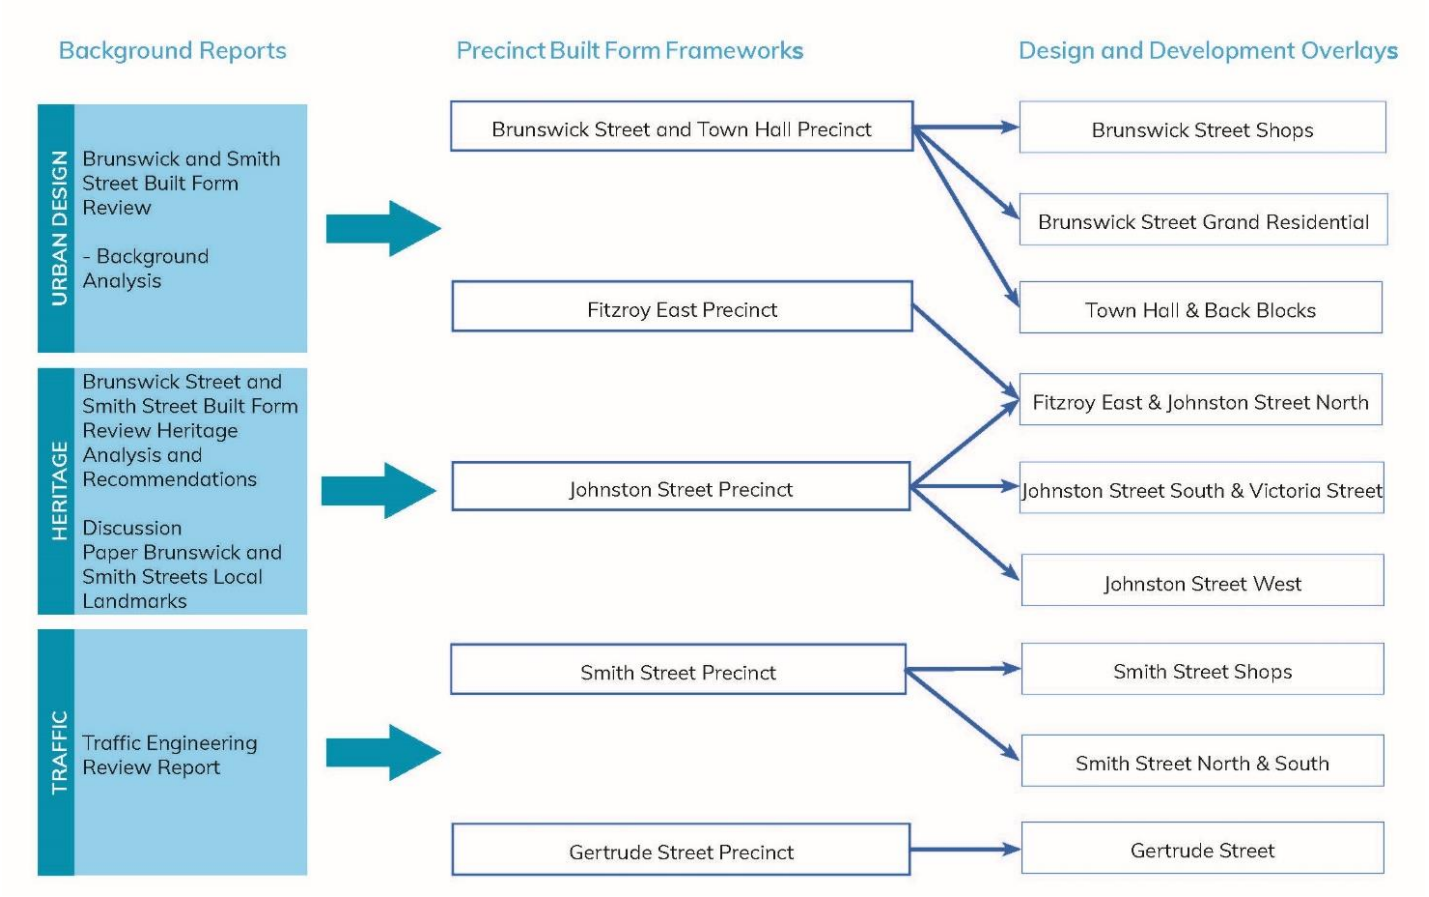
19. The proposed built form provisions have been informed by comprehensive strategic work (see Figure 2 for an overview), which generally included:

    (a) overarching background documents were prepared analysing existing conditions, current built form, heritage fabric and traffic matters;

    (b) detailed 'Built Form Frameworks' and recommended provisions for specific precincts within the study area were prepared to provide specific context analysis, framework plans and built form control recommendations; and

    (c) officers then translated the recommendations from the five (5) individual Built Form Frameworks, heritage and traffic reports into nine schedules to the DDO. The schedules draw on character distinctions found in the Built Form Frameworks.

Brunswick and Smith Street Built Form Review – Background Analysis Report



20. Hansen Partnership prepared the *Brunswick and Smith Street Built Form Review – Background Analysis Report* (see Attachment 1).

21. The *Background Analysis Report* provides a strong information basis on existing conditions across the entire study area. It reviews existing conditions and identifies the general direction of a preferred future built form character for each Built Form Framework Precinct.

22. The document considered a range of policy documents (planning zones, heritage, local/state policy), physical attributes (lot depths, road width, street wall heights, etc.), recent development trends and areas that have either experienced development pressure or that are subject to future change.

23. The *Background Analysis Report* assists Council in identifying appropriate ways to accommodate growth and change within the retail corridors and mixed use areas. A set of overarching principles was developed that generally guided the preparation of the subsequent Precinct Built Form Frameworks.

Figure 2: Fitzroy/Collingwood Activity Centres Built Form Work Overview

24. Based on the analysed conditions, the report identified ten (10) precincts within the study area. Developing built form provisions for these ten (10) precincts will be addressed in two stages:

Table 1: Built Form Provisions - Development Stages

Stage	Precinct
Stage 1 Precincts – completed, subject to prepared interim DDOs.	Brunswick Street Precinct (**B**) Town Hall Precinct (**TH**) Fitzroy East Precinct (**FE**) Gertrude Street Precinct (**G**) Johnston Street - west of Smith Street (**J**) Smith Street (**S**)
Stage 2 Precincts – subject to further work.	Alexandra Parade (**A**) – partially completed Victoria Parade (**V**) Collingwood Mixed Use (North) (**C**) Fitzroy West (**FW**) – Further investigation into the zoning is required before progressing.

25. Further detailed built form analysis and DDOs have been progressed for the Stage 1 precincts. For the remainder of the precincts, further strategic work is required. These precincts are discussed later in the report.

Heritage Advice

26. GJM Heritage were engaged to provide heritage advice to inform the Built Form Reviews and has prepared the following reports to assist officers in preparing built form provisions for the area:

    (a) *Brunswick Street and Smith Street Built Form Review – Heritage Assessments* (see Attachment 2)*;*

    (b) *Brunswick Street and Smith Street Built Form Review – Heritage Analysis and Recommendations* (see Attachment 3)*; and*

    (c) *Gertrude Street Built Form Review – Heritage Analysis and Recommendations* (see Attachment 4)*.*

27. The *Brunswick Street and Smith Street Built Form Review – Heritage Assessments* analysed errors, omissions and inconsistencies in the heritage overlays of the study area, including grading and mapping errors. It provides a basis for the detailed precinct reviews.

28. The report includes a number of other recommendations (such as changes to grading and zones) that should be advanced as part of a broader amendment implementing the permanent provisions for the area.

29. The above reports have informed the recommendations for future built form in the *Brunswick Street and Smith Street Built Form Review – Heritage Analysis and Recommendations* and in the *Gertrude Street Built Form Review – Heritage Analysis and Recommendations* and Hansen's subsequent Built Form Frameworks for each precinct in the study area. This combined work has had a strong influence on the proposed street wall heights, building setbacks and building heights in the proposed DDOs.

Traffic Advice

30. Traffix Group has prepared a *Traffic Engineering Assessment* (see Attachment 5) to inform the development of the DDOs. This assessment has focussed on identifying changes required to achieve safe and efficient vehicular and pedestrian access as the area is developed in accordance with the built form requirements.

Precinct Built Form Frameworks

31. Hansen Partnership, in association GJM Heritage Consultants, subsequently prepared five (5) Precinct Built Form Frameworks for the Stage 1 precincts (see Table 1).

32. The *Built Form Framework* for each precinct provides a detailed analysis and a thorough strategic basis for the recommended built form provisions. These reports provide the strategic justification and evidence (alongside other reports) needed to enable the Minister for Planning to consider a request to prepare and approve interim DDO schedules. They will provide the basis for the preparation of future structure plans for the activity centres and would be relied upon at any future Planning Panels considering a planning scheme amendment proposing permanent DDO schedules.

33. Namely, these reports are:

    (a) *Brunswick Street and Town Hall Built Form Framework 2019* (see Attachment 6);

    (b) *Smith Street Built Form Framework 2019* (see Attachment 7);

    (c) *Johnston Street Built Form Framework 2019* (see Attachment 8);

    (d) *Fitzroy East Built Form Framework 2019* (see Attachment 9); and

    (e) *Gertrude Street Built Form Framework 2019* (see Attachment 10)*.*

Precincts and Interim Design and Development Overlay Schedules

34. The recommended interim provisions (see Attachment 11 for all proposed interim DDOs) provide a balance between heritage/place character, sensitive residential interfaces and guiding change across the activity centres. Heritage matters have been considered in preparing the proposed interim DDO provisions. Built form provisions are proposed along the major activity centres of Smith and Brunswick Streets to protect their heritage character and that the majority of change is concentrated in a few areas only, spread between major and neighbourhood activity centres.

35. Most common are heights between 4 to 5 storeys along the Major activity centres of Brunswick and Smith Streets. In the Gertrude Street *Neighbourhood* Activity Centre heights are mostly 3 storeys, with some 4 storey areas. The north side of Johnston Street, the Fitzroy East mixed use area and the northern end of Smith Street are areas that would carry mid-rise development due to the larger allotments and/or lower consistency in heritage fabric.

36. Officers have translated the recommendations from the five (5) individual *Built Form Frameworks*, heritage and traffic reports into nine DDO schedules (see Figure 2).

37. Each DDO schedule has been tailored to address the unique built form typologies, heritage and character of that area.

38. The nine (9) DDO Precincts are outlined below in Table 2 and Figure 3:

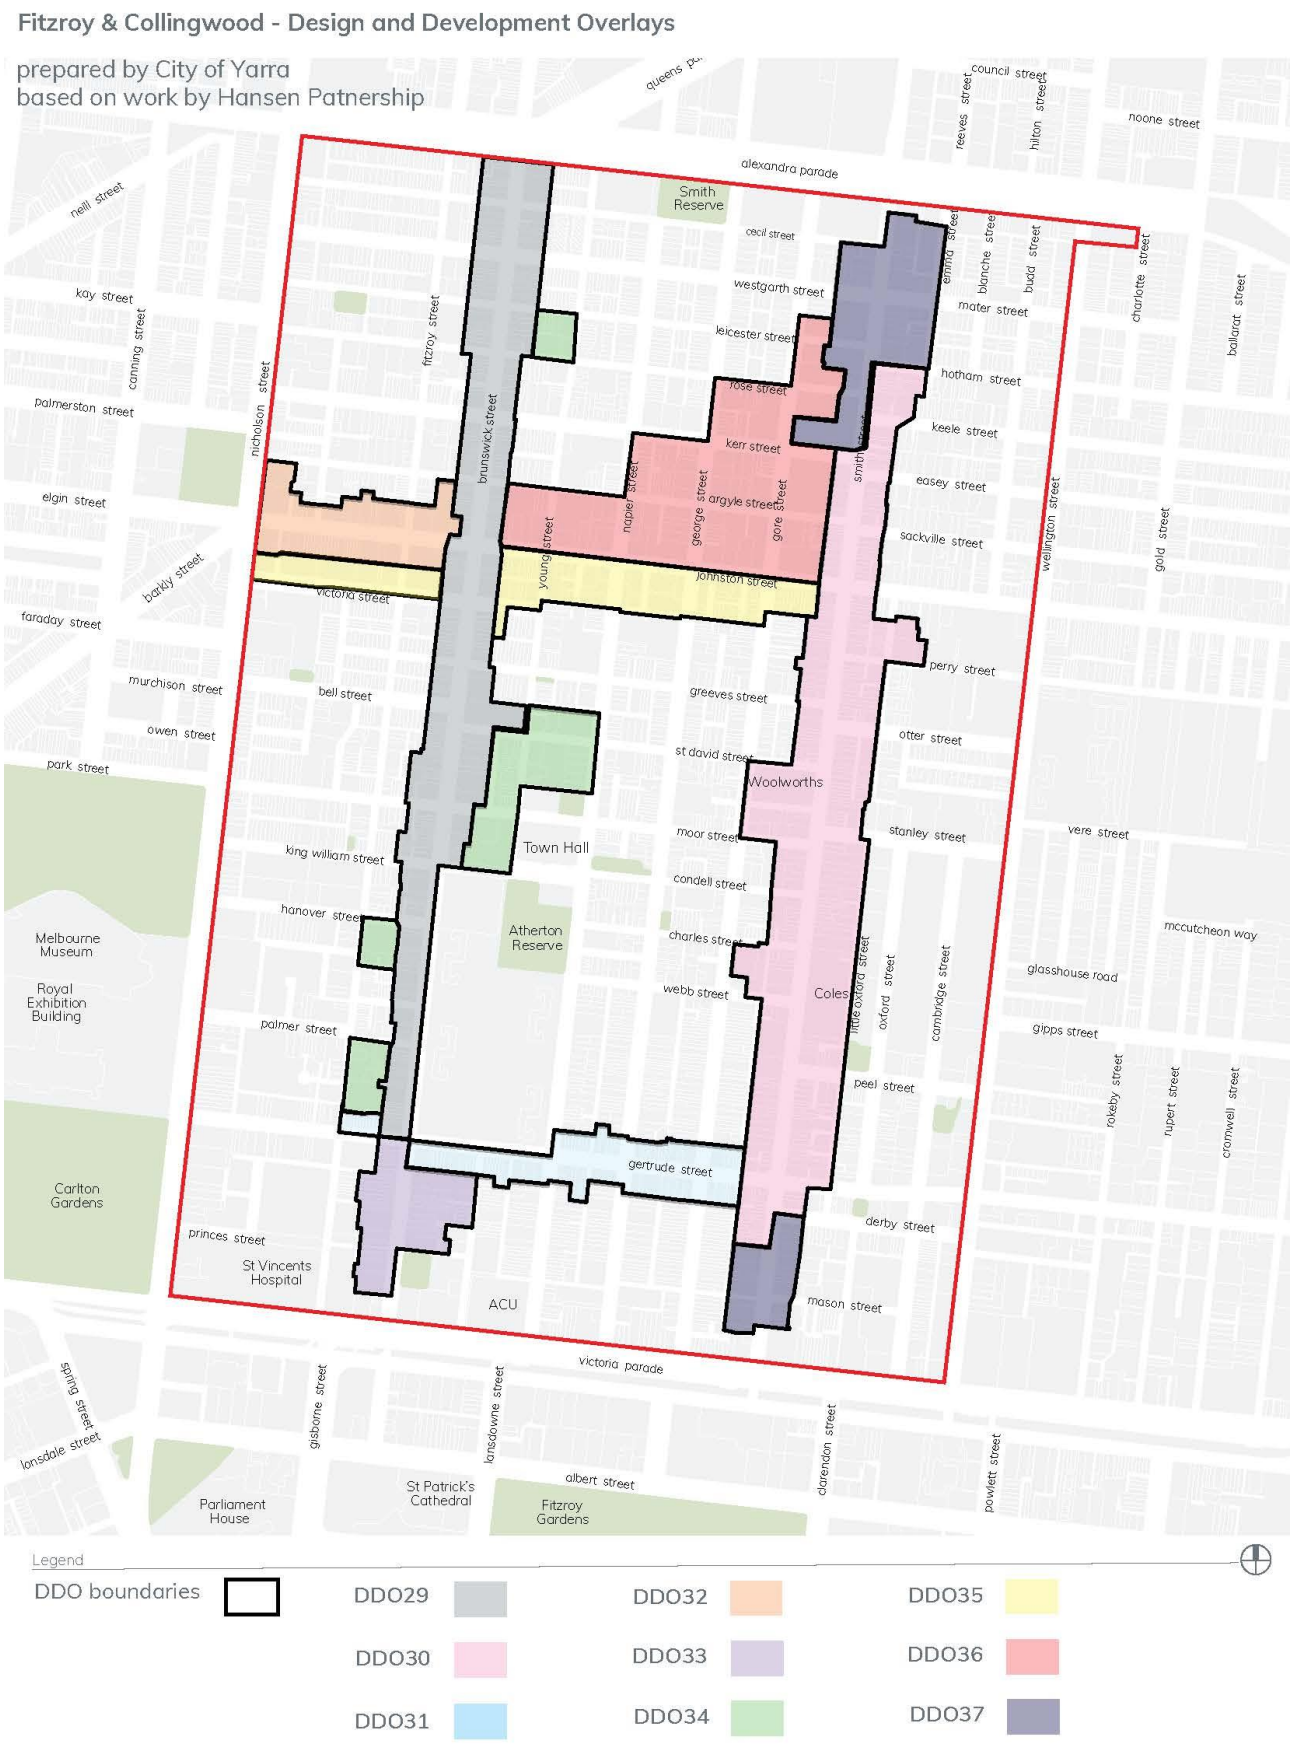
Table 2: Proposed DDO Precinct Summary

DDO Name (Schedule)	*Comment*
Brunswick Street Shops (DDO29)	• The DDO precinct covers the Victorian retail shop fronts in the Commercial 1 Zone (C1Z) along Brunswick Street, between Gertrude Street and Alexandra Parade. • The area has a consistent heritage streetscape of high quality. There are some variations in street wall heights south of Johnston Street due to taller heritage buildings. • The lot sizes are generally narrow and relatively shallow (i.e. 30 metres or less) and have a fine grain subdivision and development pattern, with some larger lots south of Johnston Street west of the Artherton Gardens. • Recommended building heights are mostly between 4-5 storeys, with heights above 5 storeys being less common and on a few larger sites. The area with the highest level of heritage consistency and smaller lots is recommended low rise of up to 3 storeys.
Smith Street Shops (DDO30)	• The DDO precinct covers the Victorian retail shop fronts in the C1Z along Smith Street, between Derby Street and Kerr/Keele Streets. • The area has a consistent heritage streetscape of high quality. There are some variations in street wall heights south of Johnston Street due to taller heritage buildings (former department stores). • The lot sizes are generally narrow and relatively shallow (i.e. 30 metres or less) and have a fine grain subdivision and development pattern, with some large lots south of Johnston Street around the former department stores. • Recommended building heights are mostly of lower mid-rise between 4-5 storeys, with heights above 5 storeys being less

	common and on larger sites. • Very few sites within this precinct are above 6 storeys and generally on large sites (i.e. Woolworths).
Gertrude Street (DDO31)	• The DDO precinct covers the Victorian retail shop fronts in the C1Z between Brunswick Street and Smith Street. • It excludes land currently affected by DDO8 (subject to review of the World Heritage Site Environs of the Royal Exhibition Building). • The area has a consistent heritage streetscape of high quality, with few taller forms east of Napier Street (south side of Gertrude Street). • The lot sizes are generally narrow and vary considerably in depth. • Recommended building heights are mostly low rise of 3, partially 4 storeys where visibility can be minimised due to the deep allotments and higher heritage street walls.
Johnston Street West (DDO32)	• The DDO precinct covers the C1Z land west of Brunswick Street up to Nicholson Street and includes some land fronting Nicholson Street. • The C1Z land fronting Johnston Street has a varied heritage streetscape, which is more consistent and lower on the south side than the north. • Lot sizes vary quite considerably within this smaller precinct, with some being narrow and others with wide frontages. • Recommended building heights on the south side are between 5-6 storeys, with heights on the north side reaching a maximum of 8 storeys due to larger lots and less heritage context.
Brunswick Street – Grand Residential (DDO33)	• The DDO precinct covers the Victorian residential terraces in the Mixed Use Zone (MUZ) towards Brunswick Street, between Gertrude Street and Victoria Parade and the varied streetscape and built form on the east side of Brunswick Street. • There are several Victorian buildings listed in the Victorian Heritage Register. • The area has a very consistent, high quality residential heritage streetscape on the west side and is varied on the east, made up of residential terraces, shop fronts and modern institutional buildings. • The lot sizes vary greatly in frontage and depth. • Recommended building heights are mostly low rise of 4 storeys to limit visibility above the significant heritage context that is more open due to front setbacks.
Town Hall and Back Blocks (DDO34)	• The area between Napier and Brunswick Streets is comprised of a mix of industrial warehouse, residential and institutional character and buildings. • The heritage consistency across the precinct varies. Lot sizes

	are inconsistent also. • Important are views to the clock tower of the Fitzroy Town Hall building from the intersection of Young Street and Moor Street. • Recommended building heights are generally low rise of 4 storeys.
Johnston Street South and Victoria Street (DDO35)	• The south side of Johnston Street between Brunswick and Smith Street and the north side of Victoria Street is generally comprised of a mixed heritage industrial warehouse and residential character. • Lot sizes vary greatly due to the street network and mix of historic properties which also creates a varied heritage streetscape. • Recommended building heights are generally of lower mid-rise and relatively evenly spread between 3, 4, 5 and 6 storeys, location depending on lot sizes and heritage context.
Johnston Street North and Fitzroy East (DDO36)	• The north side of Johnston Street between Brunswick and Smith Streets mainly consists of modern commercial buildings with a higher street wall and limited heritage fabric. The mixed industrial heritage warehouse and Victorian residential character in the Fitzroy East Mixed Use Zone provides for a varied streetscape. The area has experienced recent development. • Sites in this precinct are generally larger and often have more than one street frontage in a fine grain street network. • Recommended building heights along the north side of Johnston Street are generally of mid-rise and between 7 to 9 storeys in the C1Z. • Recommended building heights in the Fitzroy East MUZ area range relatively evenly between 3, 4, 6 and 8 storeys. Recommended building heights generally transition down towards existing residential areas.
Smith Street North and South (DDO37)	• North of Kerr and Keele Streets and south of Mason Street, Smith Street generally consists of industrial heritage warehouses and modern commercial buildings on larger lots with some Victorian heritage shopfronts on smaller lots. • The precinct also include the mixed use zone properties fronting Emma Street. • Recent development of 7, 8 and 10 storeys has occurred in this precinct. • North of Westgarth and Hotham Streets there are fewer significant heritage buildings influencing the future built form outcomes. • Recommended building heights for properties towards Smith Street are generally of mid-rise character and between 7 to 8 storeys. • Recommended building heights for properties towards Emma Street are generally of lower mid-rise character and 5 storeys.

Figure 3: Interim Design and Development Overlay Area Map



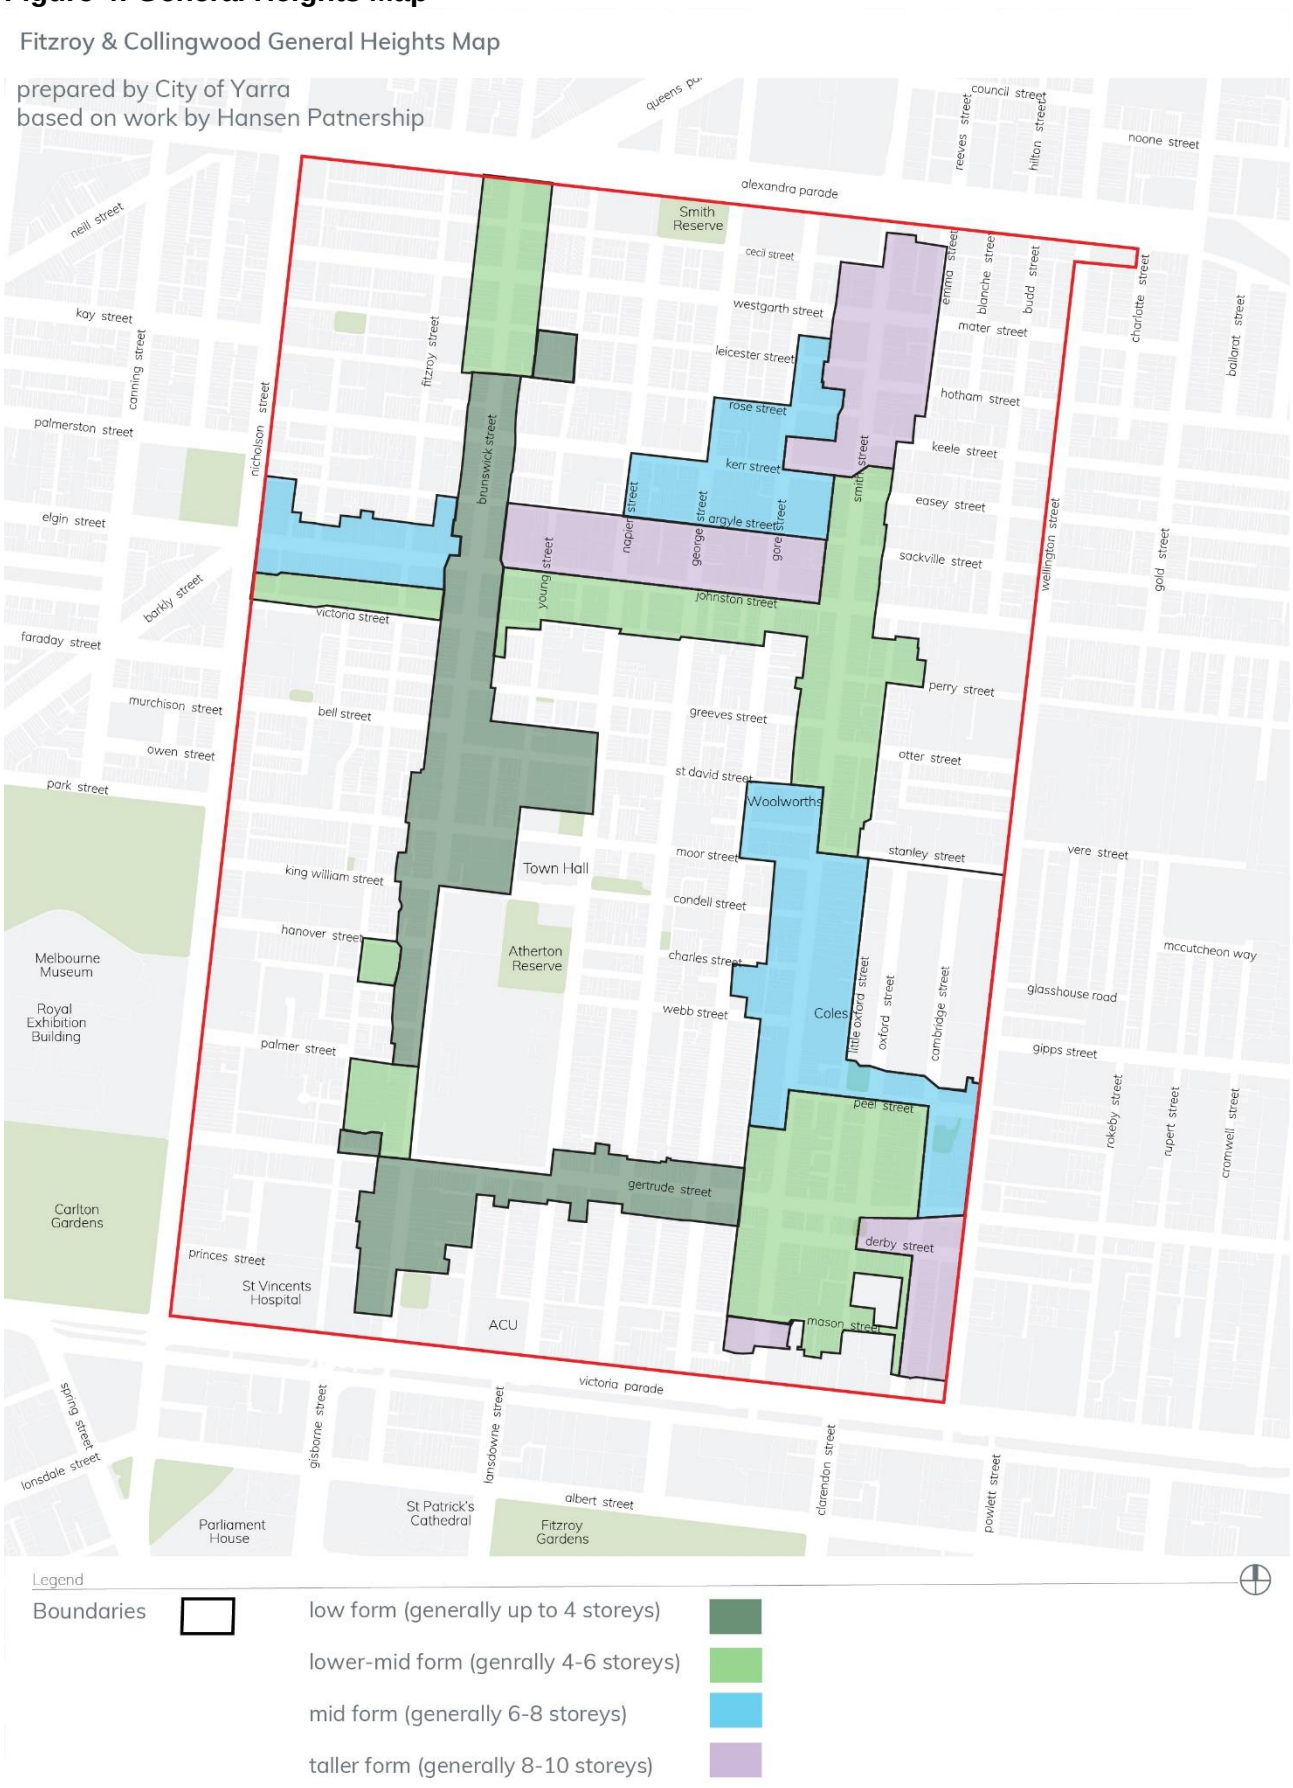


Figure 4: General Heights Map

39. The recommended provisions and requirements are the result of substantial testing of different options using 3D-modelling and cross sections, and a review of built and recently approved developments.

40. The content of the schedules to the DDO have considered and been guided by the key directions from Amendments C220 (Johnston Street East) and C231 (Queens Parade).

Gertrude Street DDO Boundary

41. The DDO boundary for the proposed *Gertrude Street (DDO31)* has been amended to not include the western end of Gertrude Street and Young Street south of Gertrude Street.

42. While included in the analysis the properties along Young Street, south of Gertrude Street, are predominantly residential terraces covered by the heritage overlay. Considering this the analysis has questioned the suitability of the current zone and whether the Neighbourhood Residential Zone would be more appropriate. This will be considered in a future zoning investigation.

43. Properties at the southern end of Young Street are part of the Australian Catholic University and are already covered by a Development Plan Overlay.

44. The western end of Gertrude Street is already affected by DDO8 which seeks to manages development in the Royal Exhibition Building Environs area and protect views to the building. It is not recommended to apply the DDO to this area as the current Planning Scheme provisions are being reviewed by Heritage Victoria. The built form work that has been undertaken by Council should be forwarded to Heritage Victoria to assist them in their review.

General Built Form Design Provisions

45. The DDO schedules provide guidance on building heights, street wall heights, upper level setbacks, front setbacks, rear setbacks, the setbacks between buildings and access and movement.

46. The key elements of all DDO Schedules for the Fitzroy/Collingwood Activity centres are summarised below in Table 3. More precinct-specific differences are mentioned in Table 4.

Table 3: Proposed General Built Form Requirements

Built Form Requirements	Description of proposed elements
Street wall	• Retain the existing heritage street walls along streets. • Infill development must match the height of abutting heritage buildings to achieve a consistent heritage street wall, which is generally 2-3 storeys or 8-11 metres, depending on the heritage parapet height. • New development would “turn a corner” and apply the same street wall height for a minimum of 8 metres to the side street. • Mandatory controls have been applied to areas with consistent heritage streetscapes to ensure this significant element of the street is retained. These are proposed for all areas excluding *Smith Street North and South (DDO37)* and *Johnston Street and Fitzroy East (DDO36).* • Areas where there is limited heritage consistency, a new street wall would be created. This is occurs in *Smith Street North and South (DDO37)* and *Johnston Street and Fitzroy East (DDO36).*

Built Form Requirements	Description of proposed elements
Upper Level Setbacks	• The recommended upper level setbacks to ensure that the heritage streetscape remains a prominent and defining element of the Fitzroy/Collingwood retail areas. • Upper levels would be recessive and should avoid a stepped form. Certain heritage forms may require a greater setback, depending on the individual heritage building and proposed development. • In areas with consistent heritage character a mandatory 8m setback is proposed. The areas include: – The DDOs affecting the retail streets of Gertrude Street, Brunswick Street and Smith Street. – Buildings within the HO in *Smith Street North and South (DDO37)*. Buildings not in the HO have discretionary (preferred) height provisions. • Along Johnston Street a 6m upper level setback is proposed to align with the setbacks set out in Johnston Street East (Amendment C220). – Mandatory controls are proposed for *Johnston Street West (DDO32)* and *Johnston Street South and Victoria Street (DDO35).* – Discretionary provisions are proposed for *Johnston Street North and Fitzroy East (DDO36)*. • Discretionary upper level setbacks of 6m apply towards all side streets.
Overall Building Heights	• The heights have been determined through an analysis of heritage values, lot depths, rear interface conditions and other built form elements (see Figure 4 and Attachments 1 to 9). • Mandatory controls are proposed in all DDO schedules excluding *Smith Street North and South (DDO37)* and *Johnston Street and Fitzroy East (DDO36).* • Mandatory controls are applied where there are consistent heritage streetscapes and to reduce the visual impact of new development and better respect the heritage significance of the building. • For areas with less heritage significance and consistency there is an opportunity for a new mid-rise form with discretionary height provisions. • *Smith Street North and South (DDO37)* and *Johnston Street and Fitzroy East (DDO36)* Schedules include a set of criteria that a development would need to comply with to exceed the preferred height limit. New development would need to achieve: – increased separation distances; – higher ESD standards; – increased private and communal open space; – housing diversity; and – no additional amenity impacts to residentially zoned properties.

Built Form Requirements	Description of proposed elements
Rear Interface Heights and Setbacks	• DDOs address residential interfaces through boundary wall heights and building setbacks at the rear. • Rear interface heights are determined by the adjacent zone and whether a laneway separates the properties from the proposed DDO area. These heights are discretionary to accommodate the variety of conditions on adjacent and development sites. • A maximum 8m height is proposed for sites abutting properties in the Neighbourhood Residential Zone (NRZ) and General Residential Zone (GRZ) where there is no lane with 11m (3 storeys) proposed to abut land with a laneway or in the MUZ. • The assessment of visual bulk and potential overshadowing would also assist in determining the appropriate boundary wall height. • A mandatory 45 degree setback envelope for upper levels above the rear interface height is proposed. This is to ensure that development provides an appropriate transition to the lower scaled development in adjacent residential zones.
Overshadowing and daylight	• The DDO schedules have a range of provisions that would manage overshadowing and daylight access to public land and sensitive residential land. • Mandatory overshadowing controls for the opposite footpaths and kerb outstands between 10am and 2pm at the equinox are proposed for main streets and wider side streets (over 14m). • The protection of sunlight to these locations is considered important to retain quality public spaces and a sense of openness as change occurs. • Discretionary overshadowing and daylight access provisions are proposed to: – meet overshadowing provisions of Clause 55.4-5 for residential land outside of the overlay; – limit overshadowing as per Clause 55.4-5 for residential land within the overlay; – ensure adequate daylight access to habitable room windows. In these locations more flexibility is considered appropriate to account for either different heights in the heritage fabric, topography changes and differing conditions on adjacent land.
Building Layout	• The retention of commercial activity is integral to the vibrancy of these centres. • The schedules require new development in C1Z areas to design the first two floors to allow for commercial uses. • In MUZ areas it is required to design the ground floor to be suitable for commercial uses and it is encouraged to design the first floor to be suitable for commercial activity.

Built Form Requirements	Description of proposed elements
Common boundary and side setbacks at upper levels	• To reduce the need for screening, allow for daylight access and create views to blue sky between taller buildings when viewed from the street, minimum setbacks are proposed at upper levels between buildings: – 4.5m to a balcony or living room window; – 3m to a commercial or non-habitable window.
Heritage	• The schedules include heritage design requirements which address upper level setbacks, design of upper levels and façade design. • The proposed design requirements ensure that infill and upper level development respect the surrounding heritage and streetscape character. • They are included to guide decision-making for commercial and industrial buildings, at least until such time as the heritage policy in Clause 22.02 is amended to more comprehensively address industrial, commercial and retail places. • The heritage significance of precincts has been a key consideration in determining the proposed requirements to reduce the visibility of new development and retain the heritage character of streetscapes. • The proposed interim provisions support improved heritage outcomes. • Lower building heights are proposed for areas with high levels of heritage streetscape consistency, greater potential visibility of upper level development and shallower allotments. Activity centres must still demonstrate a capacity to accommodate future residential and commercial growth.

Precinct Specific

47. Table 4 below summarises more precinct specific provisions for each proposed DDO area. See Attachment 11 for all proposed interim DDOs.

Table 4: Proposed provisions - Summary Precinct Specific

DDO Schedule	***Street Wall***	***Upper Level Setback***	***Building Heights***	***Rear Boundary Wall Height***
1.Brunswick Street Shops	**Mandatory** Match adjoining heritage parapet height (generally 8-11m). See control map - Attachment 1.	**Mandatory** 8m above Brunswick Street street wall. **Discretionary** 6m to side street.	**Mandatory** Generally 4-5 storeys. Highly consistent heritage streetscape north of Johnston Street generally 3 storeys up to Rose Street. Areas towards Alexandra Parade and south of Johnston a mixture of mostly 4, some areas at 5 or 6 storeys. See control map - Attachment 1.	**Discretionary** See Table 3.
2.Smith Street Shops	**Mandatory** Match adjoining heritage parapet height (generally 8-11m). See control map - Attachment 2.	**Mandatory** 8m above Smith street wall. **Discretionary** 6m to side street.	**Mandatory** Generally 4-5 storeys with some exceptions. See control map - Attachment 2.	**Discretionary** See Table 3.
3.Gertrude Street	**Mandatory** Match adjoining heritage parapet height (generally 8-11m). See control map - Attachment 3.	**Mandatory** 8m above Gertrude street wall. **Discretionary** 6m to side street.	**Mandatory** Generally 3 storeys with minor exceptions where visibility is strongly limited. See control map - Attachment 3.	**Discretionary** See Table 3.
4.Johnston Street West	**Mandatory** Match adjoining heritage parapet height (generally 8-11m) on south side, new 4 storey street wall on north side (13.6m). See control map - Attachment 4.	**Mandatory** 6m above Johnston street wall. **Discretionary** 6m to side street.	**Mandatory** Generally 5-6 storeys on south side, 6-8 storeys on north side. See control map - Attachment 4.	**Discretionary** See Table 3.
5.Grand Residential – Brunswick Street South	**Mandatory** Match adjoining heritage parapet height (generally 8-11m). See control map - Attachment 5.	**Mandatory** West: Upper levels to be set behind heritage buildings. East: 8m Brunswick above Street Wall Side Streets: 8m to Gertrude St	**Mandatory** Generally 4 storeys. See control map - Attachment 5.	**Discretionary** See Table 3.

DDO Schedule	***Street Wall***	***Upper Level Setback***	***Building Heights***	***Rear Boundary Wall Height***
6.Fitzroy Town Hall and Back Blocks	**Mandatory** Mix of heritage and new 3 storey street wall (generally 8-11m). See control map - Attachment 6.	**Discretionary** 6m above main street wall frontage Upper levels to retain views to Fitzroy Town Hall.	**Mandatory** Generally 4 storeys with some exceptions. See control map - Attachment 6.	**Discretionary** See Table 3.
7.Johnston Street South and Victoria Street	**Mandatory** Match adjoining heritage parapet height (generally 8-11m). See control map - Attachment 7.	**Mandatory** 6m above Johnston and Victoria Streets street wall **Discretionary** 6m to side street.	**Mandatory** Generally 4-6 storeys with some exceptions. See control map - Attachment 7.	**Discretionary** See Table 3.
8.Johnston Street North and Fitzroy East	**Discretionary** Mix of heritage and new 4 storey street wall (generally 8-15m). See control map - Attachment 8.	**Discretionary** 6m above main frontage street wall. 6m above side street.	**Discretionary** Maximum of 9 storeys along Johnston Street and an even mix of 3, 4, 6 and 8 storeys within Fitzroy East. See control map - Attachment 8.	**Discretionary** See Table 3.
9.Smith Street North and South	**Discretionary** Mix of heritage and new 3 storey street wall (generally 8-11m). See control map - Attachment 9.	**Mandatory** 8m above Smith Street street wall to heritage building. **Discretionary** 8m above Smith street wall for infill building. 6m to side street	**Discretionary** Mix of 7 to 9 storeys. See control map - Attachment 9.	**Discretionary** See Table 3.

Mandatory Controls

48. A number of DDO schedules include mandatory controls which address building heights, setback and street wall height.

49. Guidance of the application of mandatory controls is provided in the State Government *Planning Practice Note 59 and 60*. Planning Practice Note 60 details that mandatory height and setback controls will only be considered in 'exceptional circumstances', where they are absolutely necessary to achieve the built form objectives or outcomes identified within a comprehensive built form analysis.

50. Council officers have considered the Planning Practice Notes in the application of mandatory controls. Specifically the Practice Note requires that mandatory controls be underpinned by comprehensive strategic work, are consistent with state policy, take into consideration recent development activity and provide capacity to accommodate growth. The extensive strategic work undertake in the reports attached to this report provide sufficient justification for the use of mandatory controls in the interim.

51. It is important to note that the application of mandatory controls has been carefully considered and applied selectively and are not proposed to apply across all precincts and/or to all requirements within a DDO.

Next Steps

Stage 1 - Request for Interim DDO Schedules

52. Subject to Council supporting the officer recommendations, the request will be submitted to the Minister for Planning.

53. It is proposed that the interim DDO schedules have an expiry of 2 years. This would provide for the preparation of a structure plan (or equivalent strategy) and for the preparation, exhibition and panel consideration of the permanent DDO schedule. If additional time is required, Council may request for an extension to the expiry date.

Stage 2 - Remaining Precincts within the Study Area

54. The *Brunswick and Smith Street Built Form Review – Background Analysis Report* has identified ten (10) precincts within the Commercial 1 Zone/Mixed Use Zone areas that require built form guidance. It is proposed that these precincts be addressed in two stages. The stage 2 precincts have not been included as part of the suite of DDO schedules being proposed for the following reasons:

    (a) Fitzroy West: Further analysis of the precinct has identified that the Mixed Use Zone which applies to some of the land may not be entirely appropriate. Further investigation into the zoning is required before a built form framework plan is prepared;

    (b) Collingwood North: There is currently an application to include additional buildings within this precinct in the Victoria Heritage Register which is yet to be assessed by Heritage Victoria. Given the delay in this assessment, the urban design reports for Collingwood North will be updated and work completed to consider interim provisions;

    (c) Victoria Parade: Recent, high profile developments in both Alexandra Parade and Victoria Parade will have a substantial effect on the built form on each precinct (the St Vincent Hospital/ACU sites). Further work is required to determine a preferred future character built form provisions; and

    (d) Alexandra Parade: Further work is required to determine a preferred future character built form provisions for the area between Brunswick Street and Hoddle Street.

55. Council would progress individual Built Form Framework for each of these four areas in 2020.

Structure Planning and Permanent Provisions

56. A condition for the application of interim provisions through an amendment under Section 8(1) b and 20(4) of the *Planning and Environment Act 1987* is that Council is required to undertake further strategic planning work to support the introduction of permanent provisions into the Yarra Planning Scheme.

57. In this regard, Council will be undertaking comprehensive strategic work and community consultation over 2020-2021 period.

External Consultation

58. Council's Heritage Advisory Committee has been briefed on the preparation of the interim DDOs and their general intent.

59. No formal external consultation has been undertaken to inform the draft interim DDO schedules and there would be no formal statutory opportunity for the community to submit on the draft interim DDO schedules before it is submitted to the Minister for Planning.

60. The community would be consulted as part of the preparation of the structure plan (or equivalent strategy) that is prepared for this area. A consultation plan would be prepared to guide that consultation.

61. In addition, the community would also have the opportunity to submit on the permanent DDO schedules as part of the full planning scheme amendment.

Internal Consultation (One Yarra)

62. The *Brunswick and Smith Street Built Form Review – Background Analysis Report*, various Precinct Built Form Frameworks and heritage reports have been prepared by consultants with input from Council's Urban Design, Strategic Planning and Statutory Planning teams.

63. Council's Senior Heritage Advisor had input into the urban design and heritage reports.

Financial Implications

64. The administrative fee to DELWP for requesting the Minister for Planning to introduce interim DDOs will be met within the existing budget.

Economic Implications

65. There are no economic implications for requesting the Minister for Planning to introduce interim DDOs to the areas outlined in this report.

Sustainability Implications

66. There are no sustainability implications for requesting the Minister for Planning to introduce interim DDOs to the areas outlined in this report.

Social Implications

67. There are no specific social implications for requesting the Minister for Planning to introduce interim DDOs to the areas outlined in this report beyond providing some increased certainty to the community around the future built form in the area outlined in this report.

Human Rights Implications

68. There are no known human rights implications for requesting the Minister for Planning to introduce interim DDOs to the areas outlined in this report.

Communications with CALD Communities Implications

69. Any future consultation on the structure plan (or equivalent strategy) for the Fitzroy/Collingwood activity centres and the exhibition of the permanent DDO schedules would involve consultation in accordance with the *Planning and Environment Act 1987* and also Council's consultation policies.

Council Plan, Strategy and Policy Implications

70. The request to introduce interim DDO schedules for the Fitzroy/Collingwood activity centres supports the following strategies in the Council Plan:

    (a) 4.2 Actively plan for Yarra's projected growth and development and advocate for an increase in social and affordable housing; and

    (b) 4.3 Plan, promote and provide built form and open space that is accessible to all ages and abilities.

Legal Implications

71. The approach outlined in this report is in accordance with the requirements of the *Planning and Environment Act 1987*.

Options

72. Officers are recommending that Council seek approval of interim planning provisions by the Minister for Planning as outlined in the report and attachments as the most expeditious approach to provide improved planning provisions and certainty whilst further strategic planning work is undertaken.

Conclusion

73. The *Brunswick and Smith Street Built Form Review* and *Detailed Precinct Review and Built Form Frameworks* has been prepared which provides built form recommendations for the future development in the Fitzroy/Collingwood Activity centres. The reports' recommendations balance the need to accommodate growth and development in activity centres with the strong heritage values that are present throughout, while also considering the impacts to the sensitive residential areas behind.

74. The introduction of interim provisions as detailed in the nine DDO schedules into the Yarra Planning Scheme under Section 8(1) b and Section 20(4) of the *Planning and Environment Act 1987* would improve planning provisions across centres and provide greater planning certainty.

75. Whilst no formal community consultation has been undertaken on the draft interim DDO schedules, the preparation of a structure plan (or equivalent strategy) for the Fitzroy/Collingwood study area would provide an opportunity for the community to inform the content of future permanent DDO schedules. The community would also have an opportunity to submit on the formal exhibition process to introduce the permanent DDO schedules into the planning scheme. This opportunity would occur following the completion of the structure plan or equivalent strategy.

RECOMMENDATION

1. That Council:
   (a) note the officer report on the planning for the Fitzroy/Collingwood Activity centres and request for the Minister for Planning for interim DDO schedules;
   (b) note the preparation of the draft Brunswick and Smith Street Built Form Review – Background Analysis Report, individual Precinct Review reports and supporting heritage analysis and recommendations prepared by Hansen Partnerships and GJM Heritage as in Attachments 1 to 10;
   (c) note the background analysis, built form frameworks and supporting heritage and transport reports as outlined in Attachments 1 to 10 and endorse them as a basis of seeking interim Planning Scheme provisions, and
   (d) endorse the interim Design and Development Overlay Schedules as outlined in Attachment 11.
2. That Council request the Minister for Planning in accordance with Section 8 (1) (b) and 20 (4) of the Planning and Environment Act to introduce DDO schedules on an interim basis for the Fitzroy/Collingwood Activity centres, with required amendment documentation as in Attachment 12.
3. That Council authorise the CEO to make any minor adjustments required to meet the intent of the above resolutions.
4. That Council note a further report will be presented to Council in 2020 to request interim built form provisions for the stage 2 remaining precincts following further strategic work.

Appendix A – Planning Policy Framework 81

1.0 Introduction

The following background report has been prepared for the City of Yarra to provide extensive and overarching urban design analysis and strategic planning context for the entire Brunswick Street and Smith Street study area.

The report has been prepared by Hansen Partnership (Urban Design) with the support of City of Yarra's internal working group that included Urban Design, Strategic Planning and Statutory Planning officers. It incorporates input from GJM Heritage to ensure the heritage values and significance are considered in formation of future controls. Inputs have also been provided by Traffix Group to understand the access and movement requirements, particularly from rear laneways. Recommendations from review of Yarra Landmarks Policy prepared by Ethos Urban were considered to understand retention of key views to landmark buildings.

The overall study area was defined by Council at the outset of the project and is shown in Figure 1.

The report provides a comprehensive 'stocktake' of the existing conditions and based on this identifies areas likely to experience development pressure and areas of potential change. This base information will be further synthesized to form 'foundation' information for each precinct. The report sets out clear vision, principles and factors influencing the formation of future precincts and built form recommendations.

The report also defines and divides the large study area in individual precincts. These precincts classify the different spatial components across the broader area into primarily the 'traditional' retail corridors or the diverse mixed use areas. The report provides key directions to define the future character of all precincts.

This report should ultimately be read in conjunction with the associated, more detailed individual precinct reports. It is noted that subject to subsequent and more detailed consideration that there may be some inconsistencies between this overall background work and later precinct work. In such an instance to more recent work should prevail.

KEY FINDINGS

- The focus of north-south and east west activity spines.
- Confined sphere along those corridors.
- Comprises fine to medium grain subdivision patterns.

1.1 Purpose

The overarching purpose of this project is to provide a built form framework for the Brunswick Street-Smith Street precinct and adjoining mixed use areas that will ensure the value of these streets and surrounds are protected from inappropriate development. The framework aims to provide directions to find acceptable ways to accommodate growth and change within the corridors and mixed use areas of Collingwood and Fitzroy. This is to be achieved by undertaking rigorous analysis of the urban environment to underpin directions for urban management and subsequent built form controls.

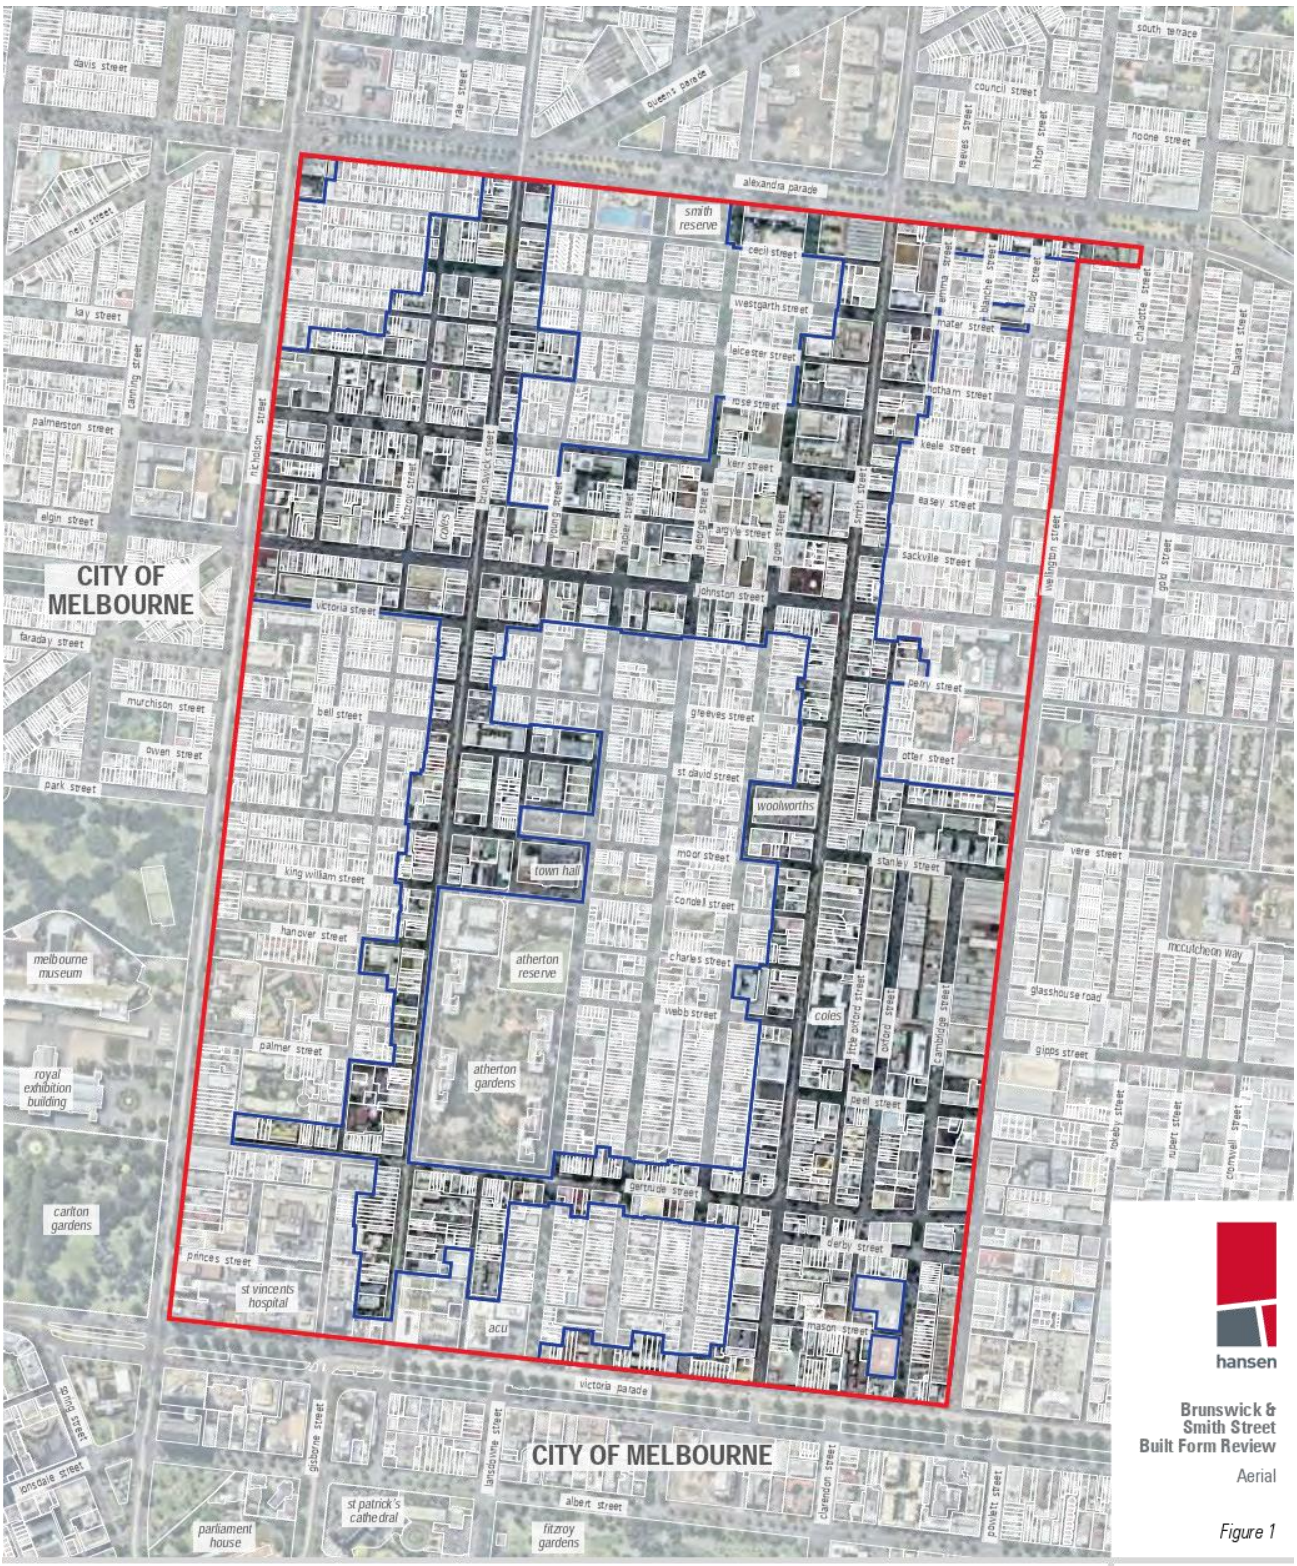
This built form review work, will inform future Council lead strategic planning work for these Activity Centres.

1.2 Study Area

The study area compasses the entire suburb of Fitzroy and the western portion of Collingwood. It is bounded by Victoria Parade to the south and Alexandra Parade in the north, and Nicholson Street to the west and Wellington Street to the east.

The study area is centred along the two Major Activity Centres which extend along both Brunswick and Smith Streets. This includes Johnston Street (west of Smith Street) which forms part of the network of the two major activity centres. The study area also contains the Neighbourhood Activity Centre area along Gertrude and the adjoining mixed use areas.

The study area is approximately 175.5ha in size and is approximately the same size as the Melbourne CBD (Hoddle Grid).



The built form review boundary is defined by the Commercial and Mixed Use Zones and therefore comprises the properties within the following zones:

- Commercial 1 Zone (C1Z);
- Commercial 2 Zone (C2Z); and
- Mixed Use Zone (MUZ).

The predominantly residential parts of the study area are excluded from the review area. These areas are already zoned residential, being predominantly either General Residential Zone - Schedule 2 (GRZ2) or Neighbourhood Residential Zone - Schedule 1 (NRZ1), which both restrict development to a mandatory maximum height of 9m. There are also a few properties zoned either General Residential Zone - Schedule 3 (GRZ3) and General Residential Zone – Schedule 4 (GRZ4), which limit development to a mandatory maximum heights of 11m and 11.5 respectively.

The review area also excludes the Health and Education Precinct around St Vincent's Hospital and ACU along Victoria Parade and the Easey Street employment precinct on north of Johnston Street.

Attachment 1 - Attachment 1 - Background Analysis Report

1.3 Strategic Context

Fitzroy and Collingwood are one of the oldest suburbs in Melbourne and have special significance in Yarra's context and a much wider catchment beyond. The proximity to the Melbourne CBD and other parts of inner Melbourne, including good access to public transport makes these areas attractive for residents, businesses and visitors. It attracts people from all over Victoria for its unique and vibrant atmosphere created by people, range of shops, artistic and cultural offers, a popular night-time economy offering good quality restaurants, bars and pubs with live music. The abundance of options available within the study area makes it a vibrant place while retaining a strong local community vibe.

Smith Street and Brunswick Street (and the intervening sections of Gertrude and Johnston Streets) form a networked activity core. The retail strips comprise fine-grained urban structure, highly intact heritage streetscapes and heritage places that contribute to Yarra's identity and the story of Melbourne. Gertrude Street is also considered one of the most historically significant Aboriginal areas in urban Victoria. Johnston Street presents an important east west connection that links the municipalities of Melbourne and Boroondara and has an emerging retail and employment role. Alexandra Parade and Victoria Parade are key routes connecting other municipalities to Yarra and further to Melbourne and accommodates an important employment hub. In particular, the St Vincent's Hospital and Australian Catholic University along Victoria Parade is of state significance and spans within City of Melbourne.

The mixed use areas behind the retail strips provide a mix of commercial, retail, light manufacturing and residential uses which add to the diverse character of the suburbs and contributes further in making the area a network of activities. It comprises the industrial history of Melbourne with MacRobertson and Foy and Gibson complexes.

The area is predominantly characterised by a dense inner city urban fabric and consequently there is a notable absence of public spaces for recreational use. The streets are important public spaces, where much of the social interaction takes place. The footpaths serve a range of functions, including shopping and dining, walking, commuters waiting to catch trams and access to kerbside parking. All of these functions further contribute to the vibrancy of Brunswick Street, Smith Street and Gertrude Street.

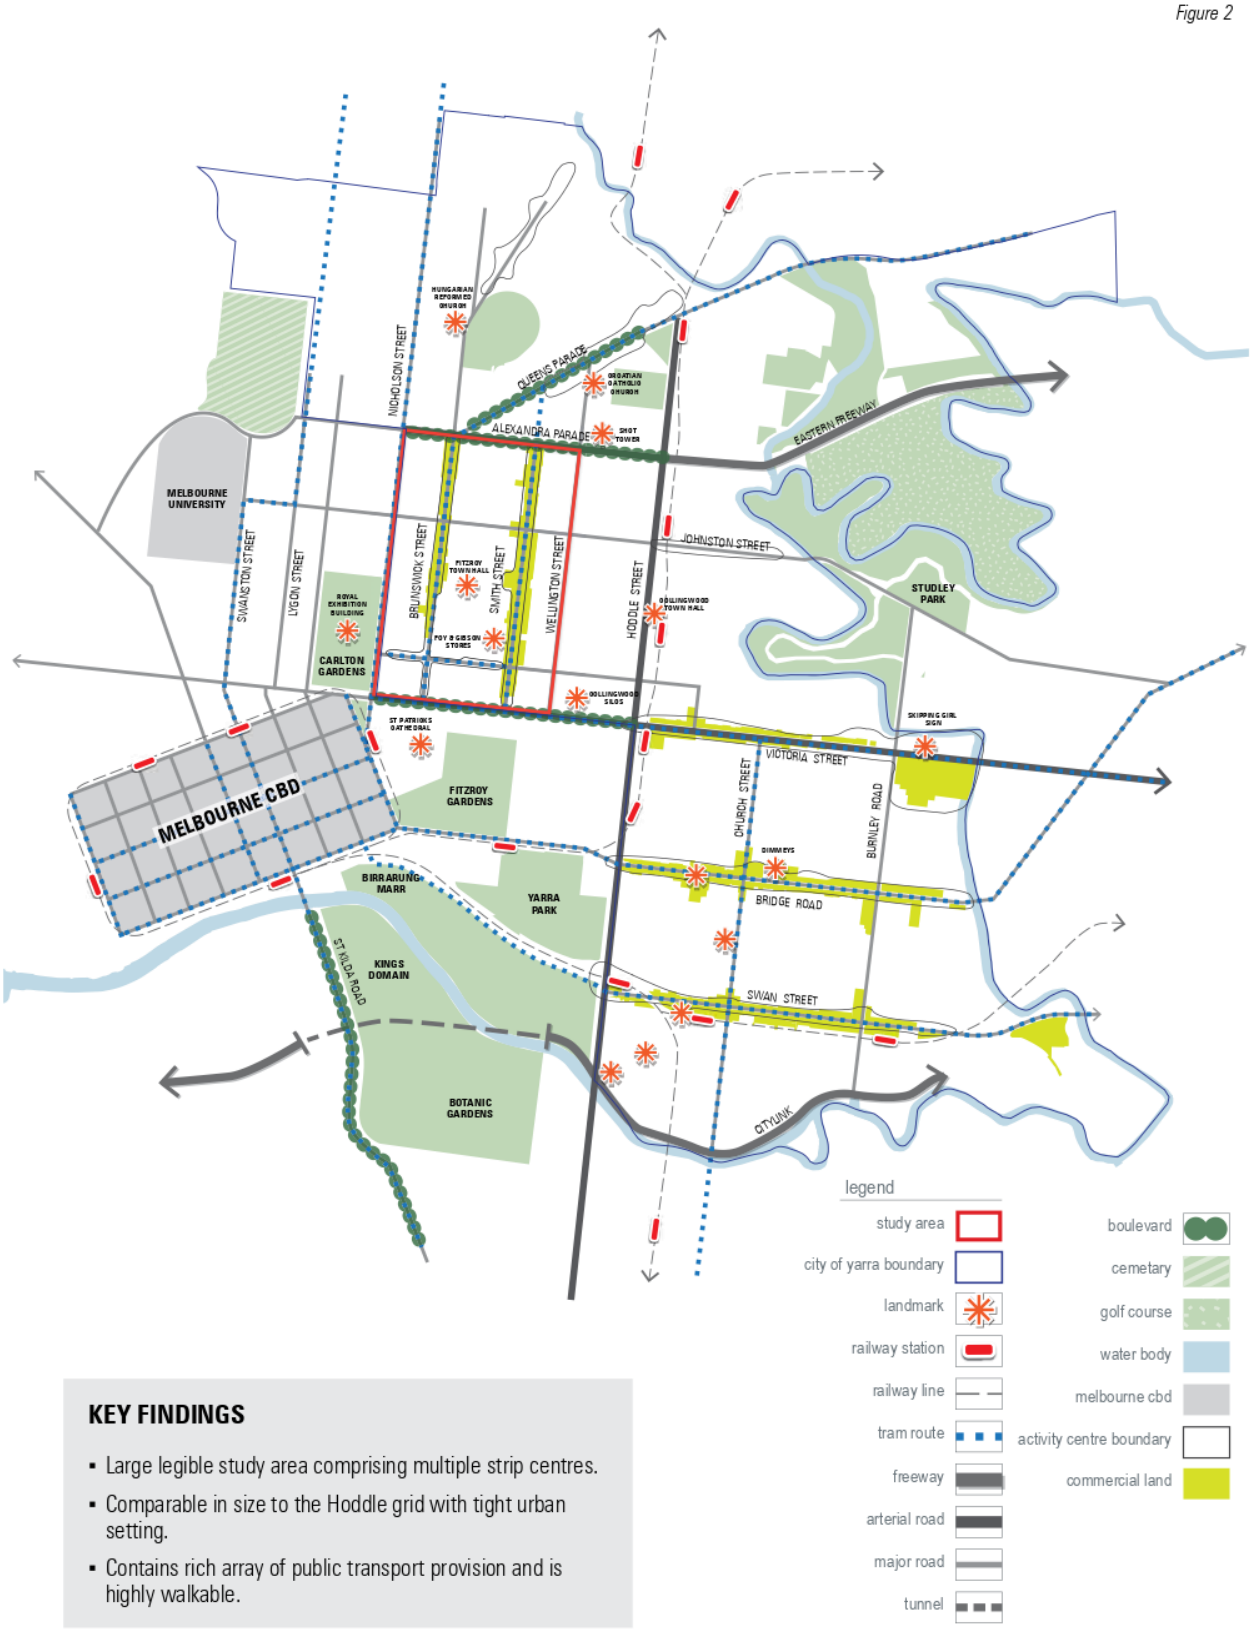
The linear activity centres of Brunswick Street and Smith Street, as well as the former industrial areas of Fitzroy and Collingwood are experiencing increased development pressure, due to their proximity to the CBD, public transport and prevailing State Policy which encourages consolidation and intensification of inner urban areas. The challenge in planning for growth has been the need to accommodate new development that is sensitive to the heritage significance and the surrounding residential areas. Presently, there is limited guidance within the Planning Scheme which informs built form heights, setbacks, massing arrangements and design requirements.

1.4 Landmarks and Tall Structure

The City of Yarra places great importance on its landmarks and tall structures and the Municipal Strategic Statement (MSS), which is reinforced by Local Policies (Clause 21.05 and 22.13), seeks to retain its prominence and key visual links. In the context of the study area, the following landmarks and tall structures are identified:

- Fitzroy Town Hall (within study area);
- St Marks Church (within study area);
- Hungarian Reformed Church spire;
- Croatian Catholic Church spire;
- Alexandra Parade shot tower;
- St Patricks Cathedral (within City of Melbourne); and
- Royal Exhibition Building (within City of Melbourne).

Fitzroy Town Hall on George Street



Brunswick Street, looking south towards St. Patricks Cathedral

Royal Exhibition Building

Figure 2

KEY FINDINGS

- Large legible study area comprising multiple strip centres.
- Comparable in size to the Hoddle grid with tight urban setting.
- Contains rich array of public transport provision and is highly walkable.

2.0 Planning Policy Context

This section reviews the relevant State and Local Planning Policies that influence existing and future built form outcomes within the Study Area. This section should be read in conjunction with Appendix A: Relevant Planning Framework.

The following Documents are referred to and form part of the broader Policy Context:

- Planning Policy Framework (PPF) (refer to Appendix A);
- Urban Design Guidelines for Victoria;
- Urban Design Charter;
- Practice Note No.60 Height and Setback Controls for Activity Centre;
- Practice Note No.59 – The Role of Mandatory Provisions in Planning Schemes;
- City of Yarra Urban Design Strategy;
- City of Yarra Housing Strategy;
- Review and Development of the City of Yarra Landmarks Policy;
- Amendment C231 - Queens Parade;
- Amendment C220 - Johnston Street; and
- Amendment C140 – Smith Street.

2.1 Zones

Commercial 1 Zone (C1Z)

The C1Z applies to properties which primarily abuts the main streets of Brunswick, Smith Gertrude and Johnston Streets, as well as the eastern portion of properties along the northern side of Victoria Parade. This provision reflects the generally fine grain commercial and retail function and character of these streets in addition, the C1Z supports the role of Activity Centres by encouraging vibrant mix of commercial centres for retail, office, business, entertainment and community uses. It also supports provision of residential uses at densities complementary to role and scale of centre.

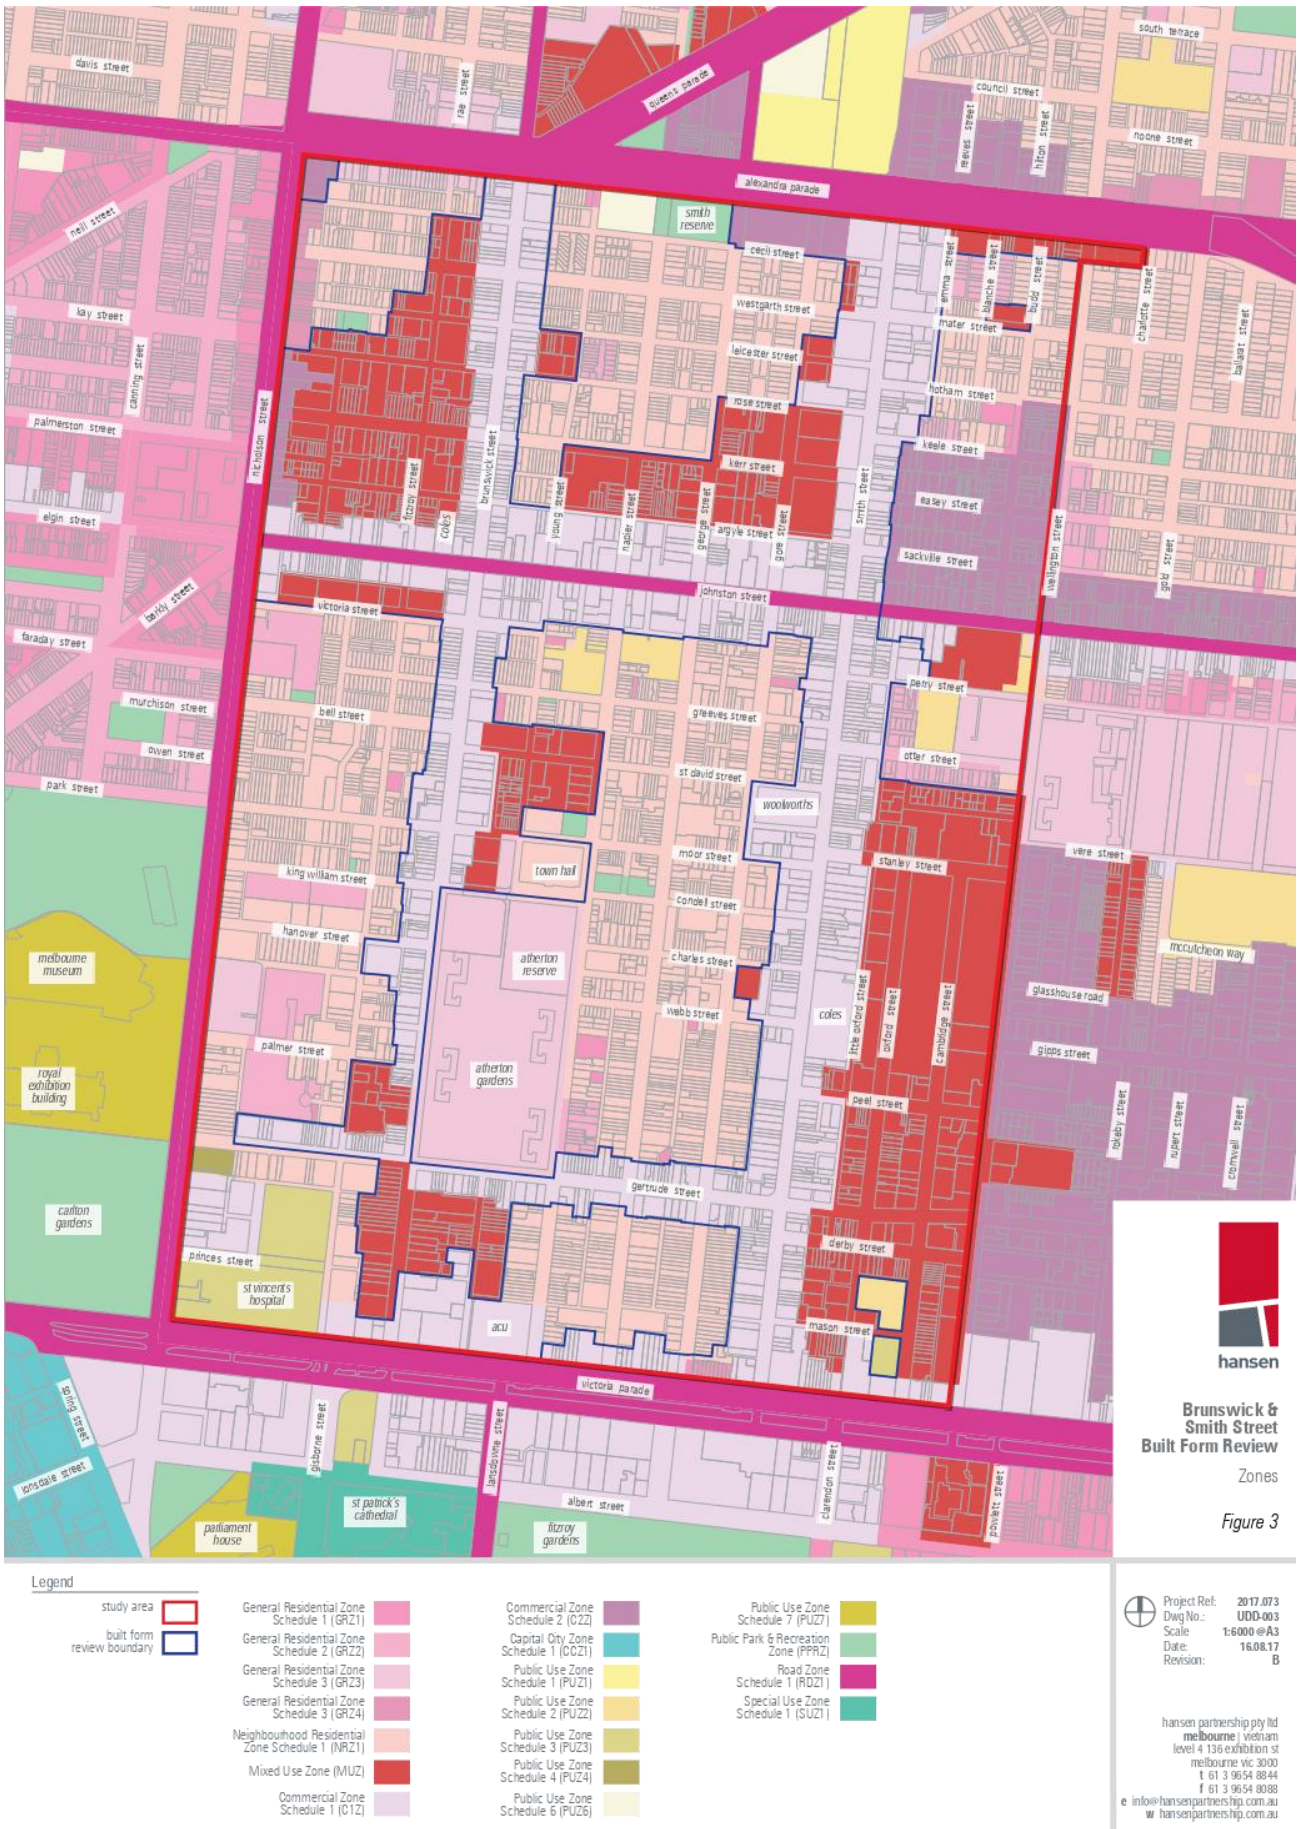
Commercial 2 Zone (C2Z)

The C2Z is applied to more discrete pockets of land or larger individual properties with prominent main street positions to the edges of the study area, north of Johnston Street. It also applies to two properties on the corner of Nicholson Street and Alexandra Parade, a strip of properties which front Nicholson Street (between Johnston Street and Kerr Street) and large parcels to either side of Gore Street, which front Alexandra Parade.

The largest pocket is centred around Easey Street in an area bounded by Johnston Street to the south, Wellington Street to the east, Hotham and Keele Streets to the north and the rear of properties which line the eastern side of Smith Street, to the west. However, this is not included within the built form review area as it is covered by JSLAP and is an important employment precinct which needs special strategic consideration. The recommendations from JSLAP and interface with Easey Street pocket should be taken into consideration for built form recommendation.

Mixed Use Zone (MUZ)

The MUZ applies to numerous larger pockets of land scattered throughout the study area and generally reflect the areas manufacturing heritage. MUZ supports provision of residential, commercial, industrial uses that respond to the existing or preferred neighbourhood character of the area.'



The largest of the MUZ areas is located to the south-eastern quadrant of the study area on the 'Collingwood slope' (between the rear of properties along the eastern side of Smith Street and Wellington Street. This area is defined by the Foy and Gibson legacy in the north, with large properties and strong manufacturing built form still dominant today. To the south of Peel Street the area is finer grain, evidence of the original residential neighbourhood, clusters around the Primary School, on Cambridge Street.

The second largest MUZ area is located to the north-western quadrant of the study area, to the rear of properties which front Johnston, Brunswick and Nicholson Streets. The other notable pocket is largely defined by the Mac Peterson factory and is centred around Kerr Street, north of Johnston Street (between Brunswick and Smith Streets).

KEY FINDINGS

- Contains 4 (possibly 5) critical mixed use cells with capacity for new development.
- Sensitive interface with the valued NRZ 'heart'.
- Johnston Street is the only vicroads asset within the study area.

Attachment 1 - Attachment 1 - Background Analysis Report

2.2 Overlays

Heritage Overlays

Existing Heritage Overlays cover the vast majority of the study area (refer Figure 4) with the exception of three pockets of land located between Smith and Wellington Streets and another pocket at the northern end of Smith Street and Nicholson Street, just north of Johnston Street. This reflects the areas rich history and early era of initial subdivision and development, being the first suburbs to emerge beyond the original 'Hoddle Grid'.

The study area cover contains the following heritage precincts:

- HO311 – Brunswick Street Precinct;
- HO318 – Collingwood Slope Precinct;
- HO321 – Gold Street Precinct;
- HO324 – Johnston Street Precinct;
- HO333 – Smith Street Precinct;
- HO334 – South Fitzroy Precinct;
- HO361 – World Heritage Environs Area Precinct;
- HO464 – Smith Street South Precinct; and
- HO336 – Victoria Parade Precinct.

While, the review area contains the following heritage precincts:

- HO311 – Brunswick Street Precinct;
- HO318 – Collingwood Slope Precinct;
- HO333 – Smith Street Precinct;
- HO334 – South Fitzroy Precinct;
- HO361 – World Heritage Environs Area Precinct;
- HO464 – Smith Street South Precinct; and
- HO336 – Victoria Parade Precinct.

Key finding from the relevant Statements of Significance are as follows:

- **HO311 – Brunswick Street Precinct** - one of the first north-south thoroughfares dating from the 1840s, with simply detailed buildings. Comprising predominantly masonry buildings which contributes to the survival of an unusually high number of early commercial buildings. Continuity and high integrity of upper level facades and use of consistent facade module that promotes visual unity and for the view of St Patrick's Cathedral as taken from within Brunswick Street's length, being one of the most significant urban vistas in Melbourne.

Brunswick Street Precinct - Brunswick Street, looking north

- **HO318 – Collingwood Slope Precinct -** as a remnant area of substantially 19th century mixed commercial, residential and industrial development that once typified the area. For the contribution provided by well preserved Edwardian-ear and inter-war factory buildings, and the massive and substantially intact former Foy and Gibson complex that is characterised by a strong sense of mass and a consistency of materials (predominantly red brick with rendered dressings).

Collingwood Slope Precinct - Cambridge Street, looking south

- **HO333 – Smith Street Precinct** - as the City's most important Victorian and Edwardian-ear commercial strip, serving the whole of Collingwood and Fitzroy and beyond, in the late 19th and early 20th centuries. As a substantially intact collection of well preserved commercial and retail buildings of note, including hotels, shop and some industrial buildings to the north of Johnston Street. For the unusual or particularly ornate and exuberant Italianate and Edwardian details on many buildings, reflecting the importance of this retail strip in the broader history of manufacturing and retailing in Melbourne.

Smith Street South Precinct - Smith Street, looking south

- **HO334 – South Fitzroy Precinct -** As the earliest urban area outside the Melbourne City grid to be settled, with several buildings surviving as testimony to its early establishment. As a substantially intact collection of predominantly mid to late nineteenth and early twentieth century building stock, interspersed with well preserved inter-war residential, commercial, retail and industrial buildings that contribute to the historical character of the area. For the relatively large number of individually significant buildings, being predominantly solid masonry rather than clad with timber. For the landmark qualities of some large factory and warehouse buildings from the late 19th and earlier 20th century, such as the MacRobertson confectionery complex which are significant features in the skyline of this predominantly low rise suburb.

South Fitzroy Precinct - Garfield Street, looking east

- **HO361 – World Heritage Environs Area Precinct** is of historical and social significance for its association with the World Heritage listed Royal Exhibition Building and Carlton Gardens. The building is the most complete 19th century international exhibition site in the world. The precinct is of architectural and aesthetic significance. It retains substantially intact 19th century streetscapes, particularly on Nicholson Street (north of Gertrude Street), the south side of Gertrude Street. The streetscapes display a comparatively high proportion of original nineteenth form and fabric, including substantial areas of 2 storey, with some 3 storey residential and commercial development. Materials and architectural elements include face brick, bluestone and rendered masonry construction materials; pitched and hipped iron and slate-clad roofs; chimneys; prominent parapets and pediments; post-supported verandahs, many with elaborate iron lacework or timber detailing; a high proportion of iron palisade fences; and typically zero or shallow front setbacks with gardens. The precinct additionally exhibits a typically fine grain pattern of urban development, generally emphasised by the regularity of the terrace row subdivisions, narrow allotments and street grid. The precinct provides for significant views to the Royal Exhibition Building including direct views to the building, dome and garden setting from bordering/ abutting streets.

World Heritage Environs Area Precinct - Gertrude Street, looking west

- **HO464 – Smith Street South Precinct** - The west side of Smith Street, south of Gertrude and Langridge Streets, shares the same common history as the east (Collingwood) side opposite, and also that of the remainder of Smith Street, further north, added to which is its distinctively different specific history, which emanated from a slower pace of development which culminated in a later phase of development which completed the street. Collectively they span the Victorian, Edwardian and inter-War eras and individual examples from each era are the original, or first substantial, building, including additions, on the site.

Smith Street South Precinct - eastern side of Smith Street, south of Derby Street

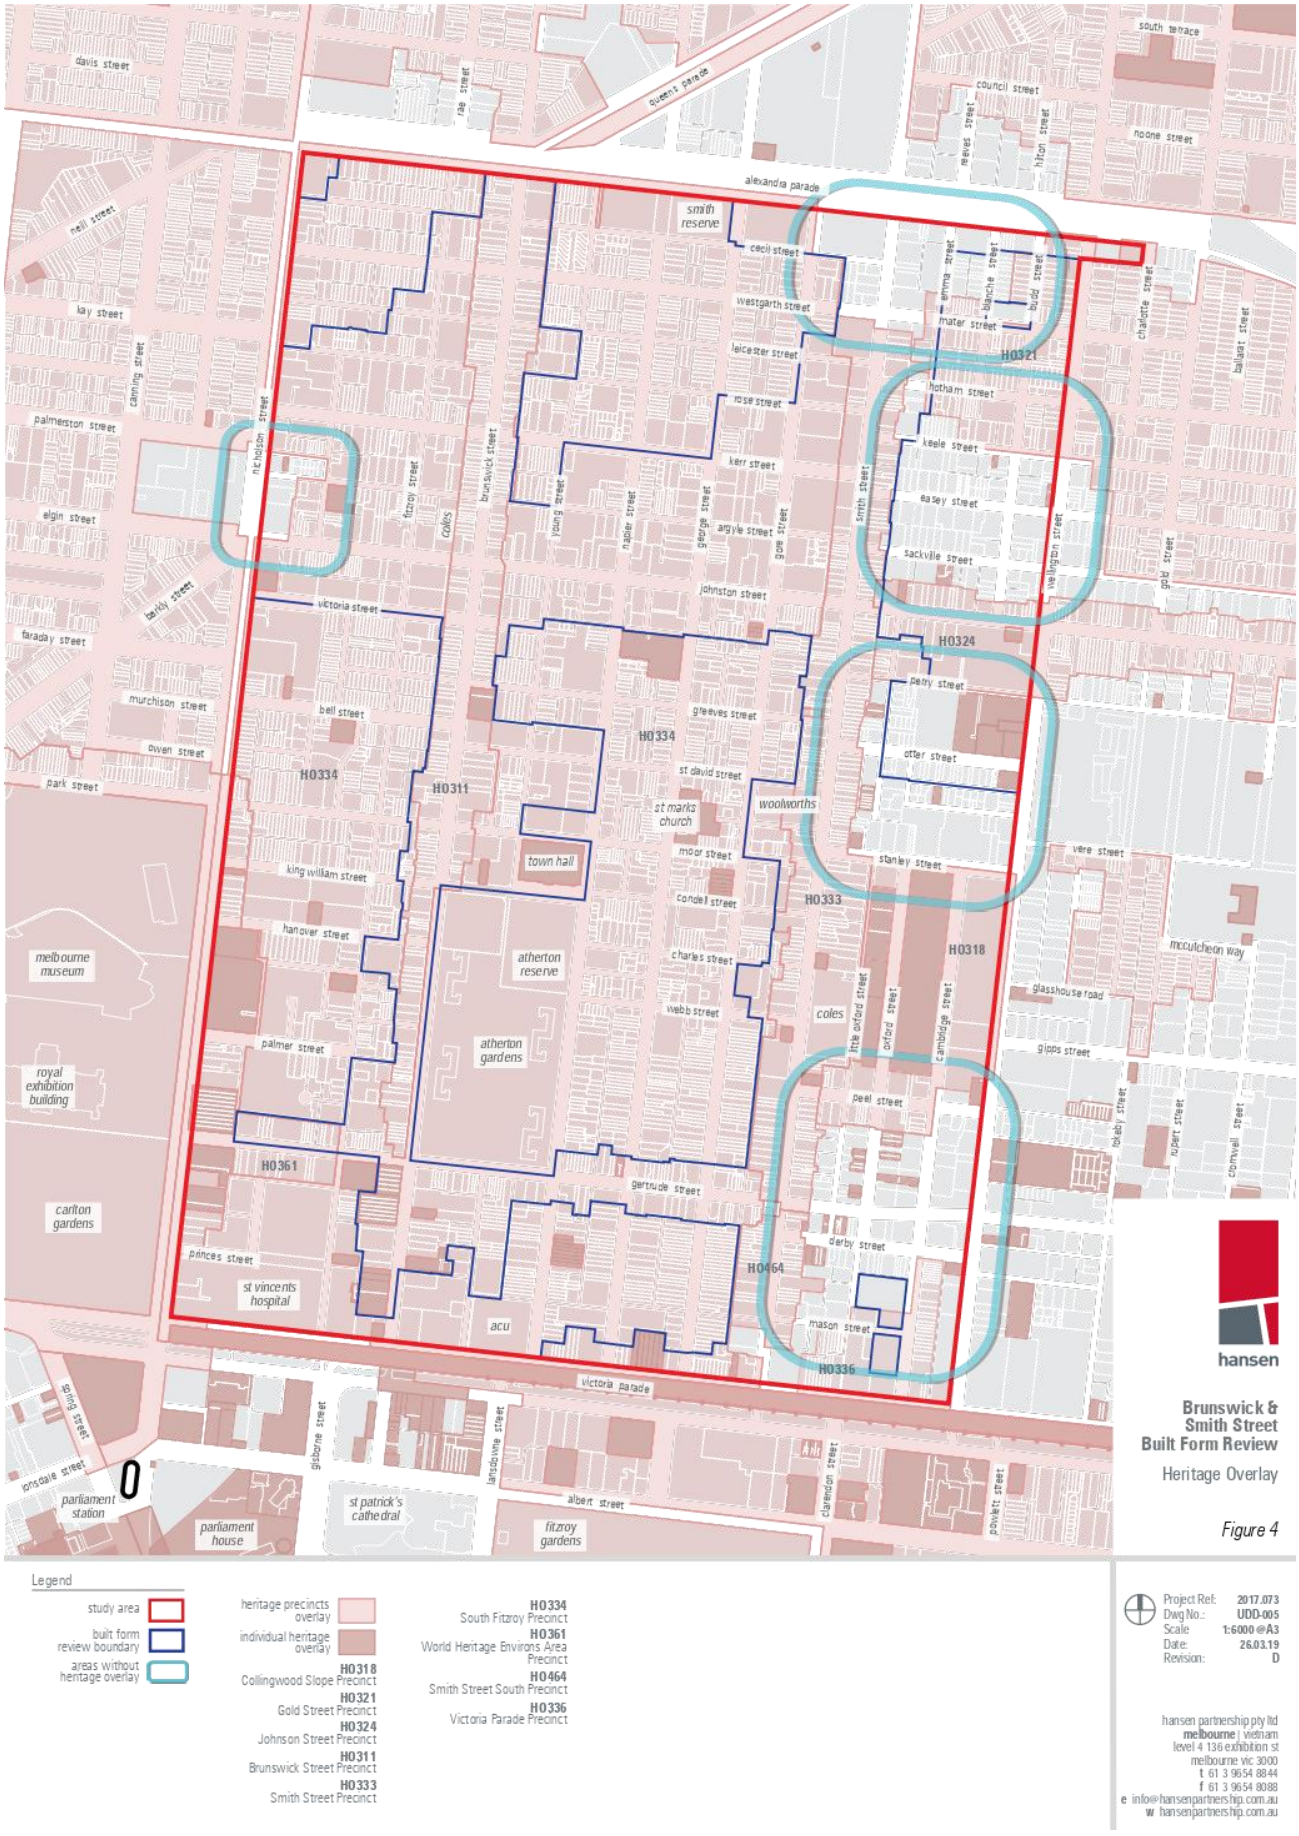
- **HO336 – Victoria Parade Precinct** - substantially intact collection of middle class late 19th century residential building stock, supported by key commercial, institutional and religious buildings. Presents as an important and elegant boulevard entrance to central Melbourne, containing an impressive collection of 2 storey Victorian-era buildings.

Victoria Parade Precinct - Victoria Parade looking north east

Significant Streetscapes

In addition to the existing heritage overlays, GJM have identified areas of 'significant streetscape'. Refer GJM report.

source: National Trust



Smith Street Precinct - Smith Street, looking south

KEY FINDINGS

- Extensive heritage fabric and associated protection
- Comprises isolated pockets (not affected by the heritage overlay) to the east.
- Contains discrete clusters of individually significant heritage overlays - primarily in the southern portion (south of Johnston Street).

Attachment 1 - Attachment 1 - Background Analysis Report

Design and Development Overlays

The study area contains 4 Design and Development Overlays as follows:

- DDO08 – Fitzroy South;
- DDO10 – Johnston Street Precinct – West of Smith Street;
- DDO12 – Former NMIT Site 35 Johnston Street, Collingwood;
- DDO13 – Emma Street Precinct, Collingwood; and
- DDO23 - Collingwood South (Mixed Use) Precinct

The extent of these overlays is relativity small as they only apply to discrete precincts or specific sites. The largest DDO is the Johnston Street Precinct (DDO10) which applies to properties which front Johnston Street generally between Brunswick and Smith Streets.

DDO8 Fitzroy South

Applies to properties along the northern side of Gertrude Street, between Nicholson Street and Fitzroy Street.

Given the relatively confined area of the DDO and its purpose in relation to protecting views of the World Heritage Listed, Royal Exhibition Building, it is understood from Council that DDO8 is intended to remain in place. Therefore, the Built Form Framework will not seek to inform future built form controls along Gertrude Street – west of Brunswick Street.

We also appreciate that Heritage Victoria will be undertaking a review of the World Heritage Environs Area in 2020, which will assess the effectiveness of DDO8 and may result in refinements to strengthen the DDO.

DDO10 Johnston Street Precinct – West of Smith Street

Applies to properties fronting both side of Johnston Street, between Brunswick Street and Gore Street.

It is anticipated that the Built Form Framework will inform future built form controls along this section of Johnston Street, replacing the existing DDO10.

DDO12 Former NMIT Site 35 Johnston Street, Collingwood

Applies to properties fronting both Johnston Street and Perry Street that made up the former NMIT campus. None of these properties fall within the built form review area. Therefore, this DDO does not impact on future built from controls implemented as a result of this project.

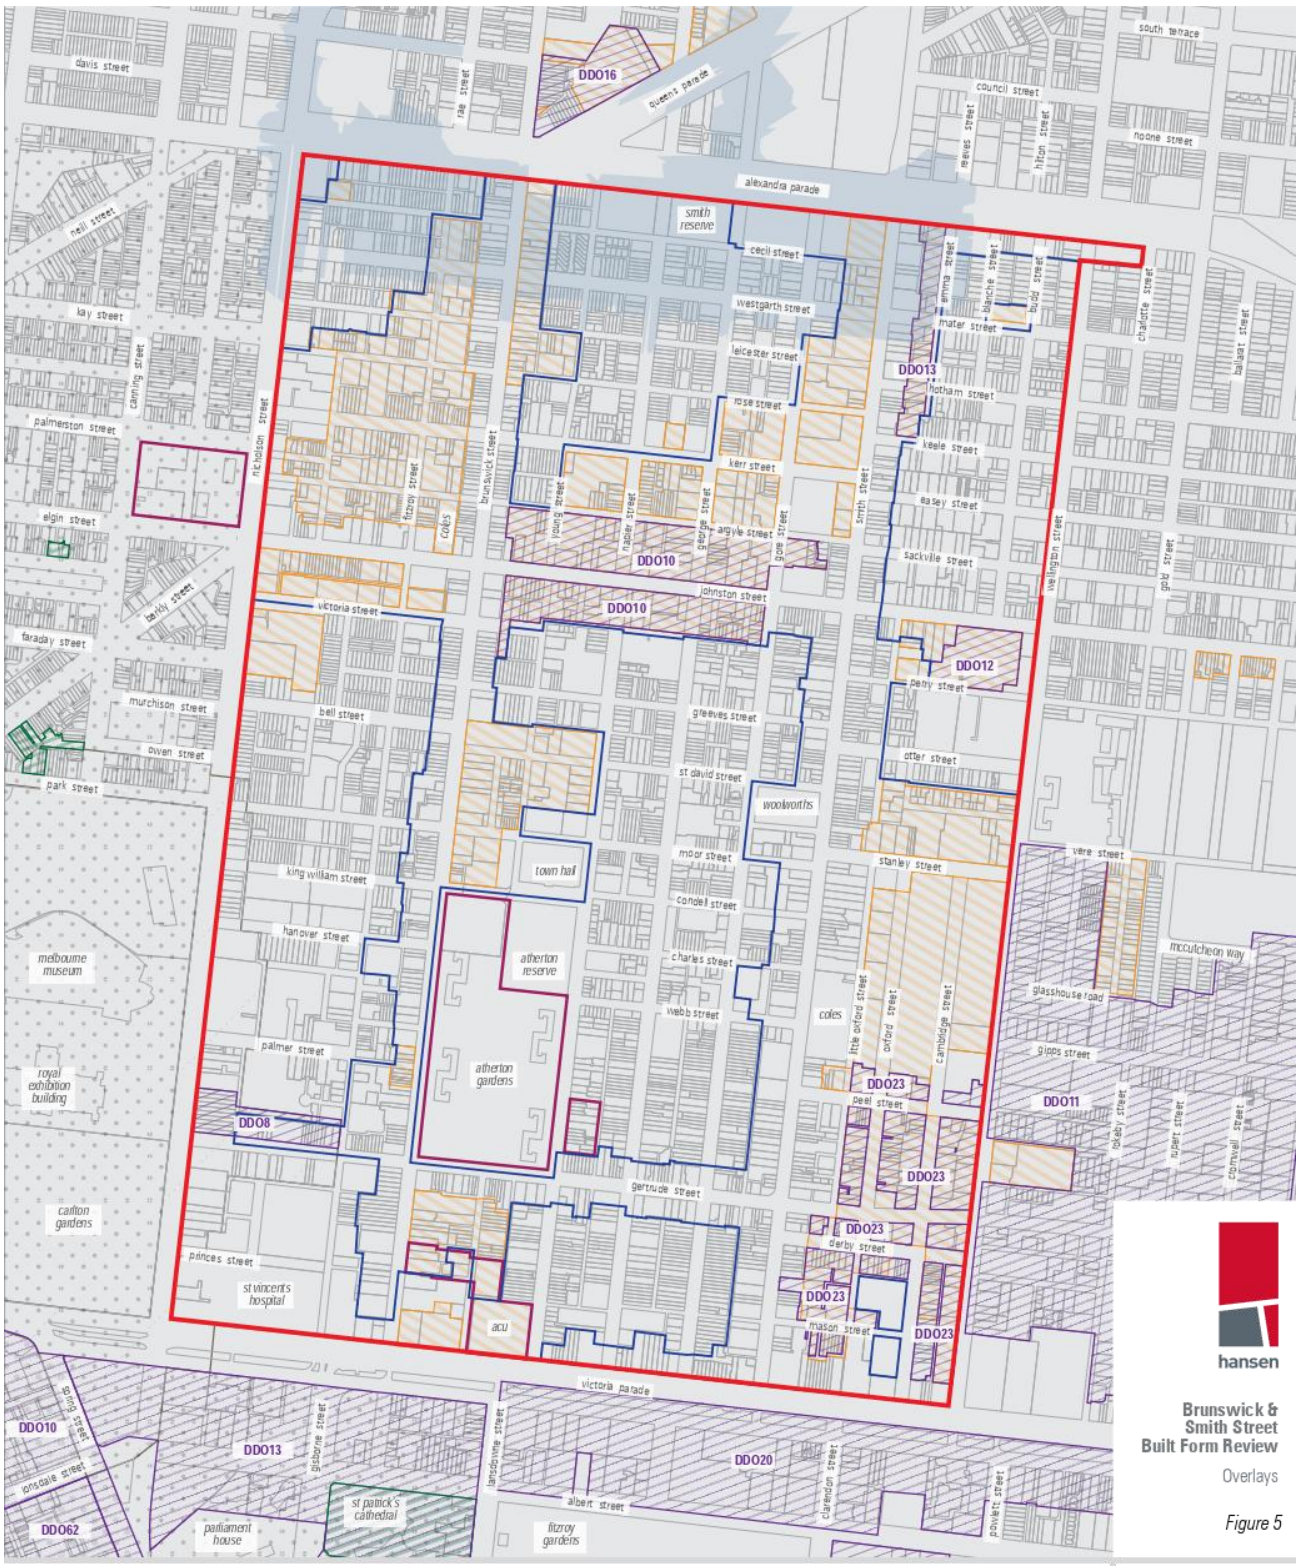
Given the site specific nature of the DDO, it is understood from Council that DDO12 is intended to remain in place. Therefore, the Built Form Framework will not to inform future built form controls at 35 Johnston Street, Collingwood.

DDO13 Emma Street Precinct, Collingwood

Applies to properties along the western side of Emma Street. It is understood from Council that DDO13 is intended to remain in place. Therefore, the Built Form Framework is unlikely to inform future built form controls within the Emma Street Precinct.

DDO23 Collingwood South (Mixed-Use) Precinct

Now applies to properties along the western side of Wellington Street generally between Peel Street and Victoria Parade and properties along Oxford Street and Cambridge Street, generally south of Peel Street and fronting Peel Street, Langridge Street, Derby Street and Mason Street, between Little Oxford Street and Wellington Street.



This interim DDO which endorsed as part of C250 in November 2018 and implements part of the Collingwood Built Form Framework which forms part of this project. Implementing built form controls for this area was prioritised by Council due to development pressure and community sentiment. The current DDO23 is due to expired on 18 October 2020.

It is understood that the Council intention is to implement a permanent DDO23 to replace this interim one. However the ultimate control may differ to the current one.

DDO Summary

All the DDOs which apply within the built form review area, seek development that respects the prevailing low-rise and heritage fabric, while enhancing the street for pedestrian activity. Prevailing streetwall height are to be reinforced with upper levels setback to be recessive.

Attachment 1 - Attachment 1 - Background Analysis Report

Special Building Overlay

Applies to properties to the northern extent of the study area, predominantly north of Westgarth Street, between Nicholson Street and Emma Street.

Key Purpose (in relation to built form)

- *To identify land in urban areas liable to inundation by overland flows from the urban drainage system as determined by, or in consultation with, the floodplain management authority.*
- *To ensure that development maintains the free passage and temporary storage of floodwaters, minimises flood damage, is compatible with the flood hazard and local drainage conditions and will not cause any significant rise in flood level or flow velocity.*

Environmental Audit Overlay

Applies to many properties within the review area, and primarily the MUZ land, given its former industrial use.

Purpose

- *To ensure that potentially contaminated land is suitable for a use which could be significantly adversely affected by any contamination.*

2.3 World Heritage Environs Area

Applies to all properties fronting the Carlton Gardens, with the exception of St Vincent's Hospital.

Objectives

- *To protect significant views and vistas to the Royal Exhibition Building and Carlton Gardens.*
- *To maintain and conserve the significant historic character (built form and landscapes) of the area.*
- *To ensure new development in the area has regard to the prominence and visibility of the Royal Exhibition Building and Carlton Gardens.*

Policy

It is policy to:

- *Retain and conserve individually significant and contributory places, including contributory fabric, form, architectural features and settings, to assist with maintaining the heritage character of the setting and context of the Royal Exhibition Building and Carlton Gardens.*
- *Retain and conserve the valued heritage character of streetscapes to assist with maintaining the heritage character of the setting and context of the Royal Exhibition Building and Carlton Gardens.*
- *Retain the predominantly lower scale form of development which provides a contrast to the dominant scale and form of the Royal Exhibition Building.*
- *Protect direct views and vistas to the Royal Exhibition Building and Carlton Gardens from bordering/abutting streets and other views and vistas to the dome available from streets within the precinct including Gertrude Street, Marion Lane and in Victoria Parade immediately east of the junction with Nicholson Street.*
- *Discourage the introduction and proliferation of permanent structures and items such as shelters, signage (other than for historic interpretation purposes), kiosks and the like around the perimeter of the Royal Exhibition Building and Carlton Gardens in order to:*
  - *Avoid impacts on the presentation of the Royal Exhibition Building and Carlton Gardens, including impacts on axial views along treed alleys and avenues; and*
  - *Minimise inappropriate visual clutter around the perimeter of the Royal Exhibition Building and Carlton Gardens.*

Clause 22.14-2 World Heritage Environs Area (WHEA)

Built Form Implications

- The extensive heritage control coverage in tandem with the heritage gradings of individually significant or contributory demonstrate the heritage importance and dominance within the built form fabric.
- Future controls will need to acknowledge the valued heritage character and ensure development respects the prevailing heritage fabric and sensitively responds to key elements such as streetwall height, streetscape rhythm, architectural expression and transitions to heritage forms.
- Development above the prevailing streetwall height will need to be recessive, through either provision of a setback and/or a clear distinction in architectural treatment.
- Development along Gertrude Street will need to protect existing views toward the Royal Exhibition Building's dome. This will considerably limit the extent (height and mass) of development along the north side of Gertrude Street, west of Brunswick Street.
- Both the SBO and EAO do not have a major implications on future development in terms of overall scale and massing, however they still need to be considered, with the SBO potentially impacting at street level.

KEY FINDINGS

- Broad Heritage Overlay coverage.
- Flooding implications to northern extent.
- Limited built form guidance with discrete DDO areas.
- Industrial legacy impacts to predominantly MUZ pockets.

2.4 Heritage

Heritage Grading

Figure 6 shows heritage gradings associated with existing buildings which are affected by Heritage Overlay. These gradings are categorised into:

Individually Significant

- Most individually significant buildings are clustered generally as follows:
  - along the western side of Brunswick Street (south of Gertrude Street);
  - along Victoria Parade;
  - in the Foy and Gibson precinct at the northern end of Oxford and Cambridge Streets;
  - in the Mac Roberston precinct along Gore Street (between Johnston and Kerr Streets); and
  - the western side of Brunswick Street to both sides of the Johnston Street junctions.
- Most individually significant buildings occupy larger sites associated with former manufacturing business or significant dwellings.
- Other individually significant buildings are located on corner sites. Therefore, visually exposed from multiple vantage points and often being current (or former) pubs.

Contributory

- Most buildings along Brunswick, Smith and Gertrude Streets are categorised as of contributory heritage value.
- They often contain the finer grain traditional 'high street' shops with dwellings above and rear laneway access.

Non-Contributory

- Most non-contributory buildings are concentrated within the mixed use precincts and along the northern side of Johnston Street (between Brunswick and Smith Street).
- Other non-contributory pockets contains commercial/warehouse forms from more recent eras of development – such as the cluster to the north and west of the Fitzroy Town Hall and towards the Nicholson Street end of Rose and Kerr Streets.

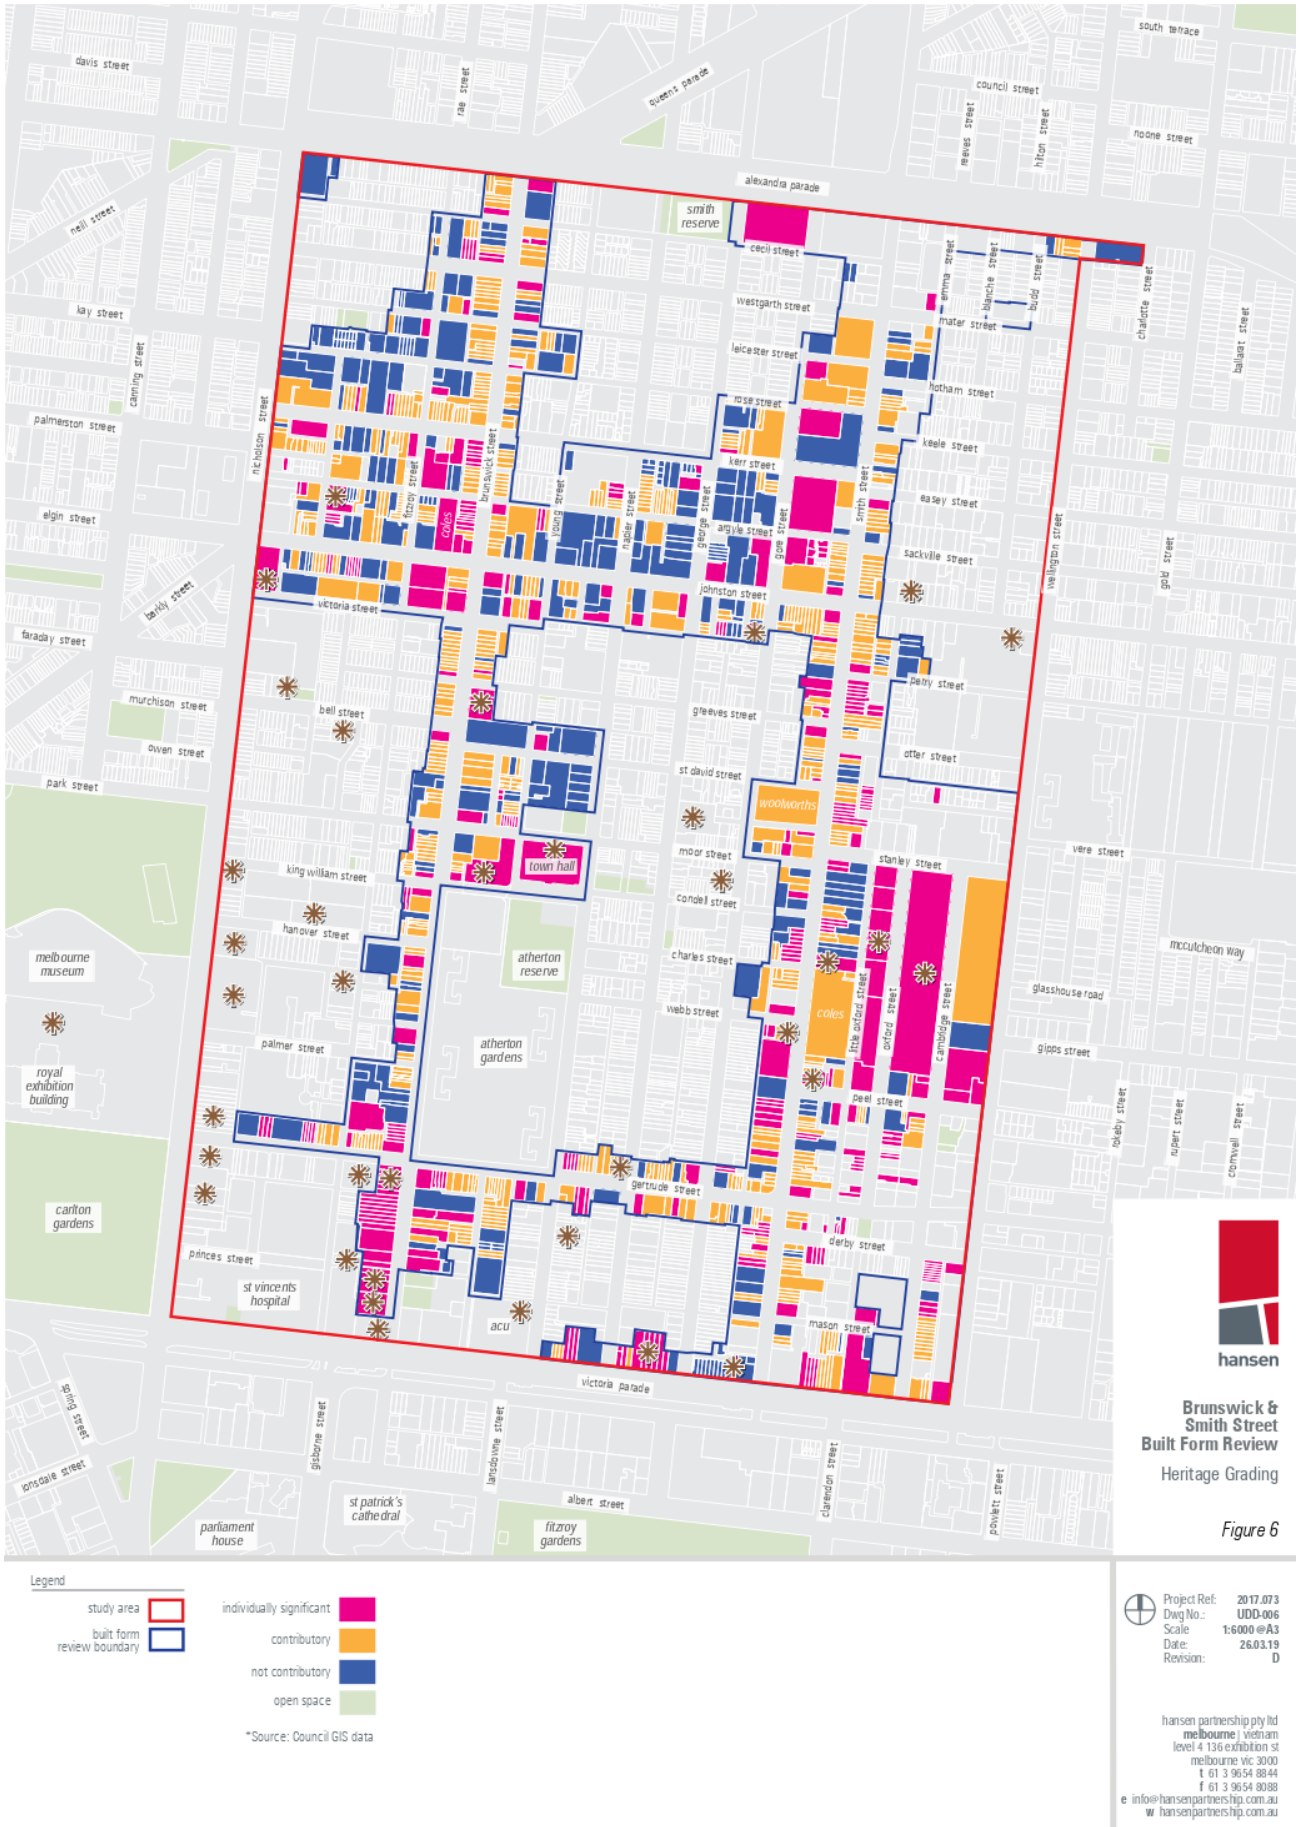
Victorian Heritage Register (VHR)

The Victorian Heritage Register lists and provides legal protection for heritage places and objects that are significant to the history and development of Victoria.

There are numerous VHR places within the built form review area. These places are legally protected and cannot be altered in any way without a permit or permit exemption from Heritage Victoria.

This permit is required in addition to any permit issued by Council.

Built Form Implications



Heritage gradings of specific sites or precincts will have implications for future proposed built form. Critical observations area:

- Heritage significance may restrict, or influence future development outcome both on heritage listed sites and adjacent land;
- Development of VHR places require Heritage Victoria approval in addition to Council approval;
- Intact heritage streetwalls and facades dominate the Major Activity Centres;
- The former manufacturing areas centred around the Foy and Gibson and Mac Robertson precincts are charactered by robust industrial buildings and 3-4 storey streetwalls;
- Landmarks and tall structures within the immediate and wider contexts influence the urban structure of linear Activity Centres and their visual relationship and protection of important view lines must be taken into consideration; and
- The requirement for new development on heritage sites to be recessive and not dominate the heritage fabric may influence the ability to achieve upper levels.

KEY FINDINGS

- Notable heritage fabric along the principle commercial spines, which forms a key feature of these streets.
- Greater capacity in the non-contributory heritage cells to the north of Johnston Street.

3.0 The Place

This chapter of the report documents the physical conditions of the study area.

3.1 Terrain and Slope

- Topographic features within the study area is highly influenced by the high point (at RL 45) and surrounding plateau located at the southern end of Brunswick Street approximate to the junction of Victoria Parade.
- This plateau then gently falls to the north along Brunswick Street to Alexandra Avenue.
- Gertrude Street is largely flat between Nicholson Street (in the west) and Napier Street, then it crests the hill before falling steeply towards to east, down to Smith Street and continues to fall down to Wellington Street.
- A ridge line extents north from Gertrude Street (located centrally between George and Gore Streets) and terminates at St Marks Church.
- The 'Collingwood slope' occurs to either side of Smith Street (between Victoria Parade and Easey Street), with land falling towards the east contributing to the character of the area.
- Land to the north of Kerr and Keele Streets is essential flat and reaches a low point of RL 21 at Alexandra Parade.

Built Form Implications

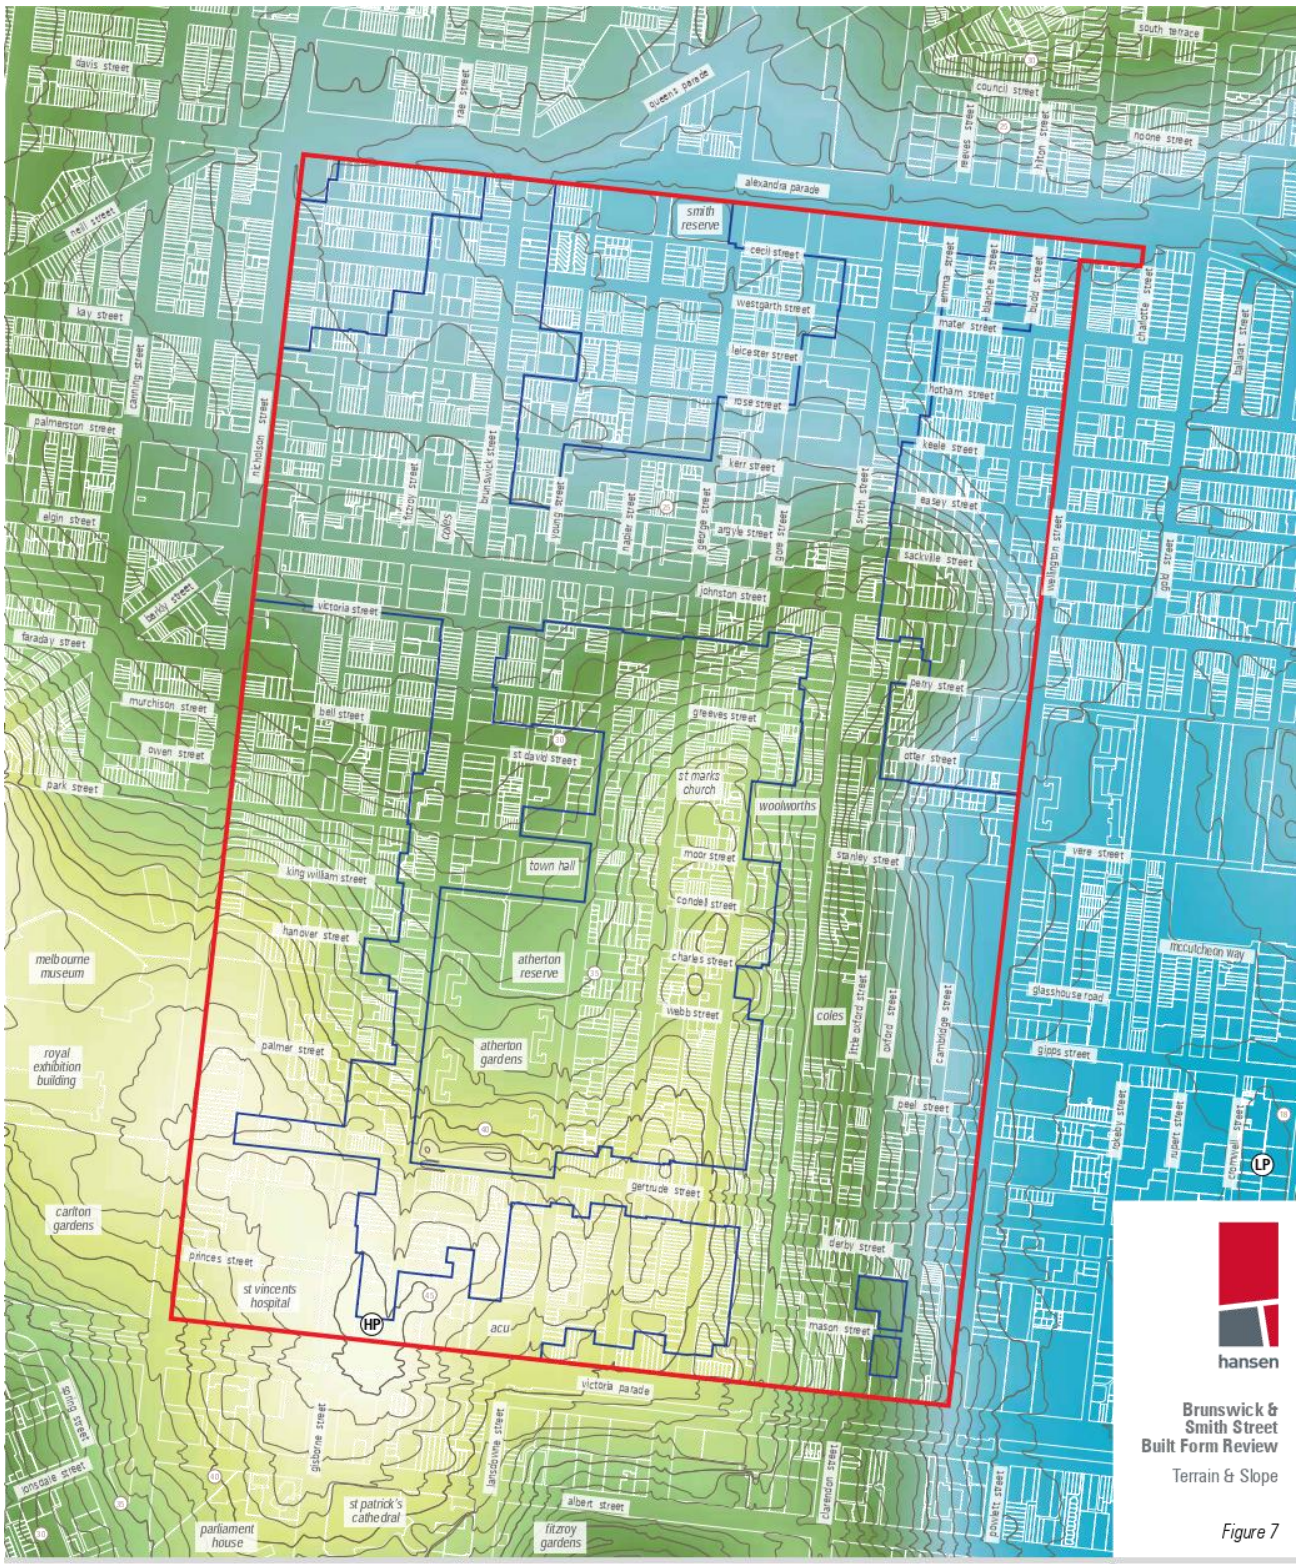
- Topography will have implications on the scale of development as future forms will have to provide suitable transition in height as land slopes.
- Topography will also impact on streetwall presentations as buildings might need to 'step' ground floors in order to respond to street level.

KEY FINDINGS

- Elevated landform to the south.
- Notable Gore-Napier street ridgeline.
- Collingwood slope to east – enables opens views to hills.
- Lower lying, flat land to the north of Johnston Street.
- Change of visual experience with changing topography.

Existing Conditions

Gentle fall along Brunswick Street to the north



Crest along Gertrude Street, with land falling away to the east

Gradual fall towards the north along Nicholson Street

Attachment 1 - Attachment 1 - Background Analysis Report

3.2 Key View Corridors and Vistas

Key view corridors along the main street spines are 'framed' by traditional streetwalls and terminated by identified landmarks of heritage significances as follows:

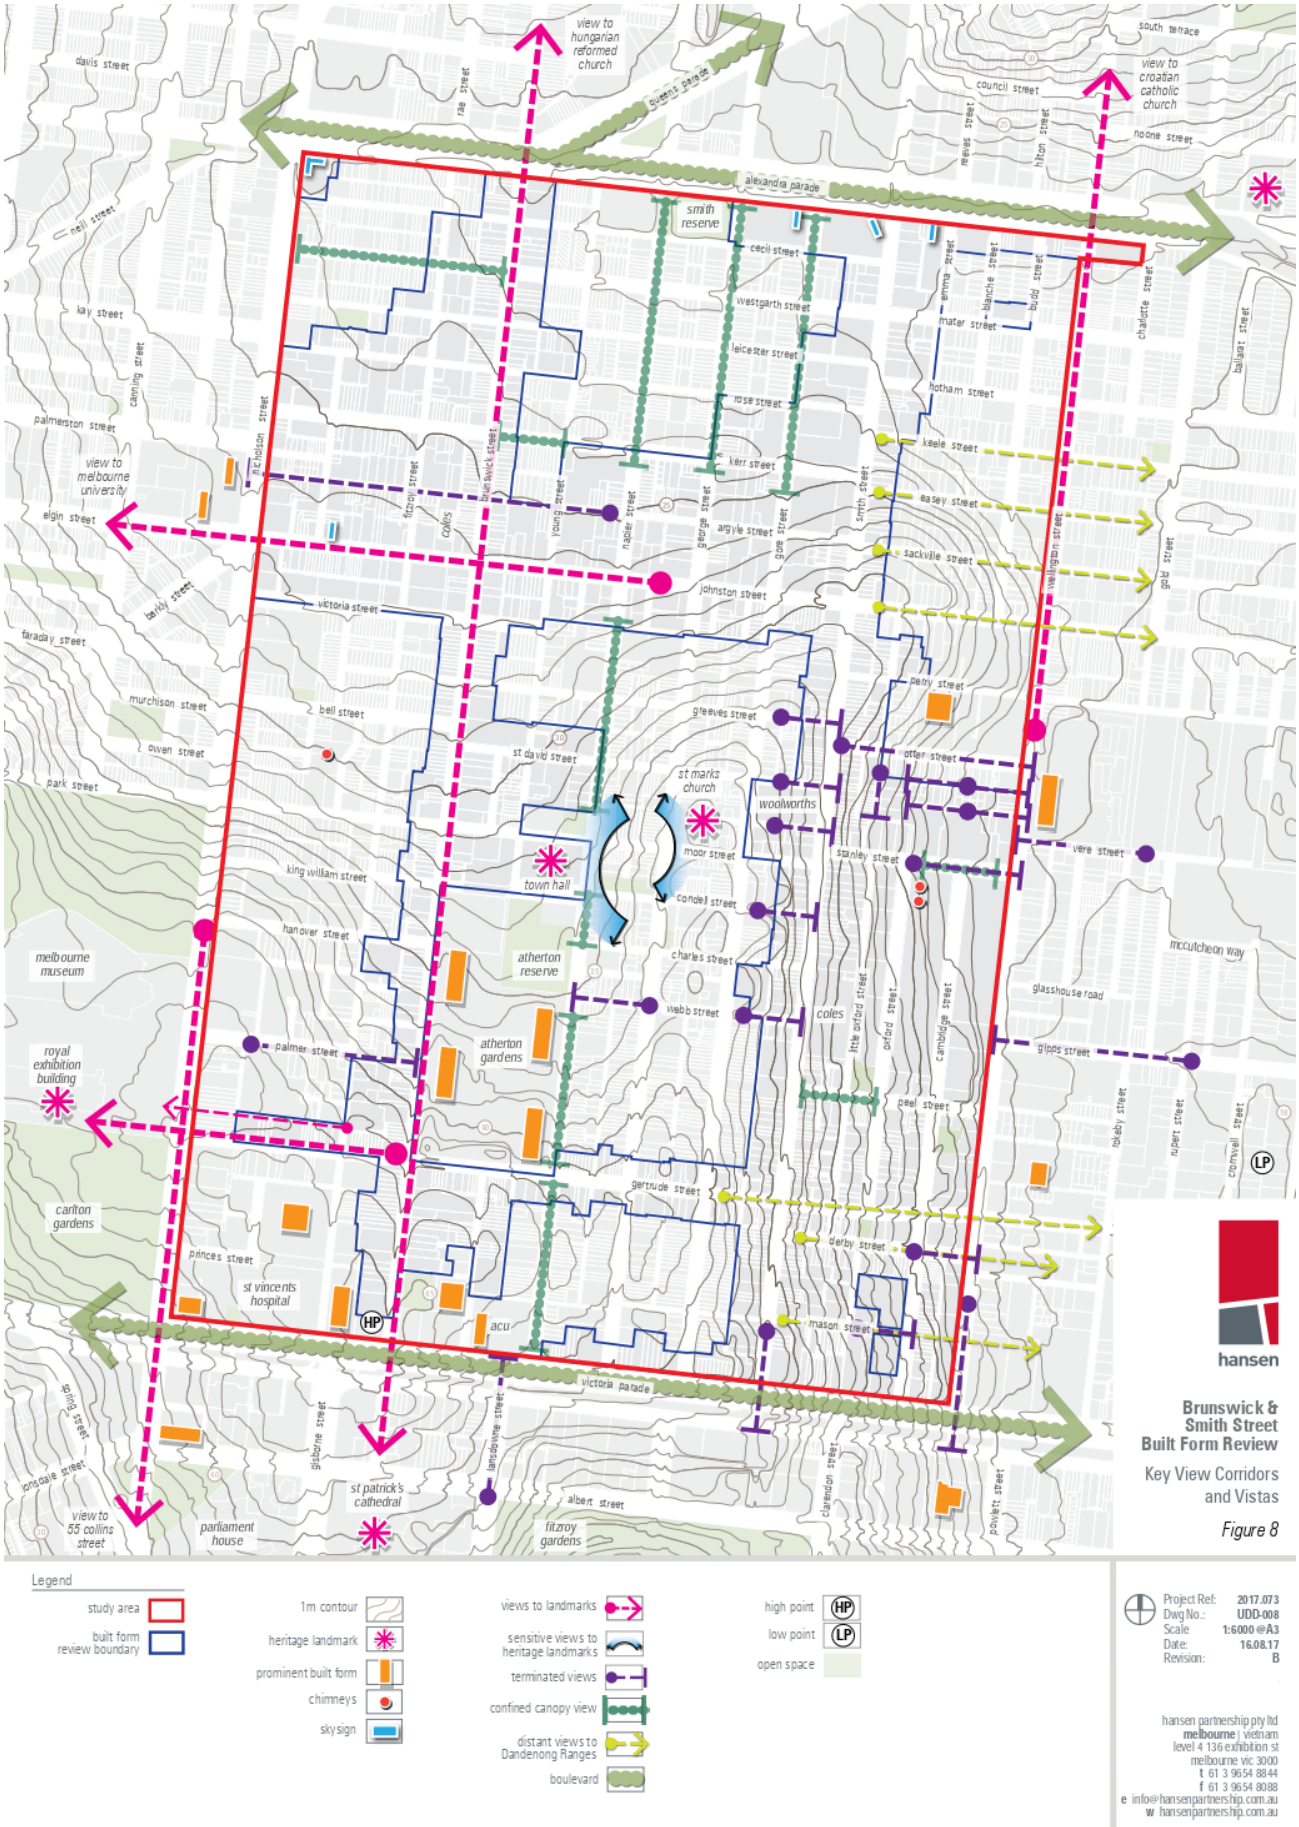
- The Brunswick Street corridors is terminated at both ends. To the south by the spine of St Patrick's Cathedral and to the north by the spine of the Hungarian Reformed Church.
- Both the Brunswick Street and Smith Street corridors are characterised by the long stretches of heritage streetscapes that are visually dominate due to a lack of street trees.
- Gertrude Street also comprises stretches of heritage streetscapes, however views to these forms a 'filtered' by the street trees.
- To the west Gertrude Street is terminated by views to the Royal Exhibition Building and Carlton Gardens.
- The Wellington Street corridor is terminated to the north by the Croatian Catholic Church spire.
- Both the Fitzroy Town Hall (on Napier Street) and the St Marks Church (on George Street) are identified as heritage landmarks and their identified primary views will need to be protected, as will primary views to other heritage landmarks as documented in the Landmarks Study.
- The Landmarks Study also identifies other primary views to nearby landmark (outside the study area) which will need to be considered as part of the built form testing.
- Terminating views occur within the review area and primarily to either side of Smith Street in response to the east-west streets which traverse the Collingwood Slope and the offset nature of the street grid pattern. Other east-west terminating views are caused by the prominent social housing 'slab' forms which are aligned in a north-south orientation.
- There are a number of instances of distant views (along east-west streets) from Smith Street across the eastern suburbs of Melbourne to the Dandenong Ranges.
- Distant views and vistas to the Dandenong Ranges (in the east) occur also due to the Collingwood Slope, the views are primarily from Smith Street, looking down east-west streets as the land falls away to the east.
- Confined views are present within a number of streets, due to their significant street tree planting, containing mature trees resulting in a strong avenue effect with canopies meeting in the middle. These streets are mostly within the residential areas and therefore outside of the review boundary.

Built Form Implications

- New development will need to be sited, massed and designed in order to avoid visual encroachment upon the identified landmarks, as seen from the primary view points, consistent with the Landmarks Study.
- Desire to retain prominence of heritage streetscapes, with development sensitively sited and massed to ensure visual primacy of streetwall profiles is maintained.

Existing Conditions

Brunswick Street, looking south towards St Patrick's Cathedral



Gertrude Street, looking west towards the Royal Exhibition Building

Nicholson Street, looking south towards the Melbourne CBD

Attachment 1 - Attachment 1 - Background Analysis Report

3.3 Built Form

Dominant Built Form

The dominant built form character predominantly consists of 2 storey Victorian and Edwardian commercial buildings which are built to the street frontage and side boundaries along the tram corridors of Brunswick, Smith and Gertrude Streets. The largely intact presence of these attached heritage forms creates strong and distinct streetscape character. These traditional shopfront forms are the define the streetwall datum of these significant retail streets, with some scattered taller and more prominent department store forms punctuating the streetscape.

To the east of Smith Street, on the Collingwood Slope, the dominant built form character is clearly defined by the Foy & Gibson complex, comprising large brick industrial buildings which create a strong and consistent streetscape character along Oxford and Cambridge Streets, to the north of Peel Street. These intact heritage streetscapes are a legacy of Collingwood's industrial past.

The northern end of Smith Street and the western end of Langridge Street are emerging as pockets of taller forms as former industrial and warehouse forms make way for new mixed use apartment developments. These new buildings generally comprise either retained heritage bases or new streetwalls to match the prevailing streetwall profile, while their rising forms are visually prominent of the skyline.

The section of Johnston Street, between Brunswick and Smith Streets is the most varied from a built of character perspective. It comprises a diverse range of building types, scale and forms.

The southern section of Brunswick Street, south of Gertrude Street, consists predominantly of grand terrace residents with small garden setbacks. These 2 storey heritage dwellings create a consistent streetscape character.

Built Form Implications

- Ensure the existing dominant built forms are respected and remain the major contributor of future built form character to maintain sense of place.
- Retaining the heritage streetwall profile and ensuring new streetswalls respect the scale and built form rhythm of the street is critical to maintaining the existing streetscape character.
- The dispersed tall buildings are not the key influence when defining the future built form character

Dominant 2 storey shopfronts along Brunswick Street

Recent development at northern end of Smith Street

Attached 2 storey heritage terraces fronting Brunswick Street

3.4 Tall and Prominent Built Form

There are a number of substantial and prominent buildings within the study area and surrounding it which have a notable visual presence on the area. These buildings are as follows:

- The four Atherton Gardens towers located within the urban block defined by Brunswick and Gertrude Streets, which rise to 21 storeys;
- The St Vincent's Hospital campus located in the south-western corner of the study area containing numerous taller buildings;
- The Australian Catholic University (ACU) campus located along Victoria Parade (between Brunswick and Napier Street) containing the Daniel Mannix and Mary Glowrey buildings;
- The NMIT building located between Perry and Otter Streets which rises to 8 storeys;
- The social housing tower located immediately outside the study area at 240 Wellington Street, which rises to 21 storeys;
- The Yorkshire Brewery development, also outside of the study area across Wellington Street, which retains the prominent heritage fabric of the former brewery, with 3 new rising forms to a maximum height of 17 storeys;
- The two social housing towers located immediately outside of the study area on the corner of Nicholson and Elgin Streets, which rise to 18 storeys;
- A further social housing tower located immediately outside of the study area, on the eastern side of Wellington Street, which rise to 21 storeys; and
- Orica House – Melbourne's first skyscraper, located to the south of the study area on the corner of Nicholson and Albert Streets.

KEY FINDINGS

- Importance of the long, grid based north-south views to traditional landmark buildings along Brunswick Street.
- Availability of easterly views from high ground, across the Collingwood slope to the Dandenong Ranges.
- There are a suite of short and intimate views that are in both the residential areas and particularly the Brunswick spine.

Signage and Billboards

There are a few prominent heritage advertising signs within the study area, as follows:

- Patersons – to either side wall of 175 Smith Street; and
- Cox Bro - to the southern side wall of 143 Brunswick Street.

There are also a few advertising 'billboards' (wall-signs) within the study area that are part of the existing character of the area, particularly at night time, as follows:

- On the side wall of 207 Wellington Street;
- At 248 Gertrude Street – wrapping open space node on corner of Gertrude and Smith Streets; and
- On side wall of 268 Nicholson Street.

Chimneys and Shot towers

There are a number of heritage chimneys which stand as a reminder of the areas industrial past. These isolated tall and slender structures form local landmarks.

- Clifton Hill Shot tower at the corner of Alexandra Parade and Copper Lane (outside study area), which is identified at Clause 22.03 as an important landmark.
- The Twin brick chimneys at 120 Oxford Street (near the corner of Stanley Street) as part of the Foy and Gibson complex,
- Brick chimney at the rear of 8 Spring Street; and
- Brick chimney at the rear of 8 Cremorne Street.

Built Form Implications

- Need to retain views to these chimneys and heritage signage as much as possible to help keep recognition of the area's historical landmarks and icons.

Prominent Patersons store and signage along Smith Street

3.5 Existing Building Heights

The study area is generally characterised by low-rise traditional built form of 1-3 storeys (predominantly 2 storey buildings), with taller form located on larger former manufacturing sites clustered around the former Foy & Gibson and MacRobertson precincts. The main street corridors a dominated by 2 storey Victorian and Edwardian commercial buildings, which are built to the street edge and side boundaries, creating strong streetscape definition.

The built form anomalies of the Atherton Garden towers and institutions such as St Vincent's Hospital, the Australian Catholic College (ACU) and NMIT represent the most prominent built forms, within the study area. While these large buildings do fall outside of the review area, their presence does influence the identity of the area given their visual prominence and function.

As a general pattern there is a strong correlation between lot size and building height, whereby the larger the land size the taller the building. Similarly, taller buildings are also generally located on wider lots, with the finer grain parcelled typically 'capped' at 2 storeys.

Development interest around the Collingwood Slope has the capacity for change given lack of sensitive interfaces, existing robust built form, broad streets and relatively limited heritage sensitivity. This is evidence in the numerous recent and proposed mixed use/residential developments to the east of Smith Street, and supported by the increased provision of public open space in this area.

Built Form Implications

Understanding the existing built form fabric (pattern) provides an indication for future built form as such built form will need to respond to its context.

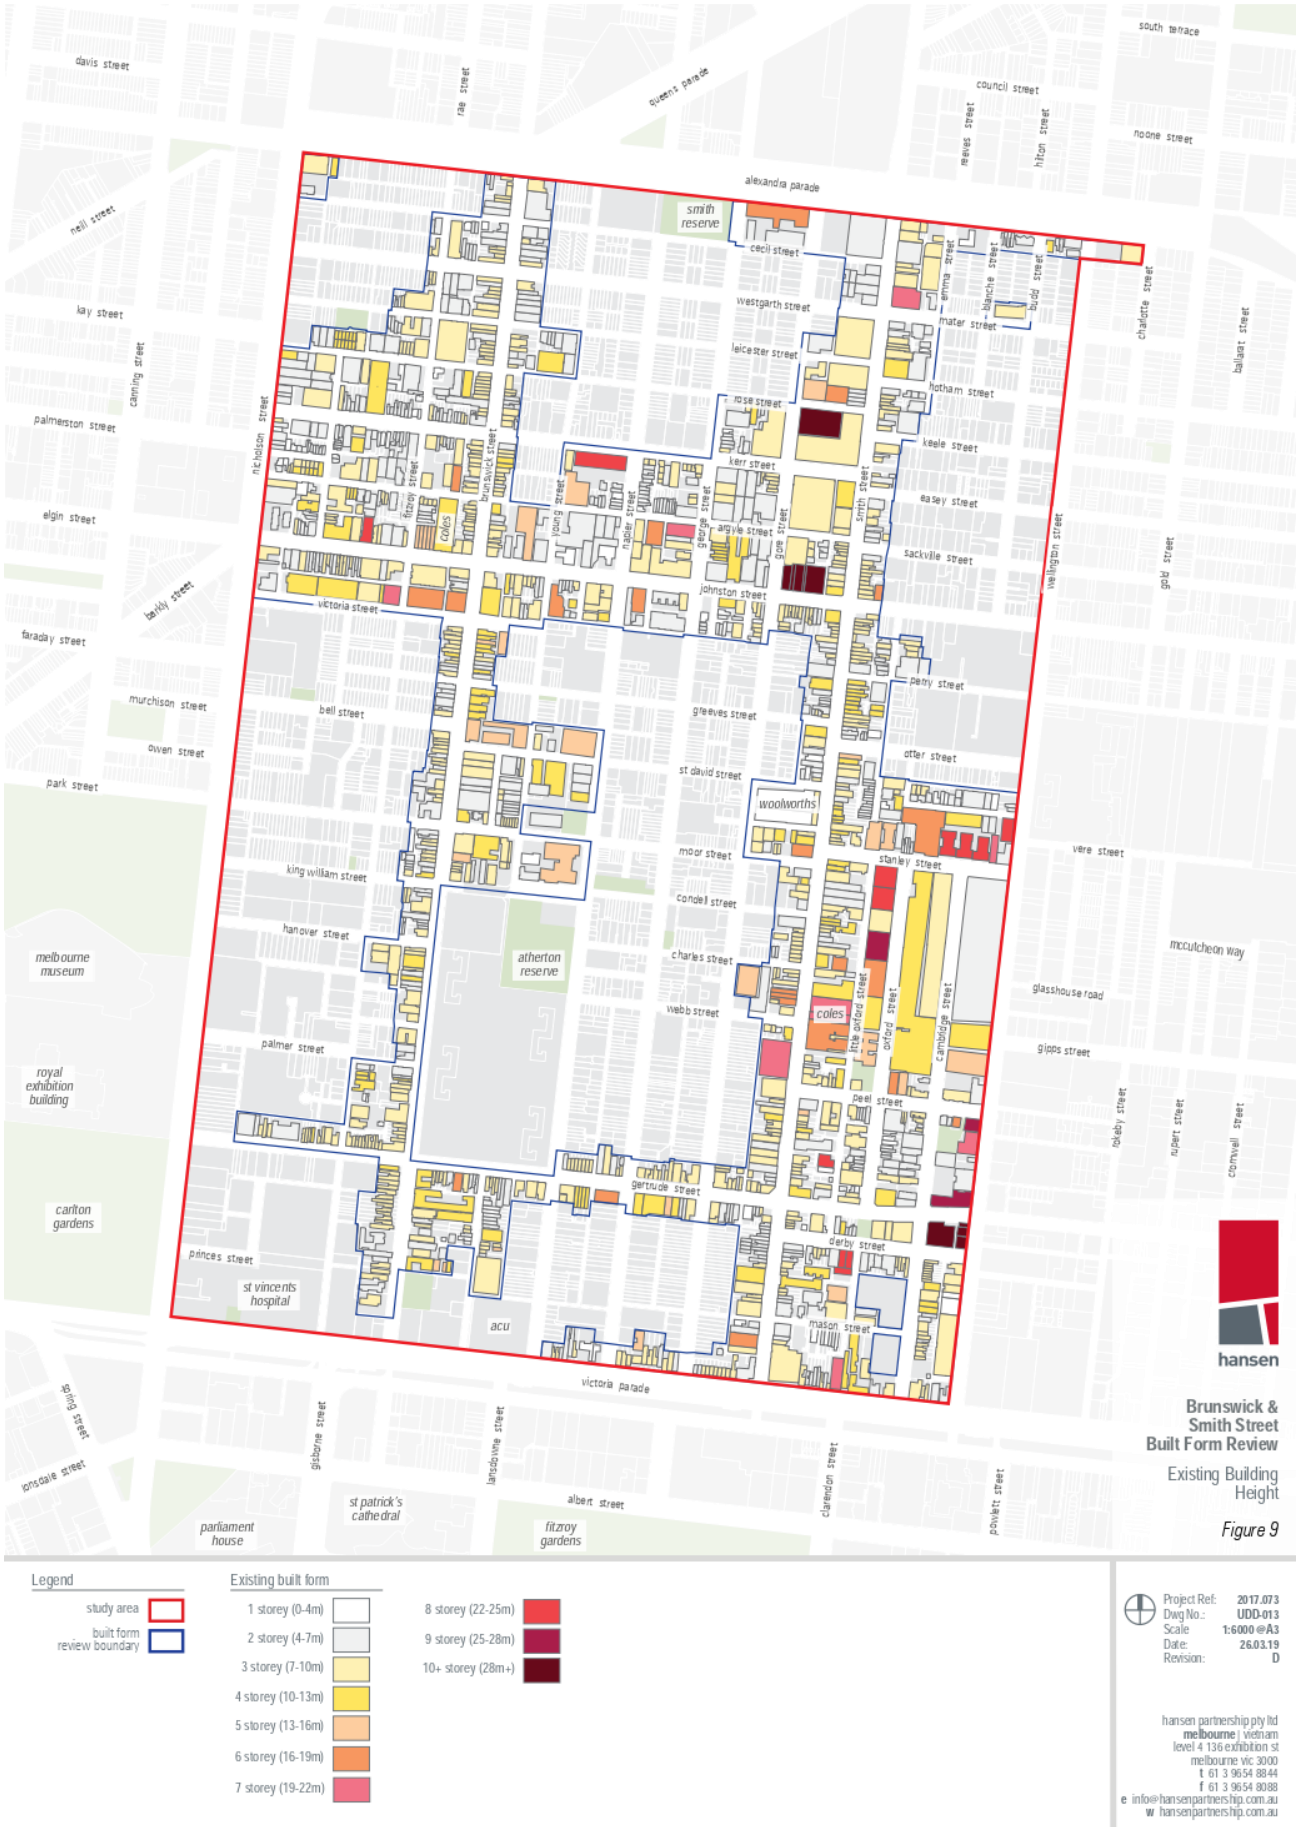
Future redevelopment of fine grained heritage shopfronts with upper level residential or office additions may be feasible, provided rear laneway access is available for vehicular access.

Fine grain residential areas will see minimal change in building heights.

KEY FINDINGS

- Predominately low-rise 1-3 storey forms.
- New mixed use infill of a higher scale (7 and 8 storey) to the east.
- Taller traditional building stock, larger format factories / warehouses to the west.
- Large areas of consistent intact traditional commercial street frontages along spines.

Former Foy and Gibson buildings in Oxford Street



Atherton Garden's towers as viewed from Gertrude Street (outside Review Area)

ACU as viewed from Brunswick Street (outside Review Area)

Attachment 1 - Attachment 1 - Background Analysis Report

3.6 Development Approvals

Increasing development pressure has occurred within the study area. Recent applications have tended to occur within the MUZ precincts demonstrate a trend to more intense and taller developments due to a lack of heritage fabric and less sensitive interfaces.

These developments have significantly transformed the built form character of these mixed use pockets from low-rise warehouses forms to mixed use and largely residential forms of generally between 6 to 10 storeys.

There has been considerably less recent development occurring along the 'traditional' retail corridors, this is largely a combination of smaller and finer grain land parcels as well as heritage considerations. In addition, some section of these corridors abut sensitive residential interfaces which restricts the development potential to the rear of the retail corridors. However, as the development opportunities within the MUZ areas are realised, it is anticipated that the development industry's focus will shift to these activity spines.

Along Victoria Parade, both St Vincent's Hospital and ACU, which already comprise larger and prominent institutional forms and in the midst of significant redevelopment and expansion of their operations. While, largely located immediately outside of the review area (and therefore beyond the influence of this project) their recent approvals for high-rise forms will transform the western end of Victoria Parade.

The northern end of Smith Street is another development 'hot spot', where the existence of larger sites has aided the realisation of some taller forms. The emerging built form character of these new developments comprises a street wall height that broadly accords with the 2 storey traditional forms with upper levels setback, to be recessive.

Overall there is a strong pattern and clear preference for development on larger sites, which are also located predominately within the mixed use areas due to their industrial past. As the availability of these larger sites diminishes, land consolidation will become more prevalent in order to accommodate larger developments.

KEY FINDINGS

- Strong pattern of development occurring on larger sites
- More development pressure in mixed use areas
- Clear correlation between site size and development height

'Oxley Apartments' on Stanley Street, Collingwood

'Milieu' at 108 Peel Street, Collingwood

Attachment 1 - Attachment 1 - Background Analysis Report

3.7 Public Realm and Open Space

The study area lacks sufficient open space provision. While its proximity to significant parks within the City of Melbourne to some degree offsets this green space provision it is considered that addition open space and enhanced public realm is required to complement the increased local population and anticipated future growth.

There are a number of existing open spaces are identified within and around the study area and the protection of these key open spaces is critical in shaping future urban form.

Given the general lack of open space, the importance of the footpaths along the retail spines is heightened. This is reinforced by the more recent provision of public space nodes at corner locations along both Brunswick and Smith Streets which provide important spaces for pedestrians to pause and rest. These spaces are typically extensions to the footpath and provide small urban spaces, incorporating bespoke streetscape furniture.

Existing canopy vegetation within the residential streetscapes also offer high amenity and contribute significantly to the leafy green character of these desirable Fitzroy streets.

Existing canopy vegetation within the surrounding arterial roads and central median also offer high amenity and contribute substantially to the landscape character of the area. As a significant streetscale feature such boulevard trees should be acknowledged and protected. These include the central medians of Alexandra Parade (between Nicholson Street and Gold Street) and Victoria Parade (between Nicholson and Hoddle Street).

Built Form Implications

- Need to ensure that future developments do not compromise the amenity of existing public open spaces and public space nodes by avoiding additional overshadowing of these spaces.
- Consider the design of developments abutting existing public open spaces to ensure appropriate visual interaction and provision of passive surveillance.

KEY FINDINGS

- Lack of principal public open space provision.
- The sensitive NRZ areas have generous canopy tree cover.
- Pedestrian concentrations are aligned with key land use functions.
- Lack of street trees along commercial spines and in some MUZ streets.

Oxford Street Reserve

Pause place at corner of Brunwick and Westgarth Streets

Attachment 1 - Attachment 1 - Background Analysis Report

3.8 Subdivision Pattern

Predominately the subdivision pattern reflects the area's initial era of development, which dates from the 1839.

The study area comprises of varied allotment sizes which facilitate development of diverse building types and land uses. The subdivision pattern typically has a robust and permeable street grid pattern, arranged into regular urban blocks with provision of rear lanes (for nightcart access).

The exception to this pattern is on the Collingwood Slope, where large lots prevail (due to the areas manufacturing past) and in the south-west corner (of the study area) where the St Vincent's Hospital and ACU campus has over time eroded the original finer grain subdivision. The other obvious exception is the Atherton Garden precinct, where a regime of 'slum clearance' during the 1970s completely removed the original subdivision and created a 'super block'.

Lot Sizes

Within the Review Area, the majority of lots size are less than 600m2 in size. These fine grain lots are generally located along either the main street spines or within residential side streets. Larger lots 601m2 to 1,200m2 are distributed throughout the Review Area, with distinct clusters within the mixed use areas, along Johnston Street and to either end of Smith Street. These more moderate grain lots often occupy corner positions. There area approximately 70 lots greater than 1,200m2 in size. These lots typically reflect their industrial, department store or civic history.

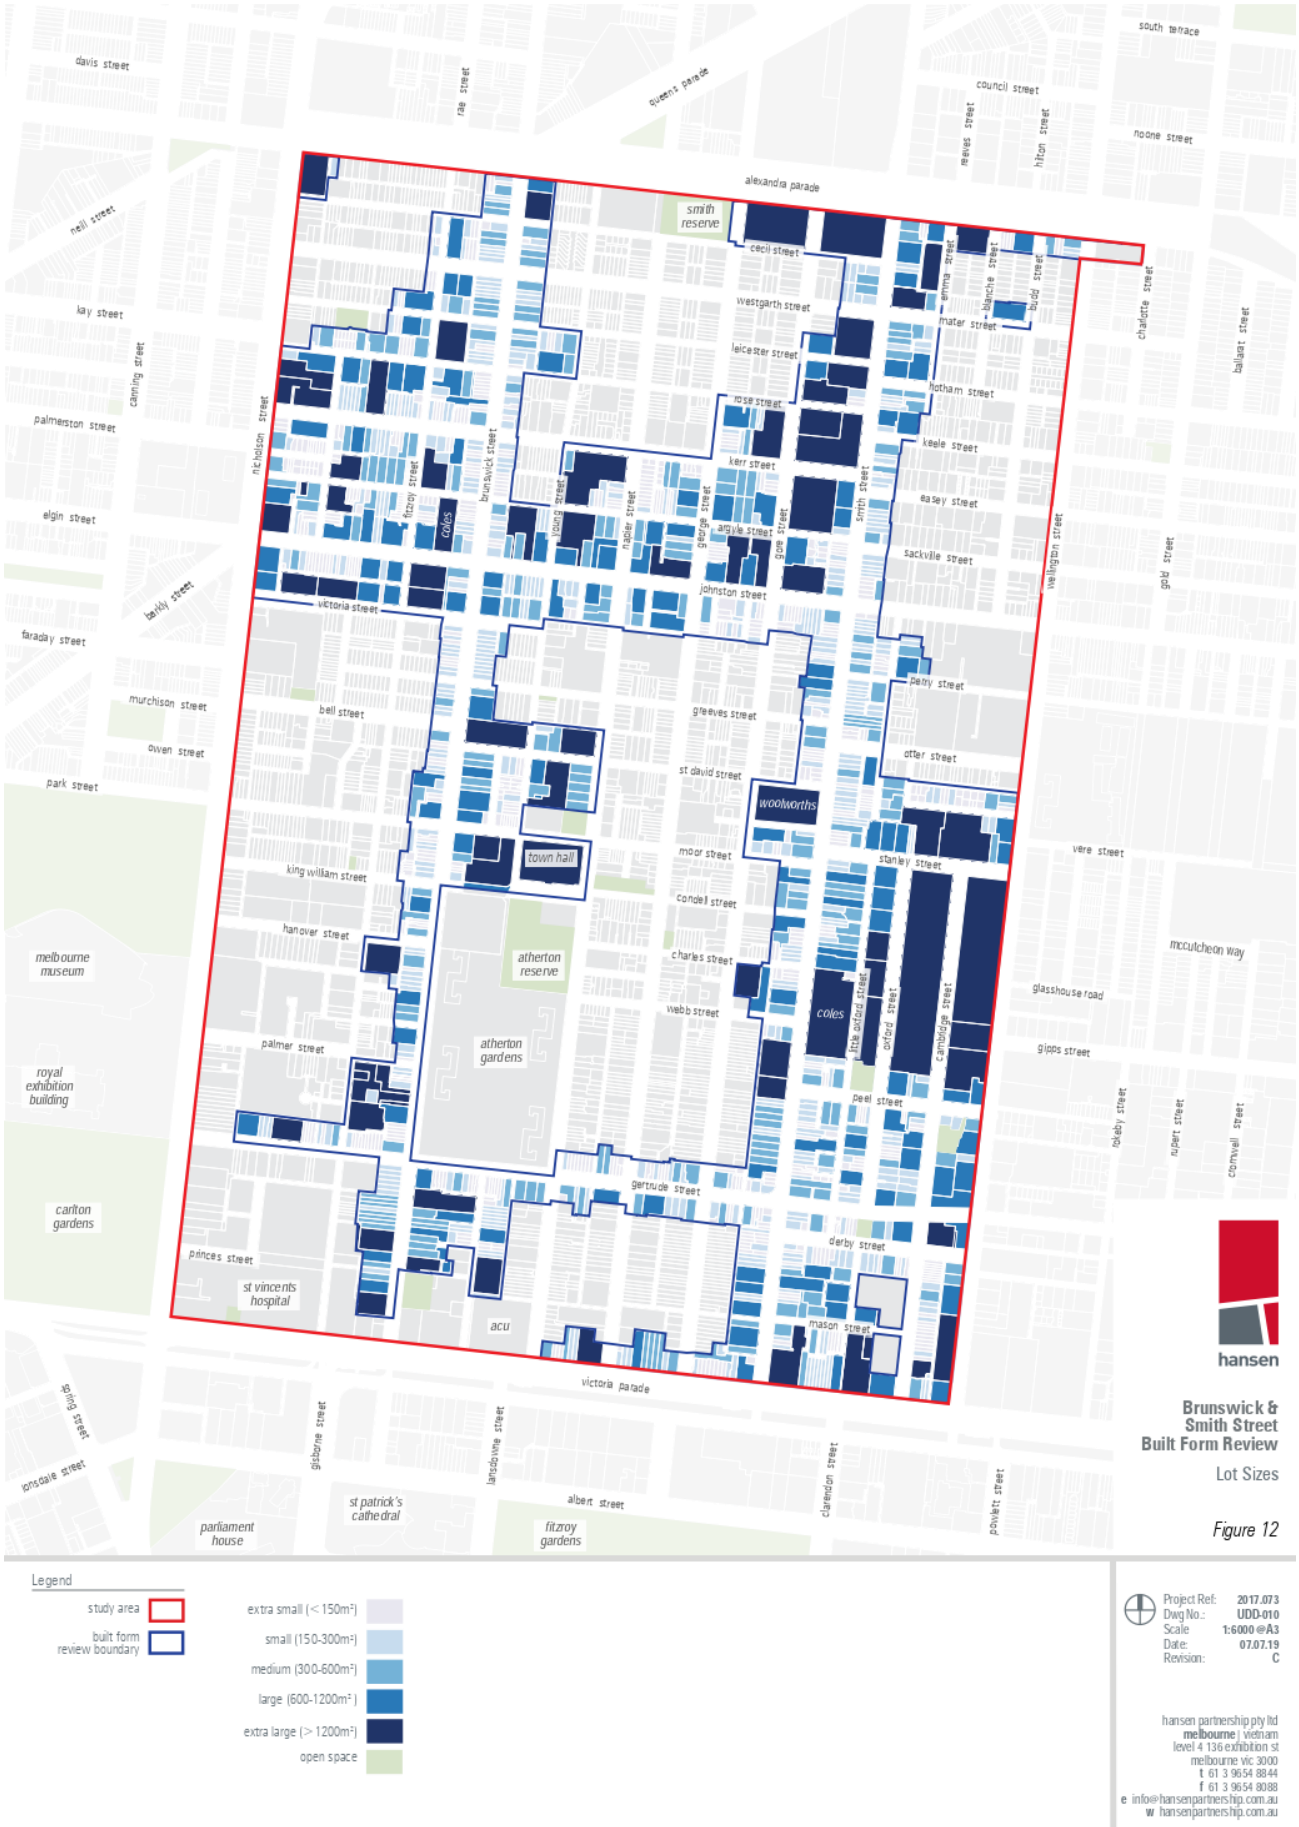
Built Form Implications

- Smaller and often narrower lot dimensions often correlate to a fine grain streetscape presentation.
- Larger lots can more readily accommodate vehicle access and storage associated with apartment development.
- Variety of lot sizes in mixed use pockets could create diversity in future character.
- Consolidation of lots could lead to the creation of broader facades, eroding the prevailing fine grain streetscape rhythm.

KEY FINDINGS

- Proliferation of larger lot sizes in MUZ pockets.
- Intricate fine grain spines.
- Diverse pattern along Johnson Street

Small lot at 15 Johnston Street



Medium lot at 107 Johnston Street

Large lot at 95 Victoria Street

Attachment 1 - Attachment 1 - Background Analysis Report

Frontage Width

Predominately, the 'traditional' retail corridors comprise a finer grain subdivision pattern of frontage widths less than 12m. These properties generally accommodate traditional shop front buildings with a shop presenting to the street and dwelling above. However, and particularly along Smith Street, this finer grain rhythm is interspersed with broad, 'extra large' frontages which are a legacy of the street's early role as Melbourne's prime retail strip centred around the Foy & Gibson departments stores. Also, to the north of Johnston Street, Smith Street has a generally larger grain. This is clear evidence of this section of the street's industrial past with the MacRobertson factory buildings still a prominent component of local character.

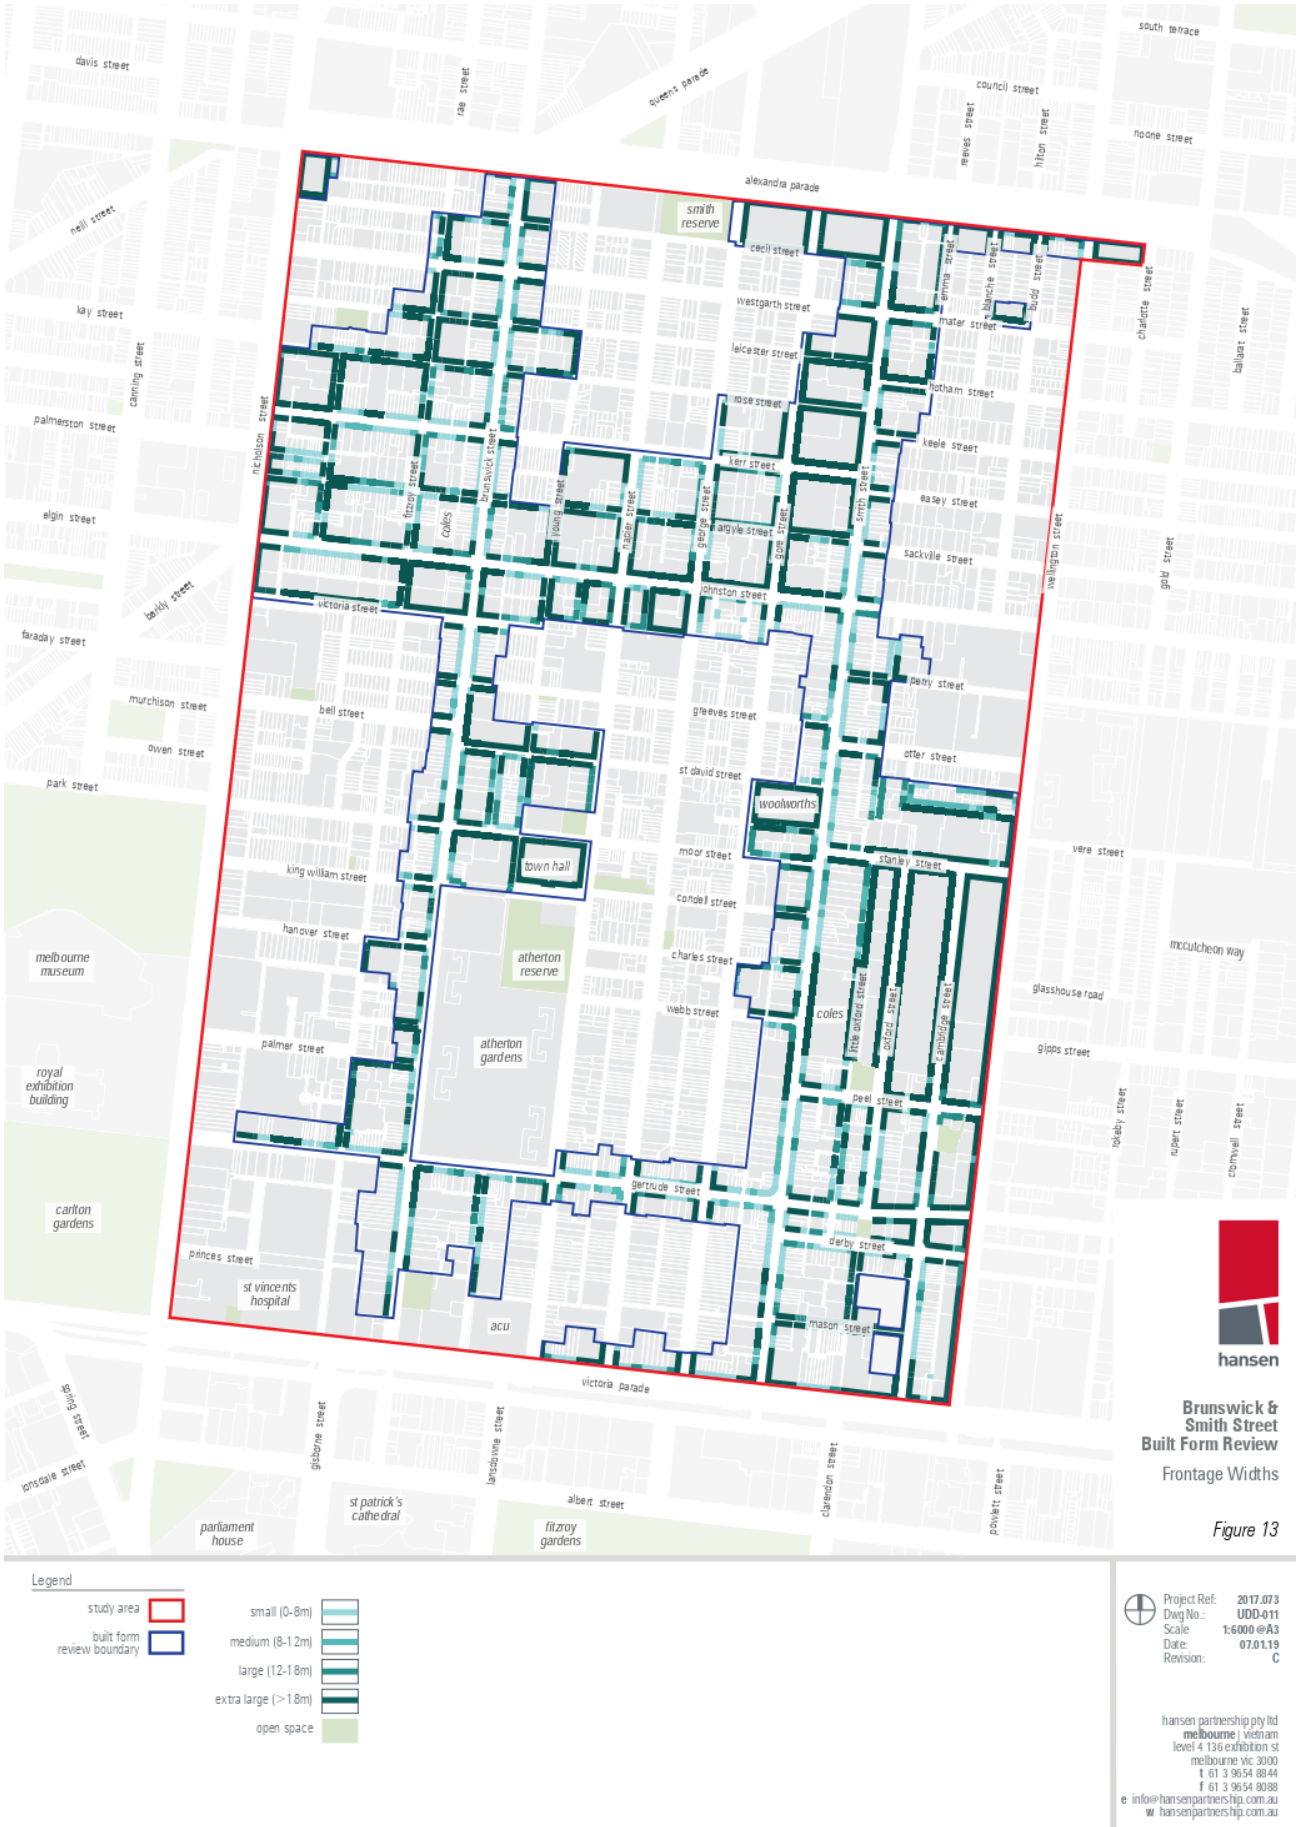
Brunswick, Smith and Gertrude Streets are dominated by smaller lot widths, contributing to a fine grain streetscape rhythm.

The mixed use areas comprise a diversity of lot widths, with no regular pattern of grain or streetscape rhythm clearly evidence. Given, the mix of frontage widths these areas overall present a moderate grain, comprising both heritage dwellings and industrial warehouses side by side.

The former industrial areas are clearly evident, the large factories often consolidated land and dissolved the original subdivision pattern. The former Foy & Gibson and MacRobertson factory complexes resulted in entire urban blocks being consolidated.

Built Form Implications

- Fine grain rhythm is major contributor to the overall streetscape character, particularly along Brunswick, Smith and Gertrude Streets and will need to be retained.
- Larger lot frontages need to ensure articulation and modulation to appropriately 'break up' form to reflect prevailing character.
- Fine grain subdivision pattern within the Brunswick and Smith Street Activity Centres is representative of the special character that defines these heritage commercial strips and must be protected and enhanced.
- Small and narrow lots, particularly along the commercial strips will limit development potential for single sites. Therefore, lot consolidation might be needed in order to redevelop. Maximising ground level activation and ground level presentation to establish an inviting and high amenity urban environment while retaining the heritage fabric is a key influence in shaping the future urban form along Brunswick, Smith and Gertrude Streets.



KEY FINDINGS

- Fine grain pattern along principal spines.
- Moderate grain in MUZ pockets.
- Broader frontages found in 'back blocks'- former industrial areas.

Extra large frontage width at 152-160 Smith Street

Attachment 1 - Attachment 1 - Background Analysis Report

Lot Depth

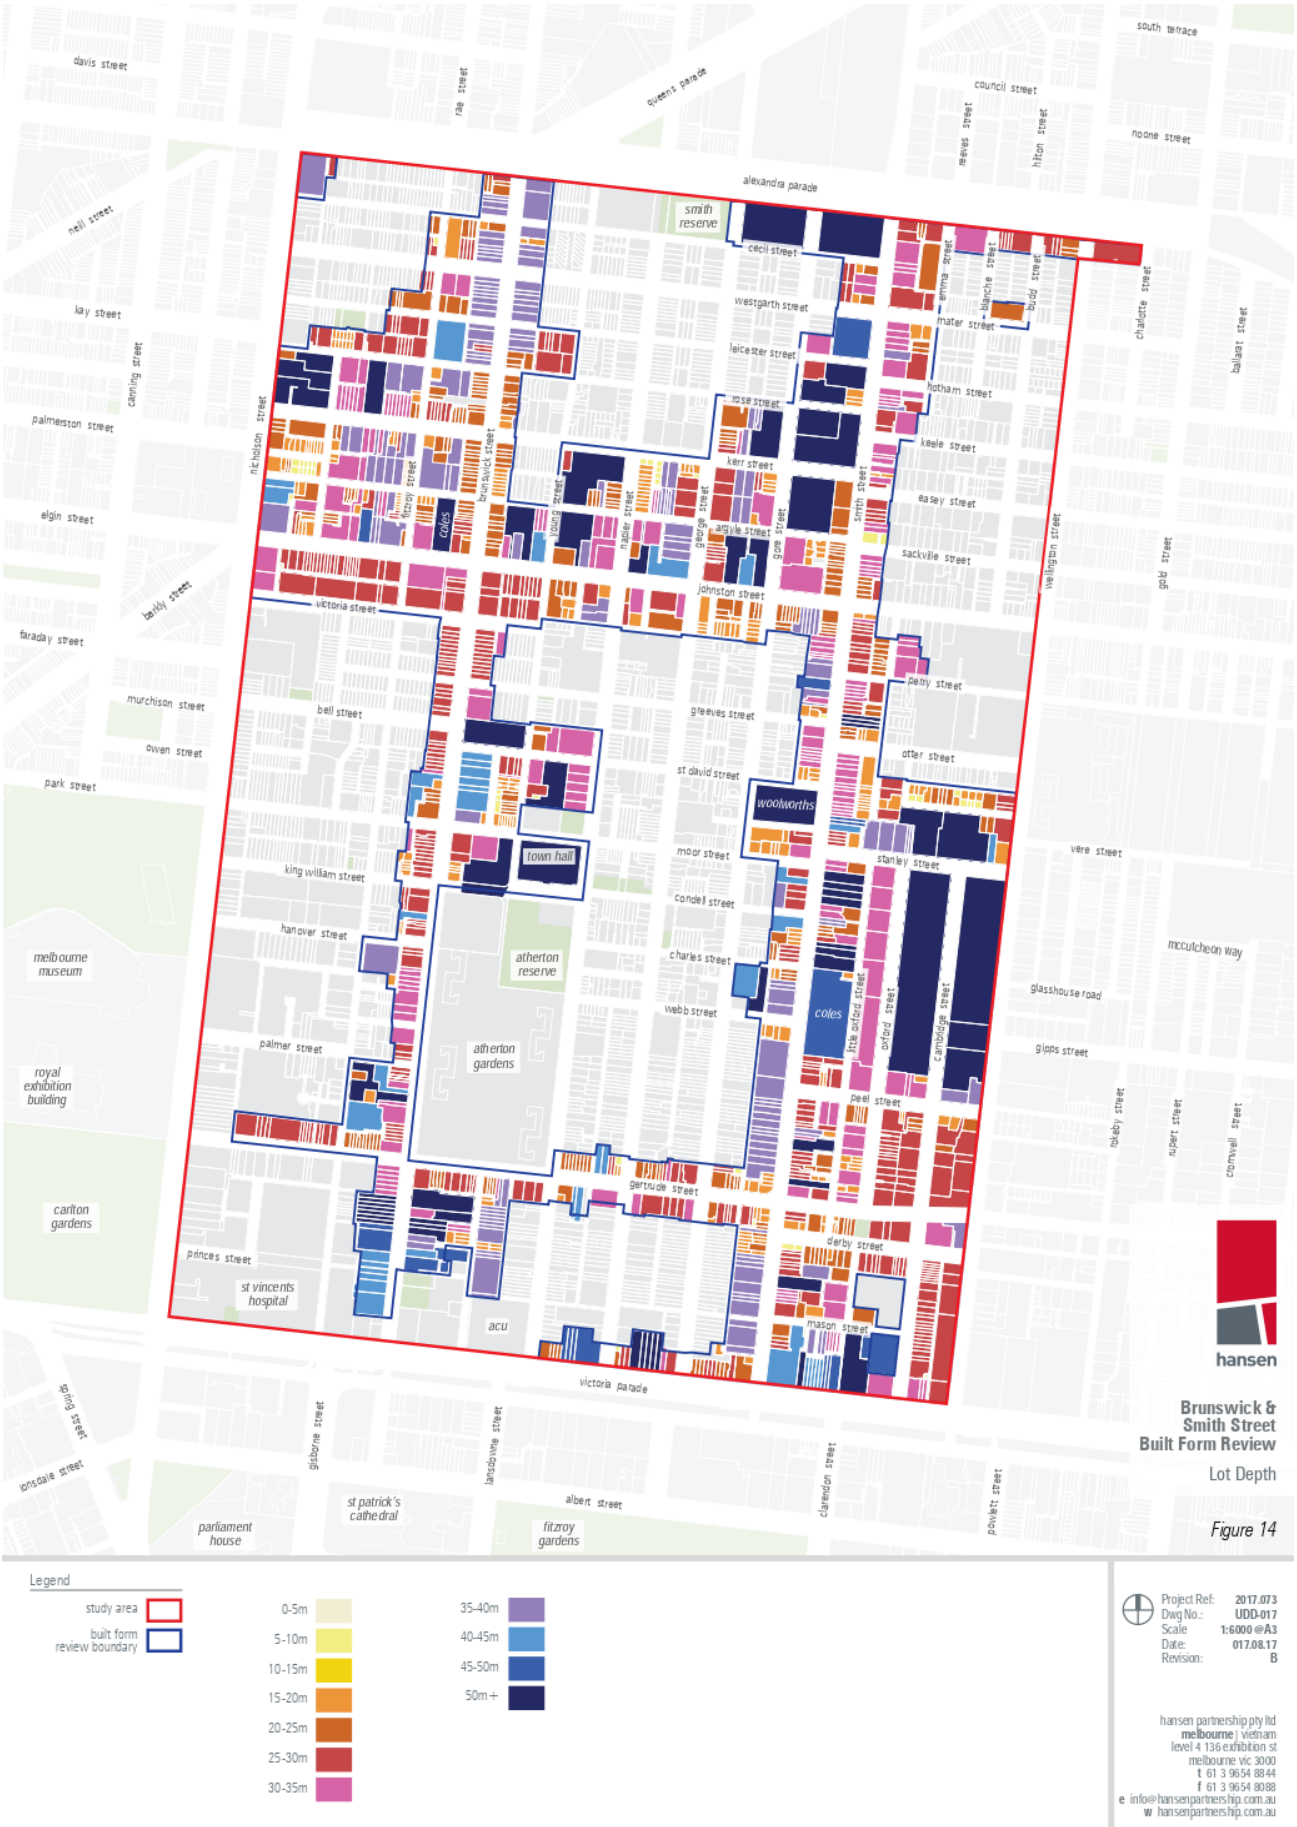
The lot depths vary greatly across the study area. However, the analysis revealed that the majortiy of lot depths are between 20m and 30m. Given the regular grid pattern of the subdivision lot depths are generally consistent within each urban block. There are some scattered areas of shallow (less than 10m deep lots) which relate to either more recent subdivision activities, creating smaller units developments or the provision of sub-stations.

Otherwise, the deepest lots (50m+) correlate with the manufacturing past of the area and signify both the Foy & Gibson and MacRobertson's factory complexes.

Built Form Implication

- Deeper lots are often more able to accommodate changing built form as the off-site impacts can be minimised and managed. These lots are predominantly located in the MUZ pockets and generally clustered around the Collingwood Slope or Kerr Street precinct.
- Deeper lots may need guidance in relation to building separation to minimise amenity impacts within developments.
- Site with rear access for vehicles are more desirable.
- Development on deeper lots may need guidance to ensure it does not overwhelm smaller lots and undermine the character of the area.
- Shallow lots need to take sensitive interfaces more strongly into consideration to avoid awkward rear boundary transitions.

20-25m deep lots on south side of 152 Johnston Street



35-40m deep lot on western side of Smith Street

KEY FINDINGS

- Majority of depths between 20m and 30m.
- Isolated pockets of shallow lots to rear of main spines.
- Deeper lots reflect industrial past.

Attachment 1 - Attachment 1 - Background Analysis Report

3.9 Land Use

The study area contains a diverse land use mix which reflects its varied allotment pattern. The four main street spines (of Brunswick, Smith, Gertrude and Johnston Streets) are evident by their predominantly commercial/retail/office land use designation. Scattered across the study area and often on corner lots are pubs/taverns, with a clear concentration along Brunswick Street (north of Johnston Street).

The built form review area comprises a large network of activities and incorporates two Major Activity Centres (MACs) of Brunswick Street and Smith Street, as well as one Neighbourhood Activity Centre (NAC) being Gertrude Street. These different linear active streets perform different 'roles' from a land use perspective. Brunswick Street has a high proportion of restaurants, cafes, and licensed venues evidence of its nightlife. Smith Street has a high proportion of retail shops, anchored by two full line supermarkets and link to the streets history as the City's prime shopping strip. In many ways, Gertude Street is a continuation of Smith Street, with retail and cafe uses prevailing and following the tram provision. Johnston Street is more mixed, comprising a bit of everything with showrooms and offices being the predominant use.

There are three emerging mixed use precincts where contrasting uses from warehouse/factory sit next to more recent mixed use and apartment developments. Generally these developments occupy the larger allotments, demonstrating that the 'lowest hanging fruit' is being capitalised on first.

Within the mixed use areas there are also pockets and isolated residential dwellings scattered amongst the warehouse forms and recent developments.

Otherwise, there is a concentration of civic and community activities which cluster around the edges of the Atherton Gardens estate.

Built Form Implications

- Land uses contribute to role and function of a place, eventually influencing social/pedestrian experience, character and identity.
- Land use has implications on the layout, access and servicing requirements.

KEY FINDINGS

- 3 Emerging mixed use 3 pockets.
- Concentration of civic and community activities in and around Atherton Gardens.
- Unknown upper levels uses within traditional commercial buildings.

3.10 Streetwall Heights

Streetwall presentation is a major contributor to the established character and identity of these streets. It provides the spatial definition of these corridors that defines them and reinforces the continuous and linear nature of the street edge.

The traditional retail corridors of Brunswick, Smith and Gertrude Streets and the section of Johnston Street (west of Brunswick Street) comprise predominately consistent streetscapes, primarily due to their 2 storey (traditional) heritage streetwalls and zero setbacks.

Smith Street's streetwalls do slightly vary in parts (south of Stanley Street) due to the legacy of the original department store forms and (to the north of Kerr Street) where industrial uses and factories evolved.

In order to maintain the prevailing streetwalls heights along these consistent streetscapes, to date newer forms often incorporate a 'contemporary' 3 storey streetwall in order to match the height of the 'traditional' 2 storey form.

Within the mixed use areas and the section of Johnston Street, between Brunswick and Smith Streets, the streetwalls a more varied in height (and setbacks) which results in a more mixed built form character. This diversity in built form defines these sections of their respective streets and differentiates them from the more consistent stretches.

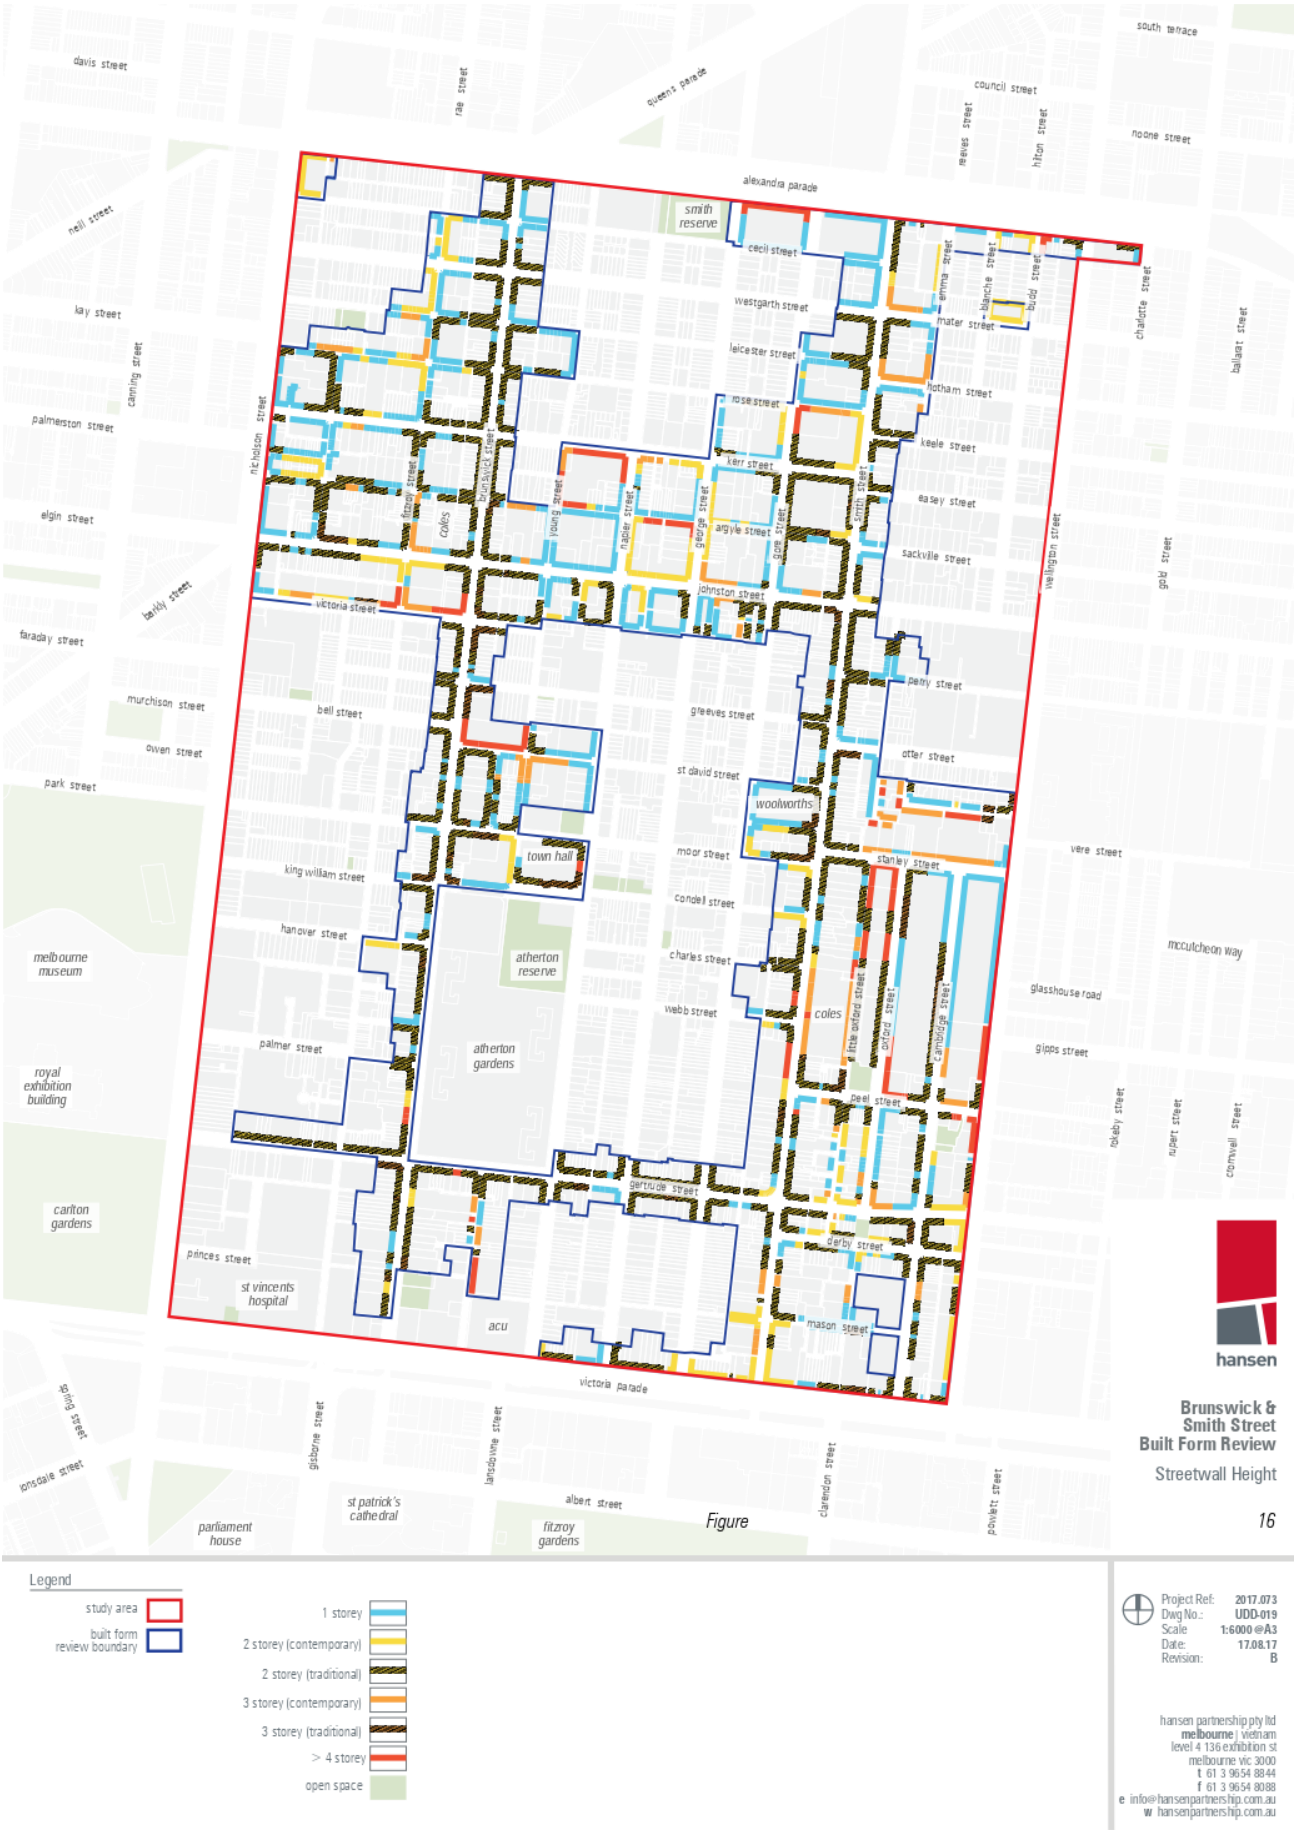
The areas which contain the higher and more 'robust' streetwall presentations are predominately as a result of former industrial uses, where either the heritage factory streetwalls retain or have been replaced by new streetwalls (around 4 storeys) in height. This is particularly strong along the streetscapes of Oxford and Cambridge Streets as a result of the Foy & Gibson complex.

Built Form Implications

- Streetwall definition highly contributes in defining the streetscape character and pedestrian experience.
- Heritage streetwalls need to be retained and future developments need to be recessed to retain dominant streetscape character and three dimensional form as viewed from the public realm to avoid 'facadism'.
- New streetwalls need to respect and not dominate neighbouring
- heritage context
- Significantly influences the overall height of new development to ensure it does not visually dominate the existing streetwall character when viewed from opposite side of the street.

Existing Conditions

2 Storey traditional streetwalls along Brunswick Street



Varied streetwall presenation along Smith Street - south of Stanley Street

KEY FINDINGS

- Predominantly consistent 2 Storey streetwall to retail strips
- Sections of higher streetwall to reflect robust factory forms
- More varied streetwall to Smith Street - south of Stanley Street

3.11 Access and Movement

The study area is bounded by arterial roads to three sides with Nicholson Street (to the west) and Alexandra and Victoria Parades (to the north and south). Johnston Street is the only other VicRoads road within the study area, however it is classified as a main road – not an arterial.

Both Alexandra and Victoria Parades have a generous road reservation width of 60m or greater and present boulevard treatments comprising wide central medians and significant avenue planting. Victoria Parade also accommodates tramlines within the central median.

Tram services

The study area is well served by public transport primarily in the form of trams which run along:

- Victoria Parade (routes 12 and 109);
- Nicholson Street (routes 86, 95 and 96);
- Gertrude Street (route 86);
- Brunswick Street (route 11 and 112); and
- Smith Street (route 86).

These tram routes enable direct connections to Brunswick, Box Hill, Bundoora, Docklands, Melbourne CBD, Port Melbourne, St Kilda, and Victoria Gardens.

Bus services

The following bus routes operate along:

- Victoria Parade 302, 303, 305, 309 313, 315, 318, 340, 684, and 905-908;
- Johnston Street 200, 201, 203, 205 and 207; and
- Alexandra Parade 546.

Principle Bicycle Network

The suburbs of Fitzroy and Collingwood enjoy excellent cycle provision (on paper) with the Principle Bicycle Network is located:

- along Brunswick Street;
- along Napier Street;
- along Wellington Road;
- along Alexandra Parade;
- along Johnston Street;
- along Gertrude Street; and
- along Victoria Parade.

However, cyclists have space along these streets with all other road users and it is generally considered to not be a safe environment for cyclists. Wellington Street comprises the only on-street (Copenhangen style) cycles lane within the study area.

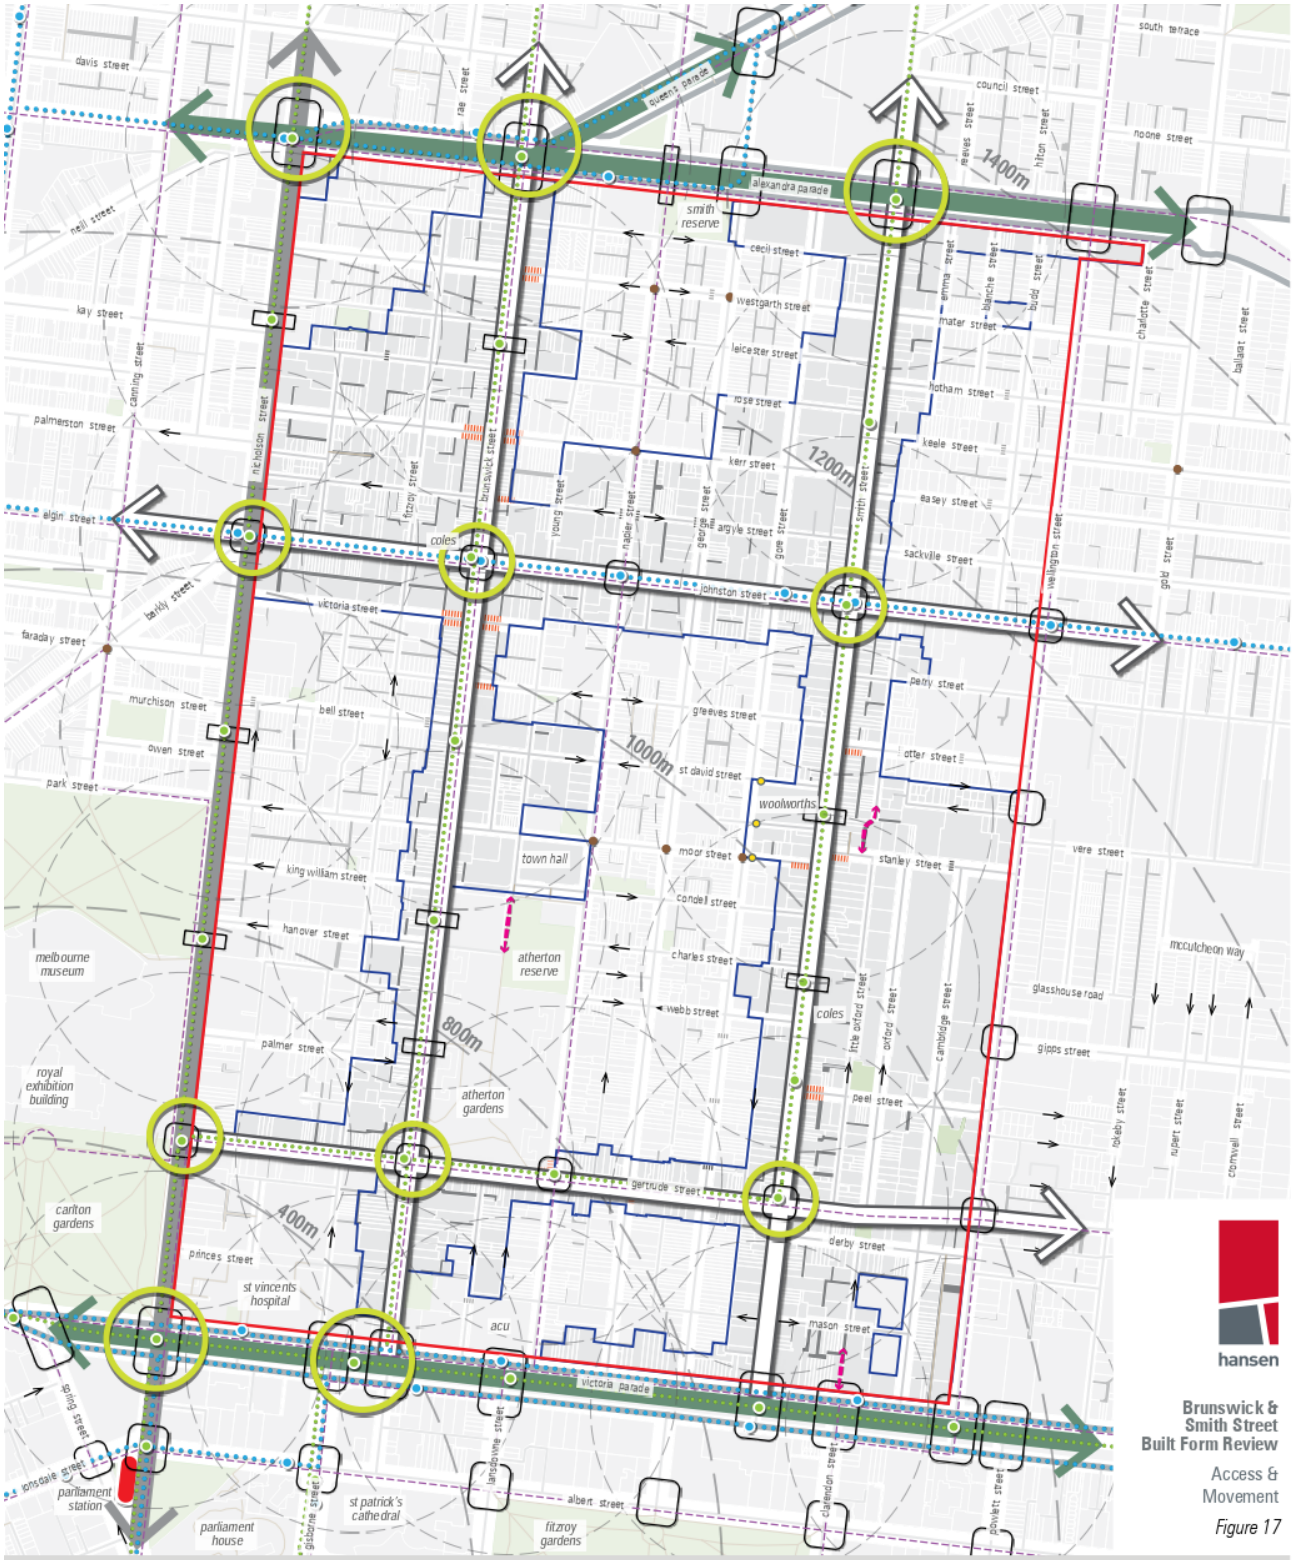
Laneways

The study area benefits from the existence of many laneways, which perform an important service function in providing vehicle access to the rear of properties. This is particularly important for properties which front the main 'retail spines' of Brunswick, Smith, Gertrude and Johnston Streets as it enables the presentation of continuous shopfronts to the street, which servicing and loading functions occurring to the rear.

The role of laneways in further heightened due to both the tram provision or VicRoads control along the main streets. In both instances this makes it also impossible to gain vehicle access from the street frontage. As a result, properties which has access to a second street frontage or a laneway are more likely to develop.

Traffix Group (Traffic Engineers) have undertaken an audit of all of the laneways within the study area. The purpose assess the existing conditions and provide an overview as to how laneways can be upgraded to accommodate additional vehicle movement and functionality. This audit classifies the laneways into three categories (unconstrained, partially constrained/minor improvements required and highly constrained/challenging to remedy) and provided traffic management recommendations to enhance movement within the constrained laneways.

For further detailed please refer to the Traffix Group memorandum dated 6th October 2017.



Built Form Implications

- The high levels of public transport accessibility enjoyed by the built form review area facilitates growth and urban consolidation.
- The provision for cyclists and end of trip facilities should be encouraged and provided for in new developments.
- The presence of laneways or multiple street frontages to provide vehicle access greatly aids the development viability and provides flexibility within the design in terms of site access and available frontages for provision of services.
- The existing conditions of laneways (particularly width - for ease of vehicle access, waste removal and built form separation) can influence the scale of development.

KEY FINDINGS

- Strong grid access allows multiple choice for legibility and permeable movement.
- Rich layers of public transport (tram and bus).
- Contrast between congested main roads & quieter back streets.

Attachment 1 - Attachment 1 - Background Analysis Report

3.12 Street Widths

Street width is a key element in contributing to the character of a place or street and its role in a movement sense. Often the wider the street, the more important it is in a movement and built form sense. This is evident in both the boulevards of Alexandra and Victoria Parade.

The study area contains a variety of street widths comprising either, predominantly 20m wide road reservations for main streets and other street, or narrower 10m wide road reservations for little streets. There is also a precinct in the north-east corner of the study area which contains 15m wide streets.

- 70m - Victoria Parade (bounding the study area to south).
- 60m - Alexandra Parade (bounding the study area to north).
- 30m - Nicholson Street (bounding the study area to west).
- 20m - Brunswick, Smith, Johnston and Gertrude Streets (main retail streets) as well as the following east-west streets: Westgarth- Mater, Kerr, Victoria, Bell, Otter, Stanley, Peel, Derby and the following north-south streets: Napier, George, Gore, Oxford (north of Gertrude Street), Cambridge and Budd.
- 15m - Moor, King William, Hanover, Princes, Hotham, Keele, Easey, Sackville, Emma and Blanche Streets.
- 10m - Cecil, Leicester, Rose, Argyle, Perry, Little Wellington, Napoleon, Greeves, St David, Condell, Charles, Webb, Mason, Fitzroy, Young, Little Oxford, and Oxford (south of Derby Street).

Built Form Implication

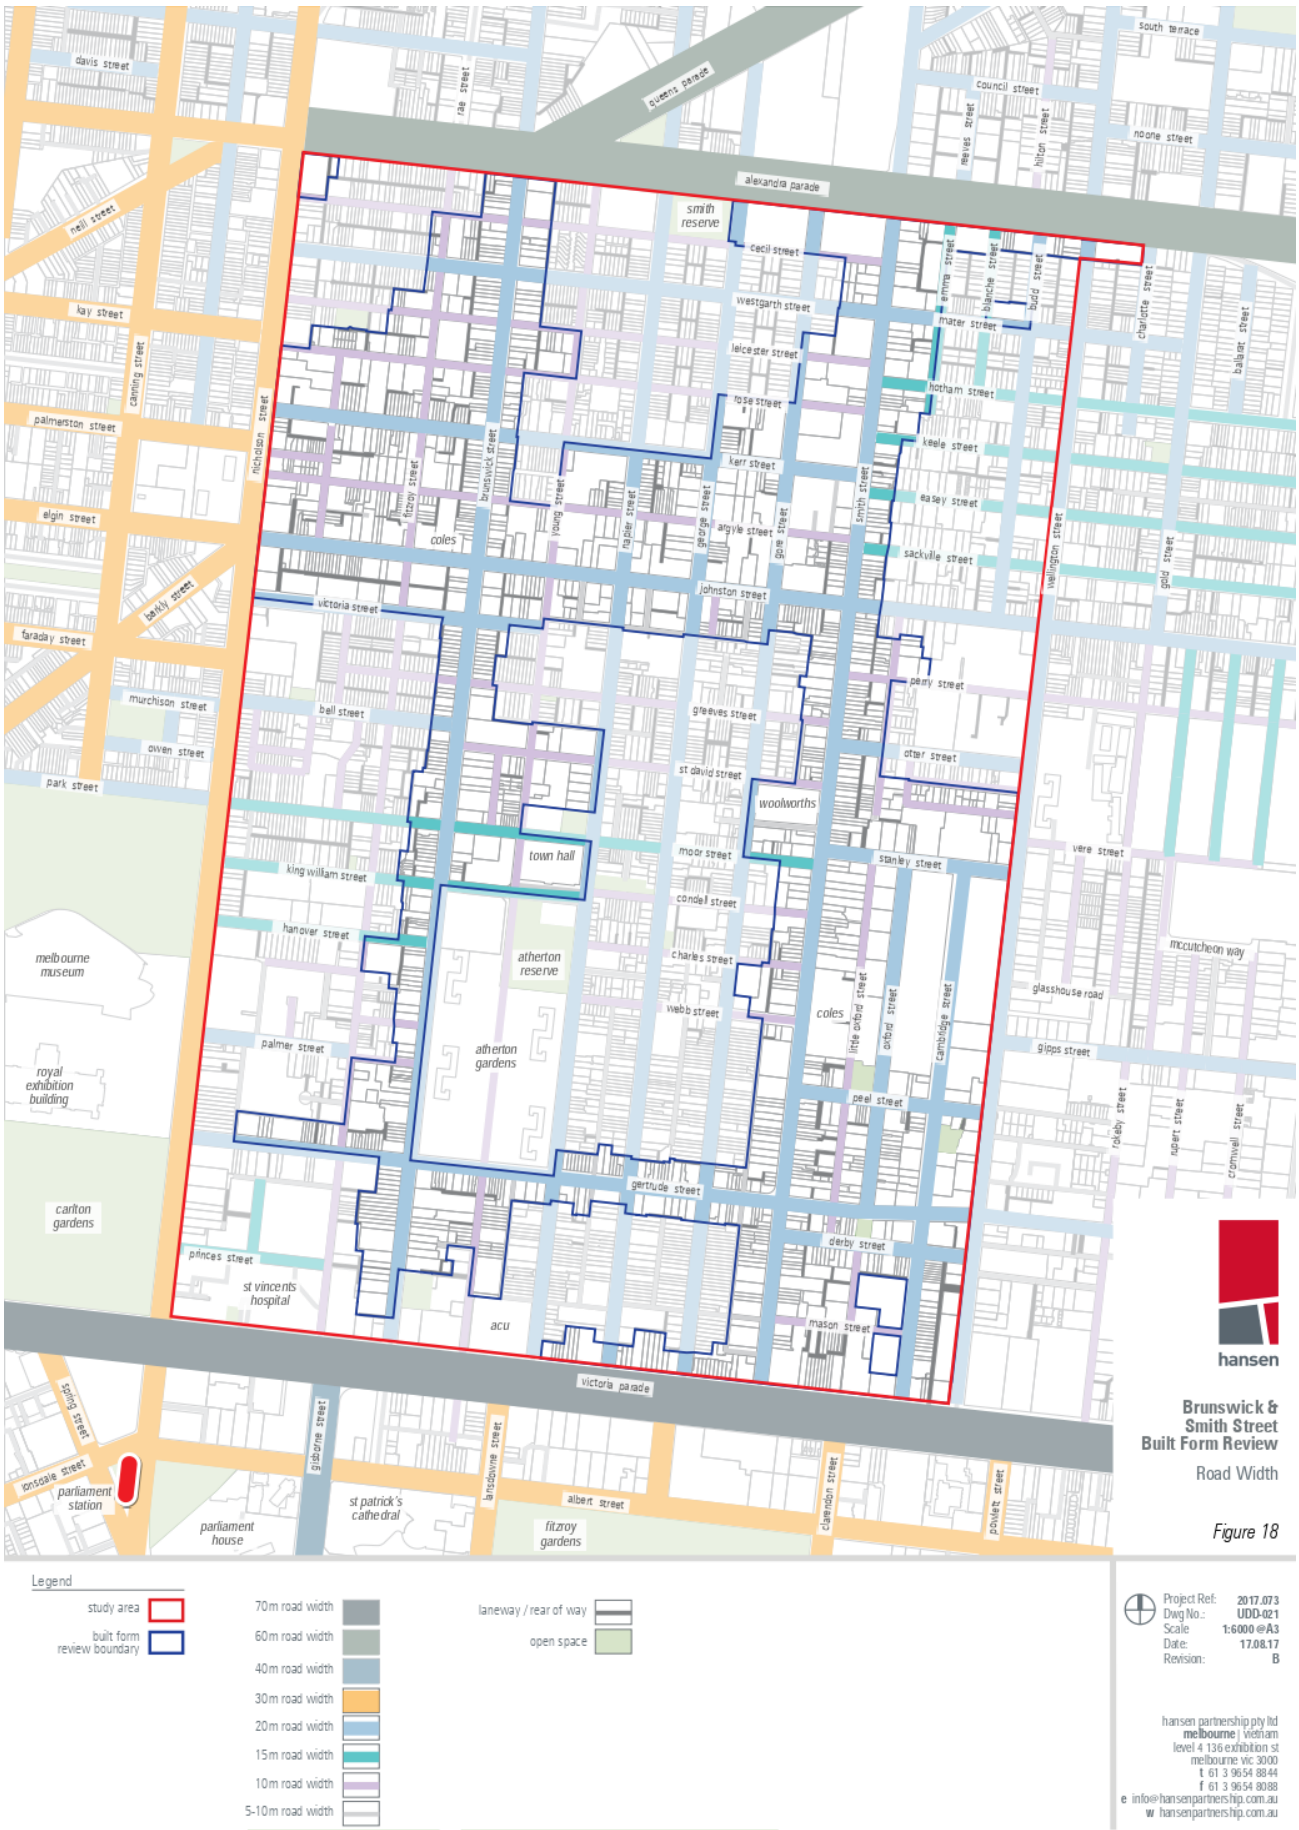
- Wider streets can more successful accommodate taller and more robust built form, without becoming too enclosed. Also when the broader street is located to the southern side of the site, it can be overshadowed by the built form.
- Conversely, narrower streets can become overwhelmed and visually dominated by taller forms more easily.

KEY FINDINGS

- No clear correlation between street width and existing role.
- Predominantly 20m wide streets.
- Tight 10m wide streets to north of Johnston Street in Fitzroy.

Existing Conditions

20m wide Brunswick Street streetscape



60m wide Victoria Parade streetscape

10m wide Leicester Street streetscape

Attachment 1 - Attachment 1 - Background Analysis Report

3.13 Rear Access

Due to the age of the original subdivision pattern service laneways were provided for the night cart. The provision and legacy of these service lanes provides opportunities for vehicle access and delivers to occur to the side or rear of the properties, leaving the primary street frontage free of cross-overs and able to provide active ground floor frontage to the street.

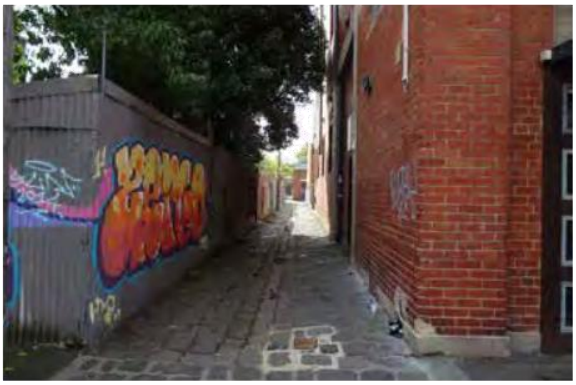
The existence of these laneways also provides separation between land parcels enabling shared access to light and air.

The analysis shows that most properties have either rear access or duel street frontages. Only relatively few properties have one street access, and of those only a small proportion are properties that front a main road (VicRoads road). This is important, because in such inner urban areas and along either VicRoads controlled roads and/or roads with tram provision, the ability to gain vehicle access is very difficult and/or undesirable.

Therefore, the provision and ability to access properties from the side or rear greatly aids in a site's likelihood to redevelop.

Built Form Implications

- The availability of service lanes or multiple street frontages aids a better design outcome and a sites' development potential.
- Properties without rear access need specific consideration around access, particularly fronting Wellington Street.
- Properties that have access to laneways should utilise them for access to allow active edges at street level fronting main streets.

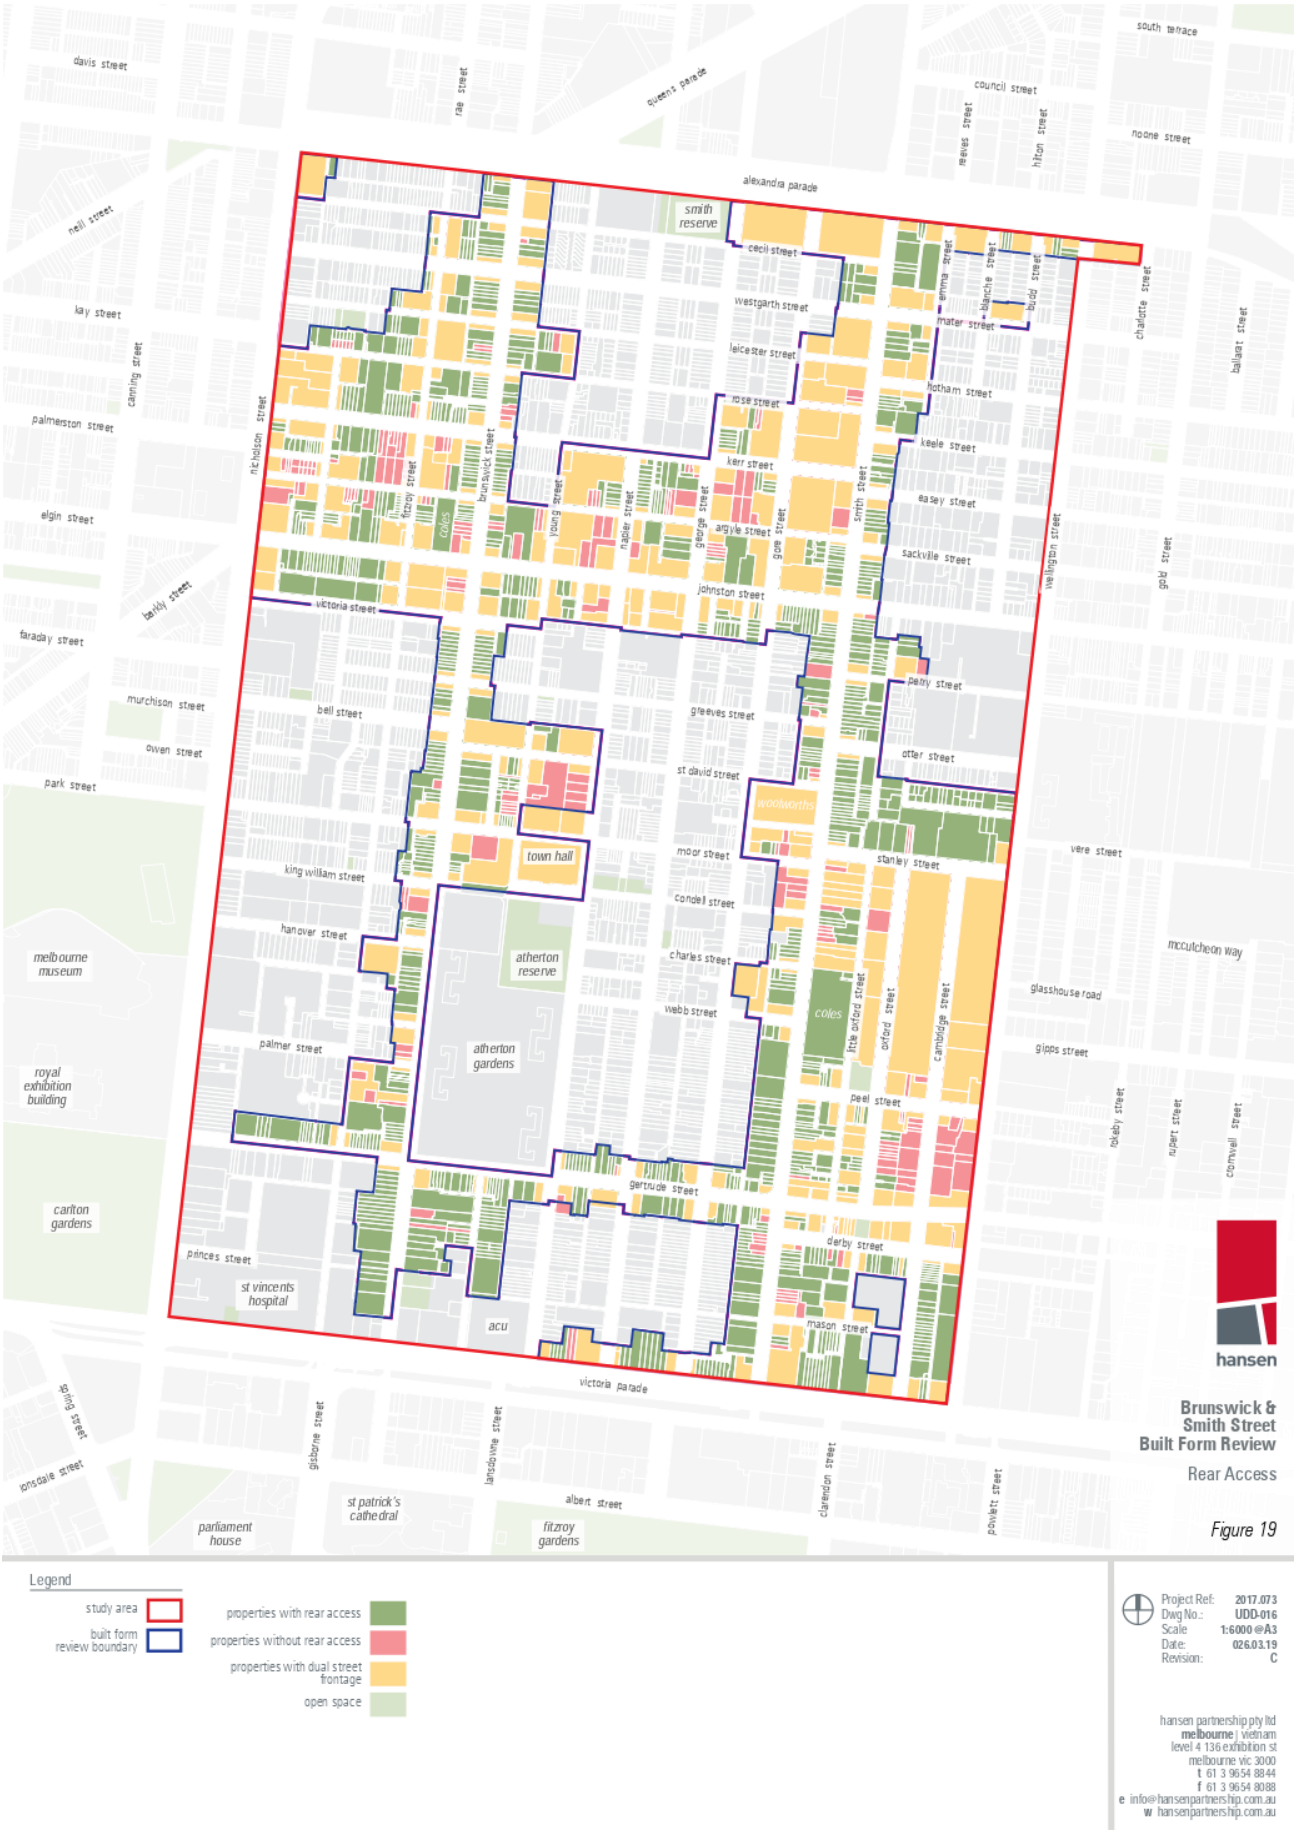


KEY FINDINGS

- Most properties comprise rear access or multiple points of access.
- Minimal properties constrained by vehicle access.

Existing Conditions

Rear bluestone service laneway, located between Johnston and Victoria Streets



Narrow bluestone service laneway, located north of Rose Street

Little Napier Street represents a broader service laneway

Attachment 1 - Attachment 1 - Background Analysis Report

3.14 Sensitive Interfaces

The Built Form Review Area has numerous interface conditions with abutting properties, lanes and open space. Some of those interface conditions are more sensitive than other due to the nature of the land use and spatial arrangement of properties and separation as a result of either laneways or streets. The following arrangement and relationship between properties at the edge of the study area (as illustrated in Figure 17) occurs:

- Back to back
- Side to back
- Side to side
- Laneway

This identifies the interface conditions to the periphery, to primarily the more 'sensitive' residentially zoned land. These interfaces are already covered by Clause 22.05 of the Yarra Planning Scheme, which primarily seeks to protect the amenity of residential uses from nearby commercial and industrial uses.

Built Form Implications

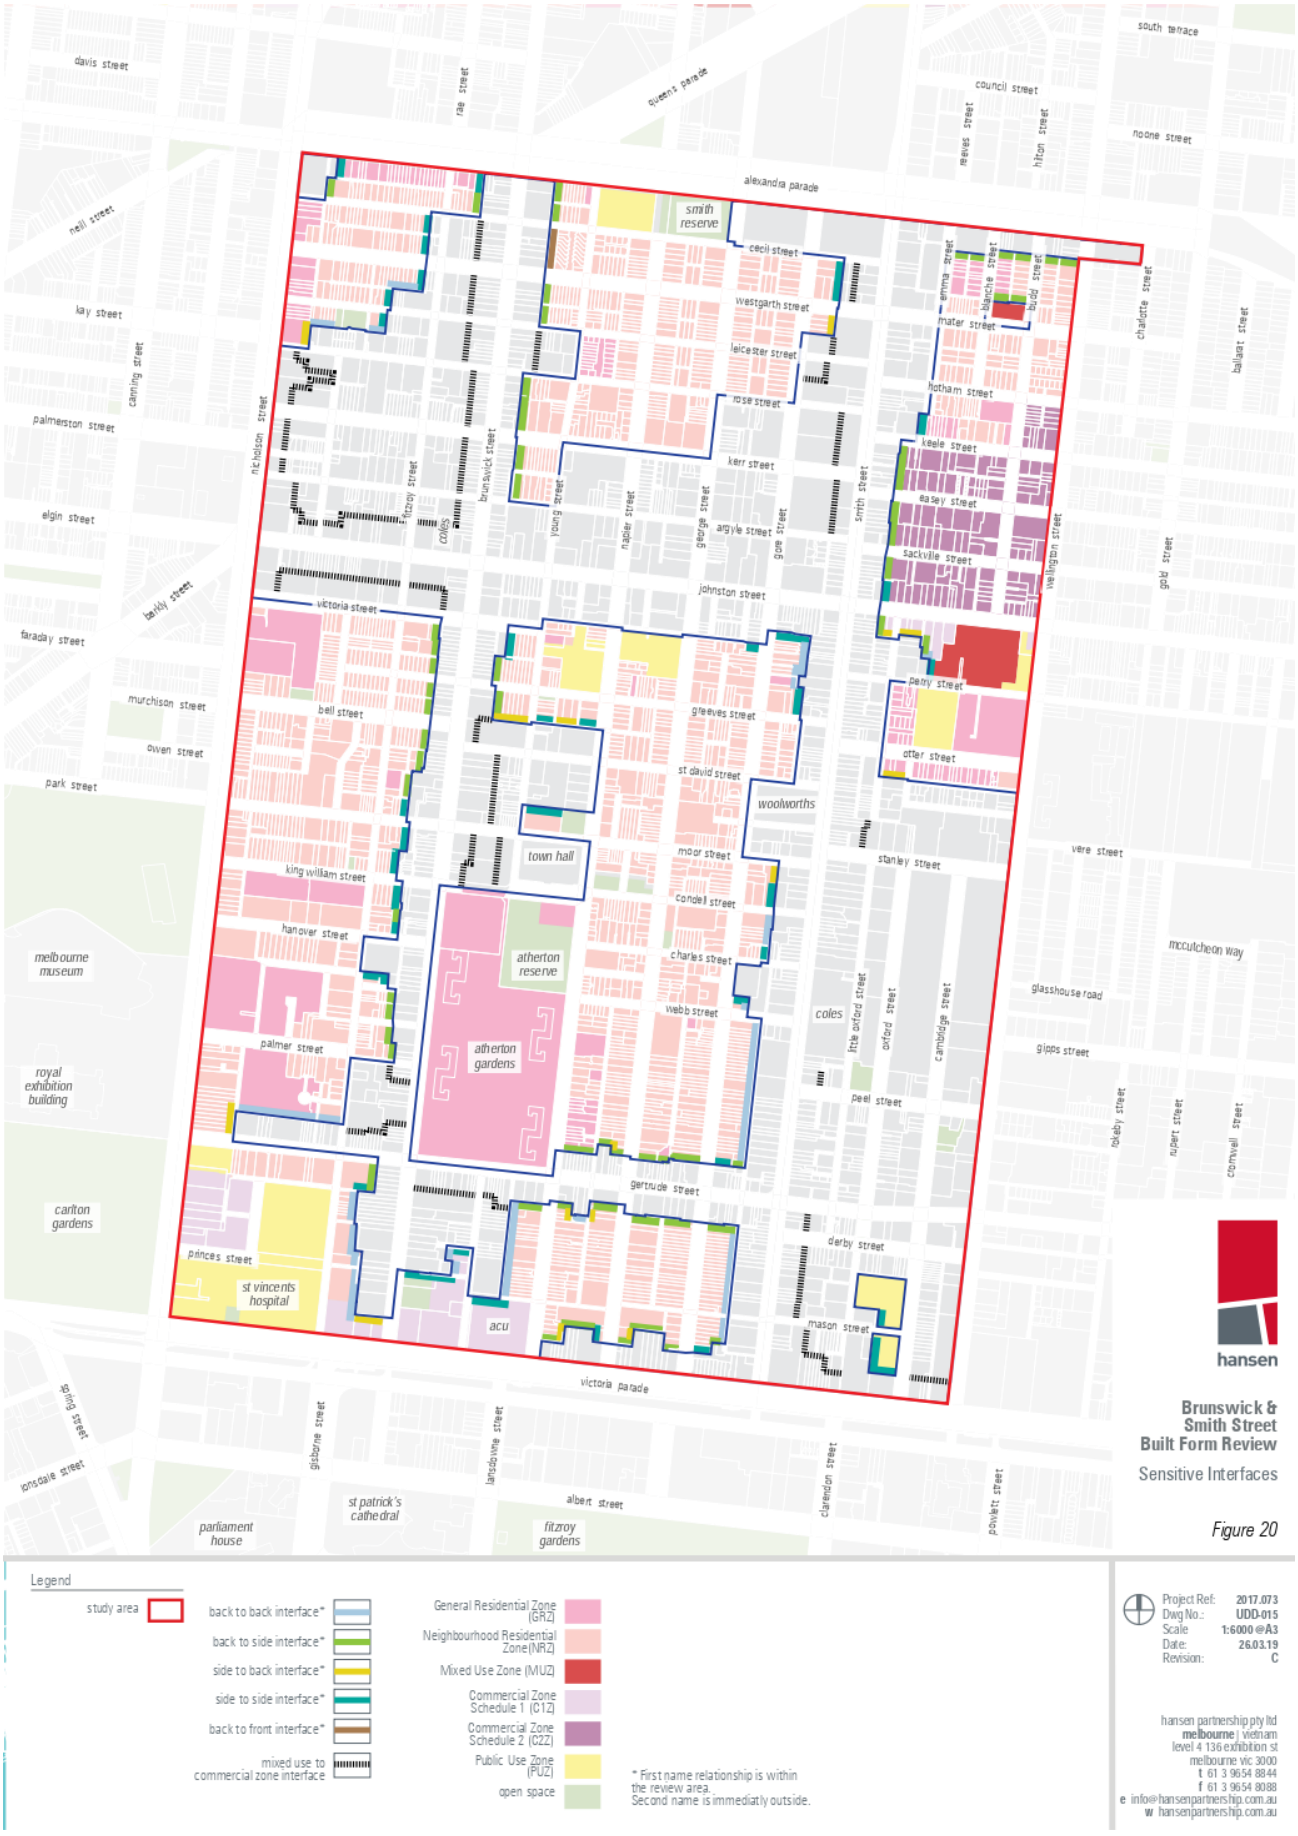
- Development with residential interface need to take into consideration amenity impacts including visual bulk
- Developments with laneway interface benefit with some separation between properties, however, they still need to take into consideration amenity impacts including visual bulk.
- South side interface is the most sensitive interface has it has major implications on overshadowing in addition to other amenity impacts.

KEY FINDINGS

- Predominant interface condition is across a lane or common boundary.
- Sensitivity in the residential 'heart' precinct is paramount.
- The mixed use/commercial precinct to the north-east is less sensitive, as compared to residential interfaces.

Existing Conditions

Typical back to back laneway interface - between Young and Napier Streets



Typical back to side laneway interface - behind 142 Gertrude Street

Typical side to side laneway interface - Greeves Street looking north

Attachment 1 - Attachment 1 - Background Analysis Report

3.15 Development Influences

Figure 19 maps the various characteristic which are considered to add a level of complexity or constraint to redevelopment of a site. The first of these characteristics are to do with the physical attributes of the site, in terms of its width, size and if it has rear access. Typically the narrower and smaller a site the harder it is to redevelop. Also, the provision of rear (or side) access for vehicles greatly assists a site's ability to successfully store the necessary provision of cars on-site.

The condition and heritage status of any existing built form on the site can also restrict a site's redevelopment potential. Therefore, sites subject to a site specific heritage overlay are generally more heavily constrained than site's covered by a broader precinct heritage overlay. In addition to the heritage overlays, a building may also be graded as being individually 'significant' or 'contributory'. As a result the heritage value of the site and its existing fabric can constraint its redevelopment potential.

Likewise, the condition and status of any building on the site can also inform how likely or not it is to redevelop within the foreseeable future. Site's which contain large, recently completed buildings are unlikely to redevelop given the recent capital investment in the building and its economic life.

Pubs often occupy prominent corner sites. Corner sites are generally attractive redevelopment opportunities as their corner attributes allow greater access to outlook and opportunity for street frontage and vehicle access. However, Pubs contain some limitations to redevelopment, such as their iconic status within the socal fabric of the local community. While, primarily from a built form perspective, the heritage nature of the building would limit redevelopment potential.

Licensed venues, depending on their nature and hours of operation these businesses can impact above surrounding sites from a redevelopment perspective. These venues can operate late into the night, producing noise which would be an undesirable amenity outcome for nearby or future residents. Similarly, for noise reasons Live Music venues also impact upon to redevelopment potential of nearby site.

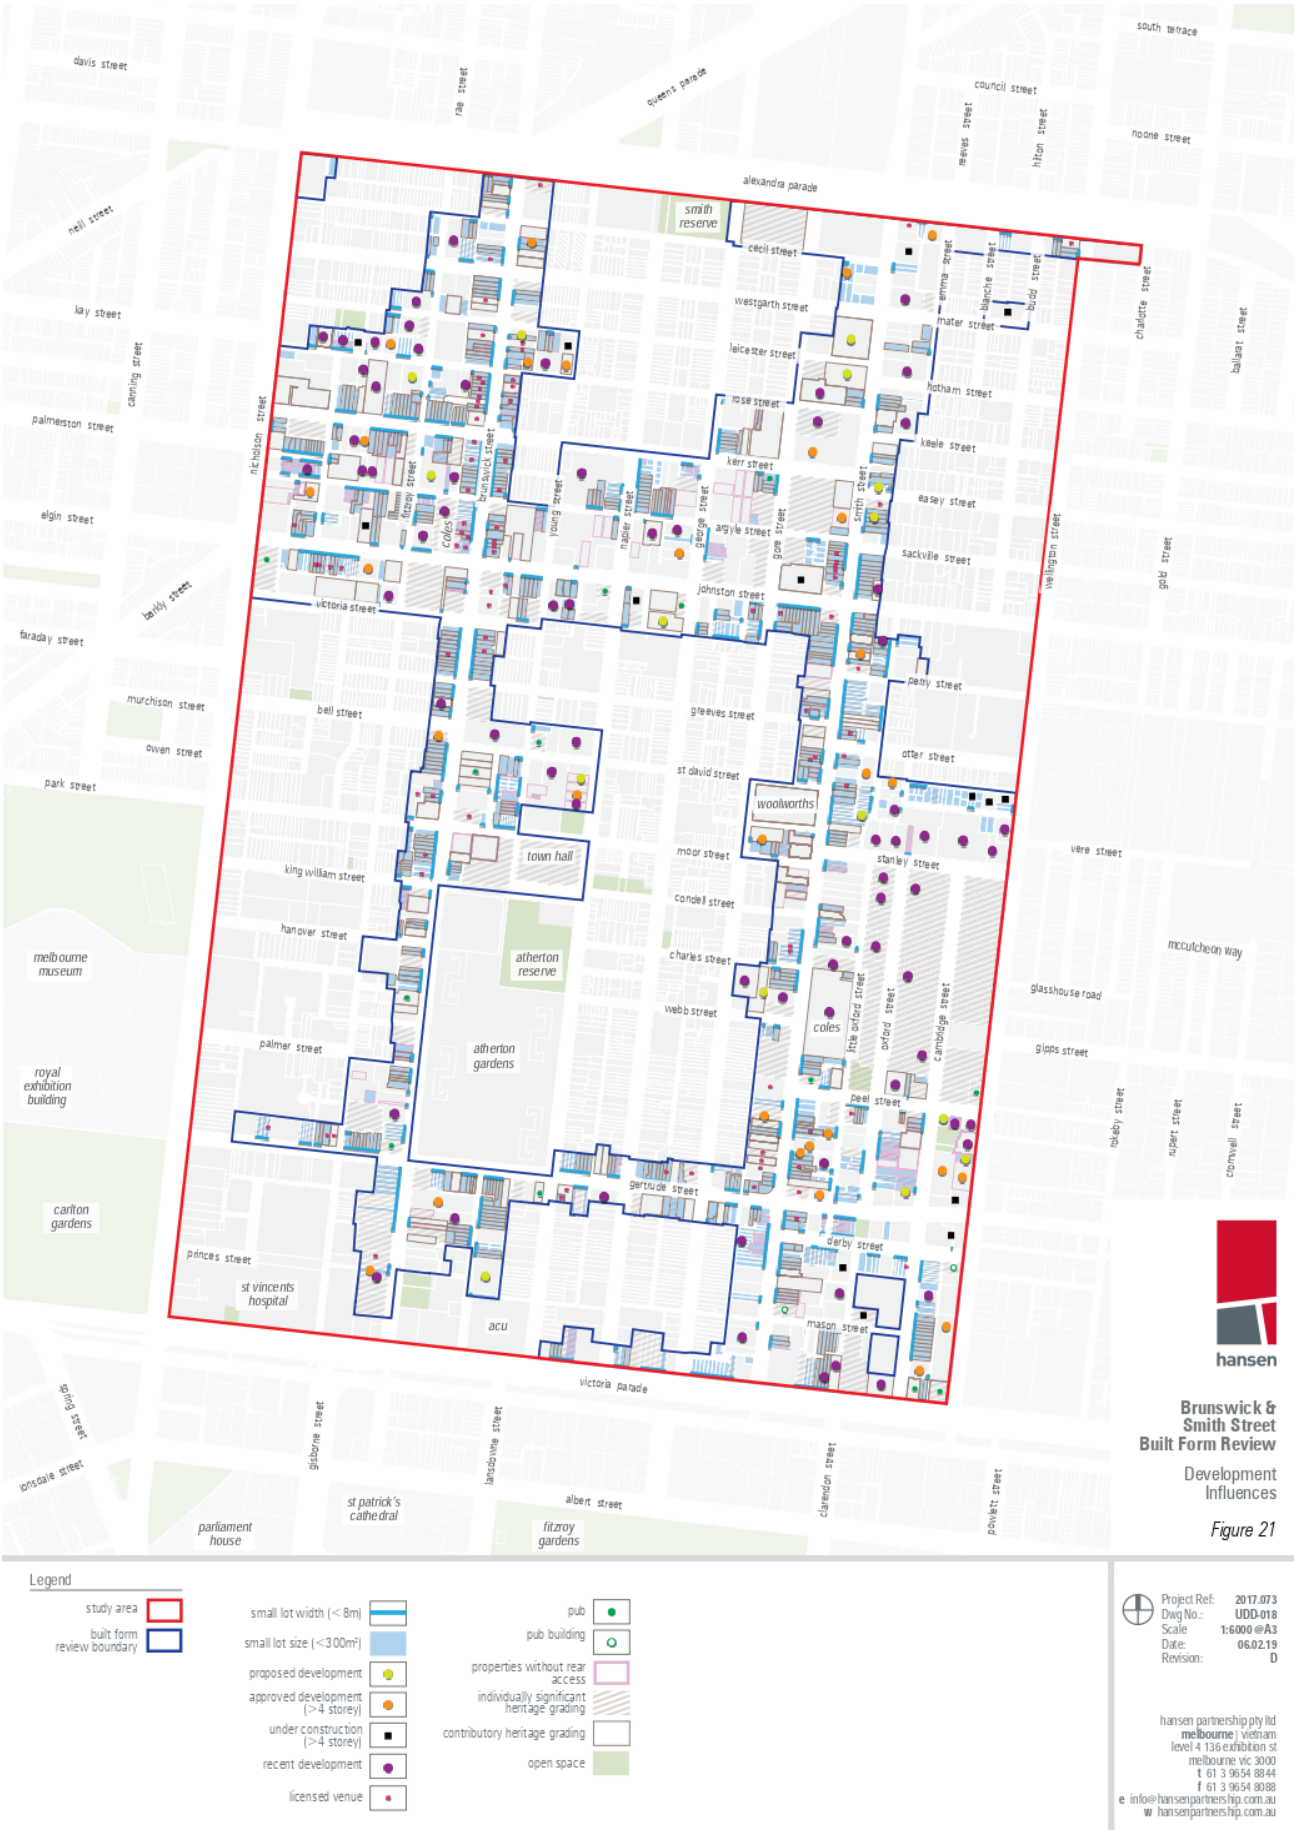
The sites, within the Built Form Review area which are not impacted upon by the above constraints therefore, are considered to have the best development potential.

KEY FINDINGS

- Much of the study area is constrained by heritage status.
- Significant redevelopment has already occurred or is in the works.
- Cluster of less constrained sites north of Johnston Street.

Existing Conditions

Example of relatively recent development - The Max on Brunswick Street



Napier Hotel on the corner of Napier and Moor Streets

The Night Cat live music venue on Johnston Street

Attachment 1 - Attachment 1 - Background Analysis Report

3.16 Level of Change

In order to understand the varying degree of built form change likely to occur across the study area, a high level analysis exercise was undertaken to determine the spatial arrangement and distribution of built form change.

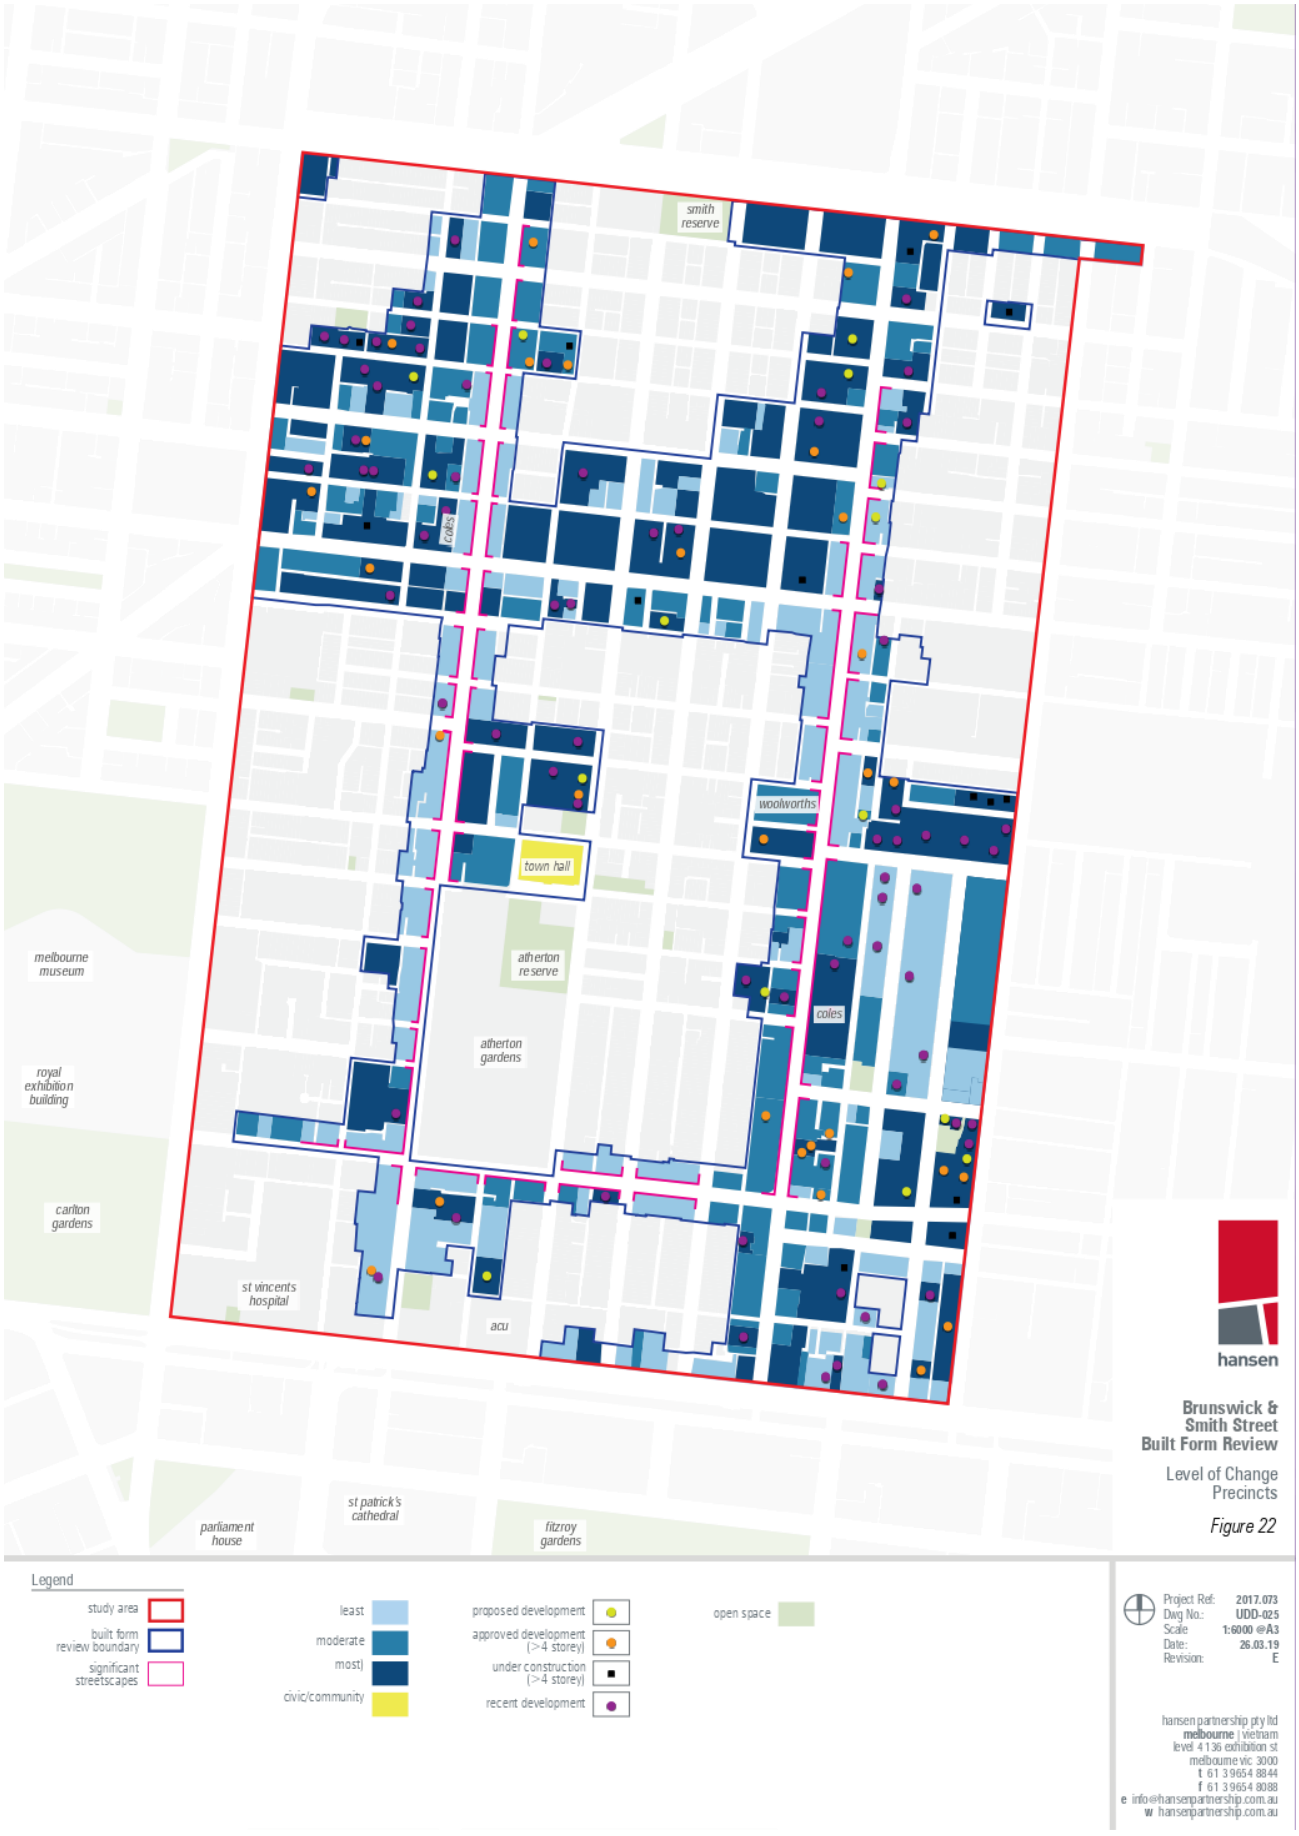
It was agreed to undertake this analysis in a consistent manner with the Victoria Street and Bridge Road Built Form Reviews and categories areas into either low, moderate or high change. These titles describe the defined areas propensity to accommodate development and associated built form change. They do not describe the potential height, scale or intensity of the potential development.

The analysis was on the following Change Criteria:

- Lot size;
- Lot depth;
- Lot width;
- Strata titling;
- Heritage values;
- Service access provision;
- Recent development; and
- Recent approvals and development proposals.

LEVEL OF CHANGE CRITERIA

LEAST	MODERATE	MOST
▪ Small size lots (<150m2); ▪ Shallow lots (<25m); ▪ Narrow lots (<8m); ▪ Strata titles; ▪ No laneway access; and ▪ Individually Significant buildings.	▪ Medium size lots (between 151-600m2); ▪ Medium depth (between 25m-35m); ▪ Medium width (between 8m-18m); ▪ Laneway access; and ▪ *Contributory building.	▪ Large size lots (>601m2); ▪ Deep lots (>35m); ▪ Wide lots (>18m); ▪ Laneway access; and ▪ Non-contributory building.



INDICATIVE LAYOUT

CIVIC & COMMUNITY

- Public buildings and community assets, including churches

Attachment 1 - Attachment 1 - Background Analysis Report

3.17 Summary

Our urban design analysis of the Brunswick and Smith Street precincts as part of the Built Form Review has confirmed a number of important precinct 'attribute close and, which have both shaped the form and character of the city as it stands today and which also served as important determinants of its evolution as a growing and regenerating urban system. The following key features represent a summary synthesis of a thorough 'sieve mapping' process exploring the study area's topography, block arrangement, streetscape, subdivision, built fabric and spatial conditions. The critical findings are as follows:

- The study area and centres are particularly large and diverse – the precinct comprises at least 4 strip centres on an east-west and north-south axis, which each represent somewhat different composition and quality. Diversity and variation of building stock is an inherent characteristic of each Centre, recognizing an ability to absorb sometimes dramatic shifts in scale and form.
- Given the linear and grid-based framework of streets, lanes and thoroughfares emanating from activity spines, they are pre-eminent walking places – the importance of the pedestrian realm and the combined effects of the ground plane, active (granular) frontages and a diverse street wall of a 'human scale' are defining features.
- The commercial spines are largely defined by the fine grain retail fabric of traditional order – these precincts are heavily constrained given their heritage qualities and limited site size (particularly width). Respect for intact traditional frontages is paramount. Furthermore, rear access where available is of considerable benefit.
- The extensive mixed use precincts 'behind the spine' represent areas with potential for notable redevelopment as part of a post-industrial transformation – these areas are not typically affected by heritage overlays, however many have already been realised or approved developments in place. Further opportunities for growth in these precinct is apt.
- The study area includes particularly sensitive residential hinterlands (within heritage overlays) - these intact traditional neighbourhoods are tightly wedged between commercial and mixed use growth areas. The spatial and visual interplay between these established areas and the evolving spines represents a critical urban design issue.
- The character of both the commercial spine and mixed use cells varies considerably across the precinct – important topographical and skyline factors influence the character of each of these precincts, including long flat terminal views along spines to the west, and open panoramic vistas to the East across the 'Collingwood Slope'. Views to designated landmarks are particularly important in this precinct.
- The quality of the public domain is heavily constrained and subjected to increasing demands with urban intensification – other than the principal pedestrian realm of foot paths and laneway is, there is a significant lack of quality public space, however a series of new pocket parks and passes have been generated to the east of Smith Street. The protection of public amenity of streets and lanes is a critical ambition.

- There is very limited built form and guidance provided for future development of the precinct – the lack of clearly defined development envelopes for particular conditions and typologies has resulted in considerable variances across the 4 strip centres. DDO controls only apply to confined areas, which constrains the ability for designs to respond appropriately to local conditions.
- The areas have a common set of parameters that distinguish them from each other and that are part of their success an attractive area for businesses and people to be in Smith, Brunswick and Gertrude Streets as traditional, mostly heritage main streetscapes. While, Johnston Street and the mixed use back blocks are more diverse. Given the sheer extent and complexity of the built form review area more detailed investigations will need to be undertaken at a precinct by precinct level. These precincts will be defined by the role and existing built form character of the areas.

KEY FINDINGS SUMMARY

- Large area, comprising 4 strip centres within a 'tight' urban setting that is highly walkable.
- Defined by fine grain activity spines along tram routes.
- Contains key mixed use pockets with development capacity.
- Significant heritage fabric and extensive broad heritage coverage.
- Limited built form guidance - only discrete DDO application.
- Notable terrain - 'Collingwood slope'.
- Importance of distant views to 'traditional' landmarks.
- Lack of principal public realm.
- Sensitivity in the residential 'heart' precinct is paramount.
- Minimal properties constrained by vehicle access.
- Mixed use land not covered by heritage overlay largely already developed.
- Generally limited potential along main retail spines.

4.0 Future Built Form Precincts

Given the sheer size and complexity of the Review Area, following the initial background research and existing conditions analysis phase it was determined to divide the overall area into smaller place based precincts.

This chapter of the report documents these street or place based precincts and defines their existing built form character and designated a 'change rating'. The change rating seeks to simply communicate the precincts anticipated propensity to accommodate built form change into the future.

The Review Area was divided into 10 precincts. The precincts are primarily defined by the functions as either:

- an Activity Spine;
- a Mixed Use Area; or
- a Boulevard.

Activity Spines

The Activity Spines are defined by the 'traditional' retail and commercial functions along the four main streets within the review area of:

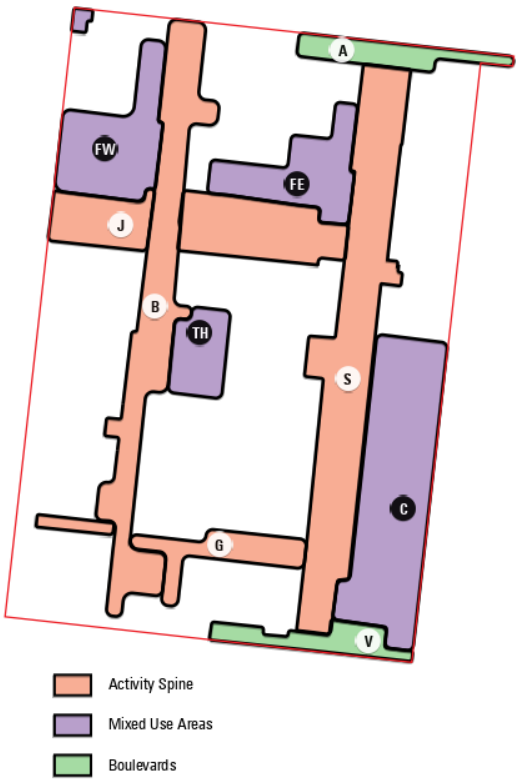
- Brunswick Street;
- Smith Street;
- Gertrude Street; and
- Johnston Street.

Mixed Use Areas

The Mixed Use Areas are defined by the mixed use functions present in the non-residential land located generally in local streets, behind the Spines. The four renewal areas within the review area are:

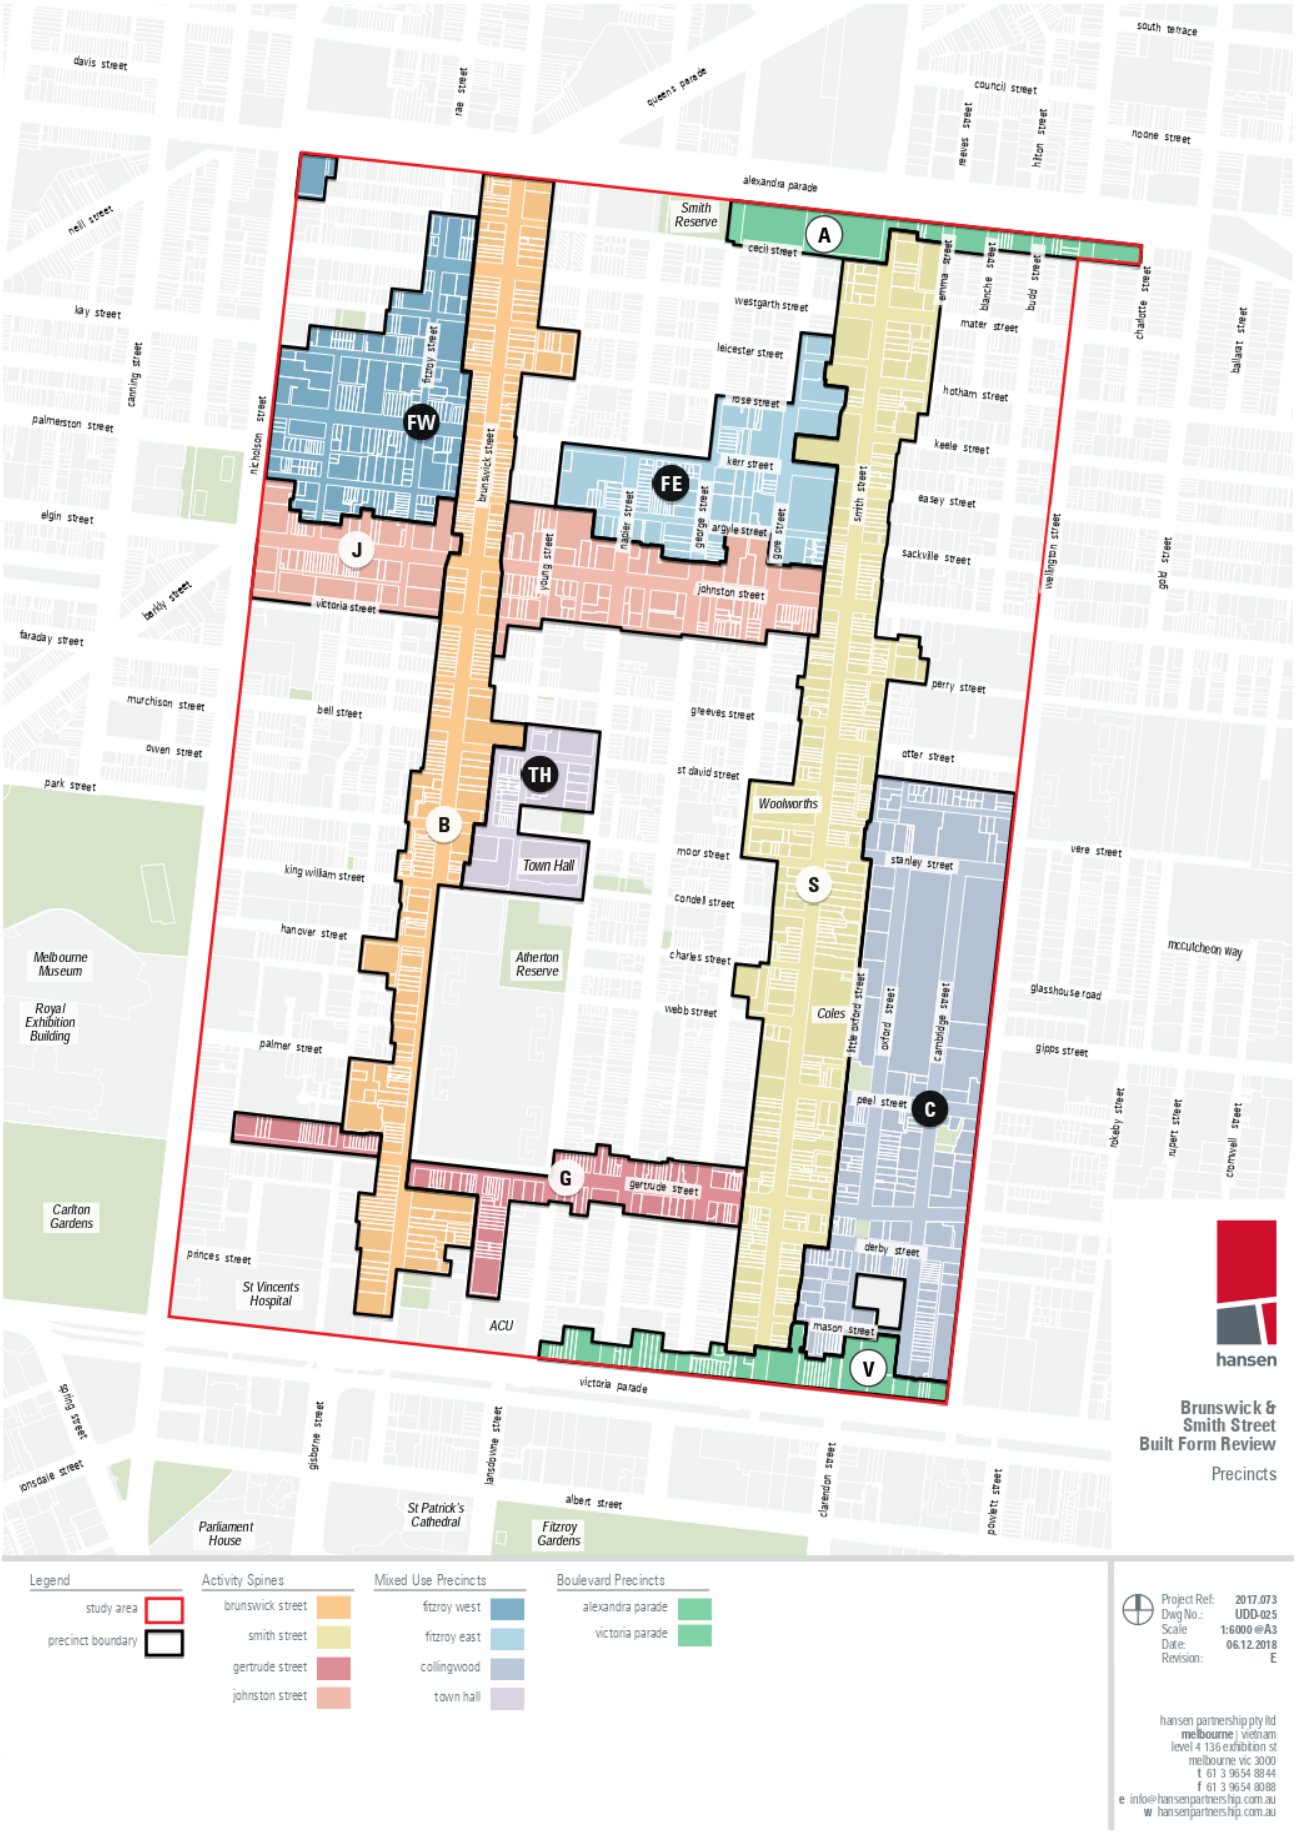
- Fitzroy West;
- Fitzroy East;
- Collingwood; and
- Town Hall.

Boulevards



The Boulevards are the non-residential land to the northern and southern edges of the review area which front the broad road corridors of:

- Alexandra Parade; and
- Victoria Parade.

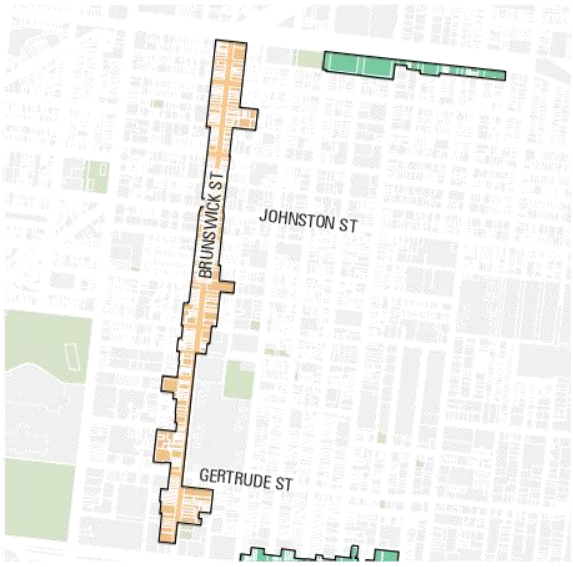


10 Precincts

The 10 precincts within the Brunswick & Smith Street Built Form Review are:

- Precinct 1: Brunswick Street (B);
- Precinct 2: Smith Street (S);
- Precinct 3: Gertrude Street (G);
- Precinct 4: Johnston Street (J);
- Precinct 5: Fitzroy West (FW);
- Precinct 6: Fitzroy East (FE);
- Precinct 7: Collingwood (C);
- Precinct 8: Town Hall (TH);
- Precinct 9: Alexandra Parade (A); and
- Precinct 10: Victoria Parade (V).

Attachment 1 - Attachment 1 - Background Analysis Report



Typical Typology

PRECINCT 1: BRUNSWICK STREET (B)

HS S

Boundary Description

This precinct is bound by Alexandra Parade in the north and Victoria Parade in the south. The western and eastern edges are defined by the rear boundaries of commercial properties fronting Brunswick Street.

Precinct map

Precinct Influences

Brunswick Street, Fitzroy is identified as one of the City of Yarra's Major Activity Centres. It is defined by its two main roads being Alexandra Parade to the north and Victoria Parade to the south and represents one of Melbourne's most intact Victorian retail corridors.

The Brunswick Street corridor is defined by its predominantly traditional Victorian streetscapes, corner pub buildings and larger institutional forms to the south. New developments are typically in shop-top format, or clustered within Mixed Use Zone (MUZ) areas behind the retail spine, including around the Fitzroy Town Hall.

Brunswick Street is a unique Major Activity Centre spine with a particularly strong north-south visual framework informed by largely intact heritage retail buildings. The spine is defined by predominately 2 storeys consistent heritage street walls to the north of Johnston Street and a more diverse street wall mix to the south of Johnston Street. The corridor benefits from a series of important local landmarks, typically found at corners which act as critical wayfinding elements.

The topography slopes gently to the south of St David Street, leading to the open profile of Atherton Gardens and the east-west commercial spine of Gertrude Street. To the south of Gertrude Street are an assemblage of significant heritage residential and commercial buildings of different setbacks associated with St Vincent's Hospital. To the periphery, the precinct is hemmed in by low-scale heritage residential and warehouse forms with discrete contemporary infill in the form of 4-6 storey apartment buildings.

Change Rating

Precedent Built Form

Typical Typology

PRECINCT 2: SMITH STREET (S)

HS S

Boundary Description

This precinct is bound by Victoria Parade in the south and Alexandra Parade in the north. The eastern and eastern extent of the precinct is defined by the rear boundary of commercial properties fronting either side Smith Street.

Precinct map

Change Rating

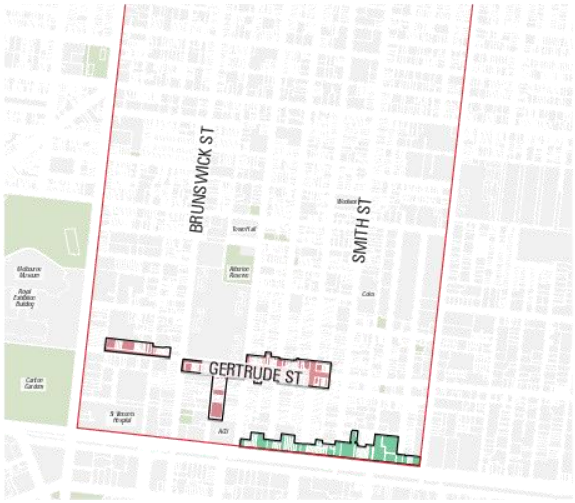
Precinct Influences

Smith Street is one of the City of Yarra's Major Activity Centres and a key metropolitan activity spine with a long retail tradition and largely intact heritage character. The street defines the boundary between the suburbs of Fitzroy and Collingwood and is hemmed in by predominately Fitzroy residential properties and diverse Collingwood residential, mixed use and former industrial properties to either side. The overall streetscape character is diverse, comprising sections of highly consistent heritage scale and rhythm, sections defined by the strong profile of prominent heritage retail buildings and areas to the northern end where contemporary, renewal and taller forms have emerged.

Smith Street is a unique Activity Centre spine with a particularly strong north-south visual framework informed continuous segments of traditional and largely intact heritage retail buildings typically extend from anchoring key intersections such as Johnston and Gertrude Streets, before variation is presented by punctuations of 'grand retail' forms, remnant of the historical department store typology. Medium rise apartment forms set behind traditional street walls represents an emerging character of change, particularly north towards Alexandra Parade.

The corridor benefits from a series of important local landmarks, typically occurring at corners which act as important wayfinding elements through the precinct. Other local landmarks occur mid-block, some of which are located at the termination of perpendicular streets, increasing the visual extent and influence of these buildings, such as the Victorian Heritage Registered Post Office. The topography gently falls north of Johnston Street, resulting in the taller contemporary forms generally sited within the line of traditional 2 storey parapets in long distant corridor views from higher land south of Johnston Street. While the corridor is largely defined by long segments of fine grained allotments, the precinct presents a number of anomalous larger sites accommodating warehouses found both along the spine as well as in the adjacent 'back-blocks.'

Precedent Built Form



Typical Typology

PRECINCT 3: GERTRUDE STREET (G)

HS S

Boundary Description

This precinct is divided by the Brunswick Street precinct and bound to the east by Nicholson Street and to the west by the rear of commercial properties with frontages to the west side of Smith Street. To the north and south, the precinct is bound by the rear of properties with frontages to Gertrude Street (with the exception of Atherton Gardens).

Precinct map

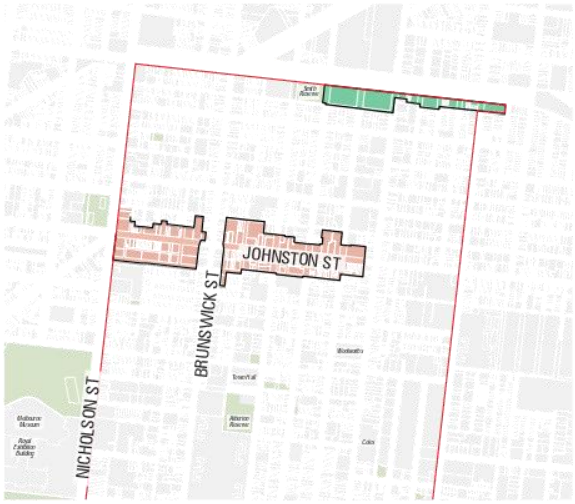
Precinct Influences

Gertrude Street, Fitzroy is identified as one of City of Yarra's six Neighbourhood Activity Centres (NAC) and represents one of Melbourne's intact Victorian retail corridors. It is anchored by two main roads including Nicholson Street to the west and Smith Street to the east.

The Gertrude Street spine is defined by predominantly traditional Victorian retail forms and corner pub buildings. New contemporary forms are limited and typically comprises ground floor retail with residential apartments above. There is one contemporary mixed-use development along the spine with multi-dwelling residential forms existing behind the retail spine on the south side.

Change Rating

Precedent Built Form



Typical Typology

PRECINCT 4: JOHNSTON STREET (J)

HS S R

Boundary Description

The smallest defined precinct, along the western section of Johnston Street bound by Nicholson Street to the west and an unamed laneway to the rear of Brunswick Street properties. The south of the precinct is defined by Victoria Street and the north is defined by the rear of properties on the north side of Johnston Street.

Precinct map

Precinct Influences

Johnston Street today is a mixed urban area, main street corridor defined by the coexistence of heritage shopfront forms, new apartment developments and remnant Victorian era cottages and corner pub buildings. These prevailing elements sit side by side with more modest 20th Century forms that is 'ripe' for renewal.

The Johnston Street precinct, between Smith and Nicholson Streets is a critical opportunity spine in Fitzroy and part of the long corridor linking Johnson Street East (in Collingwood) with Elgin Street (within the City of Melbourne) to the west. This particular section of Johnson Street is mixed in profile with two very distinctive portions. Firstly, an eastern area (between Smith and Brunswick Streets) which comprises some deep former industrial lots and a mixed arrangement of retail, residential and contemporary infill.

Secondly, a smaller western area (between Brunswick and Nicholson Streets) comprising typically fine-grained traditional retail stock and some important heritage elements, most notably at the Nicholson Street junction and extending southward along Victoria Street. Both precincts are 'hemmed in' by sometimes delicate residential stock principally to the south and more mixed fabric to its north. Johnston Street crosses (on a perpendicular alignment) the key Smith Street and Brunswick Street activity spines and offers long terminal views is to the west to the municipal threshold and uphill towards the University of Melbourne.

Change Rating

Precedent Built Form

Typical Typology

PRECINCT 5: FITZROY WEST (FW)

HR R

Boundary Description

This precinct is bound by Nicholson Street to the west and the rear of Johnston Street properties to the south. The eastern extent is defined by the rear of commercial properties with a frontage to the western side of Brunswick Street. The northern extent of the precinct is defined by the designation of MUZ land. To the corner of Alexandra Parade is an isolated pocket of land subject to the C2Z and bound by NRZ to the east.

Precinct map

Precinct Influences

Fitzroy West today is particularly diverse with respect to its built form character, comprising commercial and saw tooth warehouse forms along its Nicolson Street edge, which transition to more finer grain mix of dwellings, heritage building and contemporary developments.

The Fitzroy West precinct is notable for its mixed profile of Victorian heritage terraces, low order warehouse and medium rise contemporary apartment forms across a grid street network. This compact precinct is recognizable for its 'behind the spine' or 'back block' position, reflecting an area of transition between the more active profile of Nicholson Street and established heritage residential neighbourhoods to the north.

The precinct does not exhibit any high-rise form, but is more clearly defined by medium scale contemporary apartment developments, broad industrial complexes and finer grained residential stock addressing often broad tree-lined streetscapes. The east-west alignment of Kerr Street is a key conduit and a defining 'green' street linking Nicholson Street to Smith Street, flanked by a variety of different local forms, including a corner hotel, robust warehouses.

Precedent Built Form

Typical Typology

PRECINCT 6: FITZROY EAST (FE)

HW HR R

Boundary Description

One of the largest renewal precincts, comprising sites along Alexandra Parade to the north, surrounding Smith Street (to the east and west) as well as a larger extent to the south surrounding the north and south of Johnston Street between Smith and Brunswick Streets. This precinct comprises a direct interface to NRZ and PUZ land, with the eastern extent defined by the rear of commercial properties fronting the eastern side of Smith Street (north of Keele Street) and the rear of commercial properties along the western side of Brunswick Street (south of Kerr Street).

Precinct map

Precinct Influences

Fitzroy East today is a particularly mixed urban area, defined by the coexistence of the former warehouse heritage forms, new apartment developments and remnant Victorian era cottages and terrace shops. These prevailing elements sit side by side with more modest 20th Century development that is 'prime' for renewal.

The Fitzroy East precinct is notable for its mixed profile of Victorian heritage terraces, low order warehouse and medium rise contemporary apartment forms across a close knit grid street network. This compact precinct is recognizable for its 'behind the spine' or 'back block' position, reflecting an area of transition between the more active profile of Johnson Street and established heritage residential neighbourhoods to the north and west.

The precinct does not exhibit any high-rise form, but is more clearly defined by medium scale contemporary apartment developments, broad industrial complexes and finer grained residential stock addressing often broad tree-lined streetscapes. There is some distinction between the profile of development abutting the wide north-south aligned Napier, George and Gore Streets, compared to the more confined cross-section of Argyle Street. The east-west alignment of Kerr Street is a key conduit and a defining 'green' street linking Nicholson Street to Smith Street, flanked by a variety of different local forms, including a corner hotel, robust warehouses and the widely recognized 'Cheese Grater'

Precedent Built Form

Typical Typology

PRECINCT 7: COLLINGWOOD (C)

HW HR R

Boundary Description

This precinct encompasses the Collingwood slope and is bound by Victoria Parade to the south, Wellington Street to the east and Little Wellington Street to the north. The western extent is defined by the rear of commercial properties along the eastern side of Smith Street.

Precinct map

Precinct Influences

Collingwood today is a particularly mixed urban area, defined by the coexistence of larger former warehouse heritage forms, new apartment developments and remnant Victorian era cottages and terrace shops. These prevailing elements sit side by side with more modest 20th Century development that is 'ripe' for renewal.

The Collingwood precinct is a robust and diverse inner urban area. Its urban fabric reflects its various phases of development, which has resulted in the very mixed character and varied land uses.

The precinct comprises two distinct areas: one to the north dominanted by industial heritage buildings and a strong north-south orientated grid with large lot sizes; and one to the south with a mixed character comprising a diverse finer grain residential and small scale commercial fabric with pockets outside of the Heritage Overlay and a more permeable street network.

The emergence of new residential developments on the larger and non-heritage sites has introduced another distinct element into the Collingwood urban fabric, further adding to its diversity.

Change Rating

Precedent Built Form

Typical Typology

PRECINCT 8: TOWN HALL (8)

HR R

Boundary Description

Bounded by Napier Street to the east, Exhibition Street to the north and King William Street to the south. The western extent is defined by the rear of commercial properties along the eastern side of Brunswick Street. South of Langridge Street, the precinct 'wraps' PUZ land including Sacred Heart Primary School.

Precinct map

Precinct Influences

The Town Hall Precinct is a discreet mixed pocket located behind Brunswick Street, focused around the heritage Town Hall and influenced by the surrounding leafy green residential streets of Fitzroy. Key views to the Town Hall and its associated clocktower are experienced from Brunswick Street and on approach along Moor Street from the west.

This precinct is largely characterised by narrow east-west streets and a varied subdivision pattern which heightens the sense of arrival to Brunswick Street and the transition to fine grain residential interfaces. This confined precinct has transformed considerably in recent years, from predominately low order heritage and post-war warehouse forms to more recent mixed use apartment typologies of 4 to 6 storeys, concentrated along St David Street and Napier Street.

Change Rating

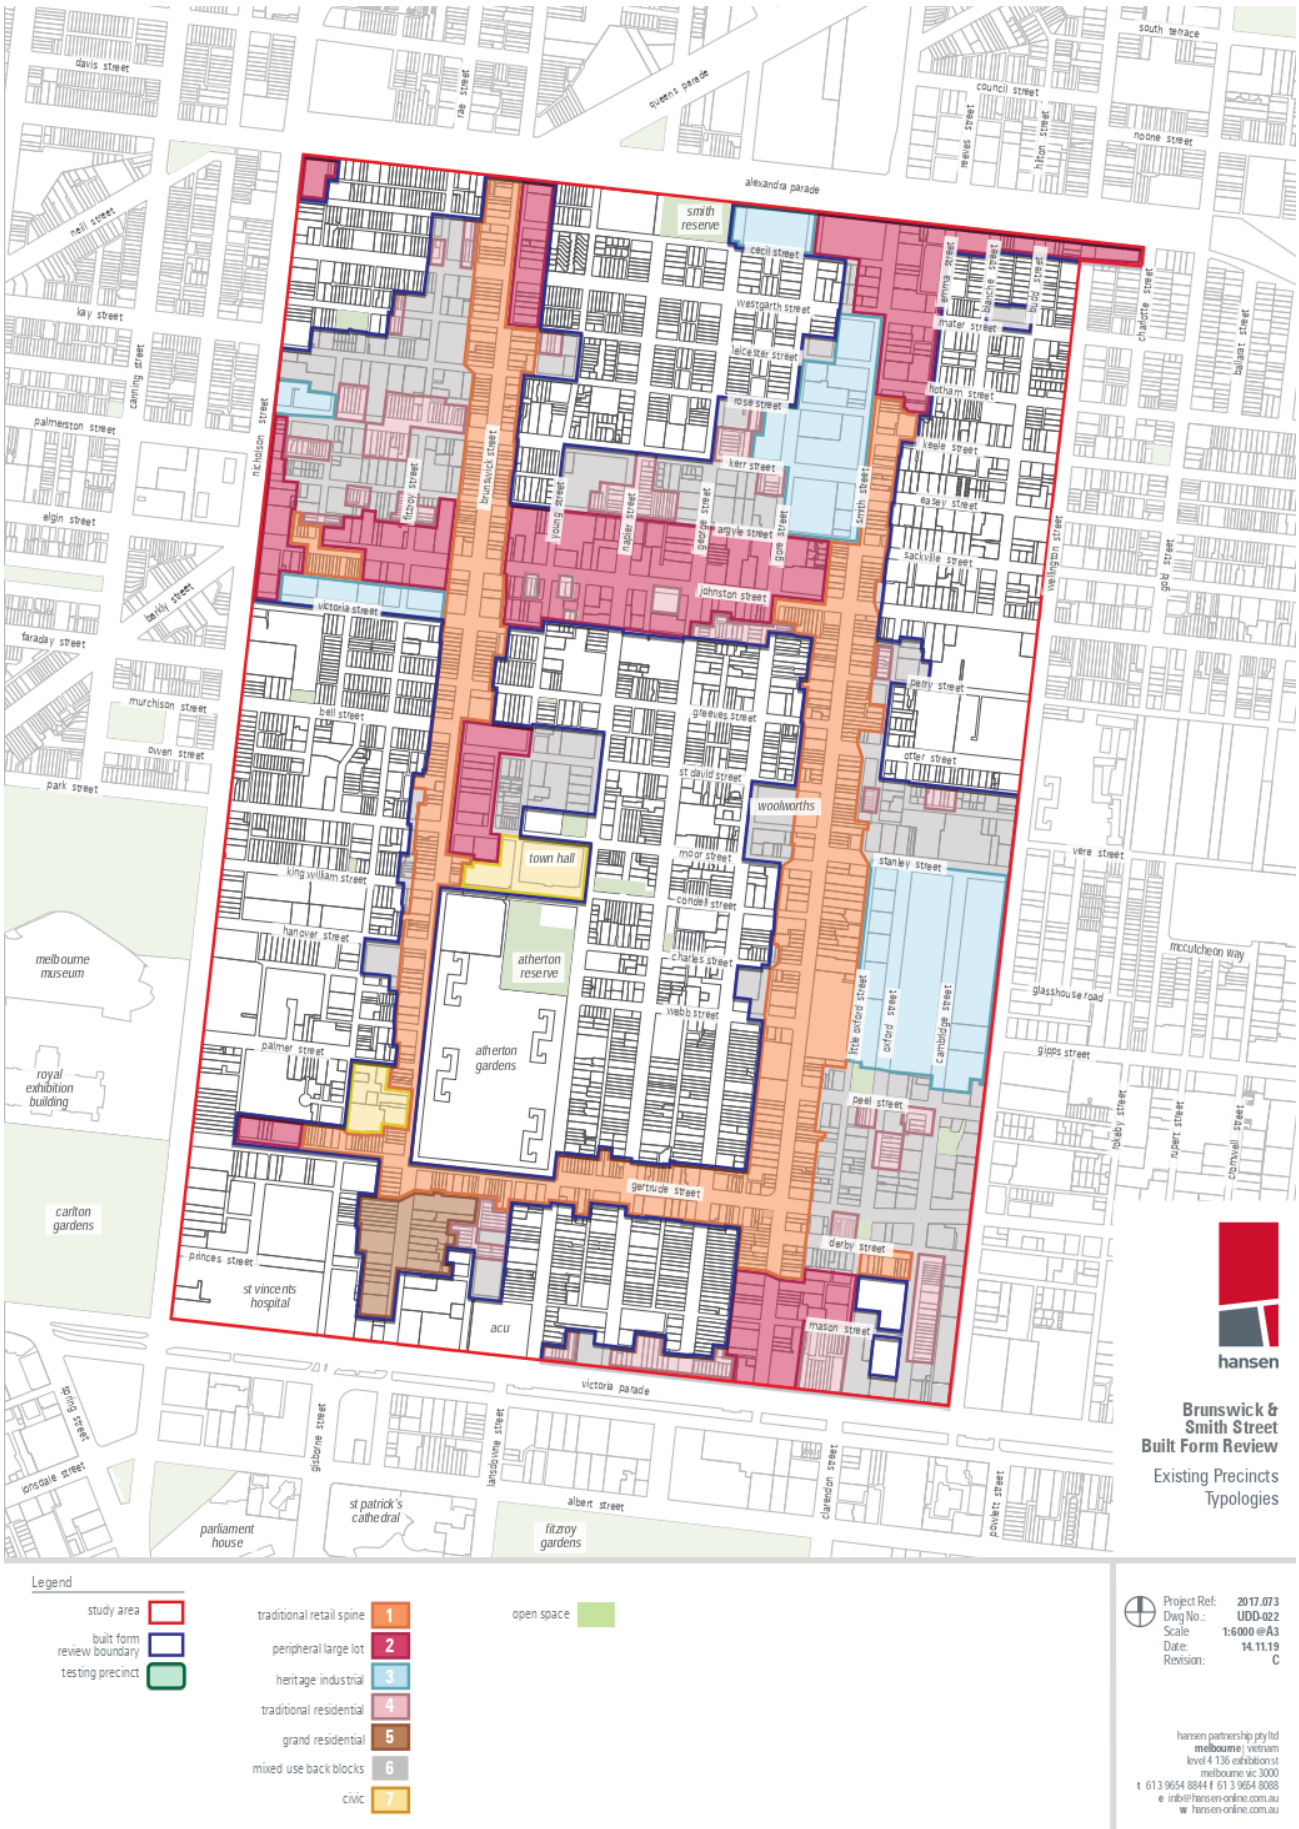
Precedent Built Form

5.0 Existing Built Form Typologies

Based on the contextual and built form analysis of the previous sections, differences in the feel and built form character are emerging between certain areas within the wider study area. The interplay between street function and role, employment activities, existing heritage fabric and more recent built form, streetwall heights and overall heights has resulted in differences that can be translated into descriptions of a dominant character within an area. It allows an identification of important aspects per area, which will inform the formulation of future character statements and provide a direction for the relevant built form parameters for development activity.

In an attempt to simplify and distil the existing diverse built form character of Fitzroy and Collingwood we undertook a typological approach to classify the built form into 7 types in order to understand the spatial distribution.

The 7 existing built form typologies are as follows:



- Traditional Retail Spine;
- Peripheral Main Street;
- Heritage Industrial;
- Traditional Residential;
- Grand Residential;
- Mixed Use Back Blocks; and
- Civic

However, the Civic typology only applies to the following:

- Fitzroy Town Hall;
- The Sacred Heart Church and School; and
- Brotherhood of St. Laurence.

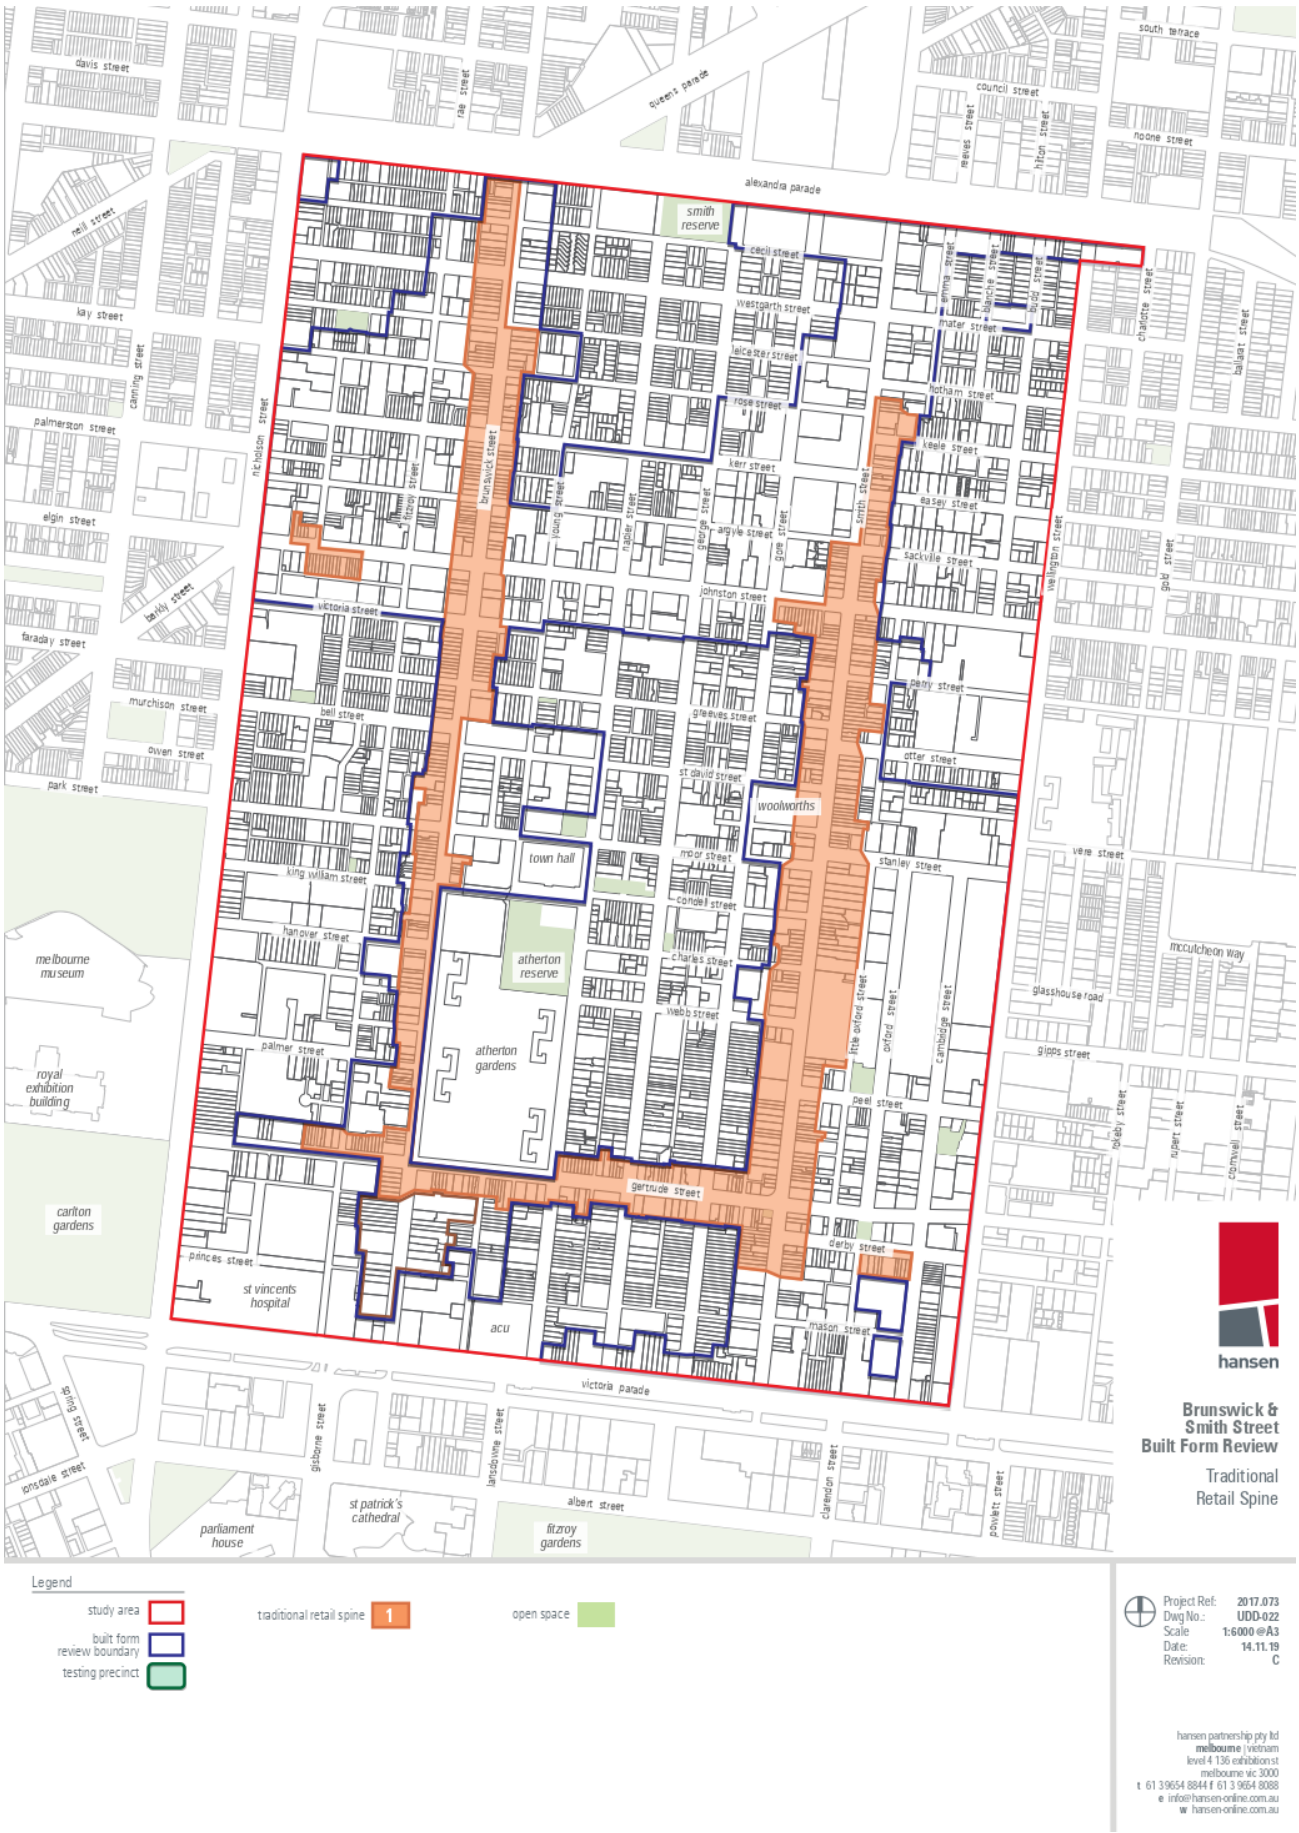
Therefore, it was deemed not necessary to document their existing built form characteristics.

Attachment 1 - Attachment 1 - Background Analysis Report

TYPOLOGY 1: TRADITIONAL RETAIL SPINE

Located predominately along Smith Street, Brunswick Street, Gertrude Street and the western portion of Johnston Street, the traditional retail spine precinct comprises of mainly fine grain shop fronts with a distinguished heritage character. The traditional, old charm main street character with wide shop windows at ground floor, verandahs over footpaths and narrow frontages host non-generic, individual commercial and gastronomy businesses that attract a lot visitors, leading to a busy pedestrian environment. The design of buildings and their streetwall and character is very consistent due to the strong re-occurrence of key characteristics and façade elements.

Key Characteristics



- Main frontage with central tram provision
- Long linear streetscapes corridors with strong streetwall profile
- Predominately fine grain subdivision
- Strong heritage fabric
- Prominent 2 storey traditional streetwall presentation
- Consistent built form rhythm
- Significant heritage built form fabric
- Highly glazed ground floor (shop) fronts at ground floor
- Skillion verandahs or canopy above footpath
- Upper levels are more solid with several vertical windows, pilasters often continued from ground floor
- Decorative parapet and visible chimneys
- Limited landscape provision
- On-street kerbside parking
- Provision of rear laneways for service access

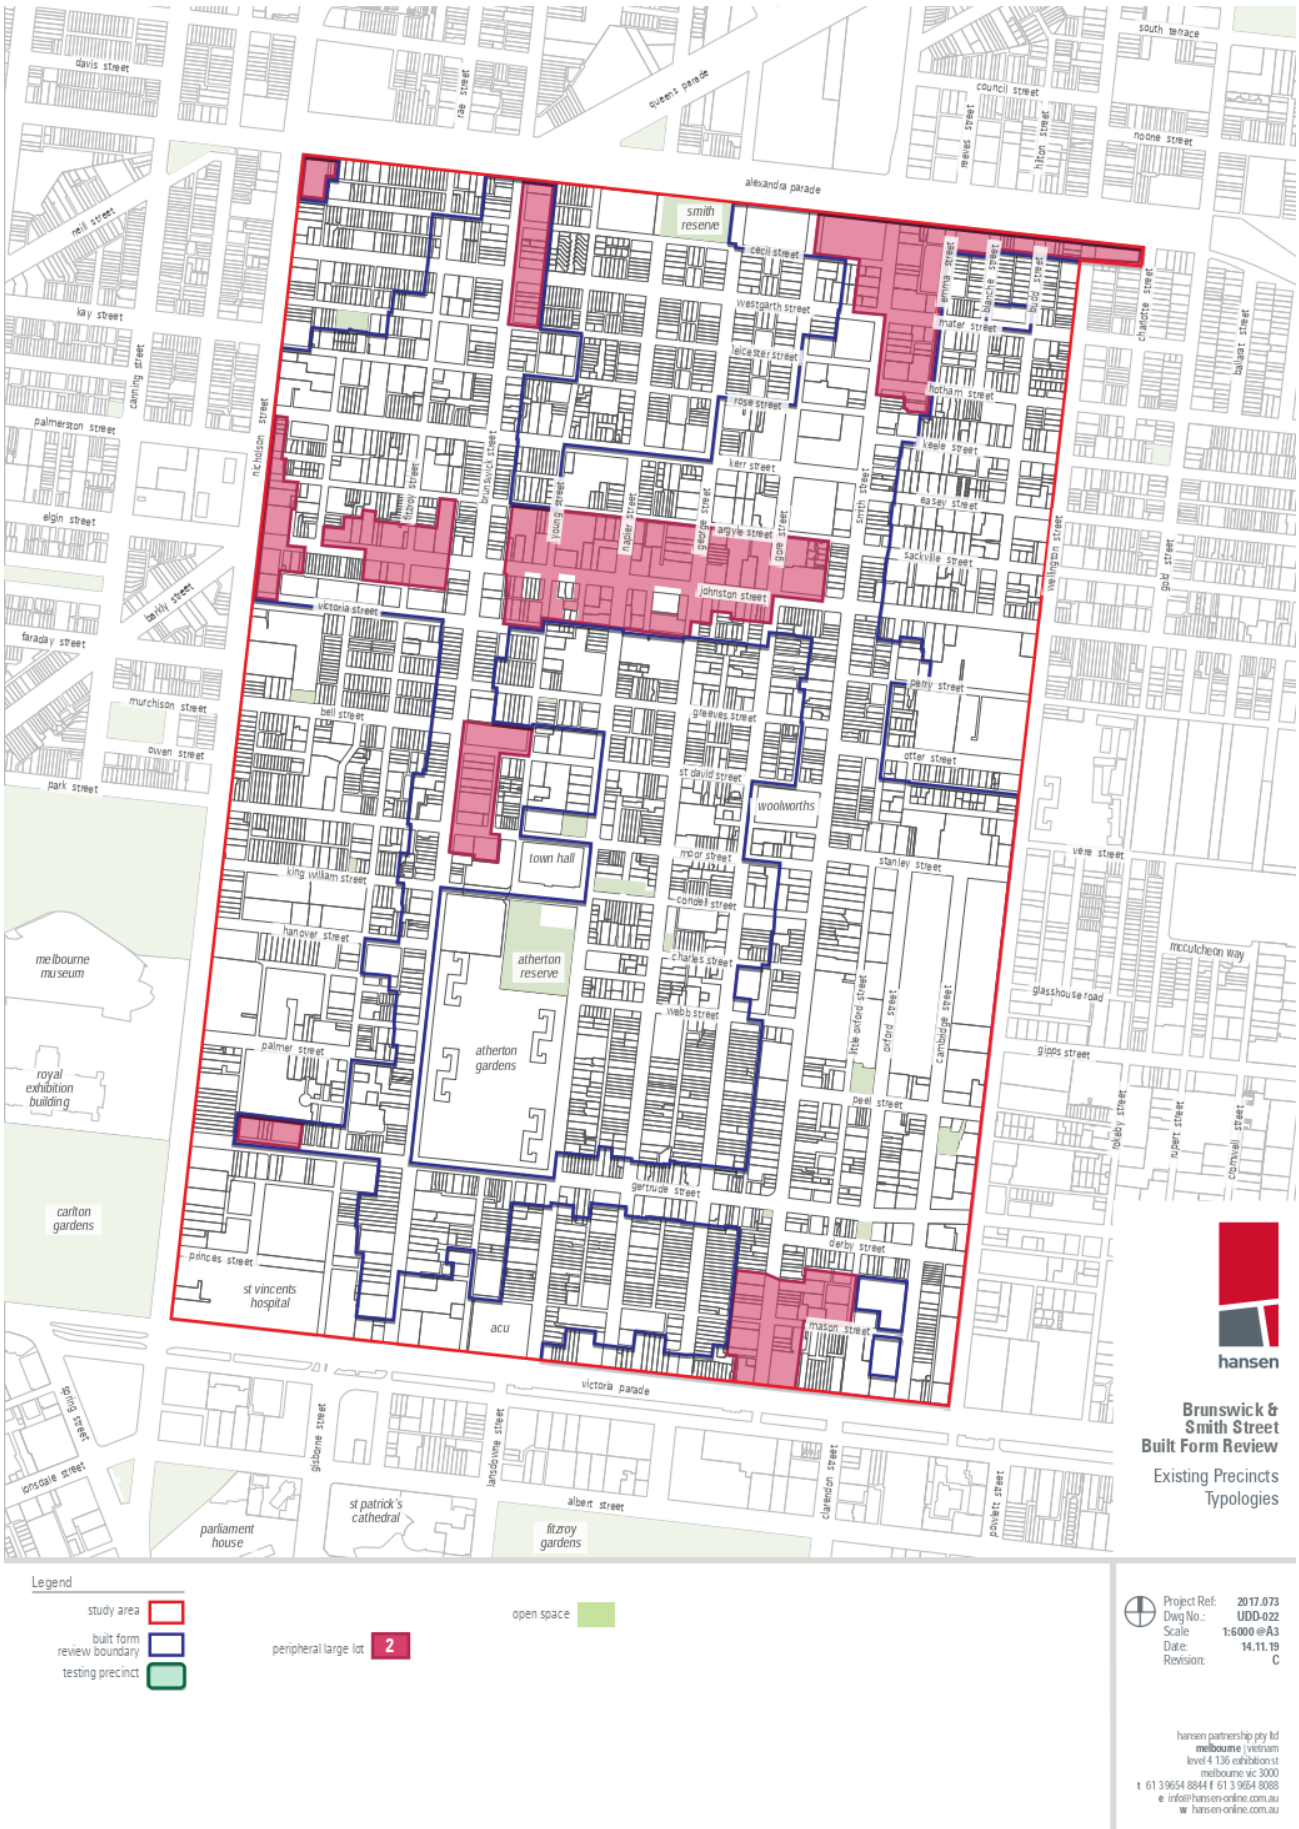
Attachment 1 - Attachment 1 - Background Analysis Report

TYPOLOGY 2: PERIPHERAL MAIN STREET

Located along the northern and southern ends of Smith Street, the northern end of Brunswick Street, Johnston Street between Brunswick and Smith Streets and a portion along Nicholson Street, the moderate grain spine precinct comprises of moderate grain shop fronts with a mix of contemporary and heritage character.

These areas resemble a mix between 1 to 3 storey streetwalls and similar overall heights. Recent developments are higher, but overall still the exception. The more robust bulk and less ornate facades (in comparison to the traditional main streets) and generally larger windows at ground and upper levels create a post-war industrial and commercial street appearance

Key Characteristics



- Main road frontage
- Mainly moderate grain subdivision
- Mix of heritage and contemporary fabric
- Prominent 2-3 storey streetwall presentation
- Inconsistent built form rhythm
- Highly glazed ground floor (shop) fronts
- Absence of canopies and awnings
- Fascia is more modern and less ornate
- Windows more horizontally aligned and larger
- Pockets of recently completed development
- Limited landscape provision
- On-street kerbside parking
- Bus and tram provision in most areas
- Provision of rear laneways for service access

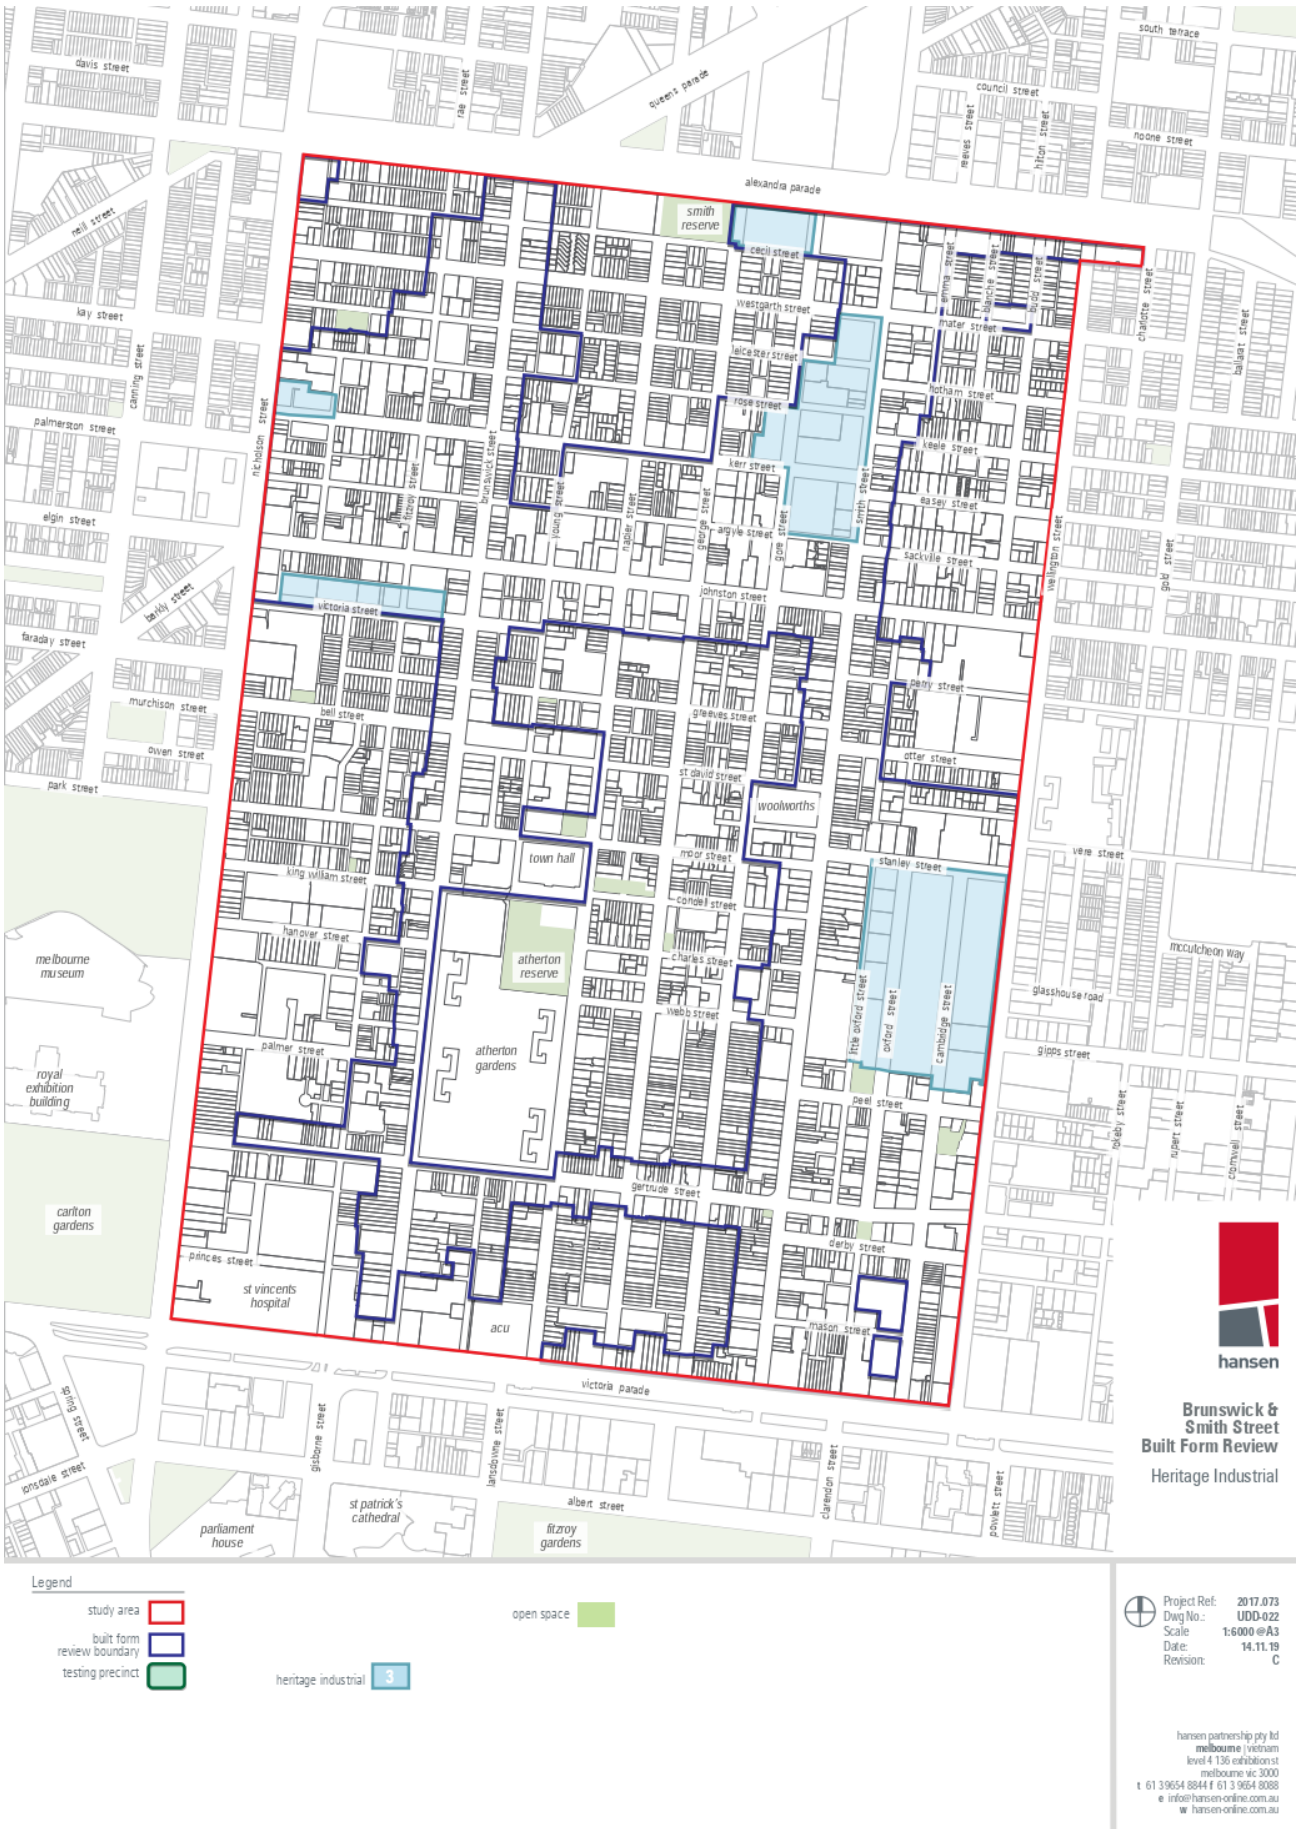
Attachment 1 - Attachment 1 - Background Analysis Report

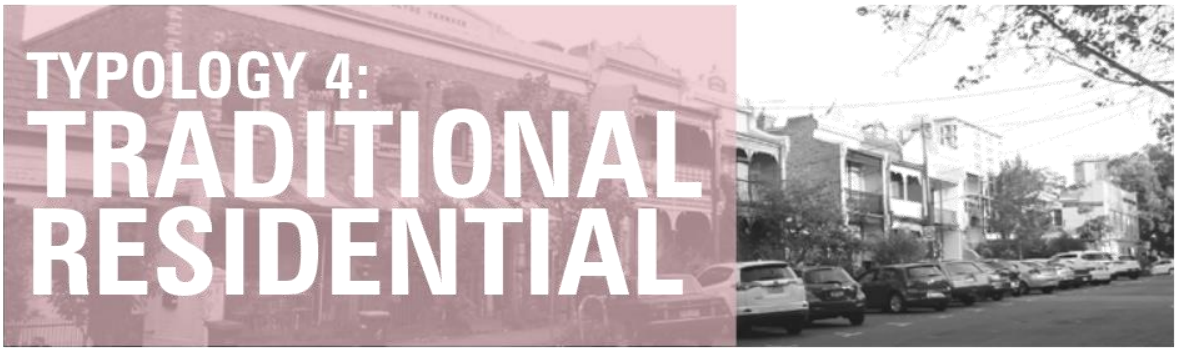
TYPOLOGY 3: HERITAGE INDUSTRIAL

Typically comprising the larger land parcels and comprise either remnant heritage factory buildings which have been renovated or recent infill developments. Located at the MacRobertson precinct to the north of Johnston Street and west of Smith Street, the Foy and Gibson precinct on the Collingwood slope, the Victoria Street properties to the west of Brunswick Street as well as 3 smaller pockets to the periphery of the study area, all comprising main street frontages. These locations are dispersed across the study area, defined by the original industrial forms and factories and were the cornerstone for the development of Collingwood and Fitzroy at that time.

Key Characteristics

- Predominately large grain subdivision
- Clear contrast to surrounding subdivision and built form
- Strong industrial fabric
- Varied streetwall presentation
- A mix of robust and intact 1-2 storey industrial built form and newer developments
- Red brick facades articulated via pilasters, plinth, window sills and fascia of different material or colour, larger windows.
- Considerable individually significant heritage fabric
- Limited landscape provision
- On-street parking
- Often occupy full urban blocks
- Limited rear laneways for service access



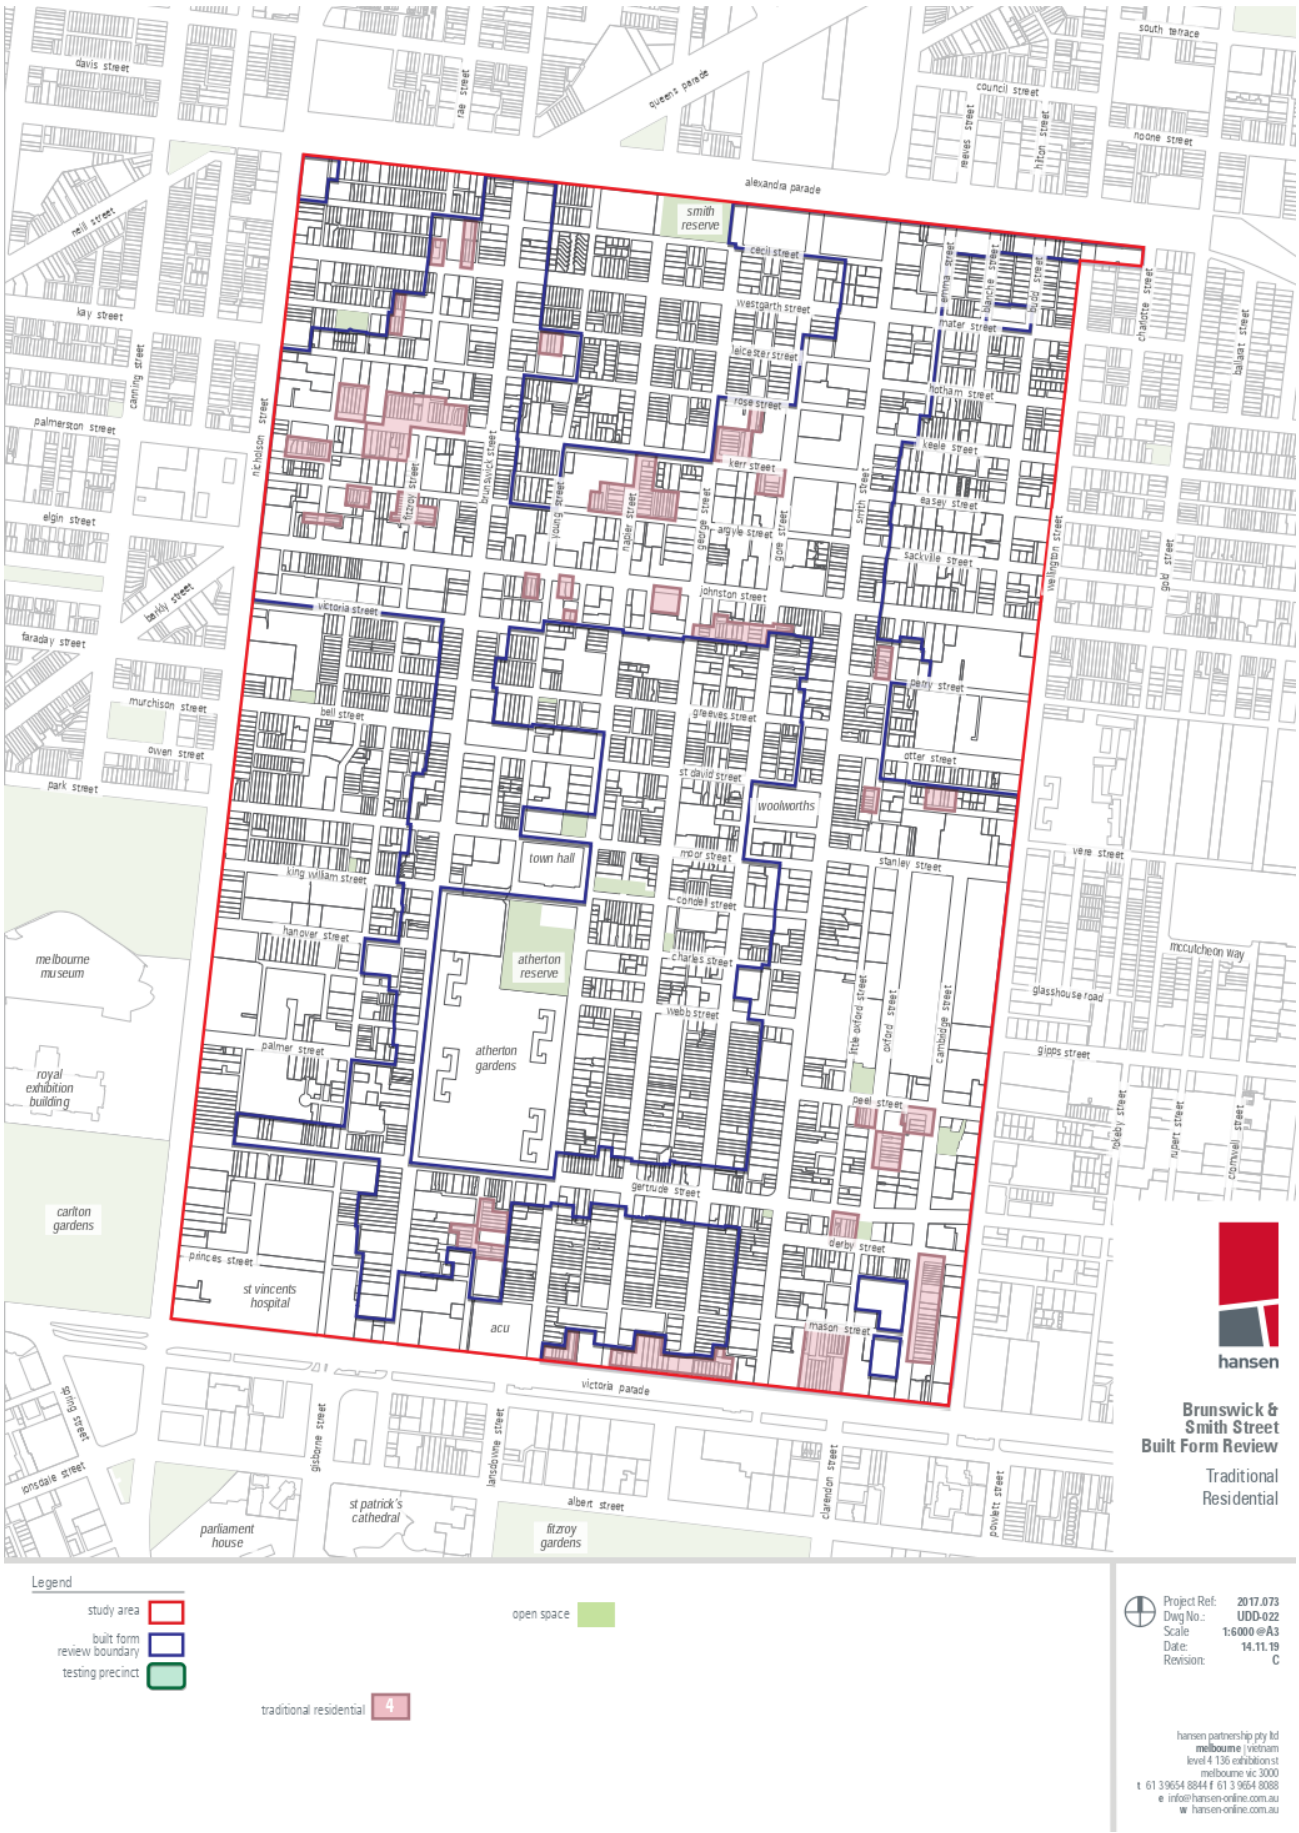


Attachment 1 - Attachment 1 - Background Analysis Report

TYPOLOGY 4: TRADITIONAL RESIDENTIAL

The traditional residential 'precinct' includes small pockets scattered throughout predominantly the mixed use back blocks, with a few instances along Johnston Street. Its characteristics include fine grain subdivisions and attached heritage terrace housing.

Key Characteristics



- Small narrow lot size
- Predominately fine grain subdivision with some larger grain lots
- Intact heritage fabric
- 1-2 storey scale
- Attached terrace dwellings
- Inconsistent fine grain built form rhythm
- Predominately heritage dwellings with some contemporary additions and new buildings
- Some landscape provision with small front setbacks
- On-street kerbside parking
- Often provision of rear laneways for service access

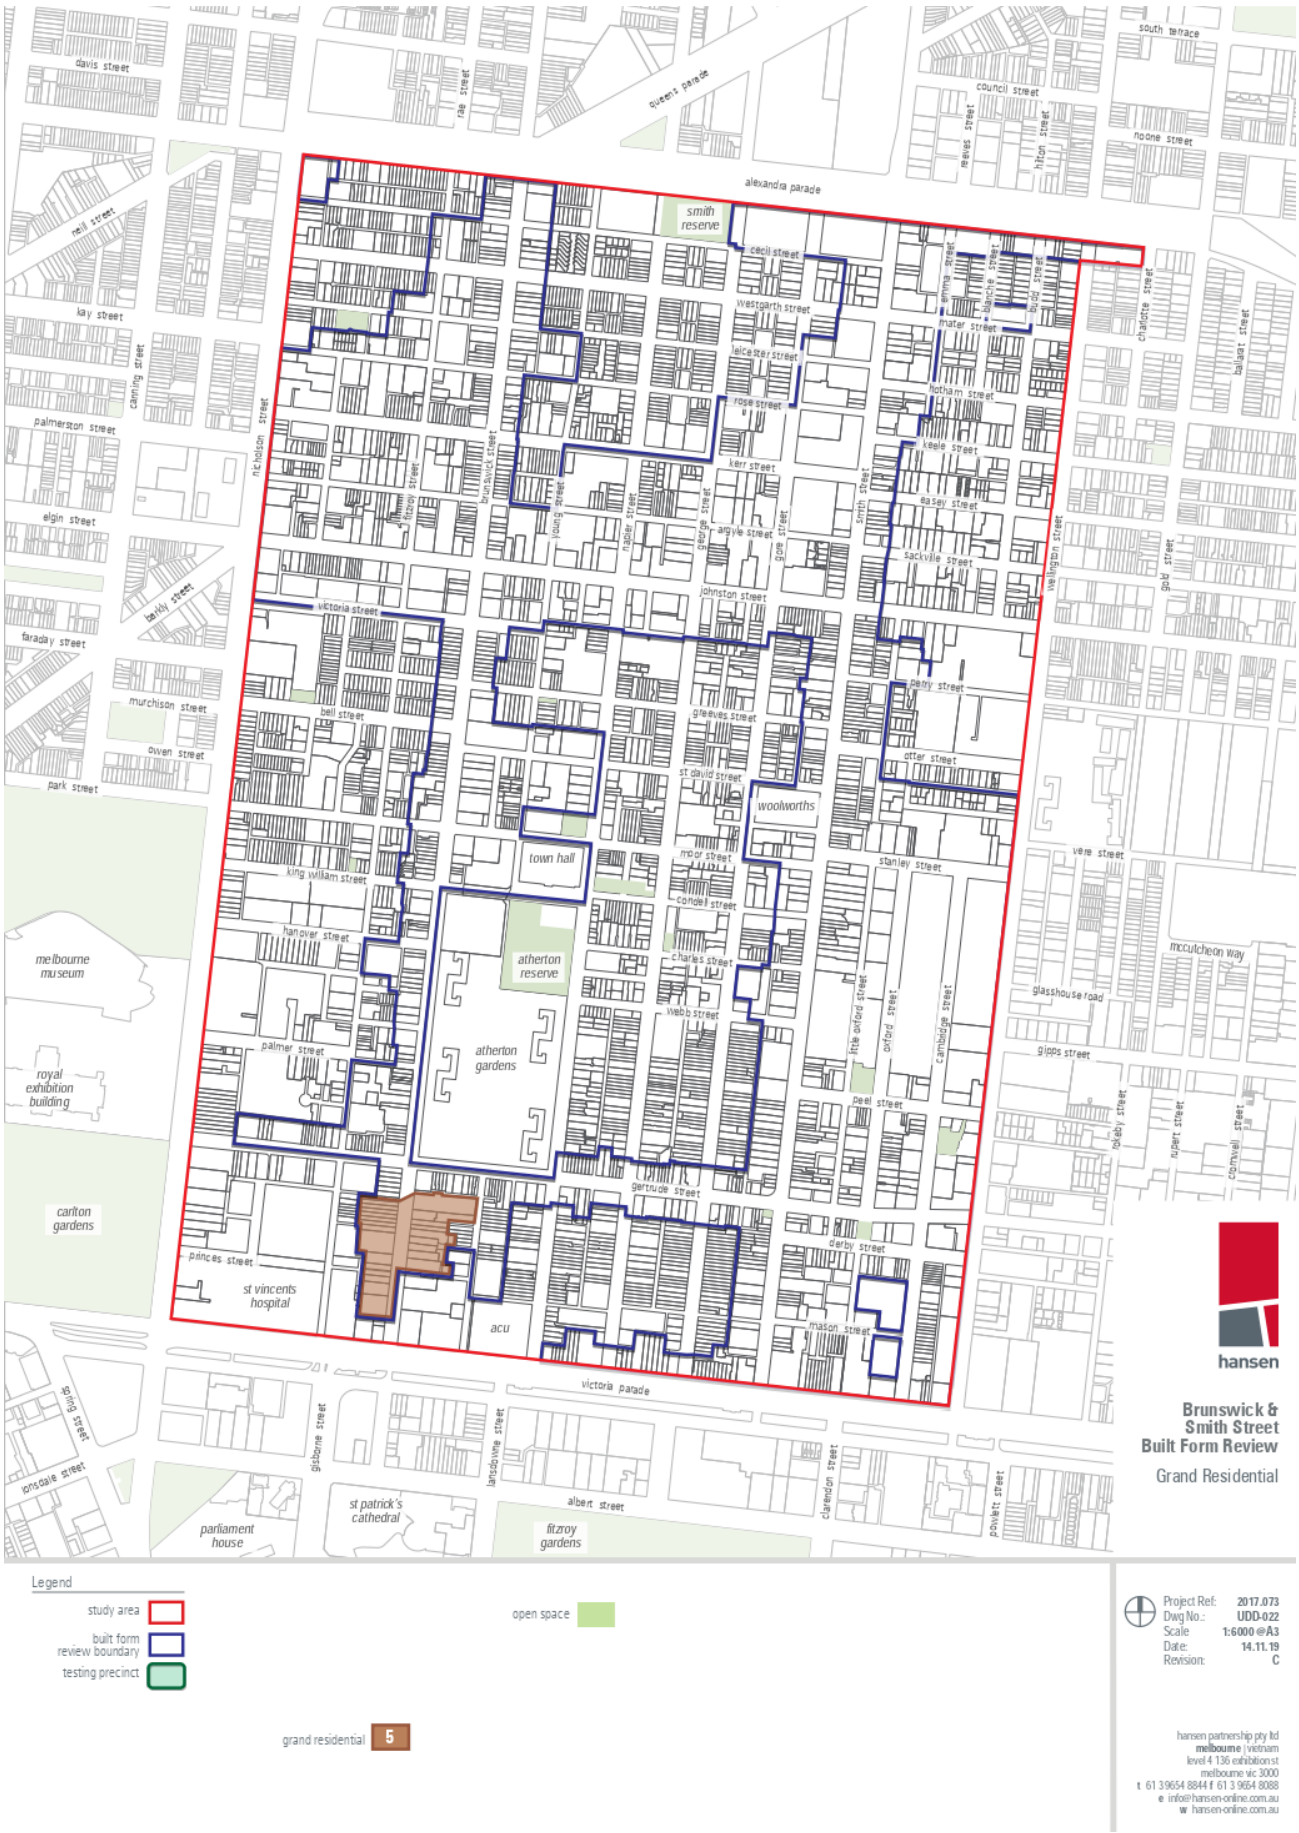
Attachment 1 - Attachment 1 - Background Analysis Report

TYPOLOGY 5: GRAND RESIDENTIAL

Located to either side of Brunswick Street (south of Gertrude Street) this predominantly intact precinct of more opulent heritage homes and 'high street' forms.

Key Characteristics

- Main road frontage
- Varied subdivision grain and lot depth
- Strong heritage fabric
- Predominantly 2-3 storey streetwall presentation
- Attached forms and more ornated architectural features
- Some landscape provision within small front setbacks
- On-street kerbside parking
- Partial provision of rear laneways for service access
- Central tram provision

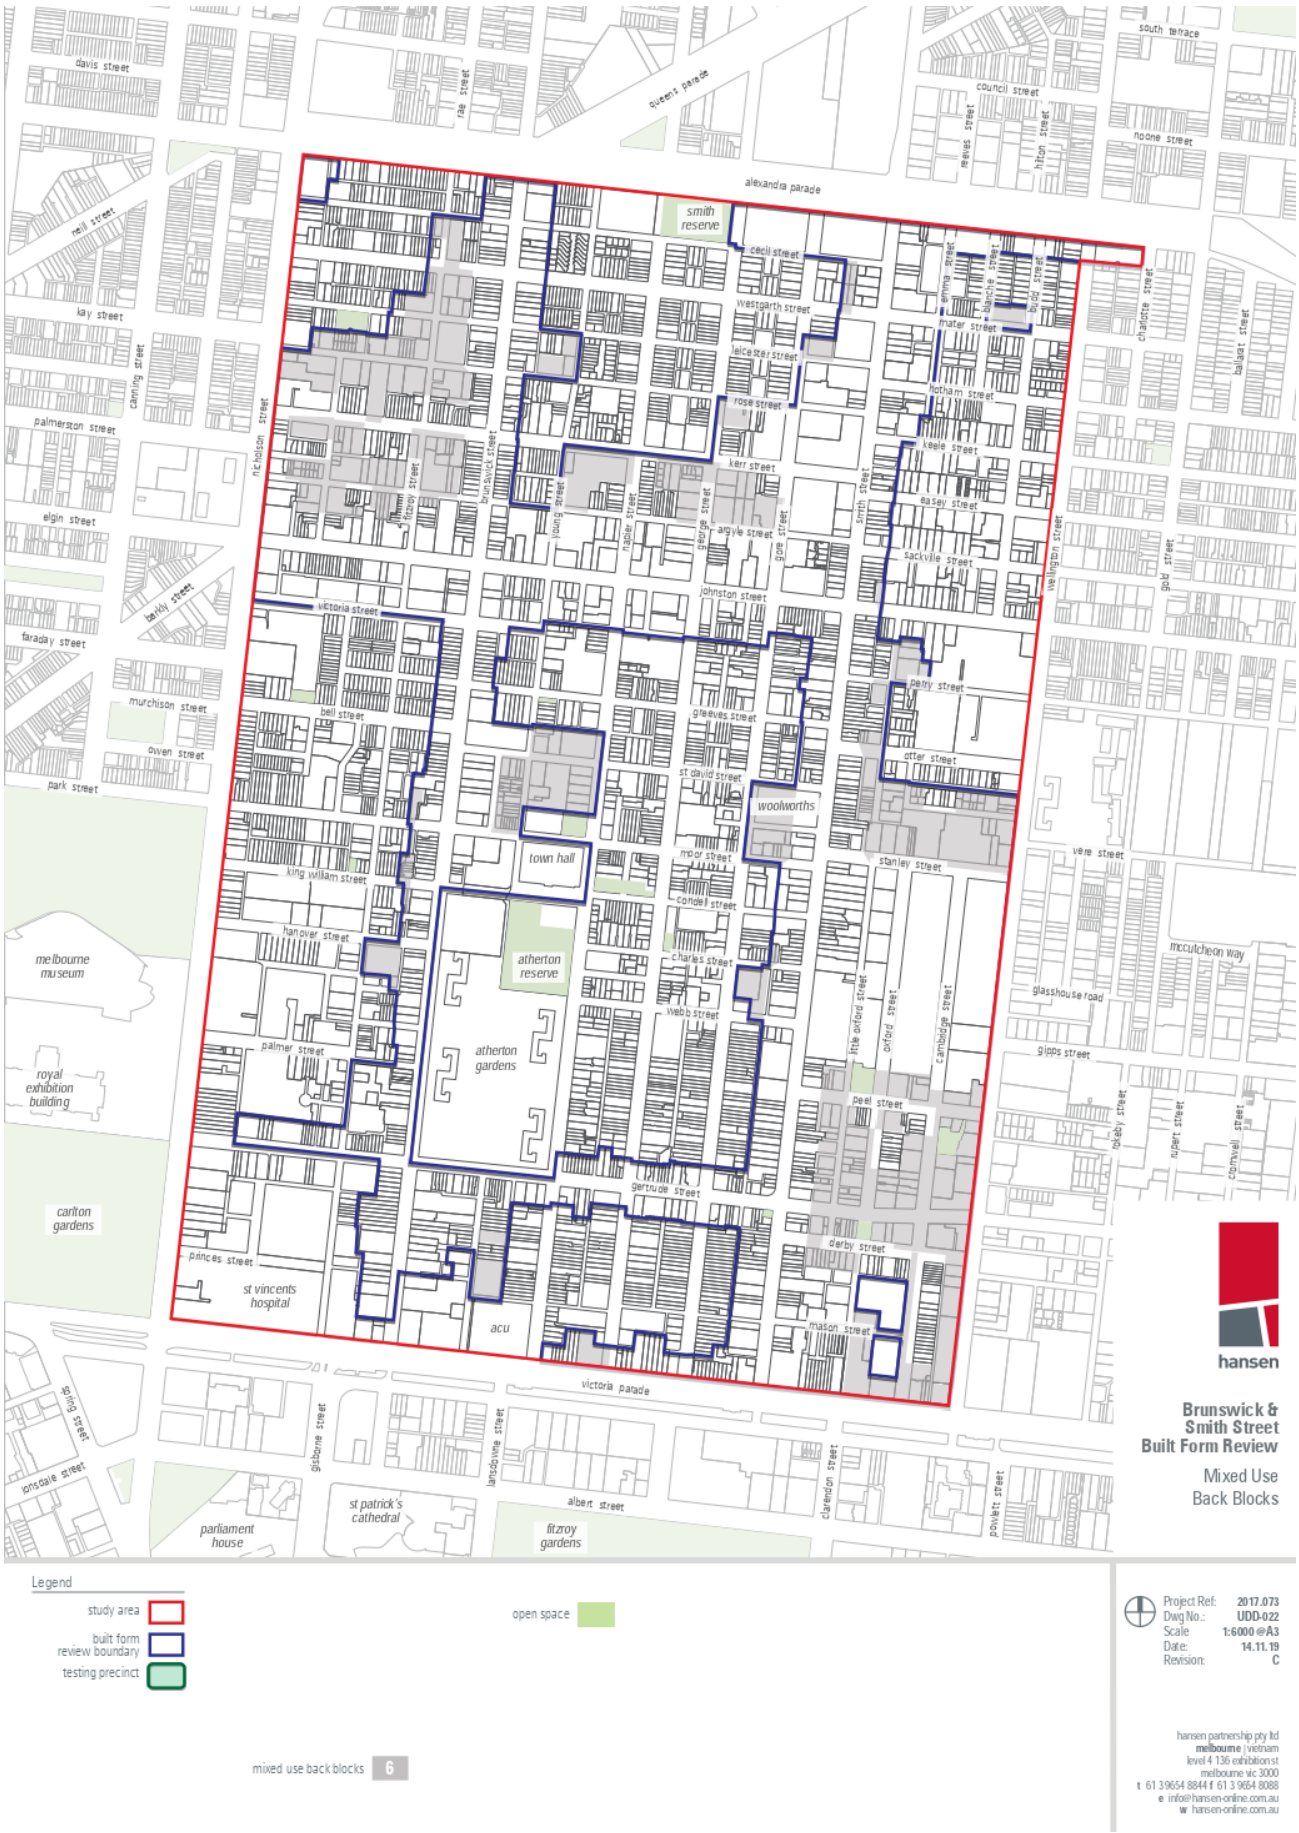


Attachment 1 - Attachment 1 - Background Analysis Report

TYPOLOGY 6: MIXED USE BACK BLOCKS

The varied grain mixed use precincts are located predominately within the mixed use zone (behind the spine) and comprises of a moderate grain subdivision pattern with areas of fine grain residential lots. This precinct is characterised by its variety of industrial and contemporary built form with pockets of traditional residential scattered within the precinct. It comprises a variety of heritage and post-war industrial built form, with some recent mixed use development infill. Traditional, small scale heritage residential form is scattered across these areas. Due to a lack of landscaping and narrower streets back blocks within Fitzroy West have a 'harsher' appearance than those in Fitzroy East or Collingwood South.

Key Characteristics



- Predominantly local street frontage
- Medium size lots and grain with some fine grain residential
- Mix of industrial and contemporary fabric with pockets of residential
- Varied streetwall heights
- Predominant 2 storey streetwall comprising brick or render with horizontially emphasised fenestration
- Inconsistent built form rhythm and presentation
- Largely non contributory or no heritage grading
- Limited streetscape landscape provision, particularly in Fitzroy West
- On-street kerbside parking
- Bus and tram provision in close proximity
- Provision of rear laneways for service access

Attachment 1 - Attachment 1 - Background Analysis Report

Attachment 1 - Attachment 1 - Background Analysis Report

APPENDIX A

Planning Policy Framework

The Planning Policy Framework (PPF) provides the planning policy direction for Victoria, and form part of all local Planning Schemes (including the Yarra Planning Scheme) at Clauses 10-19.

The relevant directions within the PPF are as follows:

Clause 11.03-1

- *To build up activity centres as a focus for high-quality development activity and living for the whole community by developing a network of activity centres*
- *To encourage the concentration of major retail, residential, commercial, administrative, entertainment and cultural developments into activity centres which provide a variety of land uses and are highly accessible to the community*

Clause 11.06-2

- *To provide housing choice close to jobs and services*

Clause 15.01-1

- *To create urban environments that are safe, functional and provide good quality environments with a sense of place and cultural identity*

Clause 15.01-2

- *To achieve architectural and urban design outcomes that contribute positively to local urban character and enhance the public realm while minimising detrimental impact on neighbouring properties*

Clause 15.01-2

- *To ensure development responds to its existing context and reinforces special characteristics of local the local environment, such as heritage key landmarks, views and vistas*

Clause 15.01-4

- *To improve community safety and encourage neighbourhood design that makes people feel safe*

Clause 15.02-1

- *To encourage land use and development that is consistent with the efficient use of energy and the minimisation of greenhouse gas emissions*

Clause 15.03-1

- *To ensure the conservation of places of heritage significance*

Clause 16.01-2

- *To locate new housing in or close to activity centres and in urban renewal precincts and sites that offer good access to jobs, services and transport*

Clause 16.01-3

- *To identify areas that offer opportunities for more medium and high density housing near employment and transport in Metropolitan Melbourne*

Clause 16.01-4

- *To provide for a range of housing types to meet increasingly diverse needs*

Clause17.01-1

- *To encourage development which meet the communities' needs for retail, entertainment, office and other commercial services and provides net community benefit in relation to accessibility, efficient infrastructure use and the aggregation and sustainability of commercial facilities*

Clause 18.01-1

- *To create a safe and sustainable transport system by integrating land-use and transport*

Other relevant state-wide documents include:

- Plan Melbourne;
- The Better Apartment Design Standards (BADS); and
- The Urban Design Guidelines for Victoria (2017).

Plan Melbourne 2017-2050

Is the overall strategic plan tp guide Melbourne's future growth in population and employment while ensuring it remains liveable, sustainable and accessible for all.

It is guided by 9 principles which are translated into 7 outcomes. Each outcome has a set of directions to achieve it. There is an emphasis on growing the city in a sustainable manner that makes the best possible use of existing, well located and accessible centres such as Fitzroy (Brunswick Street and Smith Street), which are both identified as being major activity centres.

The most relevant principles are as follows:

Principle 1 : A distinctive Melbourne

- *Melbourne has an enviable natural environment, important Aboriginal cultural heritage values, a rich inheritance of open space, and landmark buildings and streets created during the population booms of the Gold Rush and post-War period.*
- *To ensure Melbourne remains distinctive, its strengths will be protected and heritage preserved while the next generation of growth is planned to complement existing communities and create attractive new neighbourhoods.*

The extensive heritage fabric within built form review area, has to be carefully considered when formulating new built form controls.

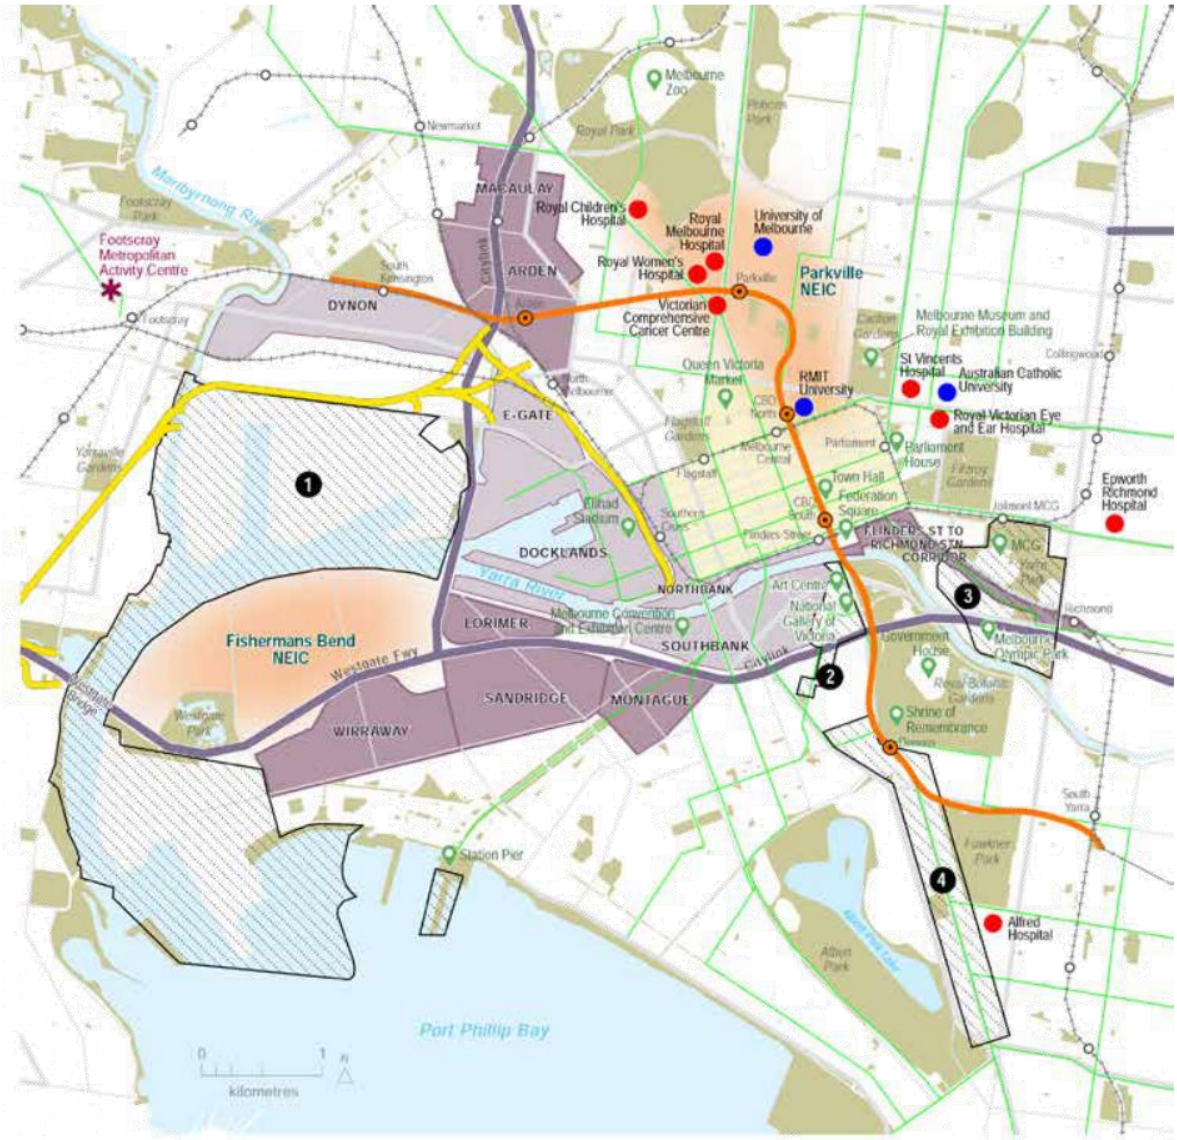
Principle 5: Living locally - 20 minute neighbourhoods

- *Creating accessible, safe and attractive local areas where people can access most of their everyday needs within a 20-minute walk, cycle or local public transport trip, will make Melbourne healthier and more inclusive.*
- *Due to the specialised and diverse nature of work, many people will still need to travel outside of this 20-minute neighbourhood for their jobs.*

Given the proximity of the built form review area to central Melbourne and infrastructure it provides excellent opportunity for 'sustainable' growth.

The relevant directions are as follows:

Direction 2.1: Manage the supply of new housing in the right locations to meet population growth and create a sustainable city.



Direction 2.2: Deliver more housing closer to jobs and public transport.

Direction 2.5: Provide greater choice and diversity of housing.

Direction 4.4: Respect Melbourne's heritage

Direction 5.1: Create a city of 20-minute neighbourhoods.

Given the activity centre status and close proximity of the study area to the central city means its continued growth will create likely demand and increased development pressure on Brunswick Street and Smith Street and the nearby mixed use pockets.

Map 4

Key features in and around Melbourne's central city

- Central Business District
- National employment and innovation cluster (NEIC)

Major urban renewal precinct (2015 - 2051+)

- Priority precinct (1)

The Urban Design Guidelines for Victoria (2017).

The Victorian State Government developed the Urban Design Guidelines for Victoria to support state agencies, local government and the urban development sector to deliver, functional and enjoyable places for people to live, work, and spend leisure time. The guidelines aim to create neighbourhoods that foster community interaction and make it easy for people of all ages and abilities to live healthy lifestyles and engage in regular physical activity. These places may be urban areas in metropolitan Melbourne and in regional cities and towns.

- The guidelines are ordered within urban elements:
- 1. Urban structure – the overall topography and land division pattern
- 2. The movement network – the roads, streets, and paths
- 3. Public spaces – areas for public recreation
- 4. Public transport environs – the spaces and buildings around stations, bus and tram interchanges
- 5. Buildings – and their contribution to their setting
- 6. Objects in the public realm – facilities located in streets and public spaces.

The Better Apartment Design Standards (BADS)

The Better Apartment Design Standards apply to all new apartment developments across Victoria.

The Standards were introduced in 2017 and provide clear rules for apartment design to improve liveability and ensure an acceptable standard of internal amenity.

Local Planning Policy Framework

The Yarra Local Planning Policy Framework (LPPF) applies to land within the municipal boundary of the City of Yarra. It is contained in Clauses 21, referred to as the Municipal Strategic Statement (MSS), and Clause 22, which contains the Local Planning Policies (LPP).

The Relevant Clauses of the MSS are summarised below.

Clause 21.03: Vision

Relevant sections in the MSS vision are:

- Yarra will accommodate a diverse range of people.
- Yarra will have increased opportunities for employment.
- Yarra's existing retail strip shopping centres will provide for the needs of local residents, and attract people from across Melbourne.
- Yarra's historic fabric which demonstrates the development of metropolitan Melbourne will be internationally recognised.
- Yarra will have a distinctive identity as a low-rise urban form, with areas of higher development and highly valued landmarks.
- All new development will demonstrate design excellence.

Clause 21.04: Land Use

21.04-1 Accommodation and housing

- *'Yarra will continue to accommodate its share of the housing growth of the inner Melbourne Metropolitan region.'*

Objective 1: To accommodate forecast increases in population

Strategy 1.1: Ensure that new residential development has proper regard for the strategies applicable to the neighbourhood in question identified in clause 21.08.

Strategy 1.2 Direct higher density residential development to Strategic Redevelopment Sites identified at clause 21.08 and other sites identified through any structure plans or urban design frameworks.

Clause 21.05: Built Form

Addresses matters relating to Heritage and Urban Design.

Clause 21.05-1 Heritage establishes a strong policy position to acknowledge, protect and enhance heritage places within the City of Yarra. Relevant strategies includes:

Strategy 14.1: Conserve, protect and enhance identified sites and areas of heritage significance including pre-settlement ecological heritage.

Strategy 14.2: Support the restoration of heritage places.

Strategy 14.3: Protect the heritage skyline of heritage precincts.

Strategy 14.5: Protect the significant landscape and heritage within streets, parks, gardens, waterways or other open spaces.

Strategy 14.6: Protect buildings, streetscapes and precincts of heritage significance from the visual intrusion of built form both within places and from adjoining areas.

Clause 21.05-2 Urban Design recognises the valued low-rise urban form of the City of Yarra and that the existing urban form is punctuated by taller buildings located near activity centres as well as landmark buildings, with objectives to reinforce the existing urban framework and to retain Yarra's identity as a low-rise urban form with pockets of higher development.

Relevant strategies include:

Strategy 16.2: Maintain and strengthen the preferred character of each Built Form Character Type within Yarra.

Strategy 17.1: Ensure that development outside activity centres and not on Strategic Redevelopment Sites reflects the prevailing low-rise urban form.

Strategy 17.2: Development on Strategic Redevelopment Sites or within activity centres should generally be no more than 5-6 storeys unless it can be demonstrated that the proposal can achieve specific benefits such as: significant upper level setbacks; Architectural design excellence; best practice environmental sustainability objectives in design and construction; high quality restoration and adaptive re-use of heritage buildings; positive contribution to the enhancement of the public domain; and provision of affordable housing.

Further specifically relevant objectives and strategies of Clause 21.05-2 Urban Design include:

Objective 18: To retain, enhance and extend Yarra's fine grain street pattern.

Strategy 18.1: Encourage the re-establishment of streets and laneways through new development sites where such links were part of the historic street pattern,except where this will cause detrimental traffic impacts.

Objective 19: To create an inner city environment with landscaped beauty.

Strategy 19.1 Require well resolved landscape plans for all new development.

Strategy 19.2: Encourage opportunities for planting suitable trees and landscape areas in new development.

Strategy 19.3: Encourage the retention of mature vegetation.

Strategy 19.4: Protect mature and healthy flora species where they have heritage value or are a valued part of the character of an area.

Objective 20: To ensure that new development contributes positively to Yarra's urban fabric.

Strategy 20.1: Ensure development is designed having particular regard to its urban context and specifically designed following a thorough analysis of the site, the neighbouring properties and its environs.

Strategy 20.2: Require development of Strategic Redevelopment Sites to take into account the opportunities for development on adjoining land.

Strategy 20.3: Reflect the fine grain of the subdivision pattern in building design where this is part of the original character of the area.

Objective 21: To enhance the built form character of Yarra's activity centres.

Strategy 21.1: Require development within Yarra's activity centres to respect and not dominate existing built form.

Strategy 21.2: Require new development within an activity centre to consider the context of the whole centre recognising that activity centres may consist of sub-precincts, each of which may have a different land use and built form character.

Strategy 21.3: Support new development that contributes to the consolidation and viability of existing activity centres.

Clause 21.08: Neighbourhoods

Clause 21.08-5: Collingwood

Identifies properties to either side of Smith Street as forming the Smith Street Major Activity Centre and the creation of a mid block pedestrian through link, connecting Smith Street and Wellington Street between Stanley Street and Langridge Street.

Identifies a number of strategic redevelopment sites within the study area, most of which has already developed except for the sites along the western side of Wellington Street, between Stanley Street and Langridge Street.

Seeks a land contribution to open space in preference to monetary contribution when residential subdivision occurs.

Seeks to support development that maintains and strengthens the preferred character of the relevant Built Form Type and seeks to encourage redevelopment of 113 Wellington Street (Police Workshop) in a way that contributes positively to the urban fabric and public domain of Yarra subject to maintaining and reinforcing the built form character of the area.

Seeks to strengthen the built form of land adjacent to Alexandra Parade.

In the area bound by Johnston Street, Wellington Street, Victoria Parade and Smith Street (including both side of Smith Street), seeks to:

- Maintain the varied profile of the skyline and the built form character of Smith Street;
- Ensure no new development presents as a dominating built form along Smith Street;
- Retain the prominence of the key 'icon' (landmark) buildings in the Smith Street streetscape such as Pattersons, Safeway (now Woolworths) and the Post Office;
- Maintain Foy and Gibson complex of buildings as a large dominating visually cohesive group of buildings; and
- Ensure new development respects the scale of adjoining existing clusters of low rise residential properties.

Clause 21.08-7:Fitzroy

Identifies properties to either side of Brunswick Street and Gertrude Street as forming the Brunswick Street Major Activity Centre (with the exception of Atherton Gardens - which is a Strategic redevelopment site) and identifies properties to either side of Smith Street as forming the Smith Street Major Activity Centre.

Seeks to encourage the redevelopment of the following strategic redevelopment sites: the Atherton Gardens Housing Estate in a way that contributes positively to the urban fabric and public domain of Yarra.

Seeks to support the improvement to the built form of land adjacent to Alexrandra Parade and the Atherton Gardens Housing Estate.

Seeks to maintain the visual prominence of the Fitzroy Town Hall and Spire of St Marks.

Seeks to support the existing scale and character of the Brunswick Street and Gertrude Street activity centres.

Clause 22.02: Development Guidelines for Sites Subject to the Heritage Overlay

This policy guides the protection and improvement of places, including buildings, identified as having cultural and natural heritage significance. Every building is classified as being individually significant, contributory or non-contributory within a given heritage overlay area.

The relevant objectives are as follows:

- *To conserve the historic fabric and maintain the integrity of places of cultural heritage significance;*
- *To retain significant view lines to, and vistas of, heritage places; and*
- *To preserve the scale and pattern of streetscapes in heritage places.*

Clause 22.03: Landmarks and Tall Structures.

This policy seeks to retain important landmarks and icons in the municipality and the view lines to them. Those identified that are contained within the study area are:

- Clocktower of Fitzroy Town Hall; and
- Spire of St Marks Church, George Street, Fitzroy

Development should protect the silhouette/profile of St Patrick's Cathedral seen from the-intersection of Brunswick Street with St Georges Road.

Development should protect the views to the drum, dome, lantern and flagpole of the World Heritage Listed Royal Exhibition Building seen from the footpath on the south side of-Gertrude Street and along Marion Lane, west of Fitzroy Street.

In March 2018, a Review of the Landmarks within Yarra was completed by Ethos Urban and adopted by Council. This work has been incorporated within this Background Analysis and will inform more detailed precinct work and future heights and setbacks.

Clause 22.05: Interfaces Use Policy

This policy seeks to reduce conflict between commercial, industrial and residential activities, and supporting appropriate industrial and commercial activity.

New dwellings must be constructed to protect residents as much as reasonably possible from the inherent conflicts. There is also a need to ensure that commercial and industrial activities are well managed having regard to their proximity to residential uses.

Objectives:

- *To enable the development of new residential uses within and close to activity centres, near industrial areas and in mixed use areas while not impeding the growth and operation of these areas as service, economic and employment nodes.*
- *To ensure that residential uses located within or near commercial centres or near industrial uses enjoy a reasonable level of amenity.*

Clause 22.05-4.1: Dwelling Design, seeks new residential development to be setback 30m amongst other design responses to minimise the impacts of noise, overlooking and other amenity impacts from commercial and industrial uses.

Clause 22.05-4.2: Non-Residential Development Near Residential Properties, seeks to minimise overlooking from residential uses into new commercial and industrial developments by the use of setbacks and other design responses.

Clause 22.07: Development Abutting Laneways

This policy aims to retain laneways and enhance their amenity. Of relevance is that, when the possibility exists, laneways be used for vehicular access instead of the street frontages.

The relevant policy is as follows:

- *Development respect the scale of the surrounding built form.*
- *Development not obstruct existing access to other properties in the laneway.*

Clause 22.10: Built Form and Design Policy

This policy applies to all new developments, except those affected by the Heritage Overlay. The Design Objectives must be met whereas the Design Guidelines are a means to meet the objectives and, consequently, other solutions may be considered by Council.

Relevant Design Objectives are as follows:

Clause 22.10-3.2: Urban form and character

- *To retain and extend the City's fine grain of street pattern and urban form.*

Clause 22.10-3.3: Setbacks & Building Height

- *To ensure that the setbacks and height of new developments are appropriate for the desired neighbourhood character.*

Clause 22.10-3.4: Street and Public Space Quality

- *To ensure ground levels and interface treatments positively engage with the public realm.*

Clause 22.10-3.6: Site Coverage

- *To ensure that the site coverage of new development complements the desired neighbourhood-character of the area and responds to the features of the site*

Clause 22.10-3.8: Off-Site Amenity

- *To ensure that new development does not prejudice the rights of adjoining and/or nearby landusers (especially residents) to enjoy solar access, privacy, and acceptable noise levels.*

Clause 22.12: Public Open Space Contribution

This policy applies to all residential and mixed use proposals with a residential component.

The relevant objectives are as follows:

- *To identify when and where land contributions for public open space are preferred over cash contributions.*
- *To ensure that where appropriate, land suitable for public open space is set aside as part of the design of a development so that it can be transferred to or vested in Council, in satisfaction of the public open space contribution requirement.*

Review & Development of the City of Yarra Landmarks Policy (March 2018)

The purpose of this study is to review the list of nominated landmarks in the Landmarks and Tall Structures Policy and recommend how the Policy could be improved to protect the City's landmarks.

Relevant to the study area the report identifies two Landmarks within the study area, being:

- the Clock tower of the Fitzroy Town Hall (201 Napier Street, Fitzroy); and
- the Spire of the St Mark's Church (268 George Street, Fitzroy).

It also identifies four Landmarks that are visible from the study area, being:

- Shot tower (94 Alexander Parade, Clifton Hill);
- Spire of St John's Church (61 Queens Parade, Clifton Hill);
- Spire of St Luke's Church (121-123 St Georges Road, North Fitzroy); and
- Spire of St Patrick's Catheral (1 Catheral Place, East Melbourne).

The review identifies both primary and secondary views in relation to each landmark. However, only the primary views provide the most identifible and prominent views of the landmarks and are considered to be worthy of planning scheme protection.

Recommended revised policy should:

- Protect the primary views to the city's important landmarks, as identified;
- Retail the visual prominence of the identified architectural elements of each landmark in primary views to the landmark;
- Ensure that new development is appropriately sited and scaled so that it avoids encroachment upon the identified architectural elements of the landmarks, as seen in the primary views;
- Ensure that, where a landmark is currently appreciated within a"clear sky" context, adequate setback and building separation is provided to maintain clear sky between identified architectural elements and new development to retain the prominence of the landdmark; and
- Minimise direct sources of light spill from new development that would reduce the visual prominence of identified landmark illuminated signs at night time.

Other recommendations

In places where pressure for higher scale built form is anticipated, such as activity centres or strategic redevelopment sites, detailed building height and setbacks for landmarks of high significance should be implemented through a Design and Development Overlay (DDO).

The DDO will allow specific building height and setback distances around a landmark to be stipulated in the planning scheme and will therefore carry a greater statutory weight than the requirements of a Local Policy. The DDO requirements can be implemented either as discretionary or mandatory controls.

DDOs would be prepared through further urban design analysis and visual assessment, as well as integration with strategic land use objectives for the area.

Clock tower of the Fitzroy Town Hall

- Identifies three key views - Views 1-3 as being 'primary views' that warrant protection.
- However, only view 3 occurs from within the Review Area.

Spire of St Marks Church

- Identifies three key views - Views 1-3 as being 'primary views' that warrant protection.
- However, none of these views occurs from within the Review Area.

Shot tower

- Identifies three key views - Views 1-3 as being 'primary views' that warrant protection.
- However, only view 1 may impact on the Review Area.

Spire of St Lukes Church

- Identifies three key views - Views 1-3 as being 'primary views' that warrant protection.
- However, only view 1 may impact on the Review Area.

Spire of St Patricks Cathedral

- Identifies one key view - View 1 as being 'primary views' that warrant protection.
- View 1 may impact on the Review Area.

Yarra Housing Strategy (Adopted September 2018)

The purpose of this study is to prepare a housing growth framework that sets a preferred vision for Yarra over the next 15 years. The strategy will provide clear policy direction about where residential development will be focused, and where it will be limited, in order to meet the changing needs of our community.

In respect to heritage, the strategy seeks to continue to protect existing high value heritage areas across Yarra. It notes that about two thirds of all properties in Yarra are covered by the Heritage Overlay and, in fact, more properties are covered by the Heritage Overlay in Yarra than in any other municipality in Victoria. The strategy will need to respond to the high level of heritage protection in Yarra.

While Yarra's activity centres have key attributes that make them ideal for accommodating housing growth, they also include unique and intact heritage streetscapes and buildings. The Heritage Overlay applies to large sections of Yarra's major activity centres including Brunswick, Smith and Swan Streets, as well as Bridge Road. Future growth in these areas will need to be managed to respond to the heritage significance of these centres.

In respect to economic development, the strategy seeks to retain land for non-residential uses to support arts, cultural and other employment and economic uses. It notes that Yarra is an attractive location for residential development, which if not managed and planned, could displace existing economic activity. Yarra's activity centres however are appropriate locations for new housing, given their proximity to services, facilities and public transport. However, Council recognises that there are economic benefits that flow on from additional housing in activity centre.

In respect to communal open space, the strategy seeks to encourage the provision of communal spaces in housing development. It notes that apartments will be the predominant housing form built over the next 15 years and there is a need to ensure that the needs of all household types are considered in the design of communal open space in high density developments.

In respect to diversity and adaptability, the strategy seeks to promote the inclusion of accessible and adaptable housing and housing suitable for all life stages. It notes that Yarra supports the tertiary institutions and also student housing that has good access (by walking, cycling or public transport) to these institutions.

In respect to affordable housing, the strategy seeks to support provision of affordable housing, including through co-housing and housing associations. It notes that the strong demand to live in Yarra has resulted in rapid house price growth and high land values in the past decade. To maintain Yarra's social and economic diversity, there needs to be more affordable housing.

This strategy recommends introducing requirements into the Yarra Planning Scheme that seek at least 10% affordable housing when sites are rezoned for residential use, and in significant developments of 50 or more dwellings.

In respect to sustainability, the strategy seeks to encourage housing development with high environmental qualities. It notes that with increased growth and development there is a corresponding community expectation to increase the standards of design and amenity, communal open and internal space and responsiveness to local character.

The strategy indicates that the spatial extent of the Brunswick Street and Smith Street Major Activity Centre has expanded to incorporate the surrounding Mixed Use Zone land and therefore differs to the boundaries contained within Clause 21.08. The strategy identifies the 'new' Gertrude Neighbourhood Activity Centre.

The strategy updates Yarra's identified strategic redevelopment sites, currently identified in Clause 21.08. Notably it removes the Atherton Gardens site and retains three strategic redevelopment sites which have yet to be realised. It does not identify any new strategic development sites within the study area.

In the short to longer term (0-15 years), future housing supply in Yarra is anticipated to be provided from the following sources:

- The remaining 13 Strategic Redevelopment Sites;
- The 10 year pipeline of planned major residential developments identified in the Victorian Government's UDP2017;
- Development sites within activity centres and mixed use precincts that have been identified as suitable for future residential growth; and
- Minimal and incremental development in established residential areas around Yarra.
- The Strategic Housing Framework Plan identifies a hierarchy of change across Yarra. In relation to the Study Area, all of the residential zoned land is identified as Minimal Change, while Gertrude Street, Fitzroy west (back blocks) and the Foy and Gibson complex are identified as Incremental Change. Much of the Brunswick Street, Johnston Street and Smith Street corridors are identified as Moderate Change, with the Collingwood South precinct (generally DDO23 area) and the middle section of Johnston Street (between Brunswick and Smith Street) and the northern end of Smith Street are identified as High Change.

Clause 43.01: Heritage Overlay

The study area is extensively covered by Heritage Overlays. The purpose of the overlay is:

- To conserve and enhance heritage places of natural or cultural significance.
- To conserve and enhance those elements which contribute to the significance of heritage places.
- To ensure that development does not adversely affect the significance of heritage places.
- To conserve specified heritage places by allowing a use that would otherwise be prohibited if thiswill demonstrably assist with the conservation of the significance of the heritage place.

The study are also contains the following site specific heritage covers:

- HO95 – 15-17 Bedford Street Collingwood;
- HO96 – 33-47 Bedford Street Collingwood;
- HO98 – 1 Derby Street Collingwood;
- HO99 – 2 Derby Street Collingwood;
- HO100 – 3-7 Derby Street Collingwood;
- HO101 – 8 Derby Street Collingwood;
- HO102 – 10-16 Derby St & 7 Langridge Street Collingwood;
- HO107 – 8-10 Johnston Street Collingwood;
- HO108 – 51 Keele Street Collingwood;
- HO115 – 12 Napoleon Street Collingwood;
- HO117, 118, 119, 120 – 32-38 Otter Street Collingwood;
- HO121 – 37 Oxford Street Collingwood;
- HO122 – 39-41 Oxford Street Collingwood;
- HO123 – 50-52 Oxford Street Collingwood;
- HO124 – 51-57 Oxford Street Collingwood;
- HO125 – 59-63 Oxford Street Collingwood;
- HO126 – 58-62 Oxford Street Collingwood;
- HO127 – 79-93 Oxford Street Collingwood;
- HO128 – 95-101 Oxford Street Collingwood;
- HO129 – 103-135 Cambridge St & 7-11 Stanley St & 68-172 Oxford St & 103-115 Oxford St & 114 -118 Langridge St Collingwood;
- HO133 – 25-27 Sackville Street Collingwood;
- HO135 – 114-116 Smith Street Collingwood;
- HO136 – 174-176 Smith Street Collingwood;
- HO137 – 2 Stanley Street Collingwood;
- HO140 – 59 Wellington Street Collingwood;
- HO142 – 46 Peel Street Collingwood;
- HO144 – 53 Otter St & 215-225 Wellington Street Collingwood;
- HO145 – 62 Easey Street & 261 Wellington Street Collingwood;
- HO148 – 17 Bell Street Fitzroy;
- HO149 – 40-48 Bell Street & 27-31 John Street Fitzroy;
- HO150 – 7-9 Brunswick Street Fitzroy;
- HO151 – 11 Brunswick Street Fitzroy;
- HO152 – 13 Brunswick Street Fitzroy;
- HO153 – 25 – 37 Brunswick Street Fitzroy;
- HO154 – 39-49 Brunswick Street Fitzroy;
- HO155 – 236-248 Brunswick Street Fitzroy;
- HO156 – 34-38 Fitzroy Street Fitzroy;
- HO157 – 317 – 339 George Street Fitzroy;
- HO158 – 250-270 George Street Fitzroy;
- HO159 – 64-66 Gertrude Street Fitzroy;
- HO160 – 181-183 Gertrude Street & 89 George Street Fitzroy;
- HO167 – 161 – 209-221 Gore Street Fitzroy;
- HO168 – 331 Gore Street Fitzroy;
- HO169 – 333 Gore Street Fitzroy;
- HO170 – 335 Gore Street Fitzroy;
- HO171 – 35 Hanover Street Fitzroy;
- HO179 – 172 – 36-50 Napier Street Fitzroy;
- HO181 – 48 A Nicholson Street Fitzroy;
- HO180 – 126 Moor Street & 201 Napier Street Fitzroy;
- HO182 – 44 Nicholson Street Fitzroy;
- HO183 – 50-68 Nicholson Street Fitzroy;
- HO184 – 88 Nicholson Street Fitzroy;
- HO185 – 98 Nicholson Street Fitzroy;
- HO186 – 122 Nicholson Street Fitzroy;
- HO187 – 165-169 Smith Street Collingwood;
- HO190 – 77 Victoria Parade Fitzroy;
- HO191 – 196 – 169-179 Victoria Parade Fitzroy;
- HO197 – 203 Victoria Parade Fitzroy;
- HO345 – 38 – 40 Brunswick Street Fitzroy;
- HO347 – 22 Brunswick Street Fitzroy;
- HO354 – 67-71 Johnston Street Collingwood;
- HO355 – Young Street - Unknown address;
- HO356 – 12 Cowell Street & 185-193 Fitzroy Street Fitzroy;
- HO385 – 97-107 King William Street Fitzroy;
- HO417 – 44 Oxford St & 63 Cambridge Street Collingwood;
- HO422 – 4 Henry Street Fitzroy;
- HO471 – 218-222 Nicholson Street Fitzroy; and
- HO472 – 12-16 Argyle Street & 8-10 Spring Street Fitzroy.

Design and Development Overlays

The study area contains 4 Design and Development Overlays as follows:

- DDO08 – Fitzroy South;
- DDO10 – Johnston Street Precinct – West of Smith Street;
- DDO12 – Former NMIT Site 35 Johnston Street, Collingwood;
- DDO13 – Emma Street Precinct, Collingwood; and
- DDO23 - Collingwood South (Mixed Use) Precinct

The extent of these overlays is relativity small as they only apply to discrete precincts or specific sites. The largest DDO is the Johnston Street Precinct (DDO10) which applies to properties which front Johnston Street generally between Brunswick and Smith Streets.

DDO8 Fitzroy South

Applies to properties along the northern side of Gertrude Street, between Nicholson Street and Fitzroy Street.

Design Objectives

- *To protect the World Heritage values of the Royal Exhibition Building and Carlton Gardens.*
- *To reinforce the built form character of the area as being essentially of low-rise buildings.*
- *To protect views of the drum, dome, lantern and flagpole of the Royal Exhibition Building from the footpath on the south side of Gertrude Street and along Marion Lane, west of Fitzroy Street.*

DDO10 Johnston Street Precinct – West of Smith Street

Applies to properties fronting both side of Johnston Street, between Brunswick Street and Gore Street.

Design Objectives

- *To retain the valued features which contribute to the preferred future character and heritage of the area.*
- *To ensure development fits with its context and the preferred future character.*
- *To develop streets with a human scale and vibrant street life.*
- *To improve the pedestrian environment in Johnston Street.*
- *To encourage high quality new development.*

Buildings and works

Built form should address the following design principles:

- *Buildings should be built to the street frontage and side boundaries of the site.*
- *Taller buildings should be setback and spaced to create new interest and variety in building forms.*
- *The form, massing, materials, finishes and detailed design of buildings respond to the preferred character of the area.*
- *Ensure active ground level frontages and designs which facilitate street level activity.*
- *The street frontage façade of infill development should complement the predominant street frontage height of nearby and abutting properties. The street façade height should not exceed three storeys or 12 metres.*
- *Development above street façade height should be set-back and not exceed four to six storeys.*
- *Setbacks should meet the following view line and amenity setback criteria:*
  - *Avoid increased overshadowing of street and public space between 10am and 2pm at the equinox (22 September);*
  - *Where sites adjoin fine grained, low rise residential development, provide a stepped transition in height at the sensitive interface to minimise amenity impacts;*
  - *Minimise the visual intrusion of the upper levels when viewed from footpaths or public spaces.*
- *In the area north of Johnston Street and east of Napier Street, new development must respect the height of the former MacRobertson complex and avoid dominating these buildings.*

It is anticipated that the Built Form Framework will inform future built form controls along this section of Johnston Street, replacing the existing DDO10.

DDO12 Former NMIT Site 35 Johnston Street, Collingwood

Applies to properties fronting both Johnston Street and Perry Street that made up the former NMIT campus. None of these properties fall within the built form review area. Therefore, this DDO does not impact on future built from controls implemented as a result of this project.

Design Objectives

- *To encourage regeneration of the site through high quality architecture.*
- *To respect and respond to any retained heritage fabric on the site.*
- *To facilitate an adaptive re-use of the site.*
- *To encourage urban design that provides for a high level of community safety and comfort.*
- *To maintain a suitable level of amenity to adjacent residential uses through the design, height and form of proposed development.*
- *To ensure that overshadowing of neighbouring properties and public space is within reasonable limits.*
- *To ensure that new built form is adequately articulated and modulated.*

- *To ensure that the combination of uses and the intensity of development is compatible with the capacity of the existing road system.*
- *To ensure that the number of vehicle accessways along Perry and Johnston Streets are limited, and that vehicle parking is concealed from street view.*
- *To ensure that new development responds to the neighbourhood character and site influences.*
- *Development should recognise and respond to the slope of the site.*
- *To ensure that buildings properly address the public realm, including that of Johnston and Perry Streets.*
- *To provide for pedestrian permeability through the site.*
- *To require energy efficient building design.*
- *To provide for an appropriately sized, well designed and located area of public open space that is publicly accessible with good surveillance and has active interfaces with appropriate uses.*

DDO13 Emma Street Precinct, Collingwood

Applies to properties along the western side of Emma Street.

Preferred future character:

- *An area where future development respects the scale and character of buildings in the area, particularly the heritage buildings in Smith Street.*
- *The valued low-rise character of the heritage areas retained. The remaining non-heritage sites may be redeveloped in scale with surrounding buildings.*

Design Objectives:

- *To retain the valued features which contribute to the preferred future character and heritage of the area.*
- *To ensure development fits with its context and the preferred future character.*
- *To encourage an appropriate transition between the scale and character of the traditional retail strip centre in Smith Street and lower-rise residential areas to the east.*
- *To encourage high quality new development.*

DDO23 Collingwood South (Mixed-Use) Precinct

Now applies to properties along the western side of Wellington Street generally between Peel Street and Victoria Parade and properties along Oxford Street and Cambridge Street, generally south of Peel Street and fronting Peel Street, Langridge Street, Derby Street and Mason Street, between Little Oxford Street and Wellington Street.

This interim DDO which endorsed as part of C250 in November 2018 and implements part of the Collingwood Built Form Framework which forms part of this project. Implementing built form controls for this area was prioritised by Council due to development pressure and community sentiment. The current DDO23 is due to expired on 18 October 2020.

Design Objectives

- *To foster an emerging, contemporary, mixed-use character with a prominent street-wall edge, incorporating upper level setbacks and design features that create a distinction between lower and upper levels.*
- *To ensure that the overall scale and form of new buildings is mid-rise (ranging from 3 to 12 storeys) and responds to the topography of the precinct, by providing a suitable transition in height as the land slopes upwards, whilst minimising amenity impacts on existing residential properties , including visual bulk, overlooking and overshadowing.*
- *To maintain the prominence of the corner heritage buildings on Wellington Street,and respect both individual and groups of low-scale heritage buildings through recessive upper level development and a transition in scale from taller form towards the interface with heritage buildings.*
- *To promote and encourage pedestrian activity through street edge activation and the protection of footpaths and public open spaces from loss of amenity through overshadowing.*
- *To ensure that development provides for equitable development outcomes through building separation and a design response that considers the development opportunities of neighbouring properties.*

It is understood that the Council intention is to implement a permanent DDO23 to replace this interim one. However the ultimate control may differ to the current one.

Currently part of HO334	Gertrude Street Precinct, Fitzroy	Prepare a mapped extent and statement of significance for a new precinct on Gertrude Street.	Section 7

1. Introduction

In 2017, the City of Yarra engaged GJM Heritage to participate in the *Brunswick Street and Smith Street Built Form Review* (the Built Form Review) with Hansen Partnership. The purpose of the Built Form Review is to determine where and how new development can appropriately occur along and around the Brunswick Street and Smith Street commercial 'High Streets'. Heritage advice has been provided to ensure that the Built Form Review – and the subsequent proposed Design and Development Overlay (DDO) – appropriately responds to the heritage fabric and values of the study area, leading to appropriately balanced decision-making when considering new development opportunities.

A key component of the Built Form Review has been to:

- Review the suitability of the extent of the existing Heritage Overlays within the study area and to identify where gaps or inconsistencies exist (if any); and
- Review the suitability of the existing Statements of Significance for heritage places and precincts against the extant heritage fabric and identify where the statements require updating for the purposes of properly considering built form recommendations; and
- Review the current gradings for heritage places in Appendix 8 and identify where updates are required.

A series of recommendations arose from the above heritage assessment and analysis. These recommendations include:

- Updates to existing Statements of Significance (refer to Section 2)
- Compilation of new Statements of Significance (refer to Section 3)
- Inclusion of one (1) place in site-specific Heritage Overlays in the Yarra Planning Scheme (refer to Section 4)
- Update to heritage gradings in Appendix 8 (refer to Section 5)
- Update to Heritage Overlay boundaries (refer to Section 6)
- Creation of two (2) new heritage precincts that currently form part of existing HO334 (refer to Section 7).

The main report of the Built Form Review includes a summary of the findings and recommendations, arising from the further heritage assessment and analysis work contained in this report.

While it is acknowledged that there is some inconsistency in the application of the 'Individually Significant', 'Contributory' and 'Not-Contributory' grading system applied through the Appendix 8, this project does not seek to comprehensively assess individual buildings with a view to regrading except where obvious anomalies or inconsistencies were identified. For the purposes of this report, the following grading definitions from Clause 22.02 - Development Guidelines for Sites Subject to the Heritage Overlay have been applied:

> *Individually significant: The place is a heritage place in its own right. Within a Heritage Overlay applying to an area each individually significant place is also Contributory.*
>
> *Contributory: The place is a contributory element within a larger heritage place. A contributory element could include a building, building groups and works, as well as building or landscape parts such as chimneys, verandahs, wall openings, rooflines and paving.*
>
> *Not contributory: The place is not individually significant and not contributory within the heritage place.*

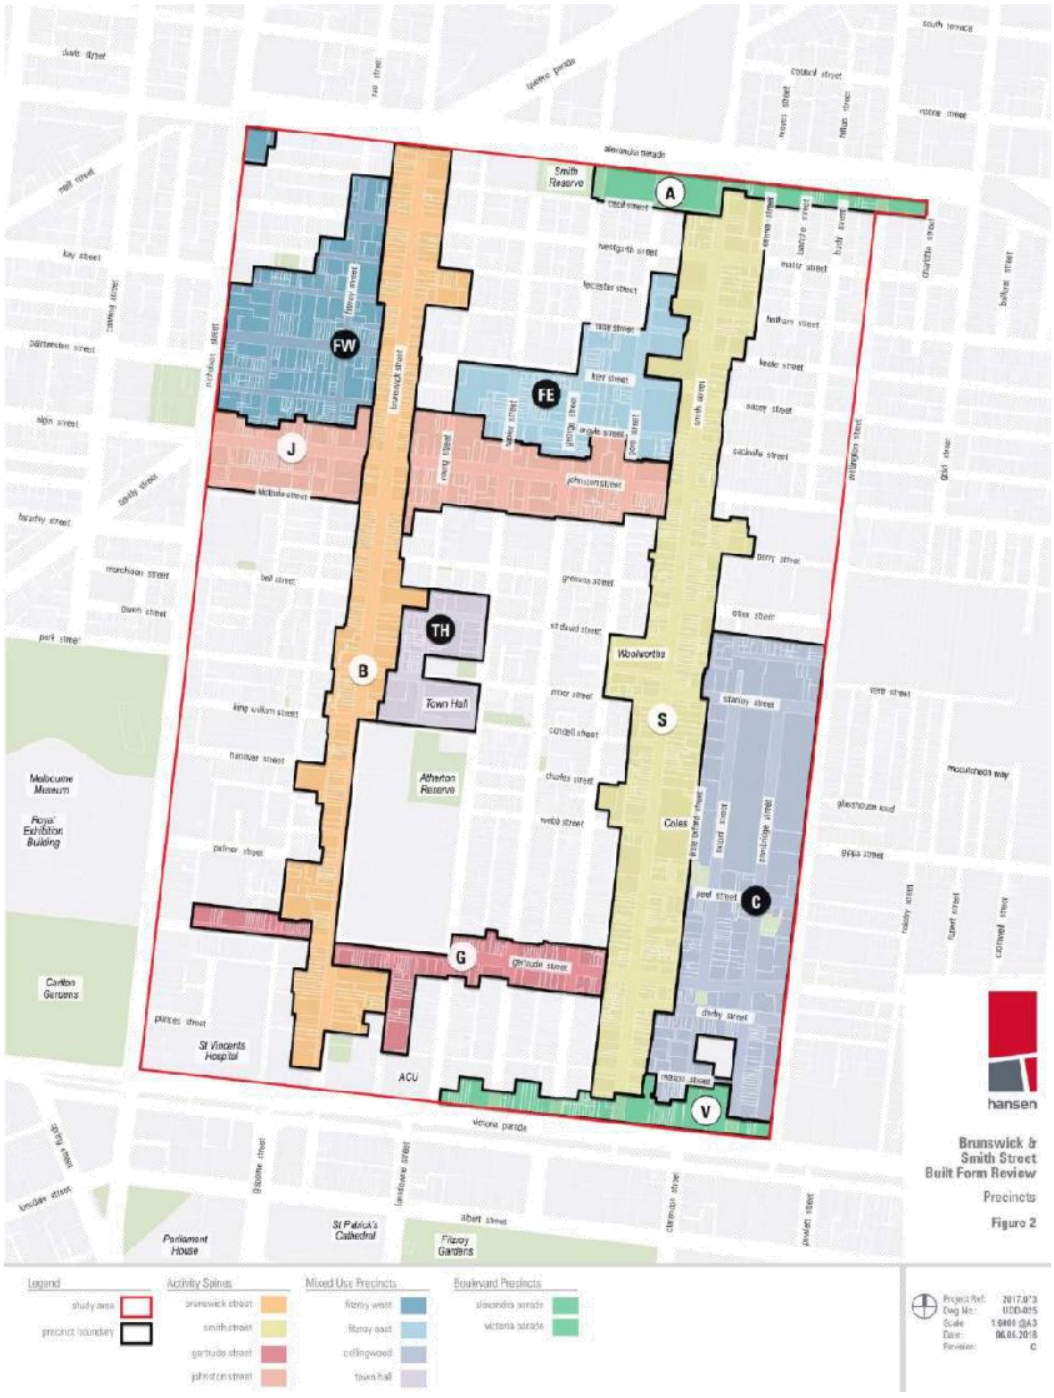

Figure 2. Precinct Map (©Hansen, 6 June 2018)

2. Statement of Significance Review

A key part of the Built Form Review has been to analyse the existing Statements of Significance for heritage precincts and individually significant places within the Study Area to ensure that they remained current and useful for managing change within the Study Area.

The review found that existing Statements of Significance for the individual places and heritage precincts within the Study Area were generally sound; however, updates were recommended for the following locally significant precincts:

HO No.	Precinct name	Attachment No.
HO311	Brunswick Street Precinct, Fitzroy	Attachment A
HO333	Smith Street Precinct, Fitzroy and Collingwood	Attachment B
HO334	South Fitzroy Precinct	Attachment C
HO464	Smith Street South Precinct, Fitzroy and Collingwood	Attachment D

It is recommended that this report be referenced as a 'Background Document' in the Table to Clause 72.08 – Background Documents of the Yarra Planning Scheme. The Statements of Significance prepared for a place or precinct within the Study Area are recommended to be incorporated into the Yarra Planning Scheme and specified in the Schedule to the Clause 43.01 - Heritage Overlay.

3. New Statements of Significance

One site-specific Heritage Overlay (Barcelona Terrace, HO153) required the preparation of a Statement of Significance consistent with the Department of Environment, Land, Water & Planning's *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018) (PPN1) to appropriately inform future decision-making for the place.

The remaining six 'Individually Significant' graded places listed below are considered to be 'atypical' in the context of their respective Heritage Precincts and it is recommended that Statements of Significance appended to this report are adopted to appropriately guide future decision-making for these properties.

Precinct HO No.	Place name	Address	Attachment No.
HO153	Barcelona Terrace	25-37 Brunswick Street, Fitzroy	Attachment E
HO311	Solway Buildings	287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy	Attachment F
HO333	Stanford Block	121-129 Smith Street, Fitzroy	Attachment G
HO334	Former Dental Surgery	17-19 Brunswick Street, Fitzroy	Attachment H
HO334	Mononia	21 Brunswick Street, Fitzroy	Attachment I
HO334	Former Champion Hotel and Shops and Residences	50-54 Brunswick Street & 90-100 Gertrude Street, Fitzroy	Attachment J
HO334	Former Priest's Residence and Mission Hall	434 Gore Street & 170 Leicester Street, Fitzroy	Attachment K

4. Assessment for Inclusion in the Heritage Overlay on a Site-Specific Basis

One place has been assessed and is recommended for inclusion in the Heritage Overlay on a site-specific basis:

Place name	Address	Attachment No.
The Gasometer Hotel	484 Smith Street, Collingwood	Attachment L

It is further recommended that:

- Appendix 8 be updated to reflect the above finding.
- The Statement of Significance for the place be incorporated within the Schedule to the Heritage Overlay.

4.1 Methodology

The assessment has been completed having regard to PPN1 and the gradings for heritage places as defined in Council's Heritage Policy at Clause 22.02 of the Yarra Planning Scheme ('Development Guidelines for sites subject to the Heritage Overlay').

The property was visually inspected from the street and historic research was conducted using a variety of sources including historic plans and maps (including Melbourne and Metropolitan Board of Works Plans), contemporary newspaper notices and advertisements, Sands and McDougall Directories, and historic photographs and aerials. Comparative analysis against similar places identified in the Heritage Overlay was undertaken to determine whether the place satisfied the threshold for local heritage significance.

5. Heritage Grading Review

Various places within Heritage Precincts HO311, HO333, HO334 and HO464 were considered in terms of the heritage gradings applied through Appendix 8.

The following material provides justification for the regrading of a small number of places in Appendix 8.

5.1 131 Brunswick Street, Fitzroy (HO311)

Figure 3. 131 Brunswick Street, Fitzroy (GJM Heritage, Oct 2019)

Figure 4. 131 Brunswick Street within HO311 (VicPlan)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO311	131 Brunswick Street, Fitzroy	Shop & residence	252075	Not contributory	Unknown

Historical background and description overview

This two-storey building fronting Brunswick Street had been built by 1899, as indicated by the Melbourne and Metropolitan Board of Works (MMBW) Detail Plan (*Figure*).

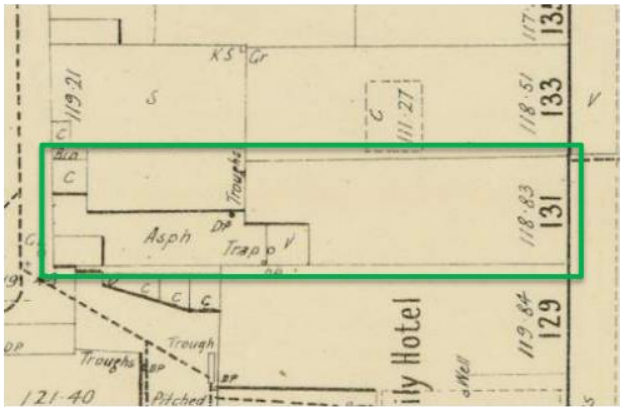

Figure 5. Footprint of the building shown on the 1899 MMBW Detail Plan (No. 1205, dated 1899).

The extant building may date as early as c1860 (not confirmed). No. 131 was formerly addressed as 113 (and later 119) Brunswick Street, which was listed in the Sands & McDougall Directories from c1860 (earlier directories did not list street numbers), occupied by George H Williams, chemist and druggist. Long term occupant (and presumably owner) of the building was chemist T A Ewing, who was the occupant from c1865 (then addressed at 113). Following Thomas Adam Ewing's death in 1879[1], the business of T A Ewing, chemist, continued to operate at the property until c1900, after which another chemist occupied the building.[2] Thomas A Ewing, JP and Fitzroy Town Councillor (and Mayor 1873-74), was a local figure. A plaque was erected in 1879 at the Fitzroy Free Public Library to commemorate his association with the establishment of the library.[3]

The property is a simple two-storey nineteenth century building with hipped corrugated steel roof concealed behind a plain (possibly modified) parapet. The rendered front façade contains two rectangular upper windows with simple rendered frames (sashes replaced), a cornice dividing the upper and street levels, and an early shopfront form with two side entrances and a central display window.

This simple Victorian building is similar to a number of 'Contributory' buildings of similar intactness within HO311. These include properties at 135-137, 178-182 and 269 Brunswick Street (window openings retained and parapets modified) and 121-131 Brunswick Street (window openings modified and parapet retained). Early shopfront forms have also been retained at 178-182 and 269 Brunswick Street.

Recommendation

This simple Victorian building is similar to a number of 'Contributory' buildings of similar intactness within HO311, including the nearby property at 135-137 Brunswick Street.

It is recommended that Appendix 8 be amended to identify 131 Brunswick Street as 'Contributory' to HO311.

5.2 Godfrey's Buildings, 266-274 Brunswick Street, Fitzroy (HO311)

HO311	270 Brunswick Street, Fitzroy	Godfrey's, Shop & residence	252560	Contributory	1880-1890
HO311	272 Brunswick Street, Fitzroy	Godfrey's, Shop & residence	252555	Contributory	1880-1890
HO311	274 Brunswick Street, Fitzroy	Godfrey's, Shop & residence	252540	Contributory	1880-1890

Historical background and description overview

'Godfrey's Buildings' at 266 to 274 Brunswick Street were built in 1887 for owner George Godfrey. According to the 1887 City of Fitzroy rate books (recorded December 1887), Godfrey did not own or occupy any property in this part (on the east side) of Brunswick Street at this date. However, in December 1888, George Godfrey was rated as the owner of the row of five occupied buildings at 266-274 Brunswick Street. The corner building at no. 274 was valued (Net Annual Value) at £200, and nos. 266-272 were rated at £130 each.[4]

In 1887, notices in *The Age* requested a large quantity of sand, and advertised for a 'plasterer and improver', with applicants to apply to 'Godfrey's Buildings, Brunswick Street, Fitzroy'.[5] Early the following year in January 1888 advertisements were placed in *The Age* requesting occupants – specifically booksellers and grocers – to occupy Godfrey's Buildings, the 'grandest buildings in Australia'.[6] George Godfrey was also the rated owner of the row at 267-275 Brunswick Street in 1890.[7]

In 1890, the shops were occupied by a bookshop, auctioneer, haberdasher, boot shop and furniture shop.[8] Ten years later in 1900, occupants comprised a dressmaker, chemist, auctioneer, perambulator makers and a music warehouse.[9] The row of five buildings was shown on the 1897 and 1900 MMBW plans (*Figure* & *Figure*). The four northern buildings (268-274) were each constructed with a cellar, with all buildings extending to the rear (eastern) boundary. Shopfront verandahs extended across the five Brunswick Street facades. By 1930, the name 'Godfrey's Buildings' was no longer recorded in the Sands & McDougall Directories above the list of addresses and their occupants (the name was still listed in 1920).

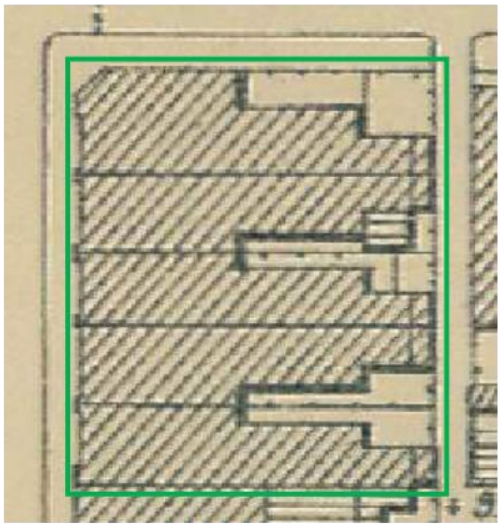

Figure 8. Plan showing the footprints of the buildings in 1897. The diagonal hatching indicates buildings constructed of brick or stone; vertical/horizontal hatching indicates buildings constructed of timber (MMBW Plan No. 28, scale 160ft to 1 inch, dated 1897).

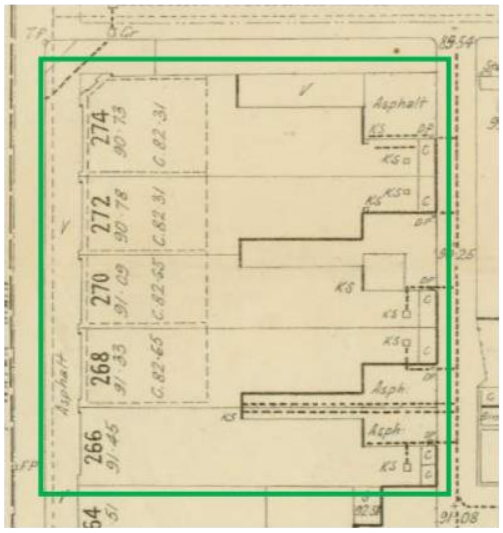

Figure 9. Footprints of the buildings in 1900 (MMBW Detail Plan No. 1193, dated 1900).

Photos dated to the 1970s show the building without the shop verandahs (*Figure* & *Figure*).

Figure 10. Photo dated between 1970 and 1974 (State Library of Victoria, Image CUAFY53/10).

Figure 11. Numbers (left to right) 272, 270 and 268 Brunswick Street, in 1978 (City of Yarra Libraries, image FL1343).

Godfrey's Buildings, 266-274 Brunswick Street, Fitzroy is situated on the east side of Brunswick Street to the south of Johnston Street, on the south corner of Victoria Street. Built in 1887, the building displays characteristics of the High Victorian style.

The building comprises a row of five three-storey shops and residences with two street facades, and splayed corner, of rendered brick (partially overpainted) and a parapet which conceals the roof behind. The south and rear elevations are of exposed brickwork.

The Brunswick Street façade is divided into identical bays, each containing triple arch-headed window openings at the upper level, triple rectangular window openings below and dividing pilaster strips, some with decorative ball finials, at each party wall. The window pattern is repeated with single windows in the splayed

corner and in a single bay in Victoria Street. A heavy cornice runs across these main facades at first floor level and a balustraded parapet runs across the four southernmost facades. The corner building is distinguished by a solid parapet above the splayed corner which contains the nameplate 'Godfrey 1' and an absence of balustrading either side. The elevation to Victorian Street is treated as a secondary façade with simple window openings and moulded panel detailing.

Concave verandahs have been reconstructed at street level. Shop front forms appear to have been generally retained.

The building retains a high degree of integrity to the Victorian period in fabric, form and detail, particularly at the upper two levels. While the building has undergone alterations, including the removal of some ball finials and the reconstruction of street verandahs, these do not diminish the ability to understand and appreciate the place as a fine example of a Victorian commercial building.

The commercial premises at 266-274 Brunswick Street, Fitzroy are of note as a representative and intact example of a shop and residence built in the Victorian 1880s boom period.

Commercial buildings from this period were most commonly two-storeys, with fewer single-storey and three or four-storey premises constructed. They were typically built as rows of attached identical buildings, as pairs or as individual buildings with no side setbacks from adjoining properties and no front setback.

Within the City of Yarra, large numbers of commercial premises built in the Victorian period are included in the Heritage Overlay, both on a site-specific basis and as 'Individually Significant' places within precincts. Comparative examples which broadly display characteristics similar to Godfreys Buildings include commercial premises at:

- 229-231 Brunswick Street, Fitzroy (1870-90), individually significant in HO311, Brunswick Street Precinct
- 341-347 Brunswick Street, Fitzroy (1880-90), individually significant in HO311, Brunswick Street Precinct
- Stanford Block, 119-129 Smith Street (1880-90), individually significant in HO333, Smith Street Precinct.

Figure 12. 229-231 Brunswick Street, Fitzroy (Google)

Figure 13. 341-347 Brunswick Street, Fitzroy (Google)

Figure 14. Stanford Block, 119-129 Smith Street, Fitzroy (Google)

Like these places, Godfrey's Buildings at 266-274 Brunswick Street, Fitzroy displays a range of characteristics which have strong associations with the Victorian period and the building remains highly intact to demonstrate these associations.

Recommendation

The row of five highly intact, three-storey shops and residences built in 1887 are comparable to places within HO311 and HO333 that are graded 'Individually Significant'.

It is recommended that Appendix 8 be updated to identify 266-274 Brunswick Street as 'Individually Significant' to HO311.

5.3 Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy (HO311)

Figure 15. 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy (left to right) (GJM Heritage, Sep 2018)

Historical background and description overview

The south-west corner of Brunswick and Johnston streets was occupied by the Fitzroy Market in the late nineteenth century, as annotated on the 1900 MMBW Detail Plans (*Figure* & *Figure*). The block bound by Brunswick, Johnston, Fitzroy and Victoria streets was owned by Henry Hoyt during this period.[10]

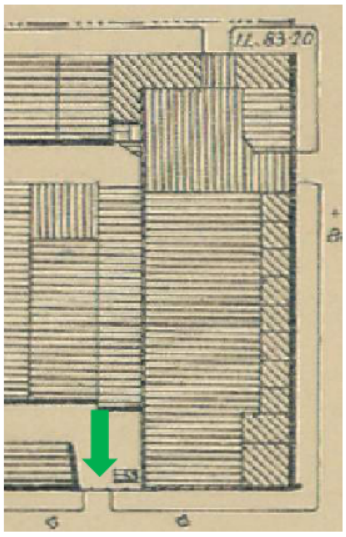

Figure 17. The south-west corner of Brunswick and Johnston streets in 1897 showing earlier buildings occupying the area. The vehicular crossover (indicated by the green arrow) off Victoria Street shows the alignment of the existing lane. The diagonal hatching indicates buildings constructed of brick or stone; vertical/horizontal hatching indicates buildings constructed of timber (MMBW 28, scale 160ft to 1 inch, dated 1897).

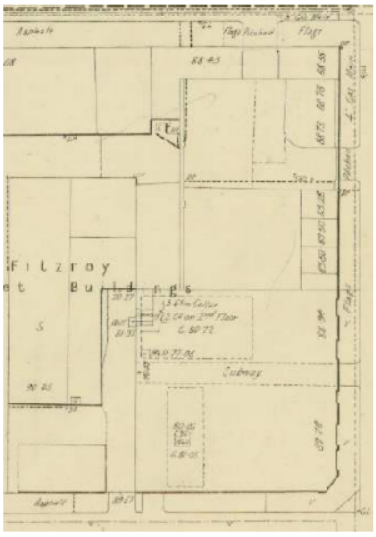

Figure 18. The corner property in 1900, showing earlier buildings occupying the area, annotated 'Fitzroy Market Buildings' (MMBW Detail Plan 1193, dated 1900).

The Herald published an article in May 1911 featuring the new buildings 'on the site of the old bus stables' at the corner of Brunswick and Johnston streets, described as 'a notable improvement in suburban shop

[10] Lewis, Miles, 'The First Suburb' in Fitzroy History Society & Cutten History Committee (2014, 1st edition 1989), *Fitzroy : Melbourne's first suburb*, South Yarra [Vic.], p28.

architecture'.[11] The site measured 206ft (62.8m) to Johnston Street and 108ft (32.9m) to Brunswick and Fitzroy streets. The Solway Theatre was to be built on the site, fronting Johnston Street (immediately west of the subject site). The article further described the subject site:

> *... there are eight shops adjoining the theatre in Brunswick Street, a shop and two furniture arcades in Brunswick street, and mantelpiece showrooms on the corner of Fitzroy street. Mr William Rain is the architect for the whole of these properties. The contractors are – For the theatre, Mr L. Hansen, and for the shops, Messrs Herd and Son. Mr Rain has also in hand other shop buildings in Clifton Hill and Hampton road, Hampton, and a large villa residence at Alphington.*[12]

Illustrations of the Brunswick and Johnston street elevations published in May 1911 show the six bays fronting Brunswick Street and four bays fronting Johnston Street, and the configuration of the shopfronts and arcades (Figure & Figure). The illustrations show the first floor (narrow) openings with a pair of three-paned windows. The corner turret bore the name 'Solway' at parapet level (replaced with 'A.O.F. House' in the 1970s).

Figure 19. Illustration of the new building, published in May 1911 (The Herald, 25 May 1911:3).

Figure 20. Illustration of the new building, published in May 1911. Architect William Rain was noted in the bottom right corner (The Herald, 25 May 1911:3).

The Solway Picture Theatre, and presumably 'Solway Buildings', was built for owners Griffiths and West Pty Ltd (Hoyts Theatres Ltd were confirmed as partner owners in 1928).[13] A plan of the new buildings at 287-293

[11] *The Herald*, 25 May 1911, p3.
[12] *The Herald*, 25 May 1911, p3.
[13] *The Argus*, 7 Sep 1911, p10;

Brunswick Street, dated 9 May 1911, confirmed the architect as William Rain (listed as the agent) (Figure 2).[14] Contemporary newspaper articles also attributed the design of the Solway Theatre to William Rain.[15] The Solway Theatre at 84 Johnston Street was demolished in 1928 and replaced with Hoyts Regent Picture Theatre which opened in 1929 (closed in 1959 and demolished 1983) and was designed by prolific theatre architect Charles N Hollinshed.[16]

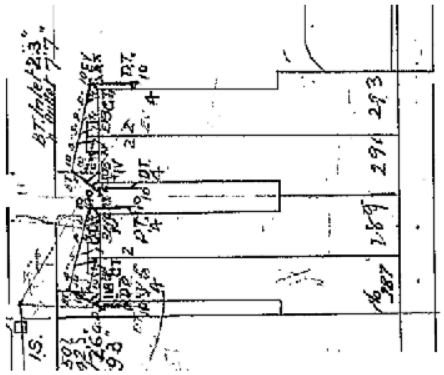

Figure 2. Plan showing footprints of the buildings at 287-293 Brunswick Street in May 1911, annotated with sewerage works. North is up (Property Sewerage Plan No. 78136, 9 May 1911)

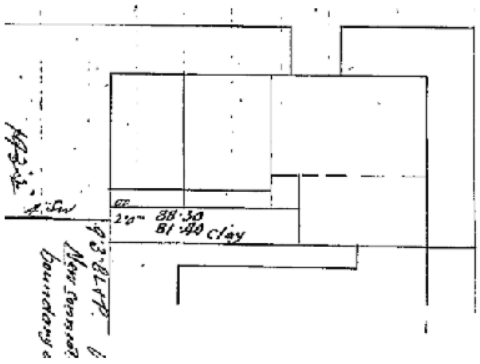

Figure 3. Plan showing footprints of the corner buildings at 295-297 Brunswick Street, and those fronting Johnston Street, dated October 1911. North is up (Property Sewerage Plan No. 78134, 30 October 1911)

In 1915, the shops fronting Brunswick Street were occupied by a draper, 'Solway Shoe Store', a fancy goods depot, tobacconist, tailors and D W Keir's 'The Solway Clothing Co'.[17] Later newspaper articles made reference to 'Solway Buildings' as the premises of the Solway Clothing Company; the company was listed as the occupants of 295-297 Brunswick Street until at least 1970.[18] Solway Clothing also later occupied 294 Brunswick Street[19]; this company is presumably named after the existing building. In March 1922, *The Age* reported on a fire at the 'Solway Buildings', then owned by Daniel W Keir.[20]

A photo dating to c1949 (Figure 4) shows the corner section of the 'Solway Buildings' with the return verandah over the pedestrian footpath. By the 1970s the verandah had been replaced, along with some of the shopfronts (Figure 5 - Figure 7).

The corner building (addressed today as 295-297 Brunswick Street and 108-110 Johnston Street) was purchased by Trustees of the Ancient Order of Foresters in Victoria, Friendly Society, in July 1974, and the Society subsequently listed as the owner from 1989 to 1995.[21] During this period the name 'A.O.F. House' was placed on the parapet of the corner building.

Figure 6. A detail of the Brunswick Street corner in a photo dated 1970-1974 (State Library of Victoria, Image CUAFY154/6-7).

Figure 7. A detail of the south end of the Brunswick Street facade in a photo dated 1970-1974 (State Library of Victoria, Image CUAFY154/6-7).

The Solway Buildings are located on a large site at the south-west corner of Brunswick and Johnston Streets, Fitzroy. Built in 1911, the building displays characteristics of the Federation Free Style and contrasts with the earlier Victorian-era buildings which are located on the other three corners at this intersection.

The building comprises a row of six two-storey shops and residences fronting Brunswick Street and a row of four two-storey shops and residences fronting Johnston Street. Upper facades are of red brick with render contrasts (partially overpainted) and a parapet conceals a series of gabled and hipped roofs. The corner of the building is splayed with a large projecting oriel window at first floor level and a distinctive round tower, with circular windows and a domed roof, above the parapet. The oriel window comprises a pair of timber framed windows and an infill window head displaying sinuous Art Nouveau-inspired applied decoration.

The two main facades are articulated in a similar manner. Pairs of arch-headed windows line the first-floor façade and bold facetted vertical elements, capped with decorative balls, delineate the individual premises. An exaggerated undulating parapet line, with bold rendered band, is punctuated by both these and additional facetted elements. As indicated in the original drawings, the width of the individual bays across the facades is uneven and this is reflected in minor variations in the window and parapet detailing.

A number of the shopfronts to Brunswick Street retain their early forms however post-supported verandahs have been removed and replaced by cantilevered awnings. The original vehicular opening to the rear of the building, located at the west end of the Johnston Street façade, remains.

The building retains a high degree of integrity to the Federation period in fabric, form and detail. While the building has undergone some alterations, including painting of the face brickwork and alterations to shopfronts, these do not diminish the ability to understand and appreciate the place as a fine example of a commercial building from the Federation period.

Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy is of note as a fine, intact and representative example of a large commercial building constructed in the Federation period of the early twentieth century.

Commercial buildings from this period were most commonly of two-storeys, with fewer single-storey and three or four-storey premises constructed. They were typically built as rows of attached identical buildings, as pairs or as individual buildings with no side setbacks from adjoining properties and no front setback. Occasionally the façade had a central focal point or patterning continued over more than one bay. Corner properties commonly had a splayed or curved corner and addressed both streets.

Solway Buildings is of particular note as a substantial and intact two-storey corner building containing ten shopfronts – six to Brunswick Street and four to Johnston Street. Within the City of Yarra, comparative commercial premises built in the Federation period are included in the Heritage Overlay, both on an individual basis and as 'Individually Significant' places within precincts. Comparative examples which broadly display characteristics similar to Solway Buildings include commercial premises at:

- 285-289 Smith Street, Fitzroy (1900-15), individually significant in HO333, Smith Street Precinct
- Hannaford's Pianos and Organs, 219 Smith Street, Fitzroy (1900-15), individually significant in HO333, Smith Street Precinct
- Shawcross Building, 320 Brunswick Street, Fitzroy (1900-15), individually significant in HO311, Brunswick Street Precinct
- 377-87 Brunswick Street, Fitzroy (1900-15), individually significant in HO311, Brunswick Street Precinct.

Figure 8. 285-89 Smith Street, Fitzroy (Google)

Figure 9. 377-87 Brunswick Street, Fitzroy (Google)

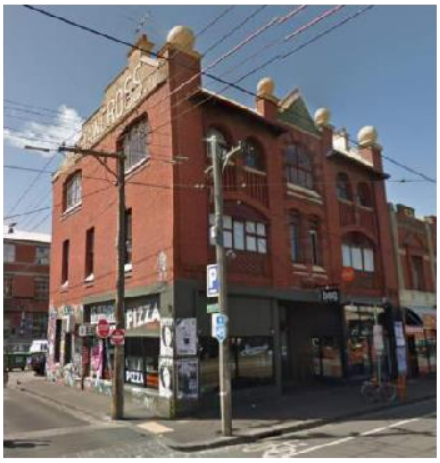

Figure 10. Shawcross Building, 320 Brunswick Street, Fitzroy (Google)

Figure 30. Hannaford's Pianos and Organs, 219 Smith Street, Fitzroy (Google)

Like these places, the Solway Buildings display a range of characteristics which have strong associations with the Federation period and the building remains highly intact to demonstrate these associations.

Recommendation

287-297 Brunswick Street and 108-110 Johnston Street were built as a complex on the prominent corner site in 1911. Architect designed, they present a consistent and uniform façade to Brunswick and Johnston streets and therefore warrant a consistent grading to the entire complex.

It is recommended that that Appendix 8 be amended to identify 287-297 Brunswick Street and 108-110 Johnston Street as 'Individually Significant' to HO311.

An individual Statement of Significance has been prepared for this place with an atypical form – see Section 3.

Historical background and description overview

In 1900, the north-west corner of Brunswick and Rose streets was occupied by a flour mill (Figure 13), later known as the Union Flour Mills and Bakery.[22] The extant row of six buildings was constructed in 1907 for owner J Macleod and designed by prominent architect Charles D'Ebro.[23] In February 1907, D'Ebro called for tenders for the 'purchase and removal' of the Union Flour Mills on Brunswick Street.[24] A Property Sewerage Plan dated June 1907 confirmed the owner of the row as J MacLeod and the agent as C A D'Ebro of 99 Queen Street, Melbourne. The 1907 plan showed the footprint of the six buildings constructed at 377-387 Brunswick Street, with a building on the rear boundary of 377, addressed as 89 Rose Street (since replaced) (Figure 14).

[22] Sands & McDougall Directories.
[23] Listed as the agent on Property Sewerage Plan No. 31037, dated 17 June 1907.
[24] *The Age*, 2 Feb 1907, p4.

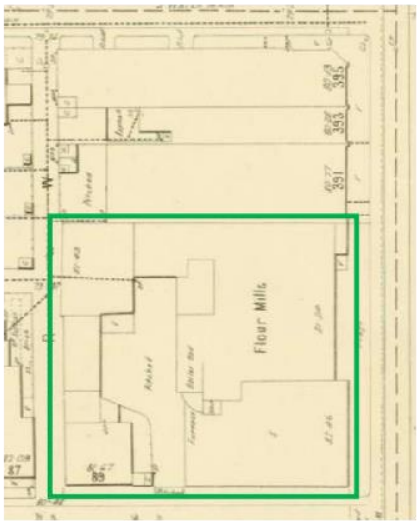

Figure 13. The north-west corner of Brunswick and Rose streets in 1900, showing the area occupied by flour mills (Melbourne and Metropolitan Board of Works Detail Plan 1241, dated 1900).

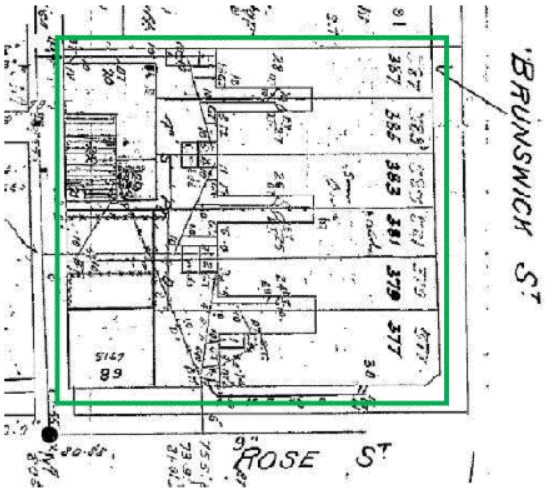

Figure 14. Footprints of the six buildings shown on the PSP plan dated June 1907, annotated with plumbing works (Property Sewerage Plan No. 31037, dated 17 June 1907).

In 1910, the occupants of the row included a chemist, importer of glassware and crockery, tailor, a boot warehouse and pastrycook. Some tenants remained for a number of decades, while at other shops the use remained consistent.[25] The row of six shops was advertised for sale in 1919 as a 'grand shop investment' at the 'centre of retail activity'. The ad described the '6 handsome and substantial brick two-storey shops and dwellings' at 377 to 387 Brunswick Street.[26]

Figure 15. The row in c1900-c1920 with an early verandah to the shopfronts (State Library of Victoria, Image H2004.89/17).

[25] Sands & McDougall Directories.
[26] *The Argus*, 16 Aug 1919, p2.

In 1930 the row was occupied by a chemist, individual, dealer, confectioner and tobacconist, boot warehouse, draper and pastrycook.[27]

The row of shops and residences at 377-387 Brunswick Street, Fitzroy is situated on the west side of Brunswick Street to the north of Johnston Street, on the north corner of Rose Street. Built in 1907, the building displays characteristics of the Federation Free Style.

The building is a row of six two-storey shops and residences with red brick upper facades and a parapet which conceals a longitudinal gabled roof behind. The two street facades of this building, and the splayed corner, are articulated in an identical manner.

The upper facades contain pairs of rectangular double-hung windows with shallow arched heads, applied decorative motifs in between and thick continuous render bands at head and sill levels. These bands continue across the facades and are broken by slim brick pilasters at the party walls which rise to finials at the parapet level. The parapet combines steep pediments and low horizontal sections which alternate across the individual buildings. This results in three pediments facing Brunswick Street, one at the splayed corner and one facing Rose Street. Heavy capping lines the undulating parapet and is repeated as a cornice below.

The pairs of rectangular double-hung windows at 383 and 385 Brunswick Street have been replaced with single sets of triple sliding windows which have been inserted into new horizontal openings. This has interrupted the repetitive patterning across the Brunswick Street façade.

Shopfronts generally retain their early forms however post-supported street verandahs have all be removed and replaced with suspended awnings at 377 - 383 Brunswick Street.

The row of shops and residences, 377-87 Brunswick Street, Fitzroy is of note as a fine, intact and representative example of a large commercial building constructed in the Federation period of the early twentieth century.

Commercial buildings from this period were most commonly of two-storeys, with fewer single-storey and three or four-storey premises constructed. They were typically built as rows of attached identical buildings, as pairs or as individual buildings with no side setbacks from adjoining properties and no front setback. Occasionally the façade had a central focal point or patterning continued over more than one bay. Corner properties commonly had a splayed or curved corner and addressed both streets.

The row of shops and residences, 377-387 Brunswick Street, Fitzroy is of particular note as a substantial and intact two-storey corner building containing six shopfronts facing Brunswick Street. Within the City of Yarra, comparative commercial premises built in the Federation period are included in the Heritage Overlay, both on an individual basis and as 'Individually Significant' places within precincts. Comparative examples which broadly display characteristics similar to the building at 377-87 Brunswick Street, Fitzroy include commercial premises at:

- 285-289 Smith Street, Fitzroy (1900-15), individually significant in HO333, Smith Street Precinct
- Hannaford's Pianos and Organs, 219 Smith Street, Fitzroy (1900-15), individually significant in HO333, Smith Street Precinct
- Shawcross Building, 320 Brunswick Street, Fitzroy (1900-15), individually significant in HO311, Brunswick Street Precinct.

[27] Sands & McDougall Directory: 1930.

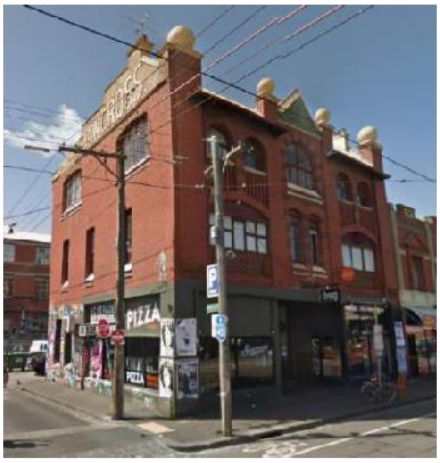

Figure 16. Shawcross Building, 320 Brunswick Street, Fitzroy (Google)

Figure 17. Hannaford's Pianos and Organs, 219 Smith Street, Fitzroy (Google)

Figure 18. 285-89 Smith Street, Fitzroy (Google)

Like these places, the commercial premises, 377-387 Brunswick Street, Fitzroy displays a range of characteristics which have strong associations with the Federation period and the building remains highly intact to demonstrate these associations.

Recommendation

377-387 Brunswick Street were built as a row in 1907, designed by prominent Melbourne architect Charles D'Ebro. The contiguous row presents an intact, uniform façade to Brunswick and Rose streets, despite some alterations, and therefore warrants a consistent grading to the entire row.

It is recommended that that Appendix 8 be amended to identify 377-387 Brunswick Street as 'Individually Significant' to HO311.

5.5 316-322 Smith Street, Collingwood (HO333)

Figure 19. 316-322 Smith Street, Collingwood (GJM Heritage, October 2018)

Figure 40. 316-322 Smith Street indicated by blue polygon, within HO333 (VicPlan)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO333	316 Smith Street, Collingwood	Shop & residence	117475	Contributory	1880-1890
HO333	318 Smith Street, Collingwood	Shop & residence	117480	Contributory	1880-1890

HO333	322 Smith Street, Collingwood	Shop & residence	117485	Contributory	1850-1890

Historical background and description overview

The row of four shops and residences were built for owner Patrick Coyle, licensed victualler, who owned and ran the Albion Hotel on the corner of Perry Street, immediately south. It appears that the row was built in 1885, with Coyle rated for the four brick shops in November 1885, all of which were tenanted. From construction, no. 316 had a higher Net Annual Value as it also comprised a 'factory'.[28] The row may have replaced two earlier buildings on the site.[29]

[28] Rate Books, City of Collingwood: 1884, entries 1350-1351; 1885, entries 1365-1368; 1886, entries 1374-1377; 1889, entries 5233-5236.
[29] Sands & McDougall Directories.

Coyle was previously the landlord of the Grace Darling Hotel, in the late 1870s.[30] Upon Coyle's death in 1888, his probate records reported that his assets comprised land on Smith Street, holding The Albion Hotel and four shops and premises at 276-282, let to tenants (current 316-322).[31]

In 1890, no. 316 was occupied by George Newtown, draper, 318 by Mark Allan, photographer, 320 by Heggie & Sons, boot dealers, and 322 by I Herman, tobacconist. The shops continued to be occupied by various commercial tenants to present day.[32]

MMBW plans showed the footprint of the four buildings and the timber outbuildings in 1897 and 1900 (Figure 20 & Figure 21). The 1900 plan indicates that a verandah extended along the four shopfronts (since replaced), across the public 'flagged' footpath. A postcard dated c1908 (*Figure 22*) showed the row; clearly visible are the first floors and parapets with urns (urns since removed/lost).

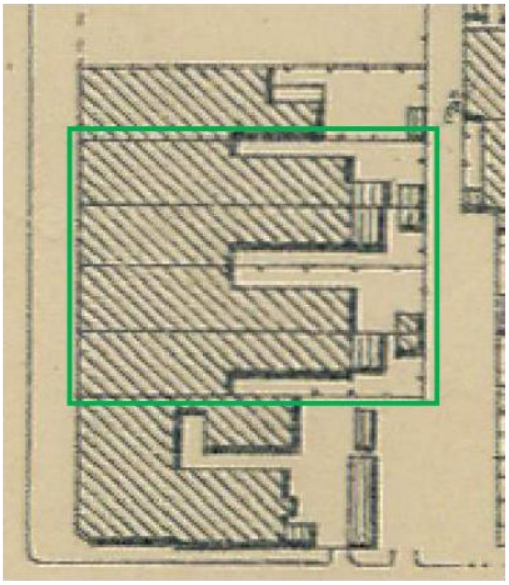

Figure 20. An 1897 plan showing footprints of the row of buildings, and their outbuildings (indicated by green polygon). The diagonal hatching indicates buildings constructed of brick or stone; vertical/horizontal hatching indicates buildings constructed of timber (MMBW Plan 28 (scale 160 ft to 1 inch), dated 1897).

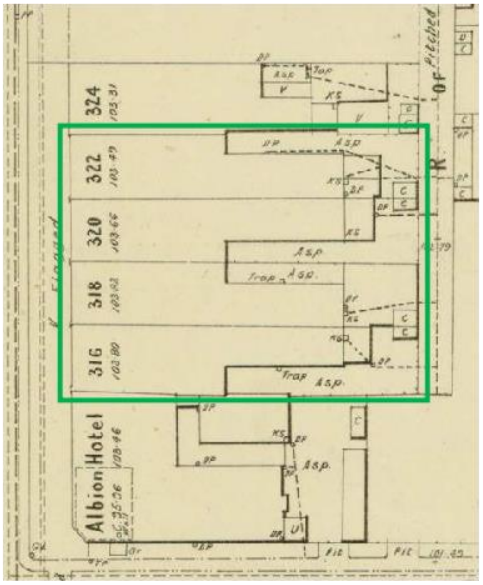

Figure 21. Footprints of the row at 316-322 Smith Street in 1900, indicated by green polygon (MMBW Detail Plan 1196, dated 1900).

[30] *The Age*, 18 Jun 1879, p3.
[31] Patrick Coyle, Probate and Administration Files via Public Records Office Victoria, VPRS 28/P0, unit 488, item 39/645.
[32] Sands & McDougall Directories.

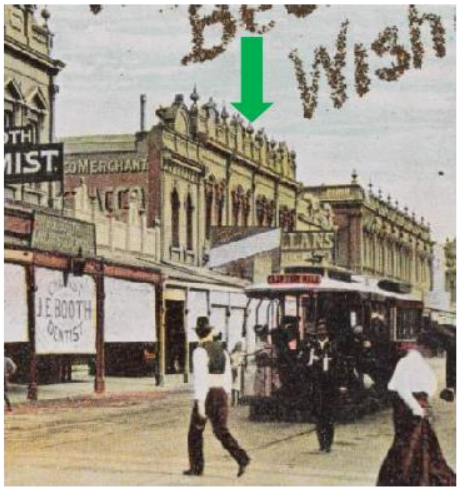

Figure 22 Detail of a c1908 colourised postcard showing the east side of Smith Street, looking south from Johnston Street. The row at 316-322 Smith Street indicated by the green arrow (State Library of Victoria, Image H33677/19).

The row of shops and residences, 316-322 Smith Street, Collingwood is situated on the east side of Smith Street to the south of Johnston Street and to the north of Perry Street. Built in 1885, the building displays characteristics of the High Victorian style of the 1880s.

The building is a row of four two-storey shops and residences with rendered upper facade and a parapet which conceals the roof behind. Pilaster strips divide the upper façade into four identical bays, each containing a pair of windows with segmental hoods supported on elaborately decorated corbels. A heavy corbelled cornice and decorative balustrade, with four repetitive pediments and patera frieze, crown the facade. Decorative corbels and pedestals (all urn finials removed), divide the cornice and balustrade into four identical sections.

Later cantilevered verandahs have replaced earlier post-supported verandahs and modern shopfronts have replaced original shopfronts.

The building retains a high degree of integrity to the Victorian period in fabric, form and detail, particularly at the upper levels. While the building has undergone alterations, including the removal of all urn finials street verandahs and shopfronts, these do not diminish the ability to understand and appreciate the place as a fine example of a Victorian commercial building.

The commercial premises at 316-322 Smith Street, Collingwood are of note as a representative and intact example of a shop and residence built in the Victorian 1880s boom period.

Commercial buildings from this period were most commonly two-storeys, with fewer single-storey and three or four-storey premises constructed. They were typically built as rows of attached identical buildings, as pairs or as individual buildings with no side setbacks from adjoining properties and no front setback.

Within the City of Yarra, large numbers of commercial premises built in the Victorian period are included in the Heritage Overlay, both on an individual basis and as 'Individually Significant' places within precincts. Comparative examples which broadly display characteristics similar to the commercial premises at 316-322 Smith Street, Collingwood include commercial premises at:

- 248-250 Smith Street, Collingwood (1880-90), individually significant in HO333, Smith Street Precinct
- 299-303 Smith Street, Fitzroy (1880-90), individually significant in HO333, Smith Street Precinct
- Stanford Block, 119-129 Smith Street (1880-90), individually significant in HO333, Smith Street Precinct.

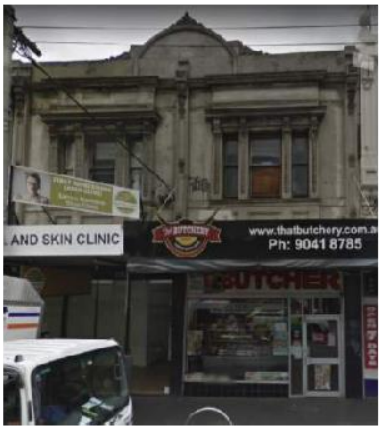

Figure 23. 248-50 Smith Street, Collingwood (Google)

Figure 24. 299-303 Smith Street, Fitzroy (Google)

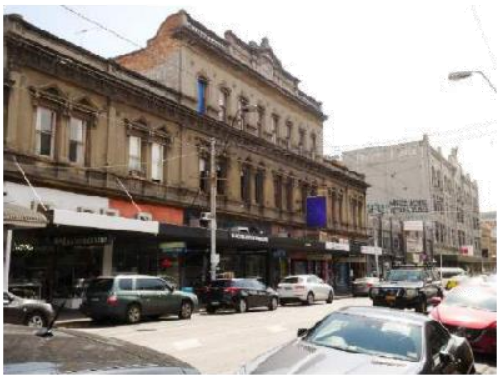

Figure 25. Stanford Block, 119-29 Smith Street, Fitzroy (GJM Heritage, Sep 2017)

Like these places, the commercial premises at 316-322 Smith Street, Collingwood display a range of characteristics which have strong associations with the Victorian period and the building remains highly intact to demonstrate these associations.

Recommendation

The row of four highly intact, two-storey shops and residences built in 1885 are comparable to places within HO333 that are graded Individually Significant.

It is recommended that Appendix 8 be amended to identify 316-322 Smith Street, Collingwood as 'Individually Significant' to HO333.

5.6 237-241 Napier Street, Fitzroy (HO334)

Figure 26. 237-241 Napier Street, Fitzroy. Top: St David Street and Napier Street elevations.
Bottom: Napier Street and Exhibition Street elevations (GJM Heritage, Oct 2018)

Figure 27. 237-241 Napier Street within HO334 (VicPlan)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO334	237 Napier Street, Fitzroy	CF Rojo & Sons Factory/warehouse, later part Thonet	265110	Not contributory	1929-

Historical background and description overview

In 1925, there were no buildings that fronted the west side of Napier Street, between St David Street and what is now Exhibition Street.[33]

In July 1929, architect Harry J James invited tenders for the construction of 'furniture warehouse, offices and factory' for C F Rojo and Sons Pty Ltd.[34] Contemporary newspapers indicate that James was a local architect, practicing in the area primarily during the interwar period, based at 109 Hoddle Street, Collingwood in the 1930s. The date 1929 and name C. F. Rojo & Sons Pty Ltd remains on the St David Street elevation parapet,

[33] Sands & McDougall Directory: 1925.
[34] *The Age*, 27 Jul 1929, p1.

along with the established date, 1877 (similar lettering since removed from the Napier Street parapet; see *Figure 28*).

Figure 28. The Napier Street elevation of the C F Rojo and Sons factory in 1948 (City of Yarra Libraries, ID No. FL406).

Figure 50. The St David Street elevation in 1970 (State Library of Victoria, Image CUAFY39/9).

The company, C F Rojo & Sons Pty Ltd, furniture manufacturers, occupied 237-253 Napier Street until 1978. The building was later occupied in part by Thonet furniture. In 2016, the property was redeveloped into a five storey residential apartment building, with some commercial premises to the ground floor (*Figure 26*, Figure 29 & **Error! Reference source not found.**).

Figure 29. 237-241 Napier Street, Fitzroy in November 2014, prior to development (Google Street View)

Although redeveloped, the original scale, form, rhythm of fenestration (although not the openings themselves) and materials of the building remain intact. The building remains as a representative example of a single storey factory constructed in the Interwar period. Within the City of Yarra there are a number of examples of single storey factory buildings dating from the first half of the twentieth century included within the Heritage Overlay which display similar characteristics, many of which have been redeveloped in a similar manner to 237-241 Napier Street, Fitzroy. These include:

- Former Builders' Steel Form Supply Co., 9-11 David Street, Richmond, individually significant (HO250)
- Footwear Manufacturers, 98-100 Roseneath St, Clifton Hill, contributory in HO316, Clifton Hill Eastern Precinct
- Part of the MacRobertson's Confectionary Complex, 420-428 Gore St, Fitzroy, individually significant in HO334, South Fitzroy Precinct
- 205 Gipps Street, Abbotsford, contributory in HO313, Charles Street Precinct.

Figure 52. 9-11 David Street, Richmond (© Bryce Raworth Pty Ltd)

Figure 53. 98-100 Roseneath Street, Clifton Hill (GJM Heritage)

Figure 54. 420-428 Gore Street, Fitzroy (GJM Heritage)

Figure 55. 205 Gipps Street, Abbotsford (GJM Heritage)

Recommendation

This architect-designed, single-storey complex was built in 1929 with extensive frontages to Napier, St David and Exhibition streets. Despite its recent redevelopment, the building remains legible as the former F. Rojo & Sons furniture warehouse and factory.

It is recommended that Appendix 8 be amended to identify 237-241 Napier Street as 'Contributory' to HO334.

5.7 19 Victoria Street, Fitzroy (HO334)

Figure 56. The west end of the complex – 19 Victoria Street is in the foreground (GJM Heritage, Aug 2018)

Figure 57. 19 Victoria Street, Fitzroy within HO334 (VicPlan)

Figure 58. The east end of the complex – 25-37 Victoria Street is in the foreground (GJM Heritage, Aug 2018)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO334	17-19 Victoria Street, Fitzroy	Apartments	324470	Not contributory	1995-2005
HO334	25-37 (part) Victoria Street, Fitzroy	Acme Shirt Factory	268210 [note correct no. is 392570]	Contributory	1880-1920

Historical background and description overview

The 1900 MMBW plan (*Figure 30*) shows the north side of Victoria Street, between Nicholson and Fitzroy streets, occupied by some residences and the Acme Shirt Factory (built c1890; a three-storey building that remains at no. 25). From c1920 the Acme Shirt Factory was addressed to 31-39 Victoria Street in the Sands & McDougall directories.

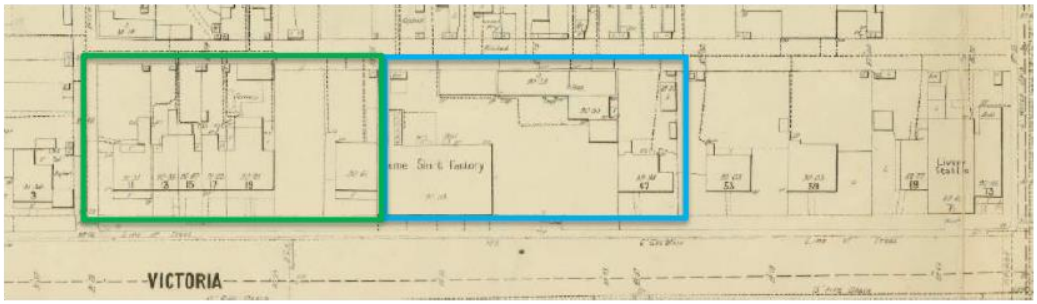

Figure 30. The north side of Victoria Street in 1900. Green polygon indicates the current 19 Victoria Street. Blue polygon indicates the current extent of 25-37 Victoria Street (Melbourne and Metropolitan Board of Works Detail Plan 1193, dated 1900).

La Mode Corsets Pty Ltd, corset manufacturers, acquired the Acme Shirt Factory between 1930 and 1933, with La Mode addressed to 31 Victoria Street in an advertisement in *The Age* published December 1933. In 1935, La Mode Corsets Pty Ltd were addressed to 31-39 Victoria Street, Fitzroy.[35]

The company soon expanded their holdings west along Victoria Street, towards Nicholson Street. By 1937, La Mode Corsets Pty Ltd was addressed to 23-39 Victoria Street and by 1940 the company was listed at 13-39 Victoria Street. By 1950 the company was addressed to 13-43 Victoria Street.[36]

Figure 60. 'La Mode Corset Industries' on Victoria Street; photo taken in 1948. The three-storey building was originally the Acme Shirt Factory (City of Yarra Libraries, ID No. FL464).

[35] Sands & McDougall directories: 1930, 1935;
The Age, 8 Dec 1933, p5.
[36] *The Age*, 9 Oct 1937, p18;
Sands & McDougall directories: 1940, 1950.

Figure 61. The extent of the complex shown in a c1940s oblique aerial; north is top-left (State Library of Victoria, Image H96.163/1).

In the early 1950s, La Mode's main mill was located at the subject site in Victoria Street, with a new dyehouse and store on the south side of Victoria Street, a factory at 190-202 Nicholson Street and mills at Morwell and Traralgon.[37]

It appears that the top portion/parapet of the building at the eastern end of the complex was built post-1948, to match that of the western end.

La Mode remained at 13-43 Victoria Street until c1960. By 1970, Easywear (Aust) Pty Ltd, shoe manufacturers, were located at 13-43 Victoria Street.[38] The complex was later occupied by Universal Theatre and 3RRR radio station. The western end (19 Victoria Street) has more been recently redeveloped into residential apartments.

[37] *The Herald*, 5 Nov 1953, p6.
[38] Sands & McDougall Directories: 1960, 1970.

Figure 62. The former Acme shirt factory and La Mode Corset factory on Victoria Street, Fitzroy, in the late twentieth century (Past Port, 'ACME Shirt Factory/La Mode Corset Factory, 31-39 Victoria Street', <https://pastport.com.au/citizen/record/660/>, accessed 7 Aug 2019).

Recommendation

19 Victoria Street originally formed part of the La Mode Corsets complex (1930s-c1960), encompassing the current 19 and 25-37 Victoria Street. The complex centres on the c1890 three-storey former Acme Shirt Factory, with 19 Victoria Street forming the western wing. Together, 19 and 25-37 Victoria Street form a prominent and reasonably intact streetscape, despite alterations.

It is recommended that Appendix 8 be amended to identify 19 Victoria Street as 'Contributory' to HO334 and reflect the correct construction date.

5.8 51-53, 59-61 & 67-69 Smith Street, Fitzroy (HO464)

51-53 Smith Street, Fitzroy

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO464	51 Smith Street, Fitzroy	-	266865	Individually Significant	c.1914
HO464	53 Smith Street, Fitzroy	-	266870	Individually Significant	c.1914

Historical background and description overview

The 1899 MMBW Detail Plan (*Figure 31*) indicates that an earlier building existed at 51 Smith Street, while 53 Smith Street had no built structures (listed as a slate yard in the 1900 and 1910 Sands & McDougall directories).

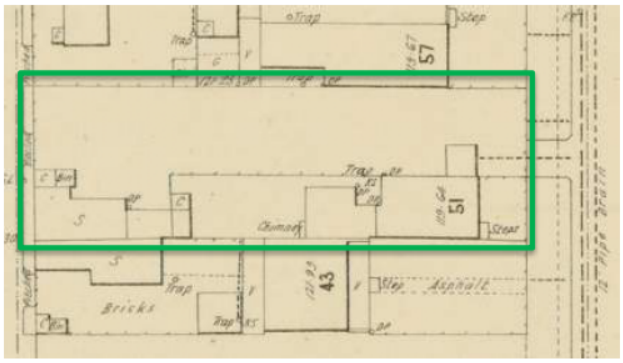

Figure 31. The two properties shown on the 1899 MMBW Detail Plan (No. 1207, dated 1899).

The 1915 Sands & McDougall Directory recorded that there were '2 shops being built' between nos. 49 and 55 Smith Street (at the subject sites). The 1920 Directory confirmed a resident and commercial occupant at each property; J T Purcell, leather merchant occupied the shop at no. 51A, while the shop at no. 53 was occupied by Miss N Casey, milliner.[39]

The following historical information is extracted from the Smith Street South Precinct citation[40]:

- *In 1915* [No. 53] *is listed as Brick 4 rooms with a NAV of £28 and in 1916 it is listed as Brick 5 rooms with a NAV of £80.*
- *In 1916 No. 51 is recorded as a Brick house 5 rooms with a NAV of £40; 51a Brick shop 1 room, which reflects the existing arrangement, and with a NAV of £30. The same year No. 53 remains as Brick 5 rooms with a NAV of £80.*
- *The existing buildings at Nos. 51 – 53, appear to date from c. 1914-1915.*
- *No. 51a retains its original metal-framed shopfront by T. S. Gill.*

The following is extracted from the 'Description & Integrity' section of the Smith Street South Precinct citation [emphasis added][41]:

> *Nos. 51 – 53 Smith Street Proposed grading: Individually significant.*

[39] Sands & McDougall Directory: 1920.
[40] Anthemion (July 2014), *City of Yarra Heritage Gap Study*, citation for 'Smith Street South' precinct, p21, 24.
[41] Anthemion (July 2014), citation for 'Smith Street South' precinct, p24.

A double-storey pair of masonry shops with a transverse gabled roof clad in Marseilles-pattern terracotta tiles, above which a shared brick chimney with a simple cap, and end parapet walls extend. There appears to be a corbelled brick chimney at the rear of No. 53. The upper level of the façade contains what appear to have been open balconies, articulated by pilasters at the end and central party walls and also at the south end of No. 51 above a separate entrance at the ground level. Behind later glazing, the façade appears to be rendered and contains two or three timber-framed, double-hung sash windows, with six lights in the upper sashes and one below. An original timber-framed door with a highlight above the transom is visible on No. 53.

No. 51a retains its original metal-framed shopfront by T. S. Gill and recessed splayed entry which also retains its original bluestone step but has been retiled. The timber-framed, half-glazed doors and framing include non-original elements but are in a style which is a replica in the style of the original. The wrought iron entrance screen is not original. The cantilevered canopy, contiguous with No. 53, retains its pressed metal soffit and with a matching egg and dart cornice to the shopfront. ***Internally the shop retains its pressed metal ceiling in a squared pattern, enlivened with flower buds, with an egg and dart cornice, decorative cover strips and pine floor boards.***

No. 53 retains a corniced pressed metal soffit which is contiguous with to the lining of the cantilevered canopy and the bluestone ramped entrance. An egg and dart pressed metal cornice, with acroteria, runs along the top of the shopfront and door. The shopfront appears to be a replica of an original and with original vents in the stallboard. The timber-framed door is not original. The cantilevered canopy, contiguous with No. 51, retains its pressed metal soffit but in a different pattern: a diapered pattern overlaid by a slight Celtic interlace and with "bosses". ***Internally the shop retains a pressed metal ceiling in a squared pattern, enlivened with flower buds, with an egg and dart cornice, decorative cover strips.***

The shops have a high degree of intactness and integrity.

Figure 32. Interior of 51 Smith Street (Oct 2019)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO464	59 Smith Street, Fitzroy	-	364280	Individually Significant	1883-1914
HO464	61 Smith Street, Fitzroy	-	364290	Individually Significant	1883-1914

Historical background and description overview

The 1899 MMBW Detail Plan (*Figure*) indicates that a row of buildings existed on this part of Smith Street at this date, with a deeper setback than the extant buildings.

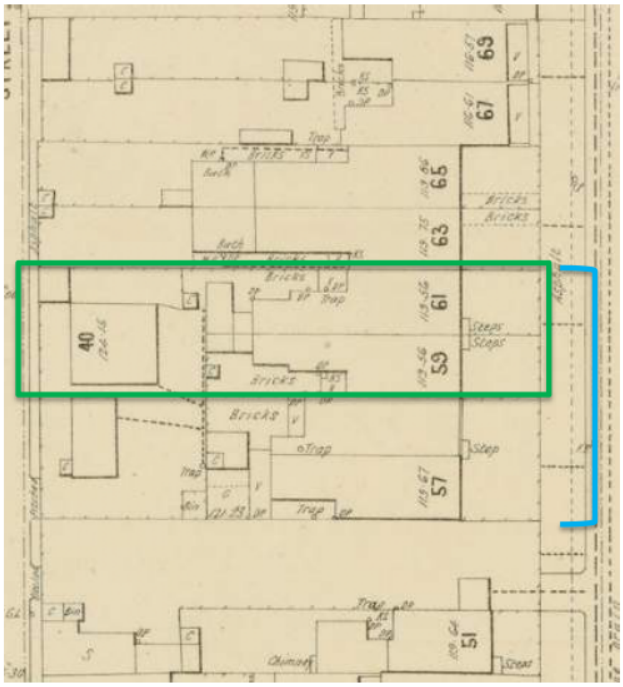

Figure 70. Footprints of the buildings at 59-61 Smith Street in 1899, indicated in green. The current 55-61 Smith Street is indicated in blue; north is top (MMBW Detail Plan 1207, dated 1899).

The following historical information is extracted from the Smith Street South Precinct citation [emphasis added][42]:

- *In 1898 [No. 57] was listed as a **brick house** with 6 rooms owned by Edward Miller. Nos. 59 and 61 also owned by Miller were **brick houses** with four rooms and all had the same listing at least 1883/84 - **1909**. There appears to have been a separate property at the rear fronting Little Smith Street (No. 40). All had deep setbacks from Smith Street.*
- *The site is now occupied by four double-storey **brick shops.***
- *A Plan of Drainage (MMBW Plan No. 1207, Drainage Plan No. 33462) for the site has an application date of 1/5/03 [1903], and shows Miller as the owner and Robert Jameson as the agent. The deep front setback and general plan form of the dwellings is the same as the MMBW plan.*
- *A second Plan [of Drainage] has an application date **2/5/1914** which is consistent with the style of the façades. It appears that the earlier dwellings were incorporated in new work fronting Smith Street as the front setback is not shown and presumably built over and the plan form at the rear is almost identical with the previous plan but with some minor corrections. A third plan dated "30/6/19" also shows the same plan and plus works abutting the rear boundary to Little Smith Street.*
- *Part of the original metal shopfront by "Duff" remains at No. 59.*
- *No. 61 has an original shopfront by "Duff".*

Analysis of the Anthemion history above and current aerial photographs suggest that the two-storey buildings fronting Smith Street were constructed after 1909. The 1914 Plan of Drainage probably indicates sewerage works to the new buildings. Part of the earlier single-storey buildings may have been retained to the rear.

[42] Anthemion (July 2014), *City of Yarra Heritage Gap Study*, citation for 'Smith Street South' precinct, pp 21-22, 24-25.

The following is extracted from the 'Description & Integrity' section of the Smith Street South Precinct citation [emphasis added][43]:

> *No. 55 - 61 Smith Street*
>
> *Proposed grading: Nos, 55-57: Contributory; Nos. 59-61: Individually significant.*
>
> *A group of four, double-storey, brick shops each divided by half-octagonal pilasters having a faceted base below a simple moulding and rising through the cornice to project above the parapet and terminating in a ball. The cornice beneath the parapet is moulded as is the top of the curved (wavy) parapet. Two windows, at Nos. 55 and 57, are original in size and contain a timber-framed, double-hung sash windows, that at No. 57 also including a highlight. No. 55 has a brick voussoir while No. 57 has a pedimented panel attached to the voussoir. The window openings to Nos. 59 – 61 have been slightly infilled at the top, below retained brick voussoirs, and widened. Beneath the moulded sills are flat curved rendered labels. There is also a pair of terracotta waffle vents in each façade above and beside the window heads.*
>
> *Roofs are hipped.*
>
> *The shopfronts at Nos. 55 and 57, other than for stallboards, are not original however the original marble door sills have been retained and re-used. The soffit of the suspended canopy is metal traydeck or standing seam.*
>
> *Part of the original metal shopfront by "Duff" remains at No. 59 and with a tiled (non-original) stallboard below. The shopfront has been slightly cut back to relocate the door to the same plane as the shopfront but* ***the original splayed entrance (floor and soffit) remains within the shop and the original floor tiles may remain beneath the flexible floor covering. Internally, the shop also retains its pressed metal ceiling with a central panel the same as at No. 69 Smith Street, edge border the same as at No. 61 Smith Street, egg and dart border moulding, diapered strapwork cornice and Classical mouldings to the covers trips and decorative vent covers.*** *The soffit of the suspended canopy is in pressed metal.*
>
> *No. 61 has an original shopfront by "Duff" and with highlight windows above. The timber-framed two-leaf door which has a highlight and is half-glazed and with (bolection) moulded panels below appears original. The shopfront tiles are overpainted but original terracotta vents, presumed glazed, remain in the stallboard. The splayed tessellated entrance tiles are in a pattern of cross-shaped elements in white, brown and terracotta on a buff background and with a diapered border between brown and cream/buff lines. The original white marble edge sill and timber door step are extant. The pressed metalwork soffit of* ***the original entrance, now within the shopfront, also has a deep ribbed cornice with Classical moulded coverstrips to the corners. The pressed metal ceiling of the shop is set out in square panels and with a square nailhead motif in each corner and a textured floriated border set ou tin squares and an edge moulding and cornice within the shop.*** *The soffit of the suspended canopy is in pressed metal.*
>
> *The shops have a high degree of intactness and integrity.*

The first-floor windows to nos. 59 and 61 have been replaced (they are wider than the original sills).

[43] Anthemion (July 2014), *City of Yarra Heritage Gap Study*, citation for 'Smith Street South' precinct, p24.

Figure 71. Interior of 59 Smith Street (Oct 2019)

Figure 72. Interior of 61 Smith Street (Oct 2018)

67-69 Smith Street, Fitzroy

Figure 36. 67-69 Smith Street, Fitzroy (GJM Heritage, Oct 2018)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO464	67 Smith Street, Fitzroy	-	266900	Individually Significant (internal alteration controls apply)	1883-1913
HO464	69 Smith Street, Fitzroy	-	266905	Individually Significant (internal alteration controls apply)	1883-1913

Historical background and description overview

The 1899 MMBW Detail Plan (*Figure 38*) indicates that a pair of earlier buildings existed on the properties at this date, with a deeper setback than the extant buildings.

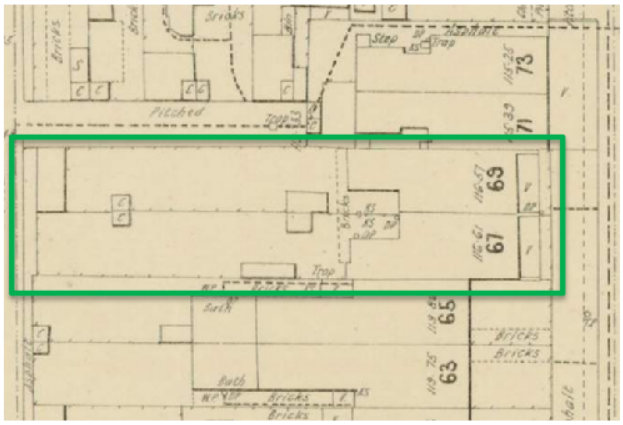

Figure 38. The two properties shown on the 1899 MMBW Detail Plan (No. 1207, dated 1899).

The Sands & McDougall directories list residents at 67 and 69 Smith Street in 1915 and 1920 and from c1925 commercial occupants are listed[44].

The following historical information is extracted from the Smith Street South Precinct citation [emphasis added][45]:

- *The site is now occupied by two double-storey brick shops **constructed c.1920s** which are probably the second structures on the site.*
- *A Plan of Drainage (MMBW Plan No. 1207, Drainage Plan No.35419) lists Robert Boyle Davies as the owner and Leonard Bros., Middle Brighton as Agents. The legible dates on the plan range from 19 Jun 1903 to 28/10/13 and the building footprint is consistent with that shown on the MMBW plan. This correlates with the style of the façade and either the existing built form all dates from this era or works occurred at the front incorporating the earlier structure. An additional date **of 4/8/20 or 29** appears to relate only to minor plumbing at the rear.* [it is likely that the 1920 plan relates to the extant buildings].

The following is extracted from the 'Description & Integrity' section of the Smith Street South Precinct citation [emphasis added][46]:

> *Nos. 67 – 69 Smith Street Proposed grading: Individually significant.*
>
> *A pair of red, face brick, double storey shops, probably dating from c.1920s, each of which has a pair of window openings containing timber-framed, double-hung sash windows in the façade beneath brick voussoirs. Above and beside the windows is a terracotta waffle vent cover at each outer edge. The external and dividing walls of each shop are brick pilasters which project above the curved parapet and which terminate in a simple moulded cap similarly to Nos. 63 - 65. The parapets are curved, generally similarly to Nos. 63 – 65, and with a simple moulded cap. Beneath the parapet, the cornice comprises a double row of moulded (ogee) bricks. The façade is otherwise plain and appears to have been washed in red oxide.*
>
> *Roofs are hipped and with the party wall parapet rising above the roof.*

[44] Sands & McDougall Directories: 1915, 1920, 1925, 1930.
[45] Anthemion (July 2014), *City of Yarra Heritage Gap Study*, citation for 'Smith Street South' precinct, p22.
[46] Anthemion (July 2014), citation for 'Smith Street South' precinct, pp25-26.

At the lower level, the end wall of each shop and the central dividing party wall are tiled with brown glazed butt jointed tiles with matching rounded tiles to the salient corners, all of which are original. The vents are also glazed to match the tiles.

No. 67 has an original shopfront with highlight windows above containing 50% original glazing. The stallboard contains terracotta vents glazed in blue. The two-leaf timber door has glazing of the period and may be original while the wrought iron screen is an addition. The splayed entrance contains a diapered chequerboard panel in black and white, surrounded by a double black and white border with running zigzag between plain white tiles and black lines and with the street edge and shop step being in white marble. ***Internally the shop contains its pressed metal ceiling with square panels edged with a moulded and egg and dart border and with a diapered border to the deep cornice embellished with Art Nouveau style floriation. The original pine boards remain on the floor****. The shop area is split level with a higher section towards the rear, possibly due to the slope of the land.*

The shopfront to No. 69 is not original however the splayed entrance tiling is original and is the same as No. 67. ***Internally the shop contains its pressed metal ceiling in an Art Nouveau style interwoven circular pattern enlivened with floriation and with a cornice of repetitive peas and pods, possibly Sturt's Desert Pea. The timber (pine) boarded floor also remains****. The shop area is split level with a higher section towards the rear, possibly due to the slope of the land.*

The contiguous, suspended canopy has no soffit lining to No. 67 Smith Street but has ripple iron to No. 69 Smith Street.

The shops have a high degree of intactness and integrity.

Figure 39. Interior of 67 Smith Street (Oct 2019)

Figure 40. Interior of 69 Smith Street (Oct 2018)

Precinct documentation

The following is extracted from the 'Comparative Analysis' section of the Smith Street South Precinct citation [emphasis added][47]:

In addition, several have retained their original metal-framed and tiled shopfronts; splayed entries with original tiling and stone (bluestone, marble) and timber sills/steps; ***pressed metal ceilings within the shops****; pressed metal soffit linings and cornices to the street canopies. While there are a number of early twentieth century shopfronts and entry tiles in various states of intactness in the north part of Smith Street,* ***it appears that Patersons Emporium is the only one with an original decorative (plaster) ceiling within the shop****, a large tiled entry (now within the shop) and a pressed metal soffit to the canopy.* ***The shops in the south part of Smith Street (west side) are an important demonstration of***

[47] Anthemion (July 2014), *City of Yarra Heritage Gap Study*, citation for 'Smith Street South' precinct, p28.

the decorative nature of shop design and fitting of the Edwardian and inter-War era which have mostly disappeared.

The following are relevant extractions from the Statement of Significance for the Smith Street South Precinct citation [emphasis added][48]:

What is Significant?

... Nos. 51 – 53, appear to date from the 1920s and are probably the first substantial structures on the site which form a pair of double-storey masonry shops with a transverse gabled roof clad in Marseilles-pattern terracotta tiles. No. 51a retains its original metal-framed shopfront and recessed splayed entry which also retains its original bluestone step. No. 53 retains a corniced pressed metal entry and awning soffit and the bluestone ramped entrance. The shopfront appears to be a replica of an original and with original vents in the stallboard. ***Internally this shop retains a pressed metal ceiling and cornice.***

... Nos. 55 - 61 appear to have originally been Victorian brick houses to which a new front section was added in 1914. The group of four, double-storey, brick shops are delineated by architectural detailing. The shopfronts at Nos. 55 and 57, other than for stallboards, are not original however the original marble door sills have been retained. Part of the original metal shopfront remains at No. 59 and with a tiled (non-original) stallboard below. ***The original splayed entrance (floor and soffit) remains within the shop and the original floor tiles may remain also. Internally, the shop retains its pressed metal ceiling****. The canopy soffit is also in pressed metal. No. 61 has an original shopfront including façade tiles, splayed tessellated entrance tiles and original step and marble sill. The pressed metal soffit and cornice to the entrance and canopy remain as does the* ***pressed metal ceiling within the shop.***

... Nos. 67 – 69 Smith Street is a pair of double-storey brick shops, most probably incorporating additions, constructed c.1920s and which are probably the second structures on the site. No. 67 has an original shopfront including a two-leaf glazed timber door. The splayed entrance contains original tiling and marble step and sill. Internally the shop contains its pressed metal ceiling. The shopfront to No. 69 is not original however the splayed entrance tiling is original and is the same as No. 67. ***Internally the shop contains its pressed metal ceiling.***

How is it significant?

The shops at Nos. 6 Smith Street, Collingwood and Nos. 21 - 23, 33 – 35, 51 – 53, 55 – 61, 63 – 65, 67 – 69, 71 – 73, and 75 - 77 Smith Street, Fitzroy are of local historical and aesthetic/architectural significance.

Why is it Significant?

... Each of the sub-groups of buildings has a high degree of integrity to their eras, demonstrating aesthetic and architectural characteristics of the Victorian, Edwardian and inter-War eras, often in a less exuberant style as befitting their periods. The latter two eras are generally not well-represented in Yarra. The concentration of original architectural elements including shopfronts, entrances, tiling, detailing and ***pressed metal ceilings*** *and soffits are demonstrative of shop design and shopfitting of the era of which examples are now* ***rare in Smith Street, certainly as compositions, and generally in other contemporary shopping strips.***

Recommendation

'Internal Alteration' controls have been applied to the entire interiors of six places – 51-53, 59-61 and 67-69 Smith Street, Fitzroy. The precinct Statement of Significance defines the significant internal elements as the pressed metal ceilings and cornices to the shop interiors and identifies the pressed metal ceilings an uncommon, remaining internal element.

[48] Anthemion (July 2014), citation for 'Smith Street South' precinct, p30-31.

PPN1 provides guidance on the appropriate application of internal alteration controls:

> *This provision should be applied sparingly and on a selective basis to special interiors of high significance. The statement of significance for the heritage place should explain what is significant about the interior and why it is important.*

The threshold for including internal alteration controls established by PPN1 is high and it is considered that the presence of pressed metal ceilings alone does not meet the requirements within the practice note.

It is recommended that Appendix 8 be amended to identify 51-53, 59-61 and 67-69 Smith Street as 'Contributory' to HO464, and reflect the correct construction dates. It is recommended that the Internal Alteration Controls to all six places be removed.

6. Heritage Overlay Boundary Review

During the course of the Built Form Review it was determined that corrections or alterations to existing Heritage Overlay curtilages (boundaries) are required. These are addressed below.

6.1 105-107 Johnston Street, Fitzroy (HO311)

Figure 41. 105-107 Johnston Street, Fitzroy (GJM Heritage, Oct 2019)

Figure 42. 105-107 Johnston Street indicated by dashed blue outline, currently within HO311 (VicPlan)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO311	103-107 Johnston Street, Fitzroy	Shops & residences, former	120800	Individually Significant	1880-1890

Historical background and description overview

The 1900 MMBW Detail Plan shows the footprints of the buildings at 105 and 107 Johnston Street, and what appears to be an accessway at the west end (Figure 80). The two-storey brick shop and residences present three bays to Johnston Street, with Classical detailing. Today the buildings appear to form part of the Provincial Hotel (former Liverpool Arms Hotel) with a rooftop area extending from the hotel across to 105-107, yet they remain on a separate title.

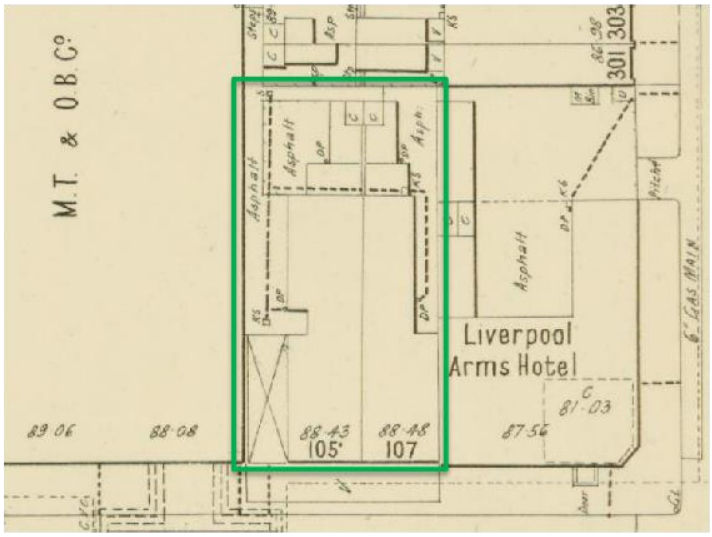

Figure 80. 105-107 Johnston Street shown on the 1900 MMBW Detail Plan (No. 1241, dated 1900).

Recommendation

The application of the heritage precinct boundary for the Brunswick Street Precinct (HO311) consistently includes buildings that front Brunswick Street (with exception of corner buildings with two main elevations).

To provide consistency, it is appropriate to remove 105-107 Johnston Street (erroneously listed in Appendix 8 as 103-107 Johnston Street) from HO311 and include it within the proposed Johnston Street West Precinct. The building very clearly addresses Johnston Street and contributes to the Johnston Street streetscape. It has no physical relationship with Brunswick Street.

It is recommended that Appendix 8 and Planning Map No. 5HO be updated to reflect this. The numbering of 103-107 Johnston Street should also be corrected in Appendix 8 to read 105-107 Johnston Street.

6.2 88 & 90 Alexandra Parade, Fitzroy (HO311 & HO334)

Figure 81. Nos. 88 and 90 Alexandra Parade, Fitzroy (GJM Heritage, Oct 2019)

Figure 82. 88 & 90 Alexandra Parade indicated by blue the polygon, currently within HO311. The area shaded green should form part of HO334 (VicPlan)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO311	88 Alexandra Parade, Fitzroy	-	237540	Contributory	1870-1890
HO311	90 Alexandra Parade, Fitzroy	-	237545	Contributory	1870-1890

Historical background and description overview

The 1900 MMBW Detail Plan shows footprints of the buildings at 88 and 90 Alexandra Parade, confirming that the pair was constructed during the Victorian period (*Figure 43*). 88 and 90 Alexandra Parade are a pair of two-storey Victorian residences, fronting the south side of Alexandra Parade.

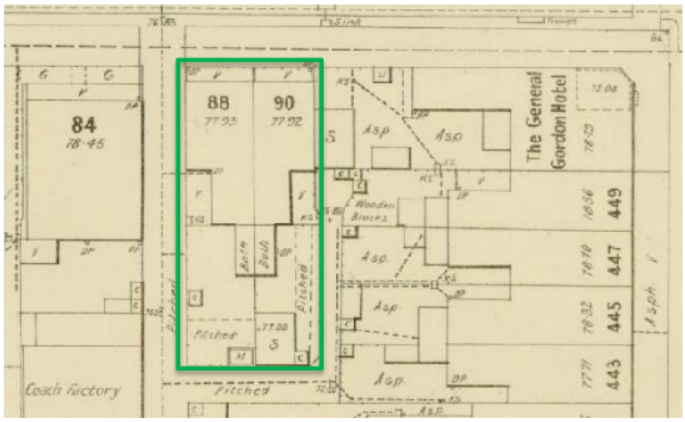

Figure 43. Site plan of the extant buildings at 88 and 90 Alexandra Parade in 1900 (MMBW Detail Plan 1211, dated 1900).

The Brunswick Street Precinct (HO311) is of significance for the following reasons (extracted from the Statement of Significance; emphasis added):

What is significant?

- *Main significant period - The Brunswick Street Heritage Overlay Area, Fitzroy is a predominantly 19th and early 20th century **commercial strip** and includes the following key characteristics.*
- *Contributory elements include (but not exclusively) typically one, two-storey, and some three-storey Victorian and Edwardian-era **shops and residences**.*

Why is it significant?

- *As an important **commercial precinct** in Fitzroy particularly expressive of the late 19th and early 20th centuries when its influence extended throughout Melbourne.*

Recommendation

88 and 90 Alexandra Parade are a pair of two-storey Victorian terrace houses, currently included within the Brunswick Street Precinct (HO311), which is significant as a predominantly commercial precinct, as defined by the Statement of Significance. It is considered more appropriate that the two residences be included within the South Fitzroy Precinct (HO334), which is significant for its contributory elements that include 'mainly detached and attached Victorian-era and Edwardian-era houses' as defined by the Statement of Significance.

It is recommended that 88 and 90 Alexandra Parade, Fitzroy, are removed from HO311 and included within HO334, and that Appendix 8 and Planning Map No. 1HO be updated to reflect this.

6.3 51 Brunswick Street, Fitzroy (HO311 & HO334)

Figure 44. The Gertrude Street and Brunswick Street facades of 51 Brunswick Street, Fitzroy (GJM Heritage Oct 2019)

Figure 45. 51 Brunswick Street, currently within HO311 and HO334. The area shaded green (the rear of 51 Brunswick Street) should form part of HO311. The recommended southern boundary of HO311 is indicated by the dashed green line (VicPlan)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO311	51 Brunswick Street, Fitzroy	Rob Roy Hotel	251955	Individually Significant	1850-1870

Historical background and description overview

The Rob Roy Hotel was built in 1859, designed by architect Patrick Scanlan.[49] In 1871, architect James Gall called for tenders to build '10 large 2-storey brick shops and dwellings, outbuildings and fencing and extensive additions to the Rob Roy Hotel, cnr Gertrude and Brunswick sts, Fitzroy'.[50] It is suggested that the Rob Roy Hotel was also re-faced by Gall at this date.[51] The 1899 MMBW Detail Plan shows a footprint of the corner building, addressing both Gertrude and Brunswick streets, and the surrounding shops and residences (Figure 86). The parapet bears the date '1929' indicating works at this date.

Analysis of the Classical architectural detail of the two-storey hotel and surrounding two-storey shops and residences confirms that the Rob Roy Hotel formed part of a Victorian-era development that comprised the current 51-63 Brunswick Street and 75-83 Gertrude Street (shown on the 1899 plan as 75-89 Gertrude Street and 51-63 Brunswick Street).

[49] Lewis, Miles, Australian Architectural Index, record nos. 16958, 16824.
[50] *The Argus*, 5 Sep 1871, p3, cited in Lewis, Miles, Australian Architectural Index, record nos. 16973.
[51] Louise Elliot, 'Brunswick Street Heritage Walk', supplied by City of Yarra.

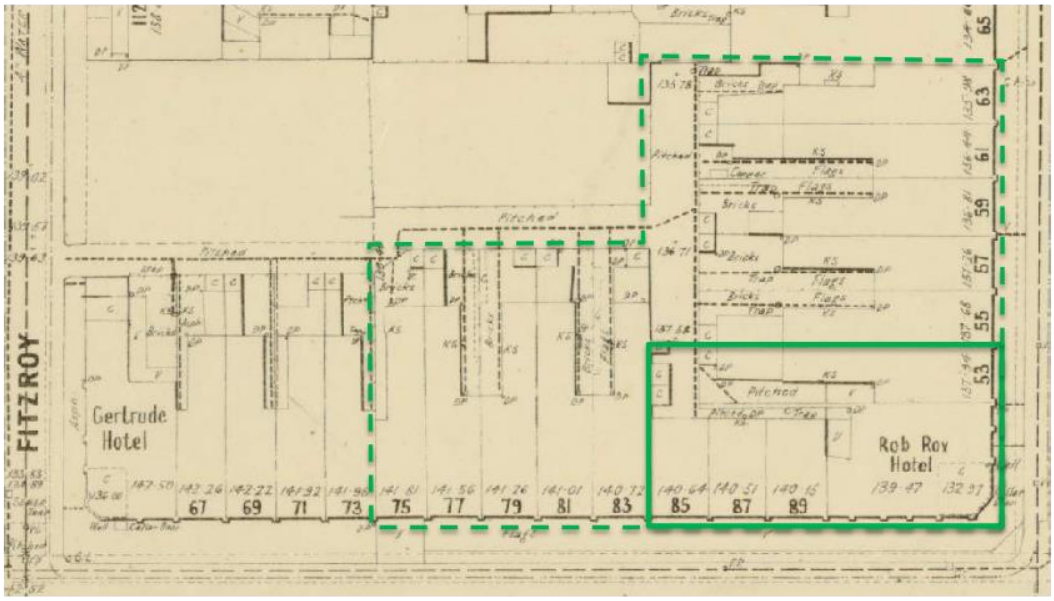

Figure 46. The current extent of 51 Brunswick Street is indicated by the bold green line. The dashed green line indicates the extent of buildings with similar architectural detail (MMBW Detail Plan 1205, dated 1899).

Recommendation

The Rob Roy Hotel, on the north-west corner of Gertrude and Brunswick streets, appears to have formed part of a larger development (constructed in stages during the Victorian period) that comprised the current 75-83 Gertrude Street and 51-63 Brunswick Street.

The application of the heritage precinct boundary for the Brunswick Street Precinct (HO311) consistently includes the full extent of buildings that front Brunswick Street and – where a corner building has two main elevations – the full extent of both elevations.

To provide consistency, it is appropriate to include the full extent of 51 Brunswick Street within the Brunswick Street Precinct (HO311). It is recommended that the southern boundary of HO311 be amended as per Figure 85 (this boundary recommendation aligns with the proposed Gertrude Street Precinct boundary). It is recommended that Planning Map No. 5HO be updated to reflect these changes.

It is appropriate for 75-83 Gertrude Street, which are individual properties fronting Gertrude Street, to be included within the proposed Gertrude Street Precinct.

6.4 304 Brunswick Street, Fitzroy (HO311)

Figure 47. The laneway to the rear of 298-302 Brunswick Street (Google street view, photo dated Nov 2017)

Figure 48. 304 Brunswick Street indicated in blue, currently within HO311 and HO334. The area shaded green (the rear of 304 Brunswick Street) should form part of HO311 (VicPlan)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO311	304 Brunswick Street, Fitzroy	Sydenham, Shop & residences	239465	Contributory	1915

Historical background and description overview

The right of way was evident on the 1900 MMBW Detail Plan, extending behind 298-304 Brunswick Street (Figure 89). Confirming this historical alignment, the bluestone paving to the right of way currently extends to the rear of 304 Brunswick Street.

However, VicPlan indicates that the public laneway only extends to the rear of 302 Brunswick Street. This indicates a consolidation of part of the laneway with 304 Brunswick Street.

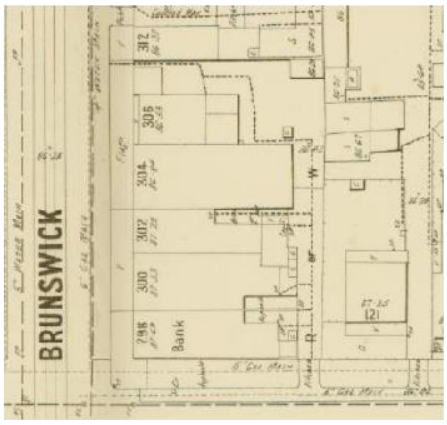

Figure 49. The right of way historically extending to the rear of 304 Brunswick Street (MMBW Detail Plan 1241, dated 1900).

Recommendation

The application of heritage precinct boundaries in the City of Yarra consistently includes the full extent of properties that contribute to the significance of a precinct. This is the case for the Brunswick Street Precinct (HO311).

To accord with this previous application of heritage precincts, it is appropriate to include the full extent of 304 Brunswick Street within HO311. It is recommended that Planning Map No. 5HO be updated to reflect these changes.

6.5 244-246, 248 & 250 Smith Street, Collingwood (HO333)

Figure 90. The rear of 244-246 Smith Street, fronting Rendle (also called Montalto) Place (Google Street View, photo dated Aug 2017)

Figure 91. The area shaded green should form part of HO333 (VicPlan)

Current grading in Appendix 8 (revised May 2018)

Overlay	Address	Property Type	Property No.	Heritage Status	Estimated Date
HO333	244 Smith Street, Collingwood	Shop & residence	117305	Contributory	1880-1890
HO333	248 Smith Street, Collingwood	-	117310	Individually Significant	1880-1890
HO333	250 Smith Street, Collingwood	-	117315	Individually Significant	1880-1890

Historical background and description overview

The 1900 MMBW Detail Plan showed footprints of the buildings at 244-250 Smith Street (*Figure*). The plan shows that the building that currently remains at 244-246 Smith Street, which is built to all four boundaries, existed in 1900 (addressed as 242A and 244).

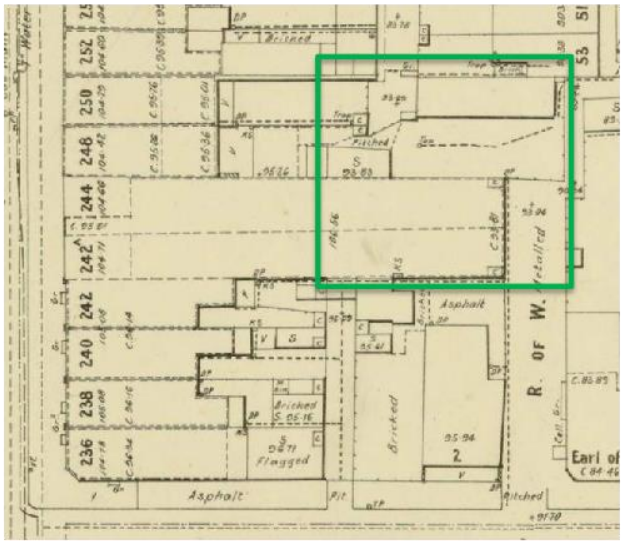

Figure 92. Footprints of extant buildings in 1900. The green polygon indicates the area excluded from HO333 (MMBW Detail Plan 1196, dated 1900).

244-246 Smith Street is currently occupied by a two-storey Victorian building that is built to all four title boundaries. 248 and 250 Smith Street comprise a pair of two-storey Victorian shop and residences that occupy the front portion of the properties; the rear of the properties are vacant.

Recommendation

The application of heritage precinct boundaries in the City of Yarra consistently includes the full extent of properties that contribute to the significance of a precinct. This is the case for the Smith Street Precinct (HO333).

To accord with the previous application of heritage precincts within Yarra, it is recommended that the boundary of Smith Street Precinct (HO333) is realigned to include the full extents of 244-246, 248 and 250 Smith Street, Collingwood, and Planning Map No. 6HO updated to reflect this.

7. Creation of New Precincts

The South Fitzroy Precinct (HO334) encompasses large residential areas and excludes the key commercial precincts of Brunswick Street (HO311) and Smith Street (HO333). However, the existing Statement of Significance for HO334 does not adequately describe the heritage values of the Johnston Street and Gertrude Street commercial streets, which have distinct histories and characters.

Two new heritage precincts are proposed as follows to aid the future management of these commercial areas:

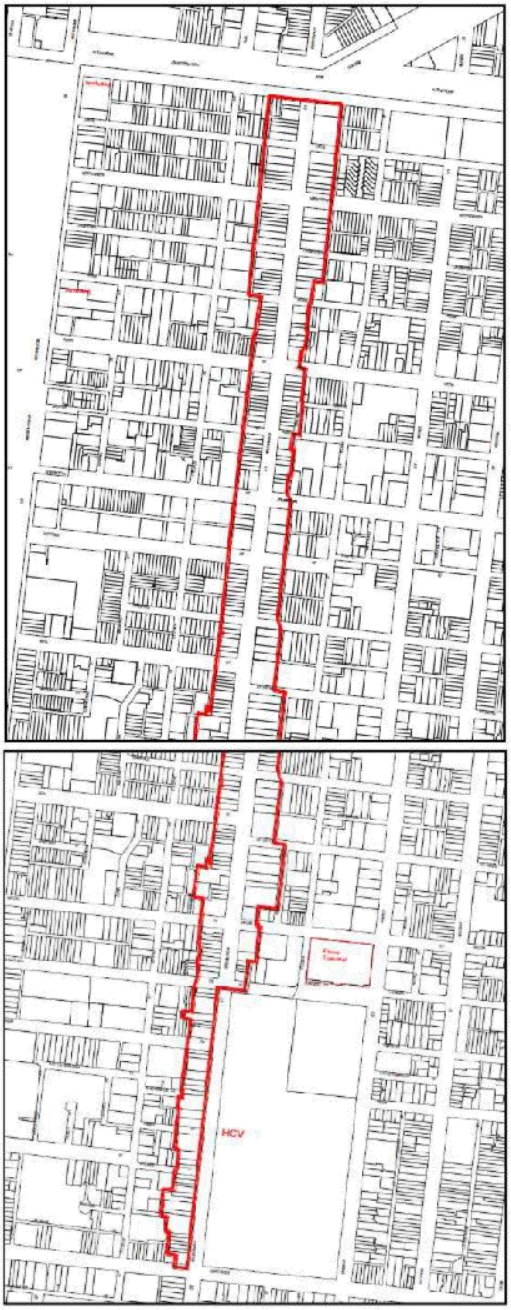
Place name	Address	Attachment No.
Johnston Street West Precinct, Fitzroy	15-129, 239-247A, 14-104 & 120-264 Johnston Street, 9-105 Victoria Street, 110-112 Argyle Street, 1A Elliott Street, 344 Fitzroy Street, 369 Gore Street, 236 Nicholson Street & 270 Young Street	Attachment M
Gertrude Street Precinct, Fitzroy	65-83, 153-179, 187-247 & 90-248 Gertrude Street, 50-54 Brunswick Street, 74-78 Gore Street, 44 Little Napier Street & 70-74 Napier Street, Fitzroy	Attachment N

It is further recommended that:

- Appendix 8 be updated to reflect the assessments for the above precincts.
- The Statements of Significance for the precincts be incorporated within the Schedule to the Heritage Overlay.

7.1 Methodology

The assessment has been completed having regard to PPN1 and the gradings for heritage places as defined in Council's Heritage Policy at Clause 22.02 of the Yarra Planning Scheme ('Development Guidelines for sites subject to the Heritage Overlay').



The precincts were visually inspected from the street and historic research was conducted using a variety of sources including historic plans and maps (including MMBW Plans), contemporary newspaper notices and advertisements, Sands and McDougall Directories, and historic photographs and aerials. Comparative analysis against similar precincts identified in the Heritage Overlay was undertaken to determine whether the place satisfied the threshold for local heritage significance.

In preparing the precinct assessment, individual property gradings were reviewed. The recommended grading are included in the assessments at the relevant attachment to this report.

Attachment A – Statement of Significance: Brunswick Street Precinct, Fitzroy

Brunswick Street Precinct, Fitzroy Statement of Significance

Heritage Place: Brunswick Street Precinct, Fitzroy	**PS ref no:** HO311

Source: Graeme Butler and Associates (2007), *City of Yarra Review of Heritage Overlay Areas*

What is significant?

Properties within the following areas contribute to the significance of the Brunswick Street Precinct:

- West side of Brunswick Street, Fitzroy from Gertrude Street to Alexandra Parade
- East side of Brunswick Street, Fitzroy from King William Street to Alexandra Parade
- Johnston Street.

Elements that contribute to the significance of the precinct include (but are not limited to):

- The consistent Victorian and Edwardian commercial character of the precinct, which includes:
  - A consistent two-storey scale with some single, and three storey buildings
  - A variety of simple and highly decorative facade parapets, with pitched roofs behind
  - No front or side setbacks
  - Face red brick (including polychrome) or rendered walls
  - Rendered window frames, sills and hoods to upper stories
  - Rendered ornament to upper stories
  - Brickwork with corbelled capping courses
  - Strong horizontal lines formed by parapets, cornices, string courses
  - Repetitive upper floor fenestration patterns
  - Less than 40% of the upper street façade comprises openings such as windows
  - Corrugated iron and slate roof cladding
  - Original post-supported street verandahs
  - Shop fronts with display windows, timber or tiled plinths, and entry recesses
  - Some red brick storage or stable buildings at the rear or side lane frontage
  - Corner buildings with secondary façades to side streets or lanes
  - Splayed corners to buildings at intersections
- Bluestone pitched road paving, crossings, stone kerbs and channels and asphalt paved footpaths.
- Examples of intact inter-war buildings
- Views afforded to St Patrick's Cathedral beyond the precinct.

Features that do not contribute to the significance of the precinct include more recent alterations and additions to buildings within the precinct, including highly altered shopfronts.

How is it significant?

The Brunswick Street Precinct is of local historical, architectural and aesthetic significance to the City of Yarra.

Why is it significant?

The Brunswick Street Precinct is a major 'High Street' in the City of Yarra and has functioned continuously as one of Fitzroy's key commercial centres since the mid-nineteenth century. It retains a substantial collection of intact commercial buildings, predominantly from the Victorian and Edwardian periods, including shops and associated residences, hotels and other commercial and civic buildings. Together these buildings demonstrate the development of this major 'High Street', particularly from the 1860s to c1920 when substantial growth in the street occurred, and are illustrative of the enduring role the street has played in the economic and social life of Fitzroy since the establishment of the suburb [Criterion A].

The highly intact streetscape of the Brunswick Street Precinct clearly demonstrates the principal characteristics of a major Victorian and Edwardian 'High Street' in the City of Yarra. Typical characteristics – including a predominantly two-storey Victorian and Edwardian street wall height, parapeted rendered or red brick facades, repetitive upper floor fenestration, and ground floor shopfronts – are displayed in the original forms, fabric and detailing of the majority of the buildings.

The streetscapes on the west side of Brunswick Street from Gertrude Street to 63 Brunswick Street and from 211 to 419 Brunswick Street, and the east side from 240 Brunswick Street to Victoria Street and from 296 to 346 Brunswick Street, are particularly intact and consistent in their architectural form and expression [Criterion D].

The Brunswick Street Precinct contains a number of landmark and individually significant buildings which are well-considered and carefully detailed examples of commercial and civic buildings. These include, among others, the Fitzroy Post Office (296 Brunswick Street); retail buildings such as the Moran & Cato Merchants building (277-285 Brunswick Street), the Shawcross Building (320-22 Brunswick Street) and extensive shop rows (such as at 236-52 Brunswick Street and 55-67 Brunswick Street); and hotels such as the Ballarat Hotel (175 Brunswick Street) and Perseverance Hotel (196 Brunswick Street). Variations in façade detailing throughout the precinct, including parapet ornamentation, balustrading and pediments, applied decoration and polychromatic brickwork, make an aesthetic contribution to the overall character of the precinct [Criterion E].

What is significant?

Properties within the following areas contribute to the significance of the Smith Street Precinct:

- West side of Smith Street, Fitzroy from Gertrude Street to Westgarth Street
- East side of Smith Street, Collingwood from Langridge Street to Mater Street
- South side of Johnston Street, Collingwood, east of Smith Street
- Leicester Street, south side, west of Smith Street (no. 180) rear of 421 Smith Street
- Little Oxford Street, west side between Peel Street and Stanley Street
- Rose Street
- St David Street, north side, west of Smith Street to Hargreaves Street.

Elements that contribute to the significance of the precinct include (but are not limited to):

- The consistent Victorian and Edwardian commercial character of the precinct, which includes:
  - A consistent two-storey scale, with some single, three and four storey buildings
  - A variety of simple and highly decorative facade parapets, with pitched roofs behind
  - No front or side setbacks
  - Face red brick (including polychrome) or rendered walls
  - Rendered window frames, sills and hoods to upper storeys
  - Rendered ornament to upper storeys
  - Brickwork with corbelled capping courses
  - Strong horizontal lines formed by parapets, cornices, string courses
  - Repetitive upper floor fenestration patterns
  - Less than 40% of the upper street façade comprises openings such as windows
  - Corrugated iron roof cladding
  - Original post-supported street verandahs
  - Shop fronts with display windows, timber or tiled plinths, and entry recesses
  - Some red brick storage or stable buildings at the rear or side lane frontage
  - Corner buildings with secondary façades to side streets or lanes
  - Splayed corners to buildings at intersections
- Bluestone pitched road paving, crossings, stone kerbs and channels and asphalt paved footpaths
- The early twentieth century industrial character at the northern end, which includes:
  - A consistent two-storey scale with some single and three storey buildings
  - Simple façade parapets with pitched roofs behind
  - No front or side setbacks
  - Face red brick walls
  - Brickwork with corbelled capping courses
  - Strong horizontal lines formed by parapets, spandrels and string courses and strong vertical lines formed by piers
  - Repetitive fenestration patterns at ground and first floor level
  - Corrugated iron roof cladding
- Examples of intact inter-war buildings.

Features that do not contribute to the significance of the precinct include more recent alterations and additions to buildings within the precinct, including highly altered shopfronts.

How is it significant?

The Smith Street Precinct is of local historical, architectural and aesthetic significance to the City of Yarra.

Why is it significant?

The Smith Street Precinct is a major 'High Street' in the City of Yarra and has functioned continuously as one of Fitzroy and Collingwood's key commercial centres since the 1860s. It retains a substantial collection of intact commercial buildings, predominantly from the Victorian and Edwardian periods, including shops and associated residences, hotels and other commercial and civic buildings. Together these buildings demonstrate the development of this major 'High Street', particularly from the 1860s to the 1920s when substantial growth in the street occurred, and are illustrative of the enduring role the street has played in the economic and social life of Fitzroy and Collingwood since the establishment of these suburbs [Criterion A].

The highly intact streetscape of the Smith Street Precinct clearly demonstrates the principal characteristics of a major turn of the century 'High Street' in the City of Yarra. Typical characteristics – including a predominantly two-storey Victorian and Edwardian street wall height, parapeted rendered or red brick facades with repetitive upper floor fenestration, and ground floor shopfronts – are displayed in the original forms, fabric and detailing of the majority of the buildings. The streetscapes on the west side of Smith Street from 101 to 207 Smith Street and 231 to 363 Smith Street; and on the east side from 54 to 106 Smith Street, 230 to 266 Smith Street, and 292 to 338 Smith Street, are particularly intact and consistent in their architectural form and expression. A group of industrial buildings at the northern end of the precinct are intact and consistent in their early twentieth century character and form [Criterion D].

The Smith Street Precinct contains a number of landmark and individually significant buildings which are well-considered and carefully detailed examples of commercial and civic buildings. These include, among others, the former Union Bank of Australia (165-167 Smith Street, VHR H0187), the National Bank of Australasia (169-171 Smith Street), retail buildings such as the Stanford Block (119-129 Smith Street), Victoria Buildings (193-207 Smith Street), Hannaford's Pianos and Organs (219 Smith Street) and the commercial row at 298-312 Smith Street, as well as large retail stores such as the Foy & Gibson Store (145-163 Smith Street) and Patersons Pty Home Furnishings (173-181 Smith Street). The former Collingwood Post Office (174 Smith Street, VHR H0973), with elaborate façade and steep mansard roof, is of particular prominence and landmark quality within the precinct. Variations in façade detailing throughout the precinct, including parapet ornament, balustrading and pediments, applied decoration and polychromatic brickwork, make an aesthetic contribution to the overall character of the precinct [Criterion E].

Attachment C – Statement of Significance: South Fitzroy Precinct, Fitzroy

South Fitzroy Precinct Statement of Significance

Heritage Place: South Fitzroy Precinct	PS ref no: HO334

[Insert updated HO Map]

What is significant?

The properties on all streets contained within the boundaries of South Fitzroy, now known as the suburb of Fitzroy, excluding a number of places with individual or other precinct Heritage Overlays.

Elements that contribute to the significance of the precinct include (but are not limited to):

- The consistent Victorian and Edwardian residential character of the precinct, which includes:
  - A highly consistent one and two-storey scale
  - Pitched gabled or hipped roofs
  - A variety of simple and highly decorative parapets, with pitched roofs behind
  - Face brick (red, dechrome and polychrome) and rendered masonry dwellings, with some weatherboard dwellings
  - Corrugated iron and slate, with some Marseilles pattern terracotta tile, roof cladding
  - Face brick and rendered chimneys with corbelled or moulded capping
  - Post-supported verandahs facing the street with cast iron detailing and/or timber detailing, and some arcaded masonry verandahs
  - Small front gardens with timber or cast iron picket fences of c1 metre in height, or no boundary setback
- Examples of intact Interwar buildings
- Examples of former light industrial buildings
- Bluestone pitched road paving, crossings, stone kerbs and channels and asphalt paved footpaths
- Corner residences and/or shop/residences with display windows and no boundary setbacks
- Mature street tree plantings
- Rear and side lanes with substantial boundary walls and brick stable structures
- Views afforded to significant buildings beyond the precinct (Royal Exhibition Building)

How is it significant?

The South Fitzroy Precinct is of local historical, architectural and aesthetic significance to the City of Yarra.

Why is it significant?

The South Fitzroy Precinct is the earliest area outside the Melbourne City Grid to be settled in the broader Melbourne municipality and a large number of early Victorian buildings from the mid-nineteenth century remain to demonstrate this. It retains a substantial collection of buildings, predominantly from the Victorian and Edwardian periods, including residential, commercial, retail and industrial buildings, which together demonstrate the development of this urban area, particularly from the 1860s to the 1920s when substantial growth occurred. The predominance of solid masonry construction reflects the application of the *Melbourne Building Act 1849* in the City of Melbourne, including Fitzroy, enforcing fireproof construction (Criterion A).

The highly intact South Fitzroy Precinct clearly demonstrates the principal characteristics of a major early suburb. It includes predominantly residential buildings, with groups of industrial, retail and commercial buildings. Typical characteristics of the residential buildings include a consistent one and two-storey scale,

solid masonry construction and a predominance of Victorian and Edwardian styles. These characteristics are displayed in the original forms, fabric and detailing of many of the dwellings. The streetscapes throughout the precinct are particularly intact and consistent in their architectural form and expression and include many residential streets, groups of industrial masonry buildings and substantial retail and commercial buildings (Criterion D).

The South Fitzroy Precinct contains a number of landmark and individually significant buildings which are well considered and carefully detailed examples of their type from the late nineteenth century and early twentieth century. These include, among others, the Standard Hotel (293 Fitzroy Street); Catherine Terrace (150-60 Nicholson Street) and large factory complexes such as that of the MacRobertson confectionary company (Gore, Kerr and Rose Streets). Façade detailing throughout the precinct, including ornate and exuberant detail and polychromatic brickwork, particularly from the late nineteenth century, make an aesthetic contribution to the overall character of the precinct (Criterion E).

What is significant?

Properties within the following areas contribute to the significance of the Smith Street South Precinct:

- West side of Smith Street, Fitzroy from north of Victoria Parade to Gertrude Street
- East side of Smith Street, Collingwood from north of Victoria Parade to Langridge Street
- East side of Little Smith Street, south of Gertrude Street.

Elements that contribute to the significance of the place include (but are not limited to):

- The consistent Victorian and Edwardian commercial character of the precinct which includes:
  - A consistent two-storey scale with some single storey buildings

  - A variety of façade parapets, with pitched roofs behind
  - No front or side setbacks
  - Face red brick or rendered walls
  - Rendered window frames, sills and hoods to upper stories
  - Rendered ornament to upper stories
  - Brickwork with corbelled capping courses
  - Strong horizontal lines formed by parapets, cornices, string courses
  - Repetitive upper floor fenestration
  - Less than 40% of the upper street façade comprises openings such as windows
  - Corrugated iron roof cladding
  - Shop fronts with display windows, timber or tiled plinths, and entry recesses
  - Some red brick storage or stable buildings at the rear or side lane frontage
  - Corner buildings with secondary facades to side streets or lanes
  - Splayed corners to buildings at intersections
- Bluestone pitched road paving, crossings, stone kerbs and channels and asphalt paved footpaths.

Features that do not contribute to the significance of the precinct include more recent alterations and additions to buildings within the precinct, including highly altered shopfronts.

How is it significant?

The Smith Street South Precinct is of local historical, architectural and aesthetic significance to the City of Yarra.

Why is it significant?

The Smith Street South Precinct is part of a major 'High Street' in the City of Yarra which has functioned continuously as one of Fitzroy and Collingwood's key commercial centres since the 1860s. It retains a small collection of intact commercial buildings, predominantly from the Victorian and Edwardian periods, including shops and associated residences and hotels. Together these buildings demonstrate the development of this major 'High Street', particularly from the 1880s to the 1920s when substantial growth at this end of the street occurred, and are illustrative of the enduring role the street has played in the economic and social life of Fitzroy and Collingwood since the establishment of these suburbs [Criterion A].

The streetscape of the Smith Street South Precinct clearly demonstrates the principal characteristics of a major turn of the century 'High Street' in the City of Yarra. Typical characteristics – including predominantly two-storey Victorian and Edwardian street wall heights, parapeted rendered or red brick facades, repetitive upper floor fenestration, and ground floor shopfronts – are displayed in the original form, fabric and detailing of many of the buildings [Criterion D].

The Smith Street South Precinct contains a small number of individually significant buildings which are well-considered and carefully detailed examples of retail and commercial buildings, including the pair of two-storey shops and residences at 71-73 Smith Street and the Former British Crown Hotel (14 Smith Street). Variation in façade detailing throughout the precinct, including parapet ornament and pediments and applied decoration, make an aesthetic contribution to the overall character of the precinct [Criterion E].

GJM Heritage

Heritage Citation

BARCELONA TERRACE

Address: **25-37 Brunswick Street, Fitzroy**

Prepared by: GJM Heritage

Date: August 2019

Place type: Residences	**Architect:** Not known
Grading: HO153	**Builder:** Thomas Cockram
Integrity: High	**Construction Date:** 1881

Figure 1. 50-54 Brunswick Street, Fitzroy (GJM Heritage, October 2018)

Statement of Significance

What is significant?

Barcelona Terrace, 25-37 Brunswick Street, Fitzroy built in 1881.

Elements that contribute to the significance of the place include (but are not limited to):

- The original external form, materials and detailing of the terrace row
- The high level of integrity to its original design
- The original front fences and gates.

Later alterations and additions to the rear of the terraces are not significant.

How is it significant?

Barcelona Terrace, 25-37 Brunswick Street, Fitzroy is of local architectural and aesthetic significance to the City of Yarra.

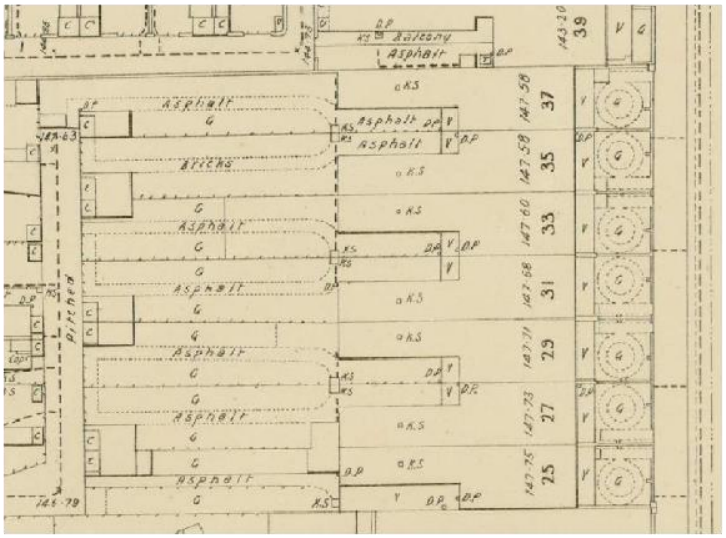
Why is it significant?

Barcelona Terrace at 25-37 Brunswick Street, Fitzroy is a fine and representative example of terrace housing from the Victorian period. It displays typical features of the Victorian Italianate architectural style popular in the 1880s boom period in Fitzroy and across Melbourne more broadly, including a two-storey form with front verandahs and balconies, rendered brickwork, decorative cast iron, rendered decorative elements including balustrading and cast iron palisade fencing (Criterion D).

Barcelona Terrace at 25-37 Brunswick Street, Fitzroy is a well-considered and carefully detailed example of Victorian Italianate terrace housing. The row of terraces, with repetitive decorative elements across the facades, presents a picturesque composition of this architectural style (Criterion E).

Historical Themes

The place illustrates the following themes as outlined in the *City of Yarra Thematic History* (1998):



3.0 Mansions, Villas and Sustenance Housing: the Division between Rich and Poor
- 3.1 A Home to Call One's Own

Place History

The row of seven terrace houses known as 'Barcelona Terrace' was constructed in 1881 (as noted on the nameplate of the building). The 1881 rate books recorded Philip, John and Stephen Parer as the owners of the seven ten-room brick houses, each with a Net Annual Value of 65 pounds (RB). The row was constructed by builder Thomas Cockram (NTAV), who also built the 1883 Hotel Windsor on the corner of Bourke and Springs streets, Melbourne.

In February 1882, a newspaper reported that the 'Messrs Parer have just built, out of the profits of their business, a grand terrace of houses in Brunswick-street, Fitzroy.' The article noted that the 'Parers are from Catalonia, in Spain, and they have very properly called the buildings Barcelona Terrace' (*Mount Alexander Mail*, 4 Feb 1882:2). The Parers Bros. are known to have also built Madrid Terrace in Princes Street (presumably in Fitzroy) (Allom Lovell 1992:4.55), and owned the Crystal Cafe, Bourke Street from 1886 (since demolished) (*Argus*, 14 Oct 1885:6; *Traralgon Record*, 21 Jan 1892:3).

The 1898 Melbourne and Metropolitan Board of Works (MMBW) Detail Plan (Figure 2) shows the footprints of the seven terrace houses, each with a grassed area and central path to the rear of the house and water closets on the rear boundary. Each house had a circular plan to the landscaping behind the front boundary and cast iron palisade fence.

Asphalt
Balcony
Asphalt
Asphalt
Asphalt

The two-storey verandahs are supported by slender iron columns with Corinthian capitals. Both floors incorporate a decorative iron freize and brackets, with the first floor also incorporating a swagbellied iron balustrade. All fenestration to Brunswick Street is arch-headed with arched label moulds that continue to formed slender engaged columns or pilasters that frame the opening. Each dwelling has two tall openings to the first floor with one-over-one sash windows. Each ground floor has a large entrance with a four-paneled door (some behind modern security doors), with arched highlights and sidelights, adjacent to a paired window. The ground floor verandah floors have tessellated tiles and bluestone edging.

Each dwelling originally had a circular landscape plan to the front garden with a tessellated tile entrance path. These elements have been retained (except for no. 35 which has lost its circular landscape plan) (Figure 2). A cast iron palisade fence with a bluestone plinth and pedestrian gates to each house extends along the boundary of the terrace. The fence finishes at the north and south ends with large rendered piers.

Later additions and outbuildings are located to the rear (west) of most of the dwellings (dates not confirmed, some may be early outbuildings on the rear boundary).

Integrity

The building retains a high degree of integrity to the Victorian period in fabric, form and detail, including the front fence and landscaping plan to the front yard. While the terrace row has undergone minor alterations, these do not diminish the ability to understand and appreciate the place as a fine example of a Victorian residential building.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

Barcelona Terrace at 25-37 Brunswick Street, Fitzroy is a fine and representative example of terrace housing from the Victorian period. It displays typical features of the Victorian Italianate architectural style popular in the 1880s boom period in Fitzroy and across Melbourne more broadly, including a two-storey form with front verandahs and balconies, rendered brickwork, decorative cast iron, rendered decorative elements including balustrading and cast iron palisade fencing.

Criterion E: *Importance in exhibiting particular aesthetic characteristics (aesthetic significance)*

Barcelona Terrace at 25-37 Brunswick Street, Fitzroy is a well-considered and carefully detailed example of Victorian Italianate terrace housing. The row of terraces, with repetitive decorative elements across the facades, presents a picturesque composition of this architectural style.

Heritage Citation

SOLWAY BUILDINGS

Other Names: A.O.F. House

Address: **287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy**

Prepared by: GJM Heritage

Date: August 2019

Place type: Shops, residences	**Architect:** William Rain
Grading: Individually Significant within HO311	**Builder:** Herd and Son
Integrity: High	**Construction Date:** 1911

Figure 1. 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy (GJM Heritage, Sep 2018)

Statement of Significance

What is significant?

The Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy built in 1911 and designed by architect William Rain.

Elements that contribute to the significance of the place include (but are not limited to):

- The original external form, materials and detailing of the building
- The high level of integrity to its original design
- Façade parapet
- No front setbacks
- Face red brick walls (part overpainted)
- Rendered façade detailing including window architraves and keystones, cornice, parapet capping, facetted vertical elements and applied decorative motif
- Horizontal lines formed by cornice, parapet and bands of windows
- Vertical lines of the upper façade formed by bold facetted elements
- Repetitive upper floor fenestration patterns
- Splayed, curved and prominent corner tower at intersection.

Later alterations and additions – particularly to ground floor shopfronts – are not significant.

How is it significant?

The Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy are of local historical, architectural and aesthetic significance to the City of Yarra.

Why is it significant?

The Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy are illustrative of the historical development that occurred along a major, early commercial thoroughfare in the City of Yarra, in the early twentieth century [Criterion A].

The Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy are a fine and intact representative example of a substantial row of Federation shops and residences. They display typical features of the Federation Free Style popular in the early twentieth century in Fitzroy and across Melbourne more broadly, including a parapeted façade with repetitive upper floor fenestration, red brick facades with render contrasts and ground floor shopfronts [Criterion D].

The Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy are a well-considered and carefully detailed example of a row of Federation Free Style commercial buildings. Set on a prominent site at the junction of two major roads, the corner building - with round domed tower, Art Nouveau-inspired detailing and large oriel window - is both distinctive and prominent and presents a picturesque composition of this architectural style [Criterion E].

Historical Themes

The place illustrates the following themes as outlined in the *City of Yarra Thematic History* (1998):

4 Developing Local Economies

- 4.4 Smaller Retailers: Strip Shopping

Place History

The south-west corner of Brunswick and Johnston streets was occupied by the Fitzroy Market in the late nineteenth century, as annotated on the 1900 Melbourne and Metropolitan Board of Works (MMBW)

Detail Plans (Figures 2-3). The block bound by Brunswick, Johnston, Fitzroy and Victoria streets was owned by Henry Hoyt during this period (Lewis 1898:28).

The Herald published an article in May 1911 (25 May 1911:3) featuring the new buildings 'on the site of the old bus stables' at the corner of Brunswick and Johnston streets, described as 'a notable improvement in suburban shop architecture'. The site measured 206ft (62.8m) to Johnston Street and 108ft (32.9m) to Brunswick and Fitzroy streets. The Solway Theatre was to be built on the site, fronting Johnston Street (immediately west of the subject site). The article described the subject site:

> *... there are eight shops adjoining the theatre in Brunswick Street, a shop and two furniture arcades in Brunswick street, and mantelpiece showrooms on the corner of Fitzroy street. Mr William Rain is the architect for the whole of these properties. The contractors are – For the theatre, Mr L. Hansen, and for the shops, Messrs Herd and Son. Mr Rain has also in hand other shop buildings in Clifton Hill and Hampton road, Hampton, and a large villa residence at Alphington.*

Illustrations of the Brunswick and Johnston street elevations showed the six bays fronting Brunswick Street and four bays fronting Johnston Street, and the configuration of the shopfronts and arcades (Figures 4 & 5). The illustrations show the first floor (narrow) openings with a pair of three-paned windows. The corner turret bore the name 'Solway' at parapet level (replaced with 'A.O.F. House' in the 1970s).

The Solway Picture Theatre, and presumably 'Solway Buildings', was built for owners Griffiths and West Pty Ltd (Hoyts Theatres Ltd were confirmed as partner owners in 1928) (*Argus*, 7 Sep 1911:10; PSP, 1928). A plan of the new buildings at 287-293 Brunswick Street, dated 9 May 1911, confirmed the architect as William Rain (listed as the agent) (PSP, 1911; Figure 6). Contemporary newspaper articles also attributed the design of the Solway Theatre to William Rain (*Argus*, 7 Sep 1911:10). The Solway Theatre at 84 Johnston Street was demolished in 1928 and replaced with Hoyts Regent Picture Theatre which opened in 1929 (closed in 1959 and demolished 1983) and was designed by prolific theatre architect Charles N Hollinshed (PSP, 1928; S&Mc; Lovell & Associates 1998:98).

In 1915 the shops fronting Brunswick Street were occupied by a draper, 'Solway Shoe Store', a fancy goods depot, tobacconist, tailors and D W Keir's 'The Solway Clothing Co' (S&Mc). Later newspaper articles made reference to 'Solway Buildings' as the premises of the Solway Clothing Company; the company was listed as the occupants of 295-297 Brunswick Street until at least 1970 (*Argus*, 24 Jun 1915:6; S&Mc). Solway Clothing also later occupied 294 Brunswick Street (SLV, Image CUAFY53/10); this company is presumably named after the existing building. In March 1922, *The Age* reported on a fire at the 'Solway Buildings', then owned by Daniel W Keir (*Age*, 29 Mar 1922:10; PSP).

A photo dating to c1949 (Figure 8) shows the corner section of the 'Solway Buildings' with the return verandah over the pedestrian footpath. By the 1970s the verandah had been replaced, along with some of the shopfronts (Figures 9-11).

The corner building (addressed today as 295-297 Brunswick Street and 108-110 Johnston Street) was purchased by Trustees of the Ancient Order of Foresters in Victoria, Friendly Society, in July 1974, and the Society subsequently listed as the owner from 1989 to 1995 (LV:V9013/F794). During this period the name 'A.O.F. House' was placed on the parapet of the corner building.

William Rain, architect

William Rain (1855-1916) was a local architect and Collingwood citizen, who served as a Councillor and Mayor (1904-05) of the City of Collingwood, was a member of the Dandenong Shire Council and held numerous other public offices (*The Age*, 15 Mar 1916:9; *South Bourke and Mornington Journal*, 8 May 1913:5). Practicing as an architect, Rain designed a number of local commercial, industrial and residential buildings, as noted in contemporary newspapers. He is known to have designed the Chilwell Salvation Army Barracks (1889) at 18 Marshall Street, Newtown (SLV, Image H2012.90/100) and the Solway Buildings on the south-west corner of Brunswick and Johnston streets, Fitzroy (1911).

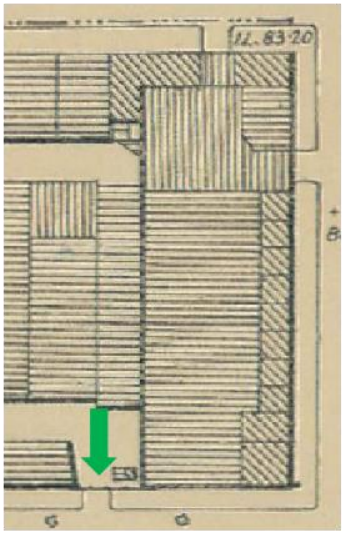

Figure 2. The south-west corner of Brunswick and Johnston streets in 1897 showing earlier buildings occupying the area. The vehicular crossover (indicated by the green arrow) off Victoria Street shows the alignment of the existing lane. The diagonal hatching indicates buildings constructed of brick or stone; vertical/horizontal hatching indicates buildings constructed of timber (MMBW 28, scale 160ft to 1 inch, dated 1897).

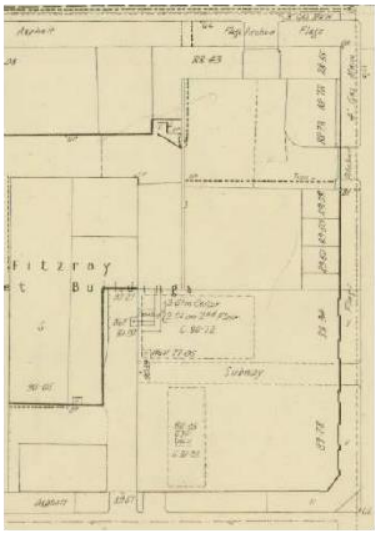

Figure 3. The corner property in 1900, showing earlier buildings occupying the area, annotated 'Fitzroy Market Buildings' (MMBW DP 1193, dated 1900).

Figure 4. Illustration of the new building, published in May 1911 (*The Herald*, 25 May 1911:3).

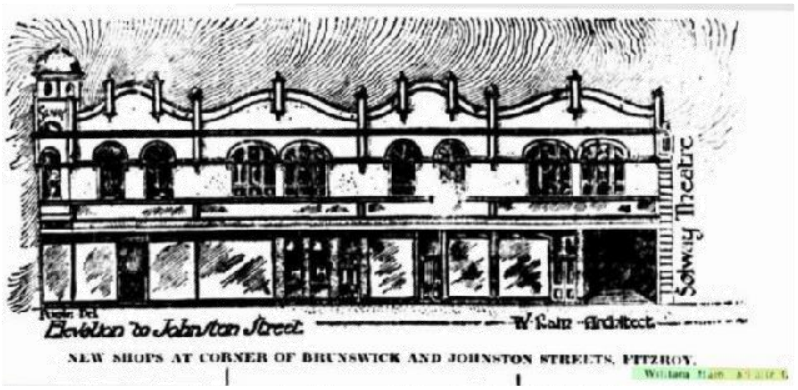

Figure 5. Illustration of the new building, published in May 1911. Architect William Rain was noted in the bottom right corner (*The Herald*, 25 May 1911:3).

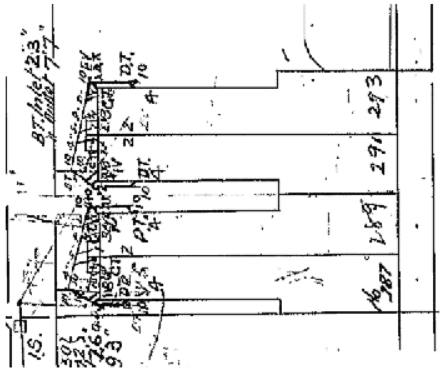

Figure 6. Plan showing footprints of the buildings at 287-293 Brunswick Street in May 1911, annotated with sewerage works (PSP).

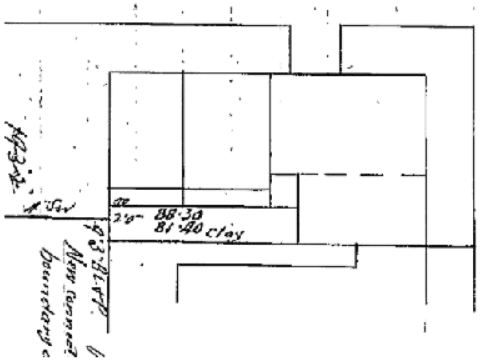

Figure 7. Plan showing footprints of the corner buildings at 295-297 Brunswick Street, and those fronting Johnston Street, dated October 1911 (PSP).

Figure 9. The Brunswick Street facade in a photo dated 1970-1974 (SLV, Image CUAFY154/6-7).

Figure 10. A detail of the Brunswick Street corner in a photo dated 1970-1974 (SLV, Image CUAFY154/6-7).

Figure 11. A detail of the south end of the Brunswick Street facade in a photo dated 1970-1974 (SLV, Image CUAFY154/6-7).

Physical Description

The Solway Buildings are located on a large site at the south-west corner of Brunswick and Johnston Streets, Fitzroy. Built in 1911, the building displays characteristics of the Federation Free Style and contrasts with the earlier Victorian-era buildings which are located on the other three corners at this intersection.

The building comprises a row of six two-storey shops and residences fronting Brunswick Street and a row of four two-storey shops and residences fronting Johnston Street. Upper facades are of red brick with render contrasts (partially overpainted) and a parapet conceals a series of gabled and hipped roofs. The corner of the building is splayed with a large projecting oriel window at first floor level and a distinctive round tower, with circular windows and a domed roof, above the parapet. The oriel window comprises a pair of timber framed windows and an infill window head displaying sinuous Art Nouveau-inspired applied decoration.

The two main facades are articulated in a similar manner. Pairs of arch-headed windows line the first-floor façade and bold facetted vertical elements, capped with decorative balls, delineate the individual premises. An exaggerated undulating parapet line, with bold rendered band, is punctuated by both these and additional facetted elements. As indicated in the original drawings (Figures 4 & 5) the width of the individual bays across the facades is uneven and this is reflected in minor variations in the window and parapet detailing.

A number of the shopfronts to Brunswick Street retain their early forms however post-supported verandahs have been removed and replaced by cantilevered awnings. The original vehicular opening to the rear of the building, located at the west end of the Johnston Street façade, remains.

Integrity

The building retains a high degree of integrity to the Federation period in fabric, form and detail. While the building has undergone some alterations, including painting of the face brickwork and alterations to shopfronts, these do not diminish the ability to understand and appreciate the place as a fine example of a commercial building from the Federation period.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

The Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy are illustrative of the historical development that occurred along a major, early commercial thoroughfare in the City of Yarra, in the early twentieth century.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

The Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy are a fine, intact and representative example of a substantial row of Federation shops and residences. They display typical features of the Federation Free Style popular in the early twentieth century in Fitzroy and across Melbourne more broadly, including a parapeted façade with repetitive upper floor fenestration, red brick facades with render contrasts and ground floor shopfronts.

Criterion E: *Importance in exhibiting particular aesthetic characteristics (aesthetic significance).*

The Solway Buildings, 287-297 Brunswick Street & 108-110 Johnston Street, Fitzroy are a well-considered and carefully detailed example of a row of Federation Free Style commercial buildings. Set on a prominent site at the junction of two major roads, the corner building - with round domed tower, Art Nouveau-inspired detailing and large oriel window - is both distinctive and prominent and presents a picturesque composition of this architectural style.

STANFORD BLOCK

Address: **119-129 Smith Street, Fitzroy**

Prepared by: GJM Heritage

Date: August 2019

Place type: Shops	**Architect:** William Pitt
Grading: Individually Significant within HO333	**Builder:** R. S. Ekins
Integrity: High	**Construction Date:** 1883

Figure 1. 119-129 Smith Street, Fitzroy (GJM Heritage, October 2018).

Statement of Significance

What is significant?

The two and three-storey building known as Stanford Block, at 119-129 Smith Street, Fitzroy, built in 1883 to designs by William Pitt.

Elements that contribute to the significance of the place include (but are not limited to):

- The original external form, materials and detailing of the building
- The high level of integrity to its original design
- Facade parapet, with pitched roof behind
- No front setbacks
- Rendered walls
- Rendered window frames, sills and hoods to upper stories
- Rendered detailing and ornament such as pilasters with Corinthian capitals, rows of dentils, consoles, keystones, roundels and balustrading
- Horizontal lines formed by parapets, cornices and string courses/sill line
- Repetitive upper floor fenestration patterns

How is it significant?

Stanford Block, at 119-129 Smith Street, Fitzroy is of local historical and architectural significance to the City of Yarra.

Why is it significant?

Stanford Block, 119-129 Smith Street, Fitzroy is illustrative of the historical development that occurred along major, early commercial thoroughfares in the City of Yarra, particularly in the 'boom' period of the 1880s (Criterion A).

Stanford Block, 119-129 Smith Street, Fitzroy is illustrative of a fine, intact and representative example of a large commercial building constructed in the 1880s 'boom' period. It displays typical features of the Victorian style popular in the 1880s in Fitzroy and across Melbourne more broadly, including a parapeted façade with repetitive upper floor fenestration, rendered facade with classical detailing and ground floor shopfronts (Criterion D).

Stanford Block, 119-29 Smith Street, Fitzroy is a well-considered and carefully detailed example of a row of substantial commercial buildings in the elaborate style of the Victorian boom period. Set on a prominent site in Smith Street, the unusually composed building – with third-storey placed above the central section – is both distinctive and prominent and presents a picturesque composition of this architectural style (Criterion E).

Historical Themes

The place illustrates the following themes as outlined in the *City of Yarra Thematic History* (1998):

4.0 Developing local economy

- 4.4 Smaller Retailers: Strip Shopping

Place History

'Stanford Block' at 119-129 Smith Street, was built in 1883 for owner Thomas Welton Stanford, who at this date was a merchant of Bourke Street, East Melbourne (LV:V1308/F437; V1366/F117). The building was designed by architect William Pitt of Collins Street, Melbourne, and constructed by builder R. S. Ekins, of Wienberg, Hawthorn (*Mercury and Weekly Courier,* 20 Oct 1883:3).

Stanford Block was opened in October 1883 (*Fitzroy City Press*, 6 Oct 1883:3). A column in the *Mercury and Weekly Courier* in October 1883 (20 Oct 1883:3), titled 'New Buildings in Fitzroy', featured 'The Stanford Block':

> *This really magnificent block of buildings is situated on the west side of Smith-street ... it has a frontage of 132 feet to the street, and divided into six shops, the two central shops being intended for large businesses, each occupying 21 feet frontage. These are three stories in height ... The remainder of the frontage is taken up with smaller shops ... this portion of the building is two stories high...*
>
> *All the shops have ample dwelling house accommodation and outbuildings for storage. The front elevation has a very imposing appearance, the material used being brick finished in cement stucco. The style of the architecture is Italian, the first floor having pilasters and entablature of the Corinthian order. There is a massive cornice enriched with cantelevers* [sic], *and surmounted with parapet, ornamented with vases and ball ornaments, &c. The windows of this floor are coupled, and have pilasters and brackets carrying neatly-moulded label-heads. The third floor of the two larger central divisions mentioned above, containing the rooms intended for store of work rooms, give a fine effect to the whole by relieving the skyline. It is worked in the form of an attic which in turn is surmounted with an entablature and parapet. The parapet is ornamented with bullasters* [sic], *vases, &c., and again broken up to relieve the skyline with a richly ornamented pediment. The height of this pediment is 60 feet from the ground. There is a handsome iron verandah of latest design in front of the building*.

The 1883 article reported that the cost of the development was approximately 10,000 pounds (including the land), and that it was 'an ornament to the City, and a great credit to the spirited proprietor'. Four of the shops were occupied by 1883, with one of the larger shops occupied by the 'Furniture Arcade' of H. Ackman and Co., the 'well-known furniture dealer of Smith-street'. The article described in detail the view from the third storey and the scores of objects 'that can be contemplated with pleasure from the top windows of the Stanford Block' (*Mercury and Weekly Courier,* 20 Oct 1883:3).

The 1899 Melbourne and Metropolitan Board of Works (MMBW) Detail Plan (Figure 2) shows footprints of the six buildings forming Stanford Block, and their outbuildings including stables; some of these outbuildings appear to remain in 2019, along with later constructions. A Property Sewerage Plan dating to 1903 records Thomas W. Stanford as the owner (and W. J. Crook as the agent). The 1903 plan also shows footprints of the buildings and their outbuildings (Figure 3).

In December 1910, Foy & Gibson Pty Ltd of Smith Street, Collingwood, purchased no. 123 of Stanford Block; the company purchased the other properties of Stanford Block soon after this date or in the subsequent years, as the 1934 title records Foy & Gibson as the owner of the entire building (nos. 119-129), with a 40 metre frontage to Smith Street. Foy & Gibson on-sold three of the buildings in 1935, 1936 and 1940 (LV:V1366/F117; 5933/F509).

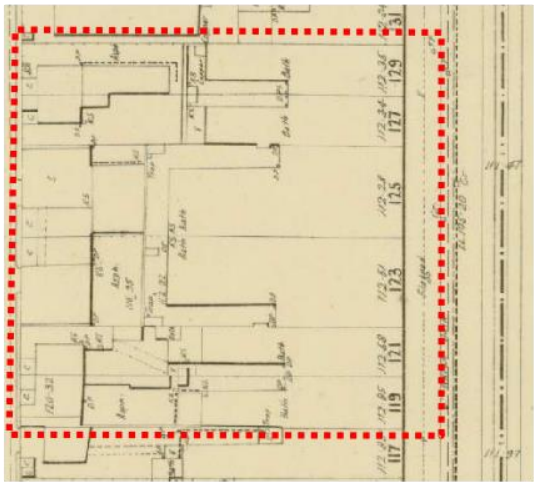

Figure 2. Footprint of the Stanford Block building and outbuildings, at 119-129 Smith Street, in 1899. The 'V' to the footpath denotes a verandah to the shopfronts (MMBW DP 1202, 1899).

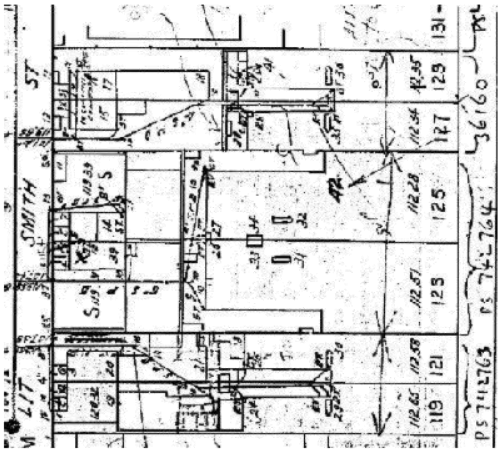

Figure 3. Footprint of the Stanford Block building and outbuildings in 1903, annotated with sewerage works dating to this period and later (PSP).

Figure 4. Stanford Block in 1970 (SLV, Image No. CUAFY48/1-3).

William Pitt, architect

William Pitt (1855-1918) was one of Melbourne's most important architects of the 19th century, designing buildings that were exemplars of the 1880's 'boom' period in Melbourne. Melbourne-born Pitt was educated in St Kilda and Carlton and articled to architect George Browne before commencing practice in 1879. Pitt won a number of design competitions early in his practice, immediately winning a competition for Melbourne's first purpose-built coffee palace (temperance hotel) in Bourke Street, which was one of Melbourne's tallest buildings at the time, standing five storeys tall. His commissions comprised mercantile, commercial, civic and residential projects. Key works included the Princess Theatre on Spring Street (1886), town halls for St Kilda (1887) and Brunswick (c1889), the Rialto Building on Collins Street (1890-91), and Foy and Gibson's complex of warehouses (1883-87), showrooms (1890) and factories (1895) in Collingwood. Suffering from debt during Melbourne's 1890s Depression, Pitt continued to practice taking on various types of commissions and later, predominantly theatre projects. Pitt was also active in local and state politics (Goad, 2012:542-43; VHD).

Thomas W. Stanford

Thomas Welton Stanford (1832-1918) was a businessman, spiritualist and philanthropist, born in Albany, New York State, USA. All six Stanford brothers went to the Californian goldfields in the early 1850s and by 1858, they ran the largest of the western oil companies. Leland Stanford became a Californian millionaire who established Stanford University in memory of his son who died in France (*Leader*, 31 Aug 1918:39; Potts, 1990). In 1859, Thomas W. Stanford and his brother De Witt came to Australia with an interest in the Colony's demand for kerosene. Stanford acquired exclusive marketing rights for the Singer sewing machine in Australia until the 1880s. Following De Witt's death in 1862, Thomas Stanford married (his wife died within a year) and moved to Clarendon Street, East Melbourne. In 1870 he founded the Victorian Association of Progressive Spiritualists with W. H. Terry and J. B. Motherwell, as a result of which he became known as the 'father of spiritualism in Australia'. Stanford was a member of Stanford University's board of trustees and donated his books on Australia and his art collection to be housed in the Thomas Welton Stanford Library. He served intermittently as honorary vice consul-general in Melbourne between 1890 and 1902 (Potts, 1990). His death was reported widely throughout Australian newspapers with fond remembrances.

Thomas Stanford developed various properties in the area, letting the buildings to tenants. He is known to have also constructed the row of shops and residences at 371-377 Victoria Street, Abbotsford (c1890), and terraces along east side of Fairchild Street, Abbotsford (1887-88) (Lovell, 1998, Vol 2: 373-4; Vol 3: 73).

Physical Description

Stanford Block, at 119-129 Smith Street, Fitzroy was built in 1883, designed by prominent Melbourne architect William Pitt in the Victorian Academic Classical style. The building is sited on the west side of Smith Street, just north of the intersection with Gertrude Street.

The substantial two and three-storey brick building was constructed to the front title boundary and comprises six shopfronts (four single and two central, double shopfronts) to Smith Street. Behind the symmetrical façade the building is formed of various sections with hipped, gabled and skillion-profile roof forms clad in corrugated iron, with some original chimneys remaining. The two central (double) shops have a third storey with a dentilled cornice below a balustraded parapet and central pediment surmounted by an acroterion, with pilasters and a nameplate bearing the words 'STANFORD BLOCK'. A row of single segmental arch-headed windows with keystones have double-hung sash windows. Roundels are positioned between the keystones of each window.

The first floor has a long form emphasised by a bold cornice with paired consoles, and a solid parapet either side of the third-floor section. Pilasters with Corinthian capitals divide the ends of the second storey into bays. Paired windows in aedicule form have bold triangular pediments and double-hung sash windows, below a row of roundels. The ground floor repeats the dentilled cornice of the third storey. Most ground floor shopfronts have been altered at various dates, some retaining the recessed entrance such as no 129. All shopfronts except no. 129 have a later cantilevered verandah over the footpath (the original verandah to all shopfronts removed by 1970, see Figures 3 & 4).

To the rear (west) of the original buildings are additions and outbuildings of various dates. Some outbuildings on the rear boundary (along Little Smith Street) may be early in date (e.g. nos. 123-125) but this has not been confirmed.

Integrity

The building retains a high degree of integrity to the Victorian period in fabric, form and detail. While the building has undergone alterations to the ground floor shopfronts, these do not diminish the ability to understand and appreciate the place as a fine example of a substantial Victorian commercial building.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

Stanford Block, 119-29 Smith Street, Fitzroy is illustrative of historical development that occurred along a major, early commercial thoroughfare in the City of Yarra, particularly in the 'boom' period of the 1880s.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

Stanford Block, 119-29 Smith Street, Fitzroy is illustrative of a fine, intact and representative example of a large commercial building constructed in the Victorian 1880s boom period. It displays typical features of the Victorian style popular in the 1880s in Fitzroy and across Melbourne more broadly, including a parapeted façade with repetitive upper floor fenestration, rendered facade with classical detailing and ground floor shopfronts.

Stanford Block, 119-29 Smith Street, Fitzroy is a well-considered and carefully detailed example of a row of substantial commercial buildings in the elaborate style of the Victorian boom period. Set on a prominent site in Smith Street, the unusually composed building – with third-storey placed above the central section – is both distinctive and prominent and presents a picturesque composition of this architectural style.

Figure 1. 17-19 Brunswick Street, Fitzroy (GJM Heritage, October 2019)

Statement of Significance

What is significant?

The Dental Surgery and Residence (former) at 17-19 Brunswick Street, Fitzroy built in 1911.

Elements that contribute to the significance of the place include (but are not limited to):

- The original external form, materials and detailing of the building
- The high level of integrity to its original design.

Later alterations and additions to the south and west are not significant.

How is it significant?

The Dental Surgery and Residence (former) at 17-19 Brunswick Street, Fitzroy is of local historical and architectural significance to the City of Yarra.

Why is it significant?

The Dental Surgery and Residence (former) at 17-19 Brunswick Street, Fitzroy is illustrative of development that occurred along a major, early commercial thoroughfare in the City of Yarra, from the 'boom' period of the 1880s through to the early years of the twentieth century (Criterion A).

The Dental Surgery and Residence (former) at 17-19 Brunswick Street, Fitzroy is a fine, intact and representative example of a dentist's surgery with a residence above, constructed in the Federation period. It displays typical characteristics of the Federation Free Style popular in the early twentieth century in Fitzroy and across Melbourne more broadly, including an eclectic combination of elements and details drawn from a variety of sources (Criterion D).

Historical Themes

The place illustrates the following themes as outlined in the *Victoria's framework of historical themes* (2009):

8.0 Building community life
- 8.3 Providing health and welfare services.

Place History

The property was owned by Hugh Short, hotel broker, from 1858 to 1885. An earlier building occupied the site from the 1850s, which became a hotel c1872 (Jacobs et al, 1979:37). The 1898 Melbourne and Metropolitan Board of Works (Figure 2) plan shows the earlier building, the 'Westminster Club Hotel', occupying the current 17-19 Brunswick Street (a new Westminster Club Hotel was built at 15 Brunswick Street in 1903) (*Fitzroy City Press*, 24 Jul 1903:3).

Robert R. Barnes, dentist 'of 78 Gertrude Street, Fitzroy', purchased lot 3 (current 19) in September 1910 and lot 4 (current 17) in March 1911 (LV:V3490/F811; *Fitzroy City Press*, 11 Aug 1911:1). Barnes constructed a new building on lot 3 (the present building at 19 Brunswick Street) to serve as a dental surgery (Elliot, 2019; *Fitzroy City Press*, 27 Oct 1911:2). A notice published in *The Age* in July 1911 reported that R. & A. E. Barnes had moved to 'their new up to date dental rooms, 17-19 Brunswick Street' (*Age*, 20 Jul 1911:4). From 1918 it appears a resident also occupied the property (S&Mc).

In July 1920, Barnes sold the property to Margaret Taylor. Barnes continued to run his surgery from the building until c1923, after which various dentists occupied the building until c1930 (LV:V3490/F811; S&Mc). Margaret Taylor left the property to Thomas Taylor, gentleman of Sorrento, upon her death in 1934 (LV:V3490/F811).

The Light Car Club of Australia occupied the building from the early 1930s (S&Mc). The club completed some renovations to the building (details not known) before opening the clubrooms in 1932. The southern

half of the property served as a carpark during this period (Elliot, 2019). The Club officially purchased the property in January 1939 (LV:V3490/F811).

The building was occupied by the Australian army for the duration of World War II, from 1939 to 1946 (Elliot, 2019). In 1955, the Light Car Club converted rear rooms into a kitchen and dining room, before vacating the building in 1961. In the 1960s and '70s the building was occupied by various tenants, including the Austrian Club Melbourne (Figure 3) (Elliot, 2019; Jacobs et al, 1979:37; SLV, Image H2010.105/763c).

In 1986 the property sold to Parkit Pty Ltd of 8-12 Brunswick Street, Fitzroy (LV:V3490/F811). From this date the building served as The Aegean Greek restaurant (continues to 2019). The building on the southern portion of the property (17 Brunswick Street) was constructed during this period (Elliot, 2019). Additions and outbuildings were constructed to the rear during various periods, covering the whole property.

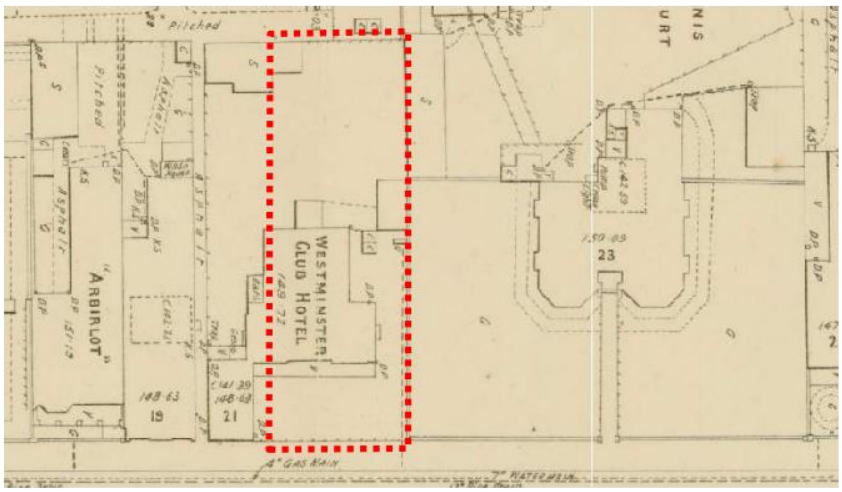

Figure 2. The property in 1898 occupied by an earlier building. Approximate boundary of the current 17-19 Brunswick Street indicated in red (MMBW DP 1206, 1898).

Figure 3. The subject site in 1970 when it was occupied by the Austrian Club Melbourne (SLV, Image H2010.105/763c).

Physical Description

The Dental Surgery and Residence (former) at 17-19 Brunswick Street, Fitzroy is located on the west side of Brunswick Street between Victoria Parade and Gertrude Street. Constructed in 1911 it is an example of the Federation Free Style. Like the commercial and residential buildings adjacent to the south, the hotel was constructed to the front title boundary.

The hipped roof is clad with slate, with a transverse gable to the front section, which is concealed by a three-gabled parapet facing Brunswick Street, with dentil frieze and urns to the peaks (missing from the central gable peak). Three simple red brick chimneys with rendered caps remain. The two-storey red brick building (overpainted in part) has a bluestone plinth (overpainted). The symmetrical façade comprises a central arched entrance, above which is an arched label mould that extends over the arch-headed windows either side. The recessed entrance is reached by bluestone steps (behind a modern grille screen). The leadlight windows either side the entrance have sidelights and arched highlights. The arcuation is repeated at the first floor recessed balcony, where three arches sit above three projecting semi-circular balconies. The balustraded balconies are supported by single large consoles which extend to form a keystone for the arches at ground level. In the balcony are four tall arch-headed openings. Next to the row of balconies are a pair of exaggerated decorative consoles.

Later additions and outbuildings are located around the two-storey building, to the south and west, covering the whole property. They appear to date to various periods.

Figure 4. The east and north elevations (GJM Heritage, October 2018)

Integrity

The building retains a high degree of integrity to the Federation period in fabric, form and detail. While the building has undergone minor alterations, these do not diminish the ability to understand and appreciate the place as a fine example of a Federation commercial building.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

The Dental Surgery and Residence (former) at 17-19 Brunswick Street, Fitzroy is illustrative of development that occurred along a major, early commercial thoroughfare in the City of Yarra, from the 'boom' period of the 1880s through to the early years of the twentieth century.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

The Dental Surgery and Residence (former) at 17-19 Brunswick Street, Fitzroy is a fine, intact and representative example of a dentist's surgery with a residence above, constructed in the Federation period. Grading: Individually Significant within HO334	**Builder:** Brown and Ramsden
Integrity: High	**Construction Date:** 1851

Figure 1. 21 Brunswick Street, Fitzroy (GJM Heritage, October 2018)

Statement of Significance

What is significant?

Mononia, 21 Brunswick Street, Fitzroy, an early Victorian house built in 1851 for John Mickle and designed by architect Charles Laing.

Elements that contribute to the significance of the place include (but are not limited to):

- The original external form, materials and detailing of the house
- The high level of integrity to its original design
- The substantial setback of the house from the street line
- Single-storey parapeted form
- Symmetrical front façade with dominant polygonal bays
- Rendered masonry walls with minimal detailing
- Rectangular window openings
- Iron palisade fence on a bluestone plinth.

Later alterations and additions to the rear and south side of the house are not significant. This includes the garage to the south of the property and the associated asphalt forecourt.

How is it significant?

Mononia, 21 Brunswick Street, Fitzroy is of local historical, architectural and aesthetic significance to the City of Yarra.

Why is it significant?

Mononia, 21 Brunswick Street, Fitzroy demonstrates the early, pre-gold rush development by prominent and wealthy Melbourne individuals who were amongst the first to populate the inner northern suburbs of Melbourne [Criterion A].

Mononia, 21 Brunswick Street, Fitzroy is a fine and representative example of a substantial house from the early Victorian period. It displays some typical features of the early Victorian Italianate architectural style popular in the 1850s period in what is now Fitzroy and across Melbourne more broadly, including a simple free-standing form with prominent polygonal bays and austere detailing [Criterion D].

Mononia, 21 Brunswick Street, Fitzroy is a well-considered and carefully detailed example of an early Victorian Italianate house. Set well back on a large allotment, the distinctive double-bay house presents a picturesque composition of this architectural style [Criterion E].

Historical Themes

The place illustrates the following themes as outlined in the *City of Yarra Thematic History* (1998):

3.0 Mansions, Villas and Sustenance Housing: the Division between Rich and Poor

- 3.1 A Home to Call One's Own

Place History

'Mononia' was constructed in 1851 for owner and squatter John Mickle. The residence was designed by architect Charles Laing and constructed by Melbourne builders Brown and Ramsden who were well known in the 1850s. The building is one of the earliest known surviving examples of a pre-gold rush mansion in Fitzroy (Jacobs Lewis Vines, 1979:105).

Mickle was 'an early squatting gentleman' who owned considerable property in the Westernport district. The 1851 rate book described Mickle's property on Brunswick Street (in what was then called Collingwood) as comprising a three roomed brick house with two pantries, a kitchen, an unfinished room off the cellar, a

garden and woolshed (with a Net Annual Value of 90 pounds). The house was the highest valued house in Brunswick Street in the 1850s and 1860s (Jacobs Lewis Vines, 1979:105-106).

In 1854 the property was advertised for sale, describing 'the excellent residence late in the occupation of Mr John Mickle, and an acre, more or less, of ground, having frontages of 132 feet [40.2m] both to Great Brunswick and Little Brunswick streets, with garden securely walled in' (*Argus*, 10 May 1854:3). However, Mickle reportedly continued to occupy the house until 1858, and retained ownership until 1865 (Jacobs Lewis Vines, 1979:105-6). Subsequent owners included American merchant and developer T. W. Stanford, followed by Dr James MacInerney, physician and surgeon, from 1882 (Elliot 2019:3; S&Mc).

A photograph of the house dated c1861 shows the early details of the facade and original timber fence (Figure 2). The timber fence was replaced with the existing cast iron and bluestone plinth fence at an early date. The gateposts are labeled 'J. Laughton & Co., Hotham Foundry, 73 & 75 Elizabeth Street North Melbourne'.

The 1897 and 1898 Melbourne and Metropolitan Board of Works (MMBW) Detail Plans (Figures 3 & 4) show a footprint of the house (addressed as no. 23), set back from Brunswick Street with a central path leading to the entrance, and a number of small outbuildings to the rear of the house including a stable. The property extended to Fitzroy Street to the west. The 1898 MMBW plan shows a new tennis court laid to the rear of the house (Figure 4).

A notice published in October 1908 upon MacInerney's death reported his residence as 'Blakemount' of Brunswick Street (*Argus*, 14 Oct 1908:5). An auction notice for 'Blakemount' at 23 Brunswick Street, Fitzroy was published in May 1912 by executors, which described the 'brick villa, containing in all 9 rooms, bathroom, detached laboratory and outbuildings' on land measuring 96 feet by 156 feet (29.3m x 47.5m; matching the current extent of the property, indicating the rear portion had been subdivided by this date). The auction notice reported that it was the late residence of Dr MacInerney who had occupied the residence for many years, along with Dr John Nelly more recently, and that it was 'well suited for a medical gentleman's residence' (*Age*, 7 May 1912:2; S&Mc).

Harold Solomon, Smith Street tailor, purchased the property in September 1912, followed by John Rowan, gentleman, in June 1914 and Catherine Slattery in December 1915 (LV:V3636/F184). The first known reference to the name 'Mononia' was in titles dated 1926, under the ownership of the Slattery family (LV:V3636/F184). An aerial photograph dated c1931 (Figure 6) shows the property and the outbuildings to the rear at this date.

Alterations to the house (pre-1970; see Figure 7) included the replacement of the slate roof with iron and the alteration of details of the facade, including new window surrounds, the addition of dentilation to the cornice, lowering of the entrance lintel to insert the name of the house, and replacement of glazing (Jacobs Lewis Vines, 1979:105).

In 1957 the property was transferred to the Roman Catholic Church, then to the Trustees of The Sisters of Charity in 1992 (LV: V3636/F184; V8139/F160). A modern building was constructed to the rear (west) and south of the house. The property serves as St Vincent's Convent in 2019 (Elliot 2019:3).

Figure 2. 'Mononia' on Brunswick Street, Fitzroy, in c1861-1862 (SLV, image no. H688).

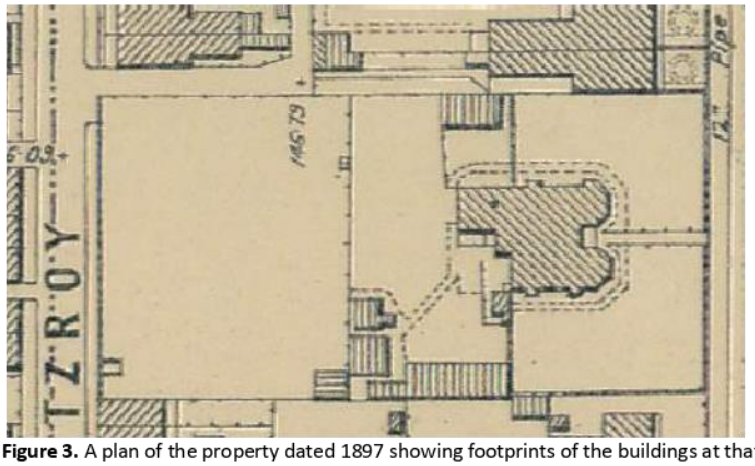

Figure 3. A plan of the property dated 1897 showing footprints of the buildings at that date. The diagonal hatching indicates buildings constructed of brick or stone; vertical/horizontal hatching indicates buildings constructed of timber. The property extended to Fitzroy Street to the west (MMBW 28, scale 160ft to 1 inch, dated 1897).

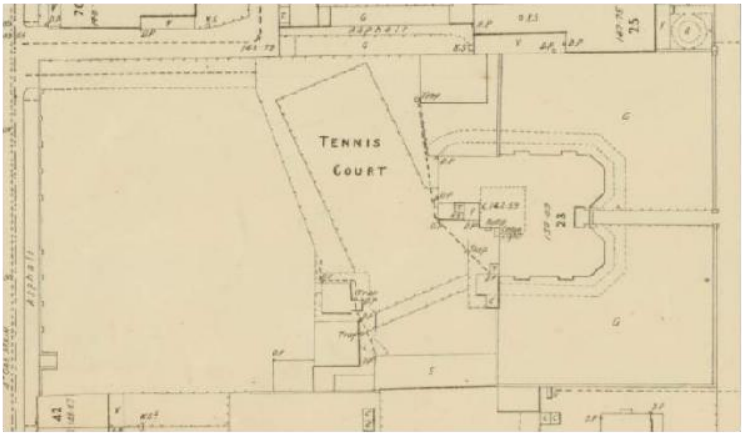

Figure 4. The property in 1898, addressed as 23 Brunswick Street, with a tennis court (MMBW DP 1206, dated 1898).

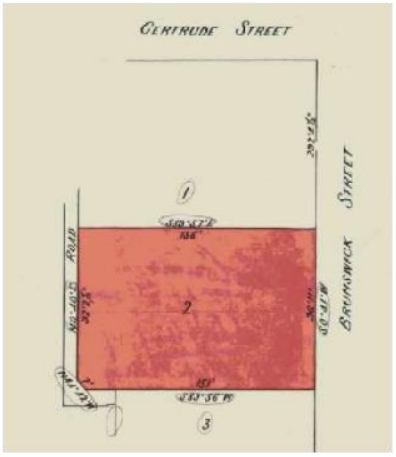

Figure 5. The reduced extent of the property in 1912; which matches the boundary in 2019 (LV:V3636/F184).

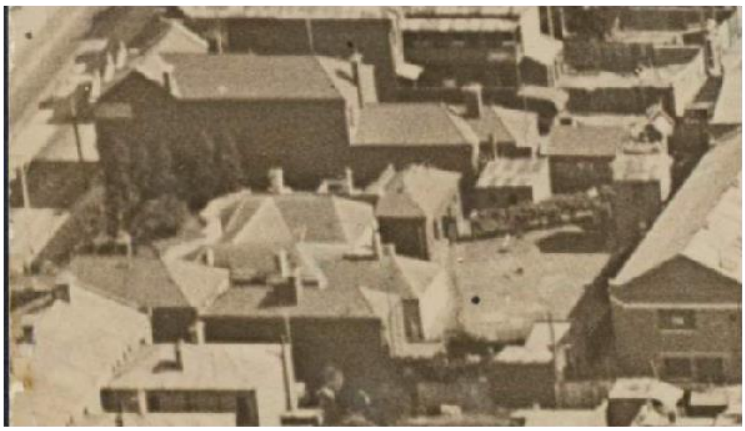

Figure 6. An oblique aerial view of the property looking south, dated c1931 (SLV, image no. H2014.1008/2).

Figure 7. 'Mononia' in 1970 (SLV, image no. H2010.105/475c).

Charles Laing, architect

Born in England, Charles Laing (1809-1857) practiced architecture in Manchester, England from c1832 before migrating to Melbourne c1840-41 and establishing a practice as an architect and town planner. He was one of the first architects to work in Melbourne.

He ceased practicing for a short period as a result of the 1842 economic crisis and a bankruptcy in 1844, however he recommenced with the winning design of Prince's Bridge in 1844 (design later altered by David Lennox). Laing was appointed Melbourne's city surveyor between 1845 and 1849, while simultaneously working privately on residential, commercial and ecclesiastical projects. From 1849 Laing continued in private practice, designing at least 130 projects encompassing churches, many houses, shops and warehouses (Tibbits & Goad, 2012:395).

Laing's residential work is known to have included the former residence at 300 Queen Street, Melbourne (1848), 'Lunan House' at 24 Lunan Avenue, Drumcondra (1849), 'Coiryule Homestead', McDermott Road, Curlewis (1849), 'Osborne House' at 40 Nicholson Street, Fitzroy (1850), 'Mononia' at 21 Brunswick Street, Fitzroy (1851), the terrace row at 39-49 Brunswick Street, Fitzroy (1856), 'Glenfern' at 417 Inkerman Road, St Kilda East (1857) and 'Merrow' at 316 St Kilda Street, Brighton (pre-1865) (VHD).

Physical Description

Mononia is a single-storey rendered masonry (overpainted) house sited on a large allotment at the southern end of Brunswick Street, Fitzroy. It is set well back on the allotment and is flanked by two-storey red brick Federation-era buildings set close to the street frontage. The main section of the house is square in plan, with a rear hipped wing to the north. It presents a symmetrical front façade to Brunswick Street, with a recessed entrance porch flanked by two large polygonal bays. A parapet, with raised central section, conceals two longitudinal hipped roofs and a transverse front hip, all clad in corrugated steel. Pairs of chimneys are situated on both sides of the main house, indicating the original internal arrangement of four main rooms.

Broadly exhibiting Victorian Italianate style characteristics, the house presents an austere classical appearance with unadorned parapet, plain cornice with later dentillation, simple rectangular window openings with hoods above, moulded string course at sill level, substantial timber door surround and later rendered nameplate 'Mononia' above the central entrance. The front fence is an early cast iron palisade fence set on a bluestone plinth, with central gate and substantial cast iron gateposts. A hedge, planted behind the fence, provides a substantial visual screen.

Changes have been made to the surface treatment of the building including the addition of dentillation to the cornice, dentillation and consoles to the window hoods and the lowering of the central lintel and insertion of an integral name panel. Engaged columns which framed the entrance porch have been removed.

Additional buildings have been constructed at the rear and side of the building, including a modern garage with associated asphalt forecourt to the south of the house.

Integrity

Mononia retains a high degree of integrity to the early Victorian period in fabric, form and detail. While the building has undergone some alterations – including surface remodeling – these do not diminish the ability to understand and appreciate the place as a highly intact example of an early Victorian house.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

Mononia, 21 Brunswick Street, Fitzroy demonstrates the early, pre-gold rush development by prominent and wealthy Melbourne individuals who were amongst the first to populate the inner northern suburbs of Melbourne.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

Mononia, 21 Brunswick Street, Fitzroy is a fine and representative example of a substantial house from the early Victorian period. It displays some typical features of the early Victorian Italianate architectural style popular in the 1850s period in Fitzroy and across Melbourne more broadly, including a simple free-standing form with prominent polygonal bays and austere detailing.

Criterion E: *Importance in exhibiting particular aesthetic characteristics (aesthetic significance).*

Mononia, 21 Brunswick Street, Fitzroy is a well-considered and carefully detailed example of an early Victorian Italianate house. Set well back on a large allotment, the distinctive double-bay house presents a picturesque composition of this architectural style.

CHAMPION HOTEL (FORMER) AND SHOPS AND RESIDENCES

Address: **50-54 Brunswick Street and 90-100 Gertrude Street, Fitzroy**

Prepared by: GJM Heritage

Date: August 2019

Place type: Hotel, Shops, Residences	**Architect:** Gerard Wight
Grading: Individually Significant within HO334	**Builder:** Not known
Integrity: High	**Construction Date:** 1911

Figure 1. 50-54 Brunswick Street and 90-100 Gertrude Street, Fitzroy (GJM Heritage, October 2019)

Statement of Significance

What is significant?

The Champion Hotel (former), 50-54 Brunswick Street and 90-92 Gertrude Street, Fitzroy and adjoining shops and residences at 94-100 Gertrude Street, built in 1911 to designs by architect Gerard Wight.

Elements that contribute to the significance of the place include (but are not limited to):

- The original external form, materials and detailing of the building
- The high level of integrity to its original design.

Later alterations and additions are not significant.

How is it significant?

The Champion Hotel (former), together with adjoining shops and residences, is of local historical, architectural and aesthetic significance to the City of Yarra.

Why is it significant?

The Champion Hotel (former), together with adjoining shops and residences, is of significance as a large suburban hotel constructed at a highly prominent corner location in Fitzroy. A hotel of this name operated on this site for about 150 years from 1861 until the early twenty-first century (Criterion A).

The Champion Hotel (former), together with adjoining shops and residences, is a distinctive, intact and representative example of a building constructed in the Federation period. It displays typical characteristics of the Federation Free Style, popular for non-residential buildings in the early twentieth century in Fitzroy and across Melbourne more broadly. The design comprises an asymmetrical composition, informal massing and fenestration, contrasting red brickwork and render, and an eclectic combination of elements and details drawn from a variety of sources, including the Art Nouveau. Despite a change of use, the existing building can be clearly identified as a former corner hotel (Criterion D).

The Champion Hotel (former), together with adjoining shops and residences, is a well-considered and carefully detailed corner hotel building with associated shops. The imposing red brick building, with render contrasts, highly prominent corner tower and elaborate Art Nouveau detailing, presents a highly picturesque composition of the Federation Free Style [Criterion E].

Historical Themes

The place illustrates the following themes as outlined in the *City of Yarra Thematic History* (1998):

7.0 Leisure and Entertainment in the Suburbs
- 7.1 Licensed Hotels and 'Sly Grog'

Place History

The original Champion Hotel building was located on the south-east corner of Brunswick and Gertrude streets and was first listed in the Sands & McDougall Directories in 1861, when it was run by publican William Butiment. Jeremiah Boland was a long-serving publican of the hotel from 1862 to the 1890s (S&Mc). The original hotel building was shown on the 1898 Melbourne and Metropolitan Board of Works (MMBW) Detail Plan, annotated 'Champion Hotel' (Figure 2). Both the original and the early twentieth century hotel buildings were addressed to Gertrude Street from 1861 to at least 1942 (S&Mc).

In January 1911, architect Gerard Wight of 423 Chancery Lane invited tenders for the 'rebuilding' of the Champion Hotel and 'erecting shops and dwelling houses, at the corner of Gertrude and Brunswick streets, Fitzroy, for the Victoria General Insurance and Guarantee Company' (*Age*, 21 Jan 1911:3). The hotel, as well as the shops with residences at 94-100 Gertrude Street, was subsequently constructed in 1911 (Jacobs et al, 1979:108). In June 1912, *The Herald* (20 Jun 1912:5) published a photo of the newly built hotel and

adjacent buildings fronting Gertrude Street (Figure 3), reported to have been designed by architect Gerard 'Wright' (note that the article spells the architect's name incorrectly).

Alterations and additions were carried out in 1924, 1959, 1962 and 1977 (Jacobs et al, 1979:108). The hotel was a live music venue in the 1970s and '80s. In the 1990s it was called the Metropol Hotel (Allom Lovell 1992:2.2). The hotel has served (in part) as a post office from c2010, and in 2017, part of the building serves as apartments and shops.

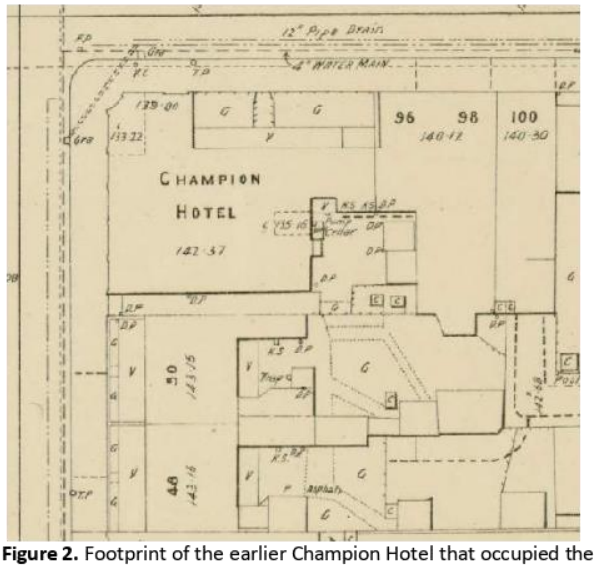

Figure 2. Footprint of the earlier Champion Hotel that occupied the corner site in 1898 (MMBW DP 1206, 1898).

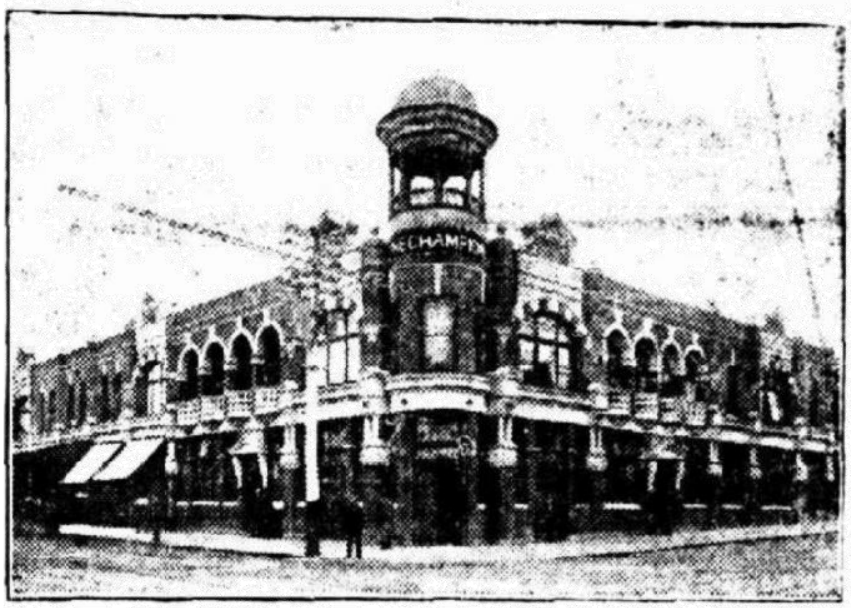

Figure 3. An image of the new corner building, published in June 1912 (*Herald*, 20 Jun 1912:5).

Figure 4. The Champion Hotel in 1975 (COYL, identifier no. FL1188).

Gerard Wight, architect

Many sources, including some contemporary newspaper articles, incorrectly spell Wight's surname 'Wright'. The correct spelling is confirmed by his 1914 Will (PROV), his obituary published in the 1915 *Royal Victorian Institute of Architects Journal* (May 1915:87), and contemporary listings in the Sands and McDougall Directories.

Gerard Wight (1860-1915) was born in Victoria and educated in Melbourne, before he was articled to the firm Smith & Johnson. In 1885, he won a competition for the design of a Merri Creek Bridge, which was built to his design. Wight later partnered with William Lucas to form Wight & Lucas (c1885-c1892) (AAI, record nos. 4820, 11085, 24576). Following a tour of Europe in 1891, he resumed practice in 1898, and partnered with William Pestell for a period. Key commissions included the Geelong Church of England Grammar School, for which Wight and architect Phillip B. Hudson were commissioned in collaboration (AAI, record no. 4820; *Geelong Advertiser*, 18 Jul 1911:3). His commercial commissions are known to have included the former Champion Hotel and shops on the south-east corner of Brunswick and Gertrude streets, Fitzroy (1911).

Physical Description

The Champion Hotel (former) at 50-54 Brunswick Street and 90-92 Gertrude Street, Fitzroy, is sited on the prominent south-east corner of Brunswick and Gertrude streets. The building was constructed as a hotel in 1911, designed by architect Gerard Wight in the Federation Free Style, with contrasting materials and textures, including Art Nouveau details.

The two-storey red brick building has two prominent facades and a round corner tower. The first floor retains its face brick finish (the ground floor has been rendered and painted), with elaborately applied rendered coping and dressings (overpainted). The roof form (altered to allow for additions to interior spaces) is largely concealed by a brick parapet with rendered coping and, at the base, a pair of continuous string courses.

The two main facades are similar in form with bays divided at ground level by piers with ornate Art Nouveau capitals below a pair of squat engaged columns. Above this, at first floor level, are facetted piers

that stop with globes above the parapet. The wide bays have entrances to the ground floor with projecting arched pediments supported by long consoles. To the first floor is an arcade of four openings (in-filled with modern glazing) with projecting round balconies patterned with square openings. The two smaller bays feature a wide semi-elliptical-headed arched opening with 'striped' render to the brickwork, below a label mould, panels of Art Nouveau detailing and a triangular pediment. Other windows to the first floor are square-headed one-over-one sashes with large rendered keystones. The floors are separated by a bold cornice, punctuated by square elements with semi-circular pediments.

The prominent corner tower has been rendered at ground level (and openings altered), but retains its circular plan. Above the cornice is face brick, with three square-headed sash windows with Art Nouveau leadlight and prominent rendered keystones. The name 'THE CHAMPION' appears at parapet height, below a decorative panel. The bell-shaped tower roof is supported by turned timber posts with a solid timber frieze, timber lined ceiling and low parapet with a curvilinear detail.

A group of four two-storey shops at 94-100 Gertrude Street adjoin the hotel building and these are detailed in a similar manner to the hotel. Similar piers at ground and first floor divide the façade into separate shops and the shop at the eastern end of the row replicates the detailing of the west end.

Alterations and additions were carried out in 1924, 1959, 1962 and 1977 (Jacobs Lewis Vines, 1979:108). While particular details of these works is not known, it is apparent that the ground floor has been rendered, ground floor openings enlarged, ground floor glazing replaced and first floor openings re-glazed or in-filled with glazing.

Figure 5. The Gertrude Street elevation (GJM Heritage, October 2019)

Figure 6. The Brunswick Street elevation (GJM Heritage, October 2019)

Integrity

The building retains a high degree of integrity to the Federation period in fabric, form and detail. While the building has undergone some alterations, particularly to the openings, these do not diminish the ability to understand and appreciate the place as a fine example of a Federation commercial building.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

The Champion Hotel (former), together with adjoining shops and residences, is of significance as a large suburban hotel constructed at a highly prominent corner location in Fitzroy. A hotel of this name operated on this site for about 150 years from 1861 until the early twenty-first century.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

The Champion Hotel (former), together with adjoining shops and residences, is a distinctive, intact and representative example of a building constructed in the Federation period. It displays typical characteristics of the Federation Free Style, popular for non-residential buildings in the early twentieth century in Fitzroy and across Melbourne more broadly, including an asymmetrical composition, informal massing and fenestration, contrasting red brickwork and render, and an eclectic combination of elements and details drawn from a variety of sources, including the Art Nouveau. Despite a change of use, the existing building can be clearly identified as a former corner hotel.

Criterion E: *Importance in exhibiting particular aesthetic characteristics (aesthetic significance).*

The Champion Hotel (former), together with adjoining shops and residences, is a well-considered and carefully detailed corner hotel building with associated shops. The imposing red brick building, with render contrasts, highly prominent corner tower and elaborate Art Nouveau detailing, presents a highly picturesque composition of the Federation Free Style.

PRIEST'S RESIDENCE AND MISSION HALL (FORMER)

Address: **434 Gore Street & 170 Leicester Street, Fitzroy**

Prepared by: GJM Heritage

Date: September 2019

Place type: Priest's Residence, Mission Hall	**Architect:** Bruford and Braim
Grading: Individually Significant within HO334	**Builder:** Not known
Integrity: High	**Construction Date:** 1891

Figure 1. 434 Gore Street & 170 Leicester Street, Fitzroy (GJM Heritage, October 2019)

Statement of Significance

What is significant?

The Priest's Residence and Mission Hall (former), 434 Gore Street and 170 Leicester Street, Fitzroy built in 1891.

Elements that contribute to the significance of the place include (but are not limited to):

- The original external form, materials and detailing of the mission hall and residence
- The high level of integrity to the original design of the mission hall and residence.

Later alterations, and addition to the south-west of the residence, are not significant.

How is it significant?

The Priest's Residence and Mission Hall (former), Fitzroy is of local historical and architectural significance to the City of Yarra.

Why is it significant?

The Priest's Residence and Mission Hall (former), Fitzroy demonstrates the provision of community welfare services by the Church of England in inner suburban Melbourne in the late nineteenth and early twentieth centuries (Criterion A).

The Priest's Residence and Mission Hall (former), Fitzroy form an intact and representative group of religious buildings. The Mission Hall displays typical characteristics of the Gothic Revival style popular for religious buildings in the late nineteenth century in Fitzroy and across Melbourne more broadly, including a simple gabled form, pointed arch openings including lancet windows and label moulding (Criterion D).

Historical Themes

The place illustrates the following themes as outlined in the *City of Yarra Thematic History* (1998):

6.0 Developing Urban Institutions

- 6.2 Missions and Asylums

Place History

The first Mission was established in the area c1889 by the Rev E S Hughes in a shop on Smith Street, 'with the object of dealing with the youthful element of this district, and, as far as possible, rescuing them from the vice and misery by which a number of them are surrounded, and inducing them to become respectable members of society.' The youth received spiritual instruction and were also supplied with food and clothes. Following an increase in attendance, larger premises were required (*Mercury and Weekly Courier*, 3 Sep 1891:3).

St Mark's Mission Hall on the corner of Gore and Leicester streets was designed by architects Bruford and Braim and opened on 27 August 1891 (*Argus*, 28 Aug 1891:6). The corner lot land had been a prior gift of John Matthew Smith Esquire, for the purposes of a Mission (*Mercury and Weekly Courier*, 3 Sep 1891:3). The complex was connected with the Parish of St Mark's (St Mark's church and complex is located to the south at 268 George Street; established from 1853) and was specifically established by the Revs J F Stretch and E S Hughes, to continue to look after the welfare of the district's youth. Young men and women could come to the meeting hall and club rooms and 'spend enjoyable and profitable evenings' with 'occupation and wholesome amusement,' away from the streets and public-houses. The hall was used for amusements during the week and church services on Sundays (*Mount Alexander Mail*, 29 Aug 1891:2).

Contemporary newspaper articles reported that His Excellency the Earl of Hopetoun (Governor of Victoria at the time), mayors and councillors of Fitzroy and Collingwood, the churchwardens of St Mark's, and leading citizens attended the opening of the Mission in August 1891. Gertrude and Smith streets were decorated for

the arrival of the Governor, on the occasion of his first visit to the district for the opening of the 'Mission to the Lads and Girls of Fitzroy and Collingwood' (*Mercury and Weekly Courier*, 3 Sep 1891:3; *Argus*, 28 Aug 1891:6).

An article published in *The Argus* in August 1891 (28 Aug 1891:6) described the new Mission:

> *The mission buildings are situated just off the lower part of Smith-street, and comprise a fine hall, capable of holding from 300 to 400 people, a large gymnasium, and a brick two-storied building adjoining, which includes three or four club rooms and residential quarters for the curate in charge of the mission and some of his co-workers* (*Argus*, 28 Aug 1891:6).

Spaces were provided for girls, boys and men (*Mount Alexander Mail*, 29 Aug 1891:2). 'Above the club rooms' was 'a dwelling-house for the directors of the Mission', and adjoining the hall was a building intended for a gymnasium (*Mercury and Weekly Courier*, 3 Sep 1891:3).

The 1895 Sands & McDougall Directory listed Reverend Ernest S Hughes at the Mission Hall, then addressed as 440 Gore Street (S&Mc). The complex of buildings was evident on the 1896 and 1900 Melbourne and Metropolitan Board of Works plans (Figures 2 & 3). The 1900 plan is annotated with 'Priest's Residence', 'Mission Hall Gymnasium' and 'Mission Hall'. At this date, the complex was the northern most development on Gore Street (south of Alexandra Parade, then known as Reilly Street).

An article published in 1899 reported that the subject site served as the headquarters and training home of 'The Church Army', who held religious meetings and lectures in the hall, and used 'a large building' as a Labor Home ('for tramps, criminals, inebriates, and deserving unemployed') (*Weekly Times*, 18 February 1899:14). The mission of the Church Army was 'to help the clergy to deal with the masses, among whom a vast amount of irreligion and distress exist, and to go to the lowest stratum of society and endeavour to reclaim those whom almost no other agency tries to reach' (*Weekly Times*, 18 February 1899:14).

In 1900 the Sands and McDougall Directory confirmed that the 'Church Army Mission Hall' occupied 434 Gore Street; a building was also recorded as 'vacant' (may refer to the two-storey building). The Church Army Mission Hall continued to be listed in the directories until 1903. From 1901 to c1907, the directories also listed Reverend 'William H Hosken (Methodist)' and Miss Agnes Hosken, dressmaker, as occupants of 434 Gore Street (S&Mc).

Between 1904 and c1915 a building at the property served as a 'bulk store' for MacRobertson's (MacRobertson confectionary was established in the area in the late nineteenth century, occupying a number of factories and stores, particularly along Smith and Gore streets) (S&Mc).

It appears that for a period from c1910 the two-storey residence was occupied by private residents. From 1910, William Southwell was listed at 434, and in c1920, Thomas G Dorman was listed as the sole occupant of 434 Gore Street (S&Mc). By 1930, 434 Gore Street served as a crèche. In 1940, it served as 'Butler House Free Kindergarten' and in 1950 it was listed in the directory as the Church of England Deaconess House. In 1960 the property had a sole private occupant, Miss V Sherrin, and in 1970, 434 Gore Street was occupied by resident Miss I Cuttriss, and was also listed as 'apartments' (S&Mc).

The former priest's residence has a modern addition off the south elevation. It also appears that the south end of the mission hall has been reconstructed with a different footprint. Only a narrow brick portion of the mission hall gymnasium remains in 2019 (the timber section has been demolished), along the west boundary.

Bruford & Braim, architects

Little is known about architects Bruford and Braim. Contemporary newspapers indicate that they practised as architects, surveyors, engineers and mining agents in the late twentieth century (*Argus*, 12 Aug 1884:6; *Lilydale Express*, 18 Jan 1888:2; *Ovens and Murray Advertiser*, 2 Nov 1895:2). In 1887 they were addressed to 67 Chancery Lane, Melbourne (*Herald*, 29 Aug 1887:4).

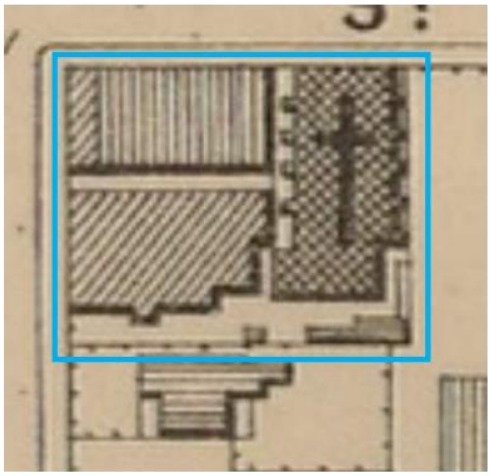

Figure 2. Footprints of the buildings at the corner site on a plan dated 1896 (subject site indicated by blue polygon). The diagonal hatching indicates buildings constructed of brick or stone; vertical/horizontal hatching indicates buildings constructed of timber. Crosshatching and the cross indicates a church (MMBW 29, dated 1896).

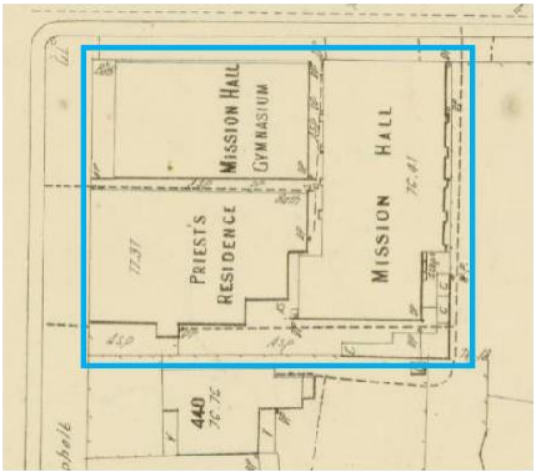

Figure 3. Footprints of the buildings in 1900 (subject site indicated by blue polygon) (MMBW DP 1239, dated 1900).

Physical Description

The Priest's Residence and Mission Hall (former) are located on a site at the south-east corner of Gore and Leicester Streets, to the west of Smith Street and south of Alexandra Parade. Built towards the end of the Victorian 'boom' period of the 1880s and early 1890s, the mission buildings comprise a mission hall to the east of the site fronting Leicester Street and a two-storey building, originally housing residential quarters and club rooms (the Priest's Residence in 1900), to the south-west. A brick portion of the original timber gymnasium building remains at the west boundary and a high brick wall along the remainder of the north boundary encloses the site.

The Mission Hall is a red brick building designed in a Gothic Revival style. It is built to the Leicester Street boundary and is of simple hall form with corrugated steel-clad gabled roof, half-hipped roof at the front and rows of roof gablets along the ridge. A porch, with corrugated steel-clad skillion roof and central entrance gable, spans the entire front façade and contains a pointed-arch central door opening and flanking lancet windows. A triple lancet window is situated above the central entrance in the wall of the main hall and windows line the side walls between buttresses. Decoration of the front façade is limited to rendered label moulding above all openings. A small gable-roofed section is located at the rear (south) of the building.

Built on the Gore Street boundary, the associated two-storey Victorian style building is constructed in brick with rendered façade (overpainted) to Gore Street. It comprises two hipped roofs which run east-west across the site from the Gore Street frontage and a gable-roofed wing to the south side which appears to be a later addition. All roofing is of corrugated steel and two brick chimneys are located at the ridges of the hipped roofs.

The Gore Street elevation has shallow eaves supported on paired consoles, arcaded balcony at first floor level with simple timber balustrading and four rectangular openings at ground floor level which have been filled in. The upper wall at the rear of the balcony is of unpainted red brick and openings appear to contain pairs of French doors. The northern elevation of this building contains a row of rectangular window openings with shutters and external timber stairs at the western end.

The remainder of the Gore Street frontage comprises a long and narrow brick building with corrugated steel-clad skillion roof and large brick dormer with arched opening (in-filled). Shallow eaves have cream brick dentil detailing below and a former arched opening to the north end has a brick voussoir and a protruding sill (possibly bluestone).

A brick wall encloses the remainder of the property along Leicester Street.

Figure 4. The former priest's residence fronting Gore Street (GJM Heritage, October 2019)

Figure 5. The former mission hall fronting Leicester Street (GJM Heritage, October 2019)

Figure 6. The remaining section of the gymnasium building (GJM Heritage, October 2019)

Integrity

The Priest's Residence and Mission Hall (former) retains a high degree of integrity to the late Victorian 'boom' period in fabric, form and detail. Whilst the timber gymnasium building has been largely demolished (brick western end retained), an addition has been made to the south of the Priest's House, and the latter has undergone some alterations, these do not diminish the ability to understand and appreciate the place as a fine example of a group of religious buildings.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

The Priest's Residence and Mission Hall (former), Fitzroy demonstrates the provision of community welfare services by the Church of England in inner suburban Melbourne in the late nineteenth and early twentieth centuries.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

The Priest's Residence and Mission Hall (former), Fitzroy form an intact and representative group of religious buildings. The Mission Hall displays typical characteristics of the Gothic Revival style popular for religious buildings in the late nineteenth century in Fitzroy and across Melbourne more broadly, including a simple gabled form, pointed arch openings including lancet windows and label moulding.

GASOMETER HOTEL

Address: **484 Smith Street, Collingwood**
Prepared by: GJM Heritage
Date: August 2019

Place type: Hotel	**Architect:** Not known
Grading: Locally significant	**Builder:** Not known
Integrity: High	**Construction Date:** c1859
Recommendation: Include in the Heritage Overlay	**Extent of Overlay:** To property title boundaries

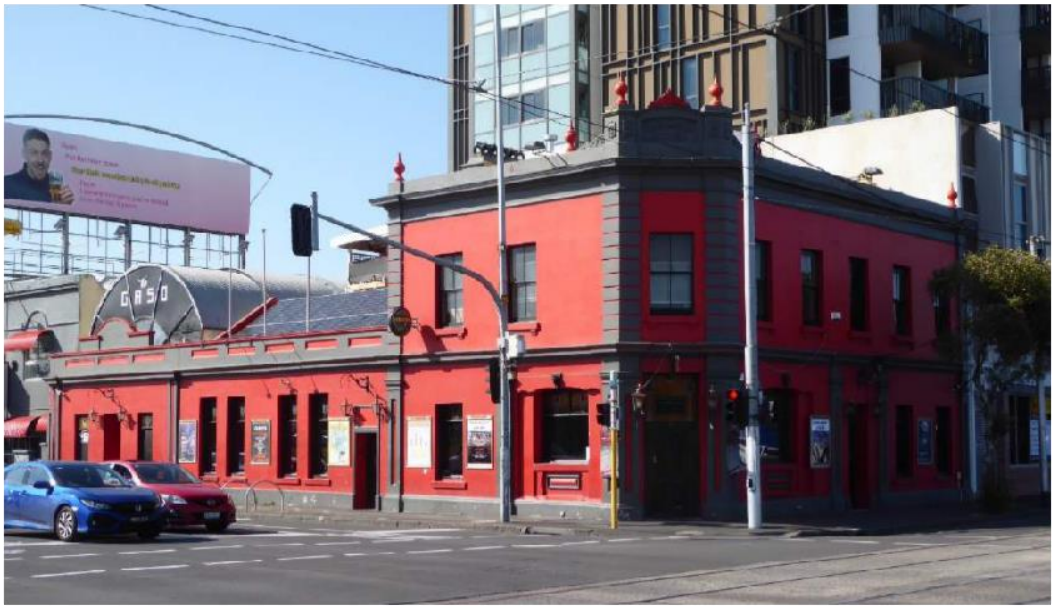

Figure 1. 484 Smith Street, Collingwood (GJM Heritage, October 2019)

Statement of Significance

What is significant?

The Gasometer Hotel, 484 Smith Street, Collingwood, built c1859.

Elements that contribute to the significance of the place include (but are not limited to):

- The original external form, materials and detailing of the building
- The high level of integrity to its original design
- Façade parapet, with pitched roofs behind
- No front setbacks
- Rendered walls
- Rendered detailing and ornament including pilasters, quoining and ball finials
- Horizontal lines formed by parapet, cornice, string course and rows of windows
- Repetitive upper floor fenestration patterns
- Splayed corner with entrance, pilasters, quoining and pediment.

Later alterations and additions, including the barrel-vaulted roofed section to the east, are not significant.

How is it significant?

The Gasometer Hotel, 484 Smith Street, Collingwood is of local historical and architectural significance to the City of Yarra.

Why is it significant?

The Gasometer Hotel, 484 Smith Street, Collingwood is of significance as a suburban hotel constructed at a prominent corner location in Collingwood. The hotel has operated on this site since c1859 (Criterion A).

The Gasometer Hotel, 484 Smith Street, Collingwood is an intact and representative example of a Victorian-era hotel. It displays typical characteristics of the early Victorian period in Collingwood and across Melbourne more broadly, including a plain parapeted façade with repetitive upper floor fenestration, rendered facades and a prominent splayed corner entrance with pilasters, quoining and pediment (Criterion D).

Historical Themes

The place illustrates the following themes as outlined in the *City of Yarra Thematic History* (1998):

7.0 Leisure and Entertainment in the Suburbs

- 7.1 Licensed Hotels and 'Sly Grog'

Place History

This corner building was not evident on the 1858 Clement Hodgkinson map of Collingwood; the map shows the east side of Smith Street, between what is now Keele Street and Alexandra Parade as vacant land.

The earliest found reference to the hotel was an advertisement published in March 1860 in *The Argus* (20 March 1860:1) entitled 'Gasometer Hotel, Collingwood Gas Works, to Let, on Lease', describing the property as follows:

> *erected as a pioneer to the settlement of a populous neighbourhood. The whole paddock adjoining is surveyed, with plans for sale in allotments at a low price, with deferred payments. The new market contiguous is fenced. The great and increasing traffic of Smith-street, with the numerous employees at the gasworks, give assurance for the establishment of a good business within a short period.*

This indicates that the hotel was built c1859-60, while the parapet of the building records the date 1861. The hotel was presumably named after the three large gasometers that were located opposite at the

Fitzroy Gasworks (north-west corner of Smith Street and Alexandra Parade, gasometers dismantled 1978) (Lovell, 1998: Vol 1, 71). In 1861, tenders were requested from carpenters for the erection of a stable and verandah, with applicants to apply to the Gasometer Hotel, Smith Street, Collingwood (*Argus*, 19 Nov, 1861:1).

The 1864 rate books record that Charles A. Mater was the owner of the stone hotel on the site, letting to George Pashley, licensed victualler. The 1867 rate books described the 'Gasometer Hotel' as a brick and stone building with twelve rooms, still owned by Mater. By 1874 the hotel was owned by Richard Benham and the following year ownership passed to Johanna Benham, licensed victualler (Ward, 1995:553). Richard and Johanna Benham retained ownership of the hotel for many years, until at least 1906 (*Age*, 19 Feb 1906:9), and by 1916 their son Richard William Benham was the owner (*Argus*, 12 Feb 1916:11; 22 Feb 1916:4).

A Melbourne and Metropolitan Board of Works (MMBW) plan (Figure 2) show the extent of the hotel and its outbuildings in 1896. The 1900 MMBW detail plan (Figure 3) showed the corner hotel and outbuildings annotated with their use. The rear of the property had a pitched, open space bordered along the east and south boundaries by stables, a wash house and water closets, with access provided off Alexandra Parade (then called Reilly Street).

Plans of the property dating to 1956 show footprints of the hotel building and outbuildings and records the occupant and owner at this date as S. Moore (Figure 4). The plan appears to show that the accessway off Alexandra Parade and stables, set back from the front title boundary (as in figure 3), remained at this date (PSP). Later additions and structures now occupy the south-east portion of the property; a barrel-vaulted building occupies the site of the original stable, washhouse and accessway.

The building continues to serve as the Gasometer Hotel in 2019.

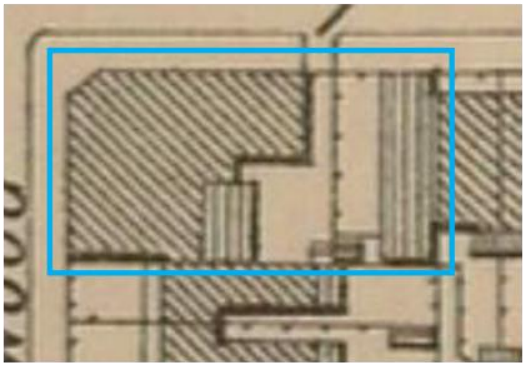

Figure 2. A footprint of the corner hotel and its outbuildings in 1896 (subject site indicated by blue polygon). The diagonal hatching indicates buildings constructed of brick or stone; vertical/horizontal hatching indicates buildings constructed of timber (MMBW 29, dated 1896).

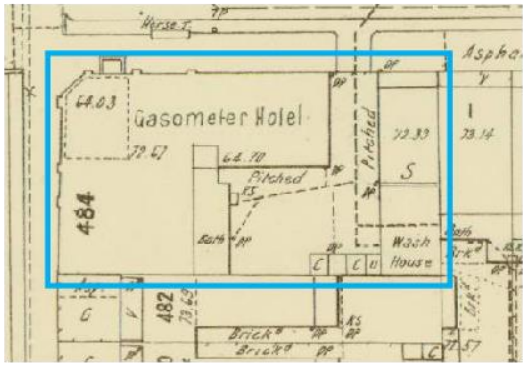

Figure 3. A footprint of the Gasometer Hotel dated 1900 (subject site indicated by blue polygon) (MMBW Detail Plan 1214, dated 1900).

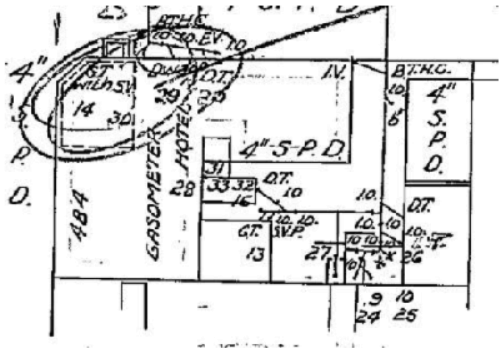

Figure 4. A plan of the site showing footprints of the buildings extant in 1956, annotated with sewerage works (PSP).

Physical Description

The Gasometer Hotel, 484 Smith Street, Collingwood is prominently located on the south-east corner of Smith Street and Alexandra Parade. Built in the early Victorian period, the building comprises a two-storey element addressing the street corner, an adjoining single-storey wing to the east and additional buildings further to the east along Alexandra Parade.

The two-storey corner hotel is a rendered stone (overpainted) building with two corrugated steel-clad, hipped roofs which run in a north-south direction, and two large rendered chimneys at the southern end. A third broad chimney is situated at the east wall of the two-storey building, behind the Alexandra Parade façade. The building has a splayed corner with ground floor entrance door, window at first floor level and pediment above which contains the description 'Gasometer Hotel' and the date '1861'. The ground floor façades contain a variety of window and door openings and are articulated with plain pilasters, while the corners of the upper façades are quoined. The upper-level fenestration comprises regularly spaced rectangular windows – six in the longer Smith Street façade and two facing Alexandra Parade. Openings are frameless and window sills are supported on plain corbels. A simple cornice forms the parapet of the building and a string course between the ground and upper floor relieves the plain façades.

An adjacent single-storey wing, facing Alexandra Parade, has a simple gable-roof which runs parallel to the front façade and is parapeted at the eastern end. The detailing of the corner building is repeated in this wing, with simple pilasters and frameless rectangular windows. The string course of the adjacent two-storey building continues to form the base of the single storey parapet which contains a row of recessed panels.

A barrel-vaulted roofed section, located further to the east in Alexandra Parade, is set behind a single-storey, parapeted façade. Constructed across an original accessway from Alexandra Parade to an internal courtyard at some stage after 1956, the façade of this later addition appears to repeat some of the earlier detailing of the original building.

Integrity

The Gasometer Hotel, 484 Smith Street, Collingwood retains a high degree of integrity to the early Victorian period in fabric, form and detail. While the building has undergone some additions to the east, these do not diminish the ability to understand and appreciate the place as a fine example of an early Victorian hotel.

Comparative Analysis

The Gasometer Hotel, 484 Smith Street, Collingwood is an intact and representative example of an early Victorian corner hotel. There are a substantial number of hotels included in the Heritage Overlay of the

Yarra Planning Scheme as individually significant buildings, including some built in the 1850 to 1870 period. Direct comparison can be made with the following examples:

- Birmingham Hotel, 333 Smith Street, Fitzroy (1853-), 'individually significant' in HO333, Smith Street Precinct
- Former Liverpool Arms Hotel, 299 Brunswick Street, Fitzroy (1860-70), 'individually significant' in HO311, Brunswick Street Precinct.

Figure 5. Birmingham Hotel, 333 Smith Street, Fitzroy (VHD)

Figure 6. Former Liverpool Arms Hotel, 299 Brunswick Street, Fitzroy (VHD, photo dated 2009)

These comparators are representative of hotel buildings constructed in the early Victorian period and are architecturally significant as intact examples of hotels from this period. Like the places above, the Gasometer Hotel displays a range of early Victorian characteristics including:

- Façade parapet, with pitched roof behind
- No front setbacks
- Rendered walls and detailing
- Horizontal lines formed by parapet, cornice, string course and rows of windows
- Repetitive upper floor fenestration patterns
- Splayed corner with entrance.

The Gasometer Hotel remains highly intact to demonstrate the key characteristics of this early type of hotel development in the City of Yarra.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

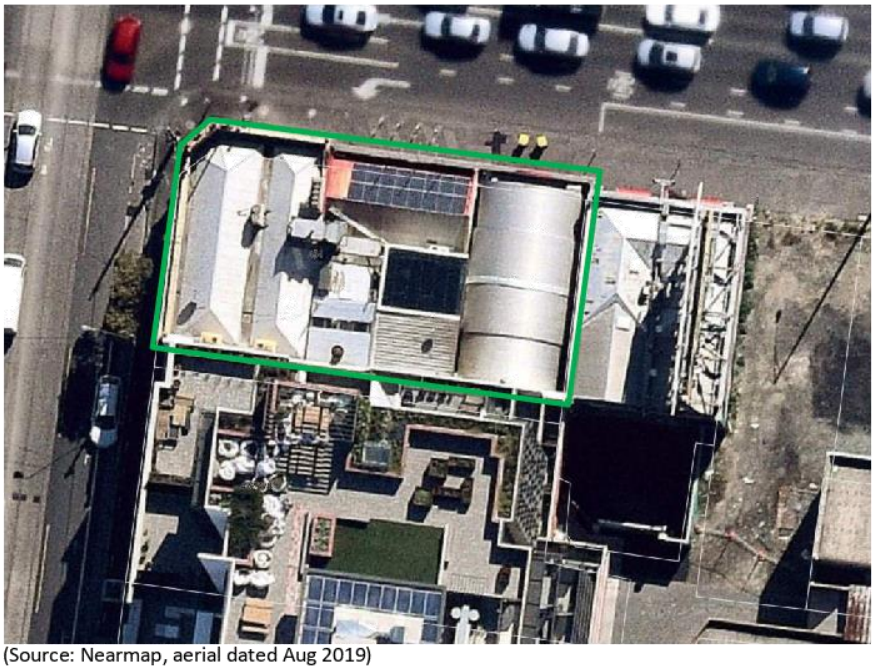
Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

The Gasometer Hotel, 484 Smith Street, Collingwood is of significance as a suburban hotel constructed at a highly prominent corner location in Collingwood. The hotel has operated on this site since c1859.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

The Gasometer Hotel, 484 Smith Street, Collingwood is an intact and representative example of a Victorian-era Hotel. It displays typical characteristics of the early Victorian period in Collingwood and across Melbourne more broadly, including a plain parapeted façade with repetitive upper floor fenestration, rendered facades and a prominent splayed corner entrance with pilasters, quoining and pediment.

Grading and Recommendations



It is recommended that the place be included in a site-specific Heritage Overlay in the Yarra Planning Scheme as an individually significant heritage place.

Recommendations for the Schedule to the Heritage Overlay (Clause 43.01) in the Yarra Planning Scheme:

External Paint Controls?	No
Internal Alteration Controls?	No
Tree Controls?	No
Outbuildings or Fences not exempt under Clause 43.01-3?	No
Prohibited Uses Permitted?	No
Incorporated Plan?	No
Aboriginal Heritage Place?	No

Extent of the recommended Heritage Overlay

To the property title boundary, as indicated by the green polygon on the aerial below.

GJM Heritage

Heritage Citation

JOHNSTON STREET WEST PRECINCT, FITZROY

Address: **15-129, 239-247A, 14-104 & 120-264 Johnston Street, 9-105 Victoria Street, 110-112 Argyle Street, 1A Elliott Street, 344 Fitzroy Street, 369 Gore Street, 236 Nicholson Street & 270 Young Street**

Prepared by: GJM Heritage

Date: October 2019

Place type: Mixed commercial, residential and industrial precinct
Integrity: High
Recommendation: Include in the Heritage Overlay
Extent of Overlay: Refer to plan at Figure 18

Figure 1. South side of Johnston Street, west of Brunswick Street (GJM Heritage, October 2019)

Statement of Significance

What is significant?

Properties within the following areas contribute to the significance of the Johnston Street West Precinct:

- North side of Johnston Street, Fitzroy from Johnston Place to Young Street and Gore Street to Smith Street
- South side of Johnston Street, Fitzroy from Nicholson Street to Smith Street
- North side of Victoria Street
- Argyle Street
- Elliott Street
- Fitzroy Street
- Gore Street
- Nicholson Street
- Young Street.

Elements that contribute to the significance of the precinct include (but are not limited to):

- The consistent Victorian and Edwardian commercial character of the precinct, which includes:
  - A consistent two-storey scale with some single and three-storey buildings interspersed
  - A variety of simple and highly decorative facade parapets, with pitched roofs behind
  - No front or side setbacks
  - Rendered or face red brick walls
  - Rendered window frames, sills and hoods to upper stories
  - Rendered ornament to upper stories
  - Brickwork with corbelled capping courses
  - Strong horizontal lines formed by parapets, cornices, string courses
  - Repetitive upper floor fenestration patterns
  - Less than 40% of the upper street façade comprises openings such as windows
  - Corrugated iron and slate roof cladding
  - Shop fronts with display windows, timber or tiled plinths, and entry recesses
  - Corner buildings with secondary façades to side streets or lanes
  - Splayed corners to buildings at intersections.
- Residential buildings from the Victorian period with typically:
  - Expressed gabled roofs
  - One or two-storey wall heights
  - Front setbacks with post-supported verandahs and fences at the street boundary
  - No side setbacks
  - Face brick (including polychrome) or rendered walls
  - Corrugated iron or slate roofing
  - Prominent cement rendered chimneys
  - Less than 40% of the street wall face comprised with openings such as windows and doors.
- Early twentieth century industrial buildings on the north side of Victoria Street and eastern end of Johnston Street, which includes:
  - Multi-level buildings of varying height
  - Simple façade parapets with pitched roofs behind
  - No front or side setbacks
  - Rendered or face red brick walls
  - Strong horizontal lines formed by parapets, windows, spandrels and string courses
  - Repetitive fenestration patterns at all levels
  - Corrugated iron roof cladding.
- Bluestone pitched road paving, crossings, stone kerbs and channels and asphalt paved footpaths.

Features that do not contribute to the significance of the precinct include more recent alterations and additions to buildings within the precinct, including highly altered shopfronts.

How is it significant?

The Johnston Street West Precinct is of local historical, architectural and aesthetic significance to the City of Yarra.

Why is it significant?

The Johnston Street West Precinct has functioned continuously as one of Fitzroy's mixed commercial and residential 'High Streets' since the nineteenth century. It retains a substantial collection of intact commercial and residential buildings, predominantly from the Victorian period, including shops and associated residences, hotels and rows of terrace housing. Together these buildings demonstrate the development of this centre, particularly from the 1870s to c1900 when substantial growth along the street occurred, and are illustrative of the enduring role Johnston Street has played in the economic and social life of Fitzroy since the establishment of the suburb [Criterion A].

The Johnston Street West Precinct has functioned as one of Fitzroy's industrial centres since the twentieth century. It retains a collection of large twentieth century industrial buildings, particularly in Victoria Street in close proximity to the retail area of Johnston Street. Together these buildings demonstrate the development of industry in Fitzroy, particularly in the early twentieth century when substantial industrial growth occurred throughout the suburb [Criterion A].

The intact streetscapes of the Johnston Street West Precinct clearly demonstrate the principal characteristics of a mixed commercial, residential and industrial precinct in the City of Yarra. Typical characteristics of these building types are displayed in the original forms, fabric and detailing of the buildings. This includes commercial buildings with a two-storey Victorian and Edwardian street wall height, parapeted rendered or red brick facades, repetitive upper floor fenestration, and ground floor shopfronts; residential buildings with front setbacks with verandahs, parapeted party walls, rectangular window openings, exposed or low parapeted gable roofs and prominent chimneys; and industrial buildings with multi-storey parapeted brick forms with repetitive rows of rectangular window openings [Criterion D].

The Johnston Street West Precinct contains a number of individually significant places which are well-considered and carefully detailed examples of commercial, residential and industrial buildings. These include, among others, shops and residences at 52-60 and 105-107 Johnston Street, the Melbourne Tramways and Omnibus Company Engine House (95 Johnston Street), Town Hall Hotel (160-166 Johnston Street), Rochester Castle Hotel (202-204 Johnston Street), Tankerville Arms Hotel (230-236 Nicholson Street), Dr Peacock's Surgery and Residence (120 Johnston Street) and Moran & Cato Factory & Warehouse (101-105 Victoria Street). Variations in façade detailing throughout the precinct, including parapet ornamentation and applied decoration, make an aesthetic contribution to the overall character of the precinct [Criterion E].

The Johnston Street West Precinct is an important social centre in Melbourne for the Spanish community. The establishment of a Spanish Club at 57-61 Johnston Street in the late 1960s, and the subsequent establishment of restaurants and an annual Spanish festival within the precinct, have resulted in a long and enduring meeting place for the Spanish community [Criterion G].

Historical Themes

This precinct is associated with the following themes as identified in the *City of Yarra Heritage Review Thematic History* (Lovell 1998):

2.0 The suburban extension of Melbourne

- 2.1 Settlement, land sales and subdivision

- 2.2 A street layout emerges

4.0 Developing local economies

- 4.4 Smaller retailers: Strip shopping

7.0 Leisure an Entertainment in the Suburbs

- Clubs, the 'Pictures' and Dancing.

Precinct History

Fitzroy established

Two years after the European settlement of Melbourne in 1835, Crown land immediately to the north and east was subdivided into 88 portions by surveyor Robert Hoddle. These allotments were auctioned in Sydney in 1839 as part of the first land sales outside of the town reserve of Melbourne (Barrett 1971:14-15; Lewis, 2014:7). This land now forms the suburbs of Fitzroy, Collingwood, Richmond and Abbotsford. Crown portions 48 to 88 in the north were unofficially referred to as the 'district of Collingwood', and were administratively divided into two local government areas. The area west of Smith Street, now Fitzroy, was governed by the City of Melbourne until 1858 when the municipality of Fitzroy was established. Fitzroy was first called Newtown, then more commonly Collingwood West, and is attributed as being Melbourne's first suburb. The area east of Smith Street, now Collingwood and Abbotsford, was known as East Collingwood and did not form part of any local government until 1855, when the municipality of East Collingwood was formed (Barrett 1971:14-15). Hoddle's early surveys included the alignments of Nicholson, Smith, Hoddle and Johnston streets.

The development of these localities was influenced by both the status of local governance within the two areas and the topography of the landscape. At the southern extent of what is now Fitzroy, near Victoria Parade, is Eastern Hill. To the east, the hill descends to a slope between Smith Street and Wellington Street (Collingwood Slope), followed by a flat plain that extends to the Yarra River (the Flat). These topographically distinct areas underwent substantially different urban development from 1850 (Barrett 1971:14-15).

Nineteenth century

Early development was concentrated to the south in what was called Newtown, while the land to the north remained largely undeveloped, comprising mainly paddocks and semi-rural sites such as dairies, with housing developing primarily after 1850. Scattered pockets of development could be found near Johnston Street, for example, where groups of migrants settled in the 1840s, as well as some subdivision on the south-west corner of Johnston and Smith streets.

Between Nicholson and Smith streets, Johnston Street was bordered by Crown allotments 82 and 83 to the north and 71 and 72 to the south (Figure 2). The first development in the precinct occurred on the south side of Johnston Street, between Smith and Young streets when part of Crown Allotment 72 was subdivided in 1840-1842 (Barrett 1971:18). Crown Allotments 82 and 83, on the north side of Johnston Street were purchased from the Crown by merchants J T Hughes and J Hosking. The pair were declared insolvent in 1848 and their holdings transferred to the Bank of Australasia until the lots were subdivided in 1850 (Barrett 1971:20). Allotment 83 was subdivided as 'Theresaville' estate (Lewis 1998:23). Crown allotment 71, on the south side of Johnston Street, was also subdivided in 1850-1851 (Barrett 1971:19). The inclusion of Fitzroy (then referred to as Collingwood) within the Municipality of Melbourne boundaries encouraged substantial development, with the population increasing from 600 in 1841 to more than 3,000 in 1851 (Lewis 2014:14-15).

Figure 2. Hoddle's survey of the environs of Melbourne, dated c1840. Johnston Street is indicated by the green arrow (Lewis 2014:9).

The 1849 *Melbourne Building Act* shaped development along Johnston Street. Under the provisions of the Act, which enforced fireproof construction, dwellings and commercial premises constructed in Fitzroy from the 1850s were typically exposed or cement rendered bluestone or brick buildings (Barrett 1971:20-21; Lovell 1998:16). From 1853, residential development comprised fewer detached mansions as the terrace house began to be favoured in Fitzroy (Lewis, 2014:21; Barrett 1971:31), as evident along parts of Johnston Street.

Following the discovery of gold in Victoria in 1851 and the resultant gold immigration, Fitzroy was the fastest growing ward in Melbourne, with development increasing dramatically in the 1850s (Robertson et al, 2008:4). The 1860 Sands & McDougall Directory lists a combination of residential and commercial occupants along Johnston Street (between Nicholson and Smith streets; then called Collingwood). Trades and occupants comprised drapers, saddlers, greengrocers, schools, carpenters, bootmakers, stone masons, bricklayer, a coach builder and several corner hotels.

Reflecting a prospering trade and a growing community, development in Fitzroy continued from the 1860s to the 1880s, with the in-fill of the remaining vacant land, redevelopment of properties with less-substantial structures, and the renovation of existing buildings (Lewis, 2014:26; Lovell 1998:51). Within the precinct there was a slight increase in the number of occupants listed along Johnston Street between 1860 and 1880, which continued to include residential and commercial occupants – grocers, dressmakers, butchers, bootmakers, a dairy, saddler, plumber and gasfitter, tailor, chimney sweep, a saw-sharpener, and hotels amongst others (S&Mc).

Victorian-period development within the precinct took the form of single and two-storey residences interspersed with two-storey shops with residences above, and some corner hotels. Key Victorian development included 105-107 Johnston Street (c1880-90), the Rochester Castle Hotel at 202-204 Johnston Street (c1870-1890), Dr Peacock's Surgery & Residence at 120 Johnston Street (c1880-1900), the two-storey shops with residences at 40-42 Johnston Street (1880s) and Kinnard's Buildings at 52-60 Johnston Street (1891).

The Melbourne Omnibus Company ran its first service from the city to the corner of Johnston and Smith streets in 1869, however the municipality continued to function predominantly as a pedestrian city (Ward 1989:98). Johnston Street was well established as a major east-west thoroughfare through Collingwood by the 1880s when the Melbourne Tramway and Omnibus Company (known as the Melbourne Tramway Company from 1900) established a cable tram service along Johnston Street (the façade of a tramway engine house remains at 95 Johnston Street; Figure 3). This service operated from 1887 until 1939, when the service was replaced by buses (Lovell 1998b:93).

In 1880s Fitzroy, industrial uses were increasing and the shopping streets boomed, at the same time the housing in Fitzroy became less attractive to families, middle-class and white-collar people who turned to a more suburban lifestyle further north, aided by the development of the tramways and railways. Subsequently the proportion of owner-occupiers in the area decreased (Lewis 2014:26).

Figure 3. The Melbourne Tramway and Omnibus Co. tram engine house at 95 Johnston Street in 1970, prior to conversion to a supermarket (SLV, Image H2010.105/315b).

The prosperous 1880s came to an end with the 1890s depression, which caused construction in Fitzroy, and Melbourne more broadly, to virtually cease. During this period, Fitzroy transitioned into a working-class suburb (Robertson et al, 2008:15-16).

Melbourne and Metropolitan Board of Works (MMBW) Detail Plans dating to 1900 illustrate the dense development along Johnston Street west, comprising residential, commercial and some small industrial premises (**Figure 4** & **Figure 5**). Evident on corner lots were the Tankerville Arms Hotel, Liverpool Arms Hotel (current Provincial Hotel), Town Hall Hotel, Rochester Castle Hotel (Figure 7) and Birmingham Hotel, all of which remain. Larger developments included the Fitzroy market buildings on the south-west corner of Brunswick and Johnston streets, the Melbourne Tram and Omnibus Companies' tramway engine house (façade remains at 95 Johnston Street), a Church of Christ (formerly near 62 Johnston Street) and two engineering works (formerly at 49 and 133 Johnston Street).

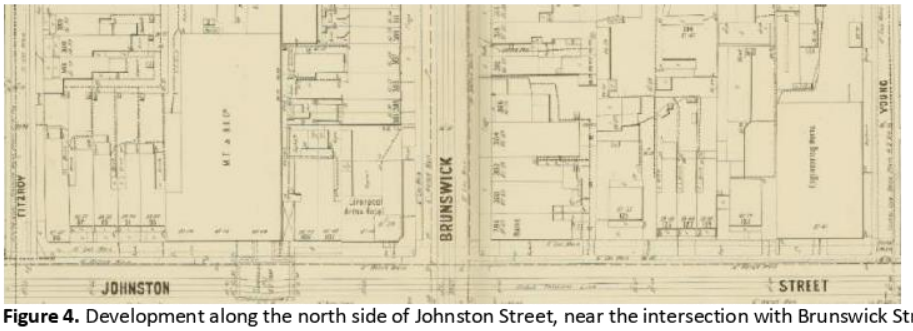

Figure 4. Development along the north side of Johnston Street, near the intersection with Brunswick Street, in 1900 (MMBW DP 1241, dated 1900).

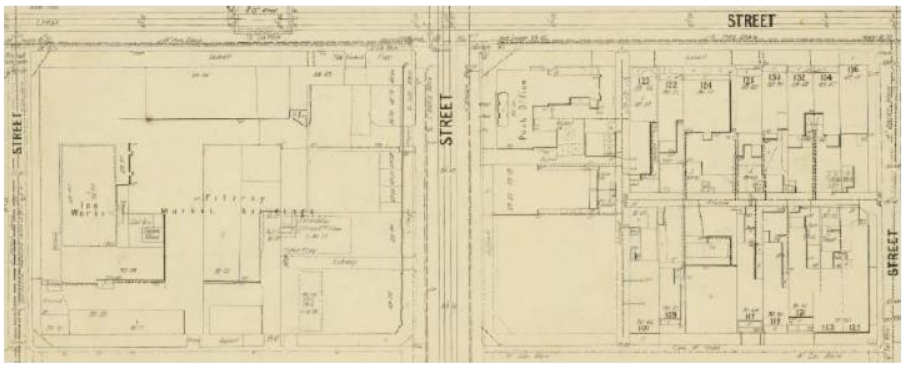

Figure 5. The south side of the intersection of Johnston and Brunswick streets, and the buildings fronting Victoria Street to the south, in 1900 (MMBW DP 1193, dated 1900).

In 1900, the north side of Victoria Street between Nicholson and Fitzroy streets comprised mainly residential buildings (Figure 6), except for livery stables near Fitzroy Street and the Acme Shirt Factory (c1890; remains at 25-37 Victoria Street). To the east between Fitzroy Street and Brunswick Street, was an ice works, M. C. Butter Co. stables and an earlier Moran & Cato building (near 101-105 Victoria Street; replaced c1900) (S&Mc). Directly east was the Moran & Cato Merchants building on the corner of Brunswick Street (built 1897, est. 1882 as per parapet; remains at 277-285 Brunswick Street).

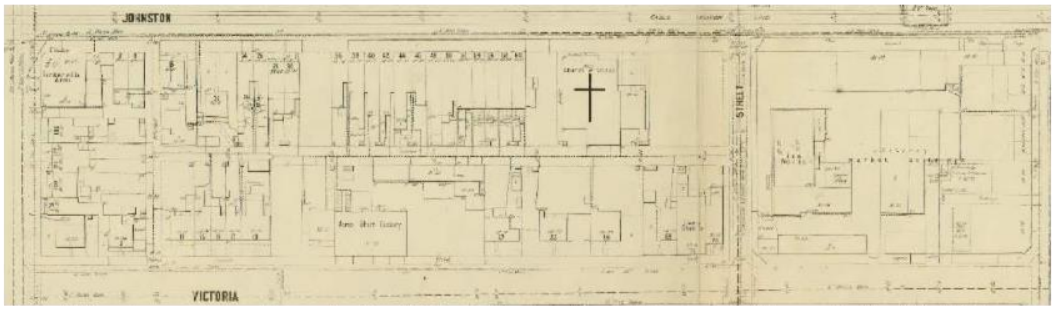

Figure 6. Development along the north side of Victoria Street, between Nicholson and Brunswick Street, in 1900 (MMBW DP 1193, dated 1900).

Figure 7. The Rochester Castle Hotel at an early date (photo not dated) (Picture Victoria, ID: 8768).

In 1900, the Sands & McDougall Directory listed residential occupants and an increased number of commercial premises operating along Johnston Street west. Traders included confectioners, a farrier, draper, carpenters, bootmakers, grocers and fruiterers, hairdressers and tobacconists, blacksmith, dressmakers, fishmongers, tailors, bakers, coachbuilders, laundries, upholsterers, monumental mason, furniture makers and warehouses, other manufacturers and an undertaker amongst other traders.

The Fitzroy shopping streets distinguished themselves from other inner suburbs due to the close link between manufacturing and retailing; for example, Fitzroy had a number of clothing, whitegoods and furniture manufacturers which, in many cases, were also the retailers (Lewis 2014:28).

Figure 8. A c1907 photo looking west down Johnston Street from Young Street, at the Victorian building stock. On the left nos. 120 (three-storey) and 128 (polychrome brick) Johnston Street remain (SLV, image H36145/38).

Twentieth century

The economic fortunes of Victoria recovered after the turn of the century. During this period there was a small amount of development along Johnston Street west, including two-storey Edwardian shops with residences above. Key developments during this period included the two-storey shops with residences at 122 Johnston Street (c1900-1915), 262-264 Johnston Street (c1900-1915) and 32-34 Johnston Street (c1900-1915).

Following World War I, there was an increased demand for housing for returned servicemen, people moving towards the city for improved job prospects, increasing number of immigrants, and the return of Aboriginal people to the area. With this influx, Fitzroy became a poorer population and because of its proximity to Melbourne, it continued to attract the unemployed and homeless. By the end of the 1920s, Fitzroy was regarded as one of Melbourne's worst slums, with a very high level of unemployment, which continued into the 1930s Depression (Robertson et al, 2008:23).

Investigations into sub-standard housing in Fitzroy had commenced in the late 19th century, managed by local councils who would condemn and demolish unsanitary buildings and makeshift housing. Concern and investigations into slum housing increased in the 1930s, when the Housing Commission and Slum Abolition Board were formed in the late 1930s. The Commission turned its focus to Fitzroy, Collingwood and Richmond by the 1950s with its 'slum clearance', or 'housing reclamation', to make way for high-density housing and new developments. In the 1960s and '70s the state government concentrated on the clearance of slums that had developed during the depressions and war years (Barrett 1971:166; Robertson et al, 2008:33).

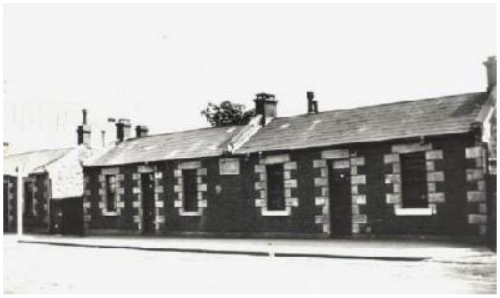

Figure 9. The residences formerly occupying 191-203 Johnston Street, demolished after classified as derelict by the Slum Abolition Board. Photo dated 1948 (Picture Victoria, ID: 8263).

The Housing Commission built tens of thousands of cottages in outer suburbs to house the effected low-income families, which resulted in the movement of population from the inner suburbs following World War II. The vacancies were filled by both the expansion of industry and European migrants, who rehabilitated the building stock and reinvigorated the community (Barrett 1971:164-65).

Some evidence of development along Johnston Street west during the interwar period remains, such as the former factory building at 57 Johnston Street (c1915-1925), the motor garage at 18-22 Johnston Street (c1920-1935) and the two-storey building at 121 Johnston Street (1930s).

It was during the interwar period that the north side of Victoria Street, between Nicholson and Brunswick streets, primarily developed as an industrial area. Key developments included the staged construction of the La Mode Corset Factory (1930s-c1960; remains at 19-37 Victoria Street) which enveloped the former Acme Shirt Factory, and the extension of the Moran & Cato complex, with the construction of the warehouse at 95-99 Victoria Street (c1927; remains) (Figure 10).

Figure 10. The Moran and Cato buildings on the north side of Victoria Street in 1948. In the foreground is the warehouse at 95-99 Victoria Street. Adjacent (right) is the warehouse at 101-105 Victoria Street, built c1900 (COYL, ID FL463).

Post-War

Properties were developed and redeveloped along Johnston Street throughout the post-war period and into the twenty-first century.

In 1969, the Fitzroy Residents Association formed in response to the slum clearances and the state government's proposed large-scale demolition in Fitzroy and Fitzroy North. The Association was successful in saving much of Fitzroy's historic building stock. In the late 1970s, the City of Fitzroy recognised the cultural significance of the area and was the first municipality to complete building conservation studies in 1978 and 1979.

From the early 1960s, Government-assisted migration saw the arrival of a number of Spanish residents to Fitzroy. This community formed the 'Spanish Quarter' at the west end of Johnston Street. In the late 1960s, a chaplain to the Spanish community, Padre Eduardo Sanchez, persuaded the Spanish Government to purchase a building for a social centre. By 1970, the former Masonic Hall at 57-61 Johnson Street was transformed into Melbourne's Spanish Club (Hogar Espanol) (O'Brien 1998:245-47). The community grew with the addition of Spanish-speaking South Americans in the 1970s, many of whom resided in the Atherton Estate flats. The Spanish Quarter comprised restaurants, and in 1975, Casa Iberica Deli, a Spanish, Portugese and Latin American deli was established. The first annual Spanish Festival (Hispanic Fiesta) was held in 1978 by the Hispanic-Latin American Festival and Cultural Association, a festival that attracts a huge crowd to the precinct each year. Despite the decline of Spanish-speaking families living in Fitzroy, the western end of Johnston Street remains as Melbourne's Spanish Quarter (O'Brien 1998:245-47).

Figure 11. The Johnston Street Hispanic Fiesta in 2017 (Yarra City).

Towards the end of the twentieth century and into the twenty-first century, a number of large-scale commercial and residential developments, and two petrol stations, replaced rows of earlier buildings within the precinct.

Physical Description

The Johnston Street West Precinct is a linear mixed-use precinct in Fitzroy which comprises parts of Johnston Street from Nicholson Street to Smith Street and part of the north side of Victoria Street from Nicholson Street to Brunswick Street. Exclusions include an extensive row of non-contributory places on the north side of Johnston Street (nos. 131-223) and properties on the north-east corner of Nicholson and Johnston Streets (non-heritage buildings) and Nicholson and Victoria Streets (State significant building, VHR H2315).

The main development period of the Johnston Street West Precinct is from the 1870s to the mid-twentieth century and the streetscapes date largely from this period. The precinct has developed as a mixed-use area and comprises a range of building types. Commercial and residential buildings in Johnston Street, dating largely from the later nineteenth century, and industrial buildings in both Johnston Street and Victoria Street, dating from the twentieth century, contribute to the significance of the precinct.

Commercial buildings are dispersed along Johnston Street and include rows of two-storey shops with residences above which date principally from the Victorian period. These are primarily located on the south side of Johnston Street with particularly intact rows located at nos. 32-46, 52-60 and 246-264. Commercial buildings from the Edwardian period include buildings at nos. 32-34, 122 and 262-264.

The facades of these buildings are predominantly cement rendered and parapeted with repetitive rows of upper level fenestration. Detailing varies from simple unadorned facades (no. 256-260) to elaborately decorated facades (nos. 40-42, Kinnard's Building nos. 52-60, the Melbourne Metropolitan Tramways & Omnibus Company Engine House at no. 95, and the adjacent building at nos. 103-07.

The form and detailing of a small number of shopfronts remains evident in the precinct with display windows, tiled plinths and entry recesses retained.

Three corner hotels contribute to the commercial character of the precinct. Located on the south side of Johnston Street and dating from a range of periods, these hotels are the Victorian-era Rochester Castle Hotel (nos. 202-04), the 1920s Tankerville Arms Hotel (corner of Johnston and Nicholson Streets) and the Victorian-era Town Hall Hotel (no. 166) which was modified in the interwar period.

A small number of residential buildings, constructed in the Victorian period between 1870 and 1890, are dispersed along Johnston Street. These comprise a group of three single-storey houses at the west end of the north side of Johnston Street (nos. 19-23) and three rows on the south side of Johnston Street, all to the east of Brunswick Street, including four two-storey houses (nos. 128-134), four single-storey house (nos. 146-152) and seven single-storey houses (nos. 188-200).

These rows of residential buildings are all set back from the street line with fences at the street boundary. They exhibit common characteristics that include front verandahs, parapeted party walls, rectangular window openings, exposed or low parapeted gable roofs (clad with slate or corrugated steel) and prominent

chimneys. A particularly elaborate residential building, Dr Peacock's Surgery and Residence is included in the precinct (no. 120). This three-storey terrace, with surgery at ground level, has a double-level front balcony with decorative cast iron, arcaded fenestration at upper levels, highly decorated side corbelling and large mansard roof, clad with scalloped slates.

A small number of buildings from the interwar period are located at the west end of the precinct. These include two buildings at the west end - a Motor Garage (no. 18-22) and a former factory building (no. 57).

A group of large industrial twentieth century buildings are located in the precinct, particularly on the north side of Victoria Street. These include three large brick buildings with rendered or face brick parapeted facades and repetitive rows of rectangular window openings (nos. 19-37, 95-99 and 101-105 Victoria Street). Detailing varies from the highly articulated classical c1900 façade at the east end (Moran & Cato at no. 101-105) to the simply detailed façade of the adjoining c1927 warehouse (Moran & Cato at no. 95-99) and the pedimented façade of the 1930s-c1960 La Mode Corset Factory at no. 19-37.

A number of non-contributory buildings, generally dating from the later twentieth century, are located in the Johnston Street West Precinct. These include buildings at nos. 41-43, 51-55, 62-70, 84-110, 85-91, 136-144, 178-184.

Integrity

The Johnston Street West Precinct retains a high degree of integrity to the Victorian, Edwardian and Inter-War period in fabric, form and detail. While some alterations have been made to these buildings, particularly the commercial buildings at street level, this does not diminish the ability to understand and appreciate the place as a fine example of a nineteenth and twentieth century mixed-use commercial, residential and industrial precinct.

Comparative Analysis

Comparison can be made with the adjoining Johnston Street Precinct, Collingwood (HO324) which is included in the Heritage Overlay of the City of Yarra Planning Scheme as a:

> *good demonstration of mainly Victorian and Edwardian-era commercial and retail development in Collingwood, including hotels, a former theatre, former shops with residences over, small industrial buildings and some residential development …*

The Johnston Street West Precinct is a continuation of the existing Johnston Street Precinct (HO324), to the west of Smith Street, and is a mixed-use precinct that demonstrates similar characteristics to HO324. Containing commercial, residential and industrial buildings from the Victorian, Edwardian and Inter-War period, the precinct retains a high degree of integrity to clearly demonstrate the development of the area in the nineteenth and the twentieth century.

Comparison can also be made with the nearby Smith Street Precinct, Fitzroy/Collingwood (HO333) which is a predominantly commercial precinct with a distinct group of substantial and intact industrial buildings at the north end. In a similar manner, the Johnston Street West Precinct is a predominantly commercial precinct with a distinct group of substantial industrial buildings, predominantly found in Victoria Street. In both cases, the principal characteristics of both commercial and industrial development are displayed in the original forms, fabric and detailing of the buildings.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

The Johnston Street West Precinct has functioned continuously as one of Fitzroy's mixed commercial and residential 'High Streets' since the nineteenth century. It retains a substantial collection of intact commercial and residential buildings, predominantly from the Victorian period, including shops and associated residences, hotels and rows of terrace housing. Together these buildings demonstrate the development of this centre, particularly from the 1870s to c1900 when substantial growth to the street occurred, and are illustrative of the enduring role Johnston Street has played in the economic and social life of Fitzroy since the establishment of the suburb.

The Johnston Street West Precinct has functioned as one of Fitzroy's industrial centres since the twentieth century. It retains a substantial collection of large, intact twentieth century industrial buildings, predominantly in Victoria Street in close proximity to the retail area of Johnston Street. Together these buildings demonstrate the development of industry in Fitzroy, particularly in the early twentieth century when substantial industrial growth occurred throughout the suburb.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

The intact streetscapes of the Johnston Street West Precinct clearly demonstrate the principal characteristics of a mixed commercial, residential and industrial precinct in the City of Yarra. Typical characteristics of these building types are displayed in the original forms, fabric and detailing of the buildings. This includes commercial buildings of two-storey Victorian and Edwardian street wall height, parapeted rendered or red brick facades, repetitive upper floor fenestration, and ground floor shopfronts; residential buildings with front setbacks with verandahs, parapeted party walls, rectangular window openings, exposed or low parapeted gable roofs and prominent chimneys; and industrial buildings with multi-storey parapeted brick forms with repetitive rows of rectangular window openings.

Criterion E: *Importance in exhibiting particular aesthetic characteristics (aesthetic significance).*

The Johnston Street West Precinct contains a number of individually significant places which are well-considered and carefully detailed examples of commercial, residential and industrial buildings. These include, among others, shops and residences at 52-60 and 105-107 Johnston Street, the Melbourne Tramways and Omnibus Company Engine House (no. 95), Town Hall Hotel (no. 160-166), Rochester Castle Hotel (no. 202-204), Tankerville Arms Hotel (230-236 Nicholson Street), Dr Peacock's Surgery and Residence (no. 120) and Moran & Cato Factory & Warehouse (101-105 Victoria Street). Variations in façade detailing throughout the precinct, including parapet and façade ornamentation and applied decoration, make an aesthetic contribution to the overall character of the precinct.

Criterion G: *Strong or special association with a particular community or cultural group for social, cultural or spiritual reasons. This includes the significance of the place to Indigenous peoples as part of their continuing and developing cultural traditions (social significance).*

The Johnston Street West Precinct is an important social centre in Melbourne for the Spanish community. The establishment of a Spanish Club at 57-61 Johnston Street in the late 1960s, and the subsequent establishment of restaurants and an annual Spanish festival to the precinct, have resulted in a long and enduring meeting place for the Spanish community [Criterion G].

Grading and Recommendations

It is recommended that the place be included in the Heritage Overlay of the Yarra Planning Scheme as a heritage precinct.

Recommendations for the Schedule to the Heritage Overlay (Clause 43.01) in the Yarra Planning Scheme:

External Paint Controls?	No
Internal Alteration Controls?	No
Tree Controls?	No
Outbuildings or Fences not exempt under Clause 43.01-3?	No
Prohibited Uses Permitted?	No
Incorporated Plan?	Yes - Incorporated Plan under the provisions of clause 43.01 Heritage Overlay, Planning permit exemptions, July 2014
Aboriginal Heritage Place?	No

Figure 1. South side of Gertrude Street, east of Brunswick Street (GJM Heritage, October 2019)

Statement of Significance

What is significant?

Properties within the following areas contribute to the significance of the Gertrude Street Precinct:

- North side of Gertrude Street, Fitzroy from Fitzroy Street to Smith Street excluding Atherton Gardens
- South side of Gertrude Street, Fitzroy from Brunswick Street to Smith Street
- Brunswick Street
- Gore Street
- Little Napier Street
- Napier Street.

Elements that contribute to the significance of the precinct include (but are not limited to):

- The consistent Victorian commercial character of the precinct, which includes:
  - A consistent two-storey scale with some taller buildings
  - A variety of simple and highly decorative facade parapets, with pitched roofs behind
  - No front or side setbacks
  - Rendered or face red brick walls
  - Rendered window frames, sills and hoods to upper stories
  - Rendered ornament to upper stories
  - Brickwork with corbelled capping courses
  - Strong horizontal lines formed by parapets, cornices, string courses
  - Repetitive upper floor fenestration patterns
  - Less than 40% of the upper street façade comprises openings such as windows
  - Corrugated iron and slate roof cladding
  - Original post-supported street verandahs
  - Shop fronts with display windows, timber or tiled plinths, and entry recesses
  - Some red brick storage or stable buildings at the rear or side lane frontage
  - Corner buildings with secondary façades to side streets or lanes
  - Splayed corners to buildings at intersections.
- Examples of intact Edwardian buildings.
- Bluestone pitched road paving, crossings, stone kerbs and channels and asphalt paved footpaths.

Features that do not contribute to the significance of the precinct include more recent alterations and additions to buildings within the precinct, including highly altered shopfronts.

How is it significant?

The Gertrude Street Precinct is of local historical, architectural, aesthetic and social significance to the City of Yarra.

Why is it significant?

The Gertrude Street Precinct is an important and early local 'High Street' in the City of Yarra and has functioned continuously as one of Fitzroy's key commercial centres since the mid-nineteenth century. It retains a substantial collection of intact commercial buildings, predominantly from the Victorian period, including shops and associated residences, hotels and a former bank building. Together these buildings demonstrate the development of this High Street, particularly from the 1850s to c1900 when substantial growth in the street occurred, and are illustrative of the enduring role the street has played in the economic and social life of Fitzroy since the establishment of the suburb [Criterion A].

The highly intact streetscape of the Gertrude Street Precinct clearly demonstrates the principal characteristics of a Victorian High Street in the City of Yarra. Typical characteristics – including a predominantly two-storey Victorian street wall height, parapeted rendered or red brick facades, repetitive

upper floor fenestration, and ground floor shopfronts – are displayed in the original forms, fabric and detailing of the majority of the buildings. The streetscape is particularly intact and consistent in architectural form and expression. [Criterion D].

The Gertrude Street Precinct contains a number of individually significant places which are well-considered and carefully detailed examples of commercial buildings. These include, among others, shops and residences at 153-159 and 184-186 Gertrude Street, the Builders Arms Hotel (211-217 Gertrude Street) and the Champion Hotel and associated shops and residences (50-54 Brunswick Street and 94-100 Gertrude Street). Variations in façade detailing throughout the precinct, including parapet ornamentation, balustrading and pediments, and applied decoration, make an aesthetic contribution to the overall character of the precinct [Criterion E].

The Gertrude Street Precinct is an important social and political hub in Melbourne for the Aboriginal community. A number of services were established in buildings in the precinct from the 1960s and it has long been an important meeting place for Aboriginal people [Criterion G].

Historical Themes

This precinct is associated with the following themes as identified in the *City of Yarra Heritage Review Thematic History* (Lovell 1998):

2.0 The suburban extension of Melbourne

- 2.1 Settlement, land sales and subdivision
- 2.2 A street layout emerges

4.0 Developing local economies

- 4.4 Smaller retailers: Strip shopping

5.0 Local council and council services

- 5.5 Private and public transportation

7.0 Leisure and Entertainment in the Suburbs

- 7.1 Licensed Hotels and 'Sly Grog'.

Precinct History

Fitzroy established

Prior to European settlement, the Wurundjeri-Willum people, a distinct language group of the Woiworrung tribe, occupied Fitzroy. Since European contact, many traditional owners of the land and descendants of the Woiwurrung have returned to meet and settle in Fitzroy (Robertson et al, 2008:1).

Two years after the European settlement of Melbourne in 1835, Crown land immediately to the north and east was subdivided into 88 portions by surveyor Robert Hoddle. These allotments were auctioned in Sydney in 1839 as part of the first land sales outside of the town reserve of Melbourne (Barrett 1971:14-15; Lewis, 2014:7). This land now forms the suburbs of Fitzroy, Collingwood, Richmond and Abbotsford. Crown portions 48 to 88 in the north were unofficially referred to as the 'district of Collingwood', and were administratively divided into two local government areas. The area west of Smith Street, now Fitzroy, was governed by the City of Melbourne until 1858 when the municipality of Fitzroy was established. Fitzroy was first called Newtown, then more commonly Collingwood West, and is attributed as being Melbourne's first suburb. The area east of Smith Street, now Collingwood and Abbotsford, was known as East Collingwood and did not form part of any local government until 1855, when the municipality of East Collingwood was formed (Barrett 1971:14-15).

The development of these localities was influenced by both the status of local governance within the two areas and the topography of the landscape. At the southern extent of what is now Fitzroy, near Victoria Parade, is Eastern Hill. To the east, the hill descends to a slope between Smith Street and Wellington Street (Collingwood Slope), followed by a flat plain that extends to the Yarra River (the Flat). These topographically distinct areas underwent substantially different urban development from 1850 (Barrett 1971:14-15).

Figure 2. The c1850 subdivision plan of Crown Portion 51 which extended Gertrude Street to Smith Street (SLV, no image no.)

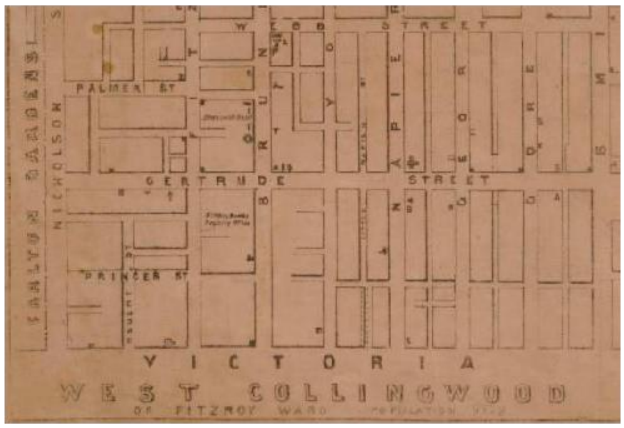

Figure 3. Proeschel's c1855 map of 'West Collingwood' (current Fitzroy) showing key buildings along Gertrude Street. The map is annotated, 'showing the western part (or Fitzroy ward) as it will be in a very short time according to the Collingwood improvements act'.

Nineteenth century

The first stage of non-Government development in what is now Fitzroy began in 1839, when pastoralist Benjamin Baxter and then Captain Brunswick Smyth subdivided Portion 49, creating the first sections of Gertrude and Brunswick streets, the intersection upon which Newtown (or New Town) established. Gertrude Street was extended by neighbouring property owners to Nicholson Street in the late 1840s and to Smith Street in 1850, by which date Brunswick Street had extended to Reilly Street (now Alexandra Parade) (Barrett, 1971:17-19; Robertson et al, 2008:2). Brunswick and Gertrude streets were the most important non-Government streets in Fitzroy, mainly due to the fact that their original alignments were continued for a considerable distance by a number of adjacent landowners. This contrasted strongly with the ad hoc pattern of subdivision and street layout which developed in other allotments in Fitzroy (Lovell 1998:14).

The city's wealthy were the first to populate Newtown on Eastern Hill from the early 1840s, with villas constructed along Gertrude Street from 1850. From its first stages of development Gertrude Street was considered a 'noble street', occupied by colonial aristocrats (Robertson et al, 2008:3-4; Lewis 1989:12). During the years of gold immigration in the early 1850s, development increased dramatically in Fitzroy and (East) Collingwood. Contemporary newspapers reported that new residents included gentleman and working men, with tensions developing between the two groups. The working class predominantly resided on the Collingwood Slope to the east, while the gentleman occupied Eastern Hill, where the land was high and dry and the main streets of Gertrude and Brunswick streets were maintained by Melbourne City Council (Barrett 1971:20-21). Fitzroy was the fastest growing ward in Melbourne following the discovery of gold, and it was

during this period that Gertrude Street firmly established itself as a commercial centre – one of the first outside of Melbourne's city centre (Robertson et al, 2008:4). Trevena's shops at 181-183 Gertrude Street (VHR H866) are illustrative of 1850s development.

The 1849 *Melbourne Building Act* further shaped development on Gertrude Street. Under the provisions of the Act, which enforced fireproof construction, dwellings and commercial premises constructed in Fitzroy from the 1850s were typically exposed or cement rendered bluestone or brick buildings (Barrett 1971:20-21; Lovell 1998:16).

The occupations of Fitzroy residents reflected the social class of the area. Census records from the 1850s indicate that male residents were predominantly government clerks, lawyers, clergymen, physicians, surgeons, dentists, merchants and gentleman (Barrett 1917:31). Serving these residents were the high street businesses. In the 1860s, Gertrude Street, like Brunswick Street, was occupied by a wide range of small businesses, most of which served local needs. The 1860 Sands & McDougall Directory illustrates that Gertrude Street was a developed commercial strip occupied by hotels, dealers, drapers, grocers, fruiteries, bakers, butchers, tailors, dressmakers, upholsterers, bootmakers, watchmakers and booksellers amongst other services, with a cluster of residences west of Brunswick Street. Fourteen hotels were built on Gertrude Street from the 1850s to 1870s (Robertson et al, 2008:10); nine of which remain in 2019.

Reflecting a prospering trade and a growing community, the 1860s to 1880s saw the redevelopment of properties with less-substantial structures, the renovation of existing buildings, completion of terraces and rows, and the in-fill of the remaining land in Fitzroy (Lewis, 2014:26; Lovell 1998:51). Along Gertrude Street, buildings of brick or stone were constructed or renovated, forming predominantly single or two-storey (some taller) buildings, the latter with a shop to the ground floor and residence above. The 1880 Sands & McDougall Directory lists a variety of shops and services consistent with the 1860s occupancies, but in greater number. A majority of the buildings in Gertrude Street reflect this Victorian period of development, illustrating the pre-eminence of the commercial strip in the late nineteenth century (Lovell, 1998:51; Robertson et al, 2008:12). Prominent late-Victorian development included Blackett's shop and residence row at 158-164 Gertrude Street (1888).

Figure 4. Looking west down Gertrude Street (from Young Street) towards the Royal Exhibition Buildings, c1890. The buildings on the right were later demolished to make way for the Atherton Gardens development (SLV, Image No. a13938).

Many Fitzroy residents vehemently opposed the establishment of a horse-drawn cable car route through Fitzroy in the 1860s – an opposition that was continued into the 1880s against cable trams, to no avail. The Gertrude Street cable tram route was established in 1886, and the cable tram engine house built on the corner of Gertrude and Nicholson streets in 1886-87 (VHR H584; west of precinct) (Lovell 1998:64). This new form of transport boosted trade on Gertrude Street but also reduced the number of owner-occupiers in the area, with many seeking a suburban lifestyle that was now accessible with public transport (Lewis, 2014:26).

The prosperous 1880s came to an end with the 1890s depression, which caused construction in Fitzroy, and Melbourne more broadly, to virtually cease. In Gertrude Street, premises became vacant and property prices plummeted, transitioning Fitzroy into a working-class suburb. Along Gertrude Street, many of the grand

houses were turned into boarding houses as demand for housing increased, the unemployed took shelter, and criminals and illegal activities moved in. Gertrude Street became synonymous with trouble, while Brunswick Street became the principal commercial street (Robertson et al, 2008:15-16).

The 1898-99 series of Melbourne and Metropolitan Board of Works (MMBW) Detail Plans illustrate the dense commercial and residential occupation of Gertrude Street at the time. The 1900 Sands & McDougall Directory lists the street's numerous hotels and boardinghouses, and fewer commercial enterprises specialising in more luxury items. However, the practical businesses were sustained – bootmakers, bakers, grocers, butchers, furniture dealers and makers, laundries and bicycle makers.

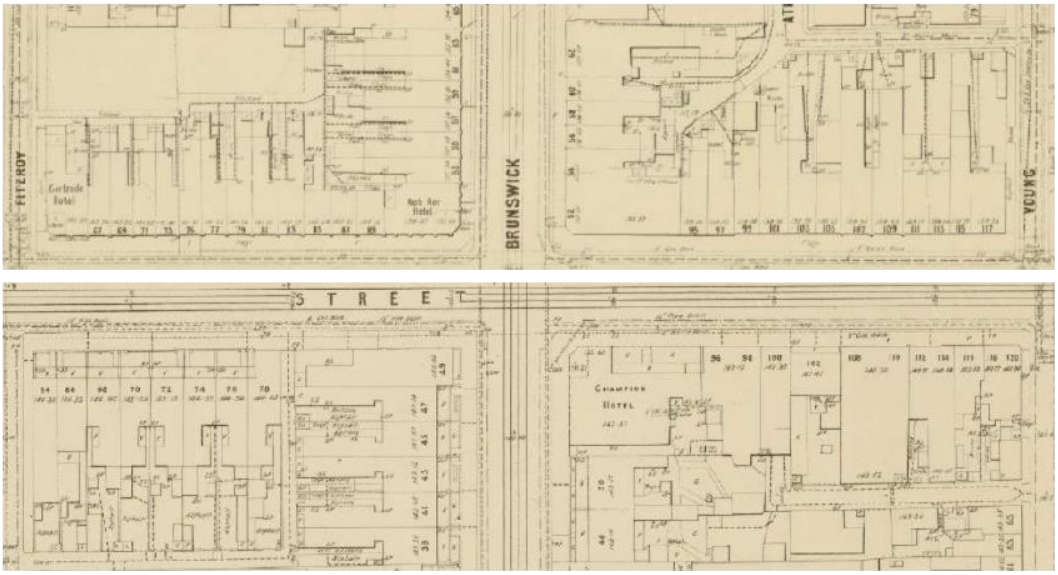

Figure 5. The dense development at the intersection of Gertrude and Brunswick streets in 1898-99 (MMBW DP 1205 & 1206, 1898 & 1899).

Twentieth century

The economic fortunes of Victoria recovered after the turn of the century, and while there was a period of optimism at the beginning of the century accompanied by some new development, Gertrude Street would not regain its aristocratic status of the 1800s. Fitzroy had become a less desirable place to live and the low number of owner-occupiers decreased further as more owners moved out of the working-class suburb, leasing their buildings to tenants. Gertrude Street continued its commercial activities, serving locals and visitors, but was now overshadowed by trade on Smith and Brunswick streets (Robertson et al, 2008:21). Key Edwardian development within the strip at this time included the Champion Hotel at 50-54 Brunswick Street and its associated shops at 94-100 Gertrude Street (1911).

Figure 6. Looking east down Gertrude Street in 1905, at the intersection with Brunswick Street (right is Glass Terrace) (COYL Id. FL294).

Figure 7. Looking west down Gertrude Street in 1905. On the left is the three-storey buildings at 158-164 Gertrude Street (COYL Id. FL666).

Figure 8. Photo of Gertrude Street dating to 1905 (COYL, Id. FL667).

Figure 9. Illustration from the 1905 Collingwood and Fitzroy illustrated Directory and Handbook, of the multi-storeyed Chas. Johnston & Co., Furniture Manufacturers building at 184-186 Gertrude Street. The top two floors were destroyed by fire in 1963 (COYL, Id. FL670).

Following World War I, there was an increased demand for housing for returned servicemen, people moving towards the city for improved job prospects, an increasing number of immigrants, and return of Aboriginal people to the area. With this influx, Fitzroy became a poorer population and – due to its proximity to Melbourne – continued to attract the unemployed and homeless. Along Gertrude Street some buildings were condemned. Criminal activities thrived; the infamous Melbourne criminal Squizzy Taylor is often mentioned in association with the Renown Hotel (former Leviathan) at 146-148 Gertrude Street. By the end of the 1920s Fitzroy was regarded as one of Melbourne's worst slums, with a very high level of unemployment. In an attempt to remedy the situation, the government reduced the number of hotels permitted to operate to seven premises by 1930 (Robertson et al, 2008:23).

Some businesses took advantage of the low property values and vacancies. It was in the 1920s and '30s that Gertrude Street became known for its furniture stores between Napier and Gore streets (Robertson et al, 2008:24). Commercial occupants along the remainder of Gertrude Street in 1930 comprised a range of businesses serving the local community, such as grocers, Chinese laundries, dressmakers, dry cleaners, a plumber, chemist, hardware shop, butchers, clothing dealers, secondhand dealers, pawnbrokers, hairdressers and dressmakers.

During the Depression of the 1930s some Gertrude Street businesses survived while others succumbed to financial hardship. The illegal activities and criminal aspect of the street continued. However, 'against this backdrop of despair and misery developed the fabric of camaraderie, trust and support that characterised Fitzroy' during this period. A pharmacist on Gertrude Street in the 1930s, Duncan Reilly, stated that 'though poor and depressed, there was still a richness of life in Fitzroy' (Robertson et al, 2008:24).

The community of Gertrude Street struggled into the 1940s. During World War II, Gertrude Street experienced further overcrowding and poverty and the terraces that lined the street also housed American servicemen. Buildings fell into disrepair and the rate books recorded an increasing number of condemned buildings (Robertson et al, 2008:25, 31). By the early 1940s the Sands & McDougall Directories listed a lower number of businesses operating, and a higher proportion of residents. European names began to appear as occupants of Gertrude Street, and cafes and social clubs emerged, opened by new immigrants (Robertson et al, 2008:25, 31).

Figure 10. The poor condition of some shops in Gertrude Street in 1948 (COYL, Id. FL411).

Post-War

Homelessness, overcrowding of houses and criminality continued into the 1950's, 60's and 70's. Gertrude Street was considered a 'red light' district with gambling at the back of cafes (Rittman & Wilson 2017:41). However, change was starting.

Following World War II, Gertrude Street experienced a wave of post-war immigration. New immigrants, particularly from Mediterranean countries, moved into the vacant buildings and established green grocers, fruit shops, fish and chip shops, cafes and clubs, bringing a new community and vibrancy to the street. By 1972, 12 clubs and coffee lounges had been opened in Gertrude Street by Greek, Macedonian, Turkish, Albanian and Yugoslav community members (Robertson et al, 2008:26). Despite this reinvigoration, Gertrude Street in the 1950s no longer compared to the commercial scale of Brunswick and Smith streets, with its drastically reduced number of businesses (Harding 2008:295).

During the post-war period, an increasing number of Aboriginal people returned from rural locations to their friends and family around Gertrude Street, in part due to the closure of reserves and missions which were subdivided by the government to make way for soldier settlements. Fitzroy, and Gertrude Street in particular, became the social and political hub for the Aboriginal community in Melbourne (Robertson et al, 2008:25, 39). From the 1960's onwards, a number of services for this community were set up on Gertrude Street, focusing on health, legal and housing assistance. The Aboriginal Community Health Centre was located on the corner of Charcoal Lane at 136 Gertrude Street from 1979 (previously at no. 229 from 1973). The Koori Club, a social club, opened in 1969 (no. 41), Fitzroy Stars Aboriginal Community Youth Club Gymnasium in 1977 (no. 184-186) and the Koori Information Centre in 1982 (no. 120). Hotels often became meeting places. The Builders Arms Hotel (no. 211; built c1850-1970) was known as the 'Black Pub of Melbourne' where people knew they would meet friends from Country, and would mix with the old locals and post-war immigrants. In the 1960s and '70s the Builders Arms was the base for Australia's black power movement, led by Bruce McGuinness (Robertson et al, 2008:31-33, 43; Fitzroy Aboriginal Heritage Walking Trail).

Figure 11. Land Rights demonstrators march down Gertrude Street in 1973. Pictured are Monica Hoffman, Sue Chilly, Bruce McGuinness and Hillary Saunders (Alick Jackamos Collection, via the Fitzroy Aboriginal Heritage Walking Trail).

Parts of the Gertrude Street streetscape saw drastic changes in the 1960s as a result of 'slum clearance', particularly on the north side of the street. Investigations into sub-standard housing in Fitzroy had commenced in the late 19th century, managed by local councils who would condemn and demolish unsanitary buildings and makeshift housing. Concern and investigations into slum housing continued to increase into the 1930s, when the Housing Commission and Slum Abolition Board were formed in the late 1930s. The Commission turned its focus to Fitzroy, Collingwood and Richmond by the 1950s with its 'slum clearance', or 'housing reclamation', to make way for high-density housing and new developments. In the 1960s and '70s the state government concentrated on the clearance of slums that had developed since the Depression of the 1890s. In the late 1960s, the entire block of over 60 shops and 120 houses between Gertrude, Brunswick and Napier streets was demolished by the Housing Commission, and replaced with the high-rise development of Atherton Gardens. These high-rise apartments housed locals in need, the Aboriginal community and later waves of immigrants, including those from Africa in the 1980s (Barrett 1971:166; Robertson et al, 2008:33). Atherton Gardens became a popular meeting place for the Aboriginal community, where families would reunite and stories were passed down.

In 1969, the Fitzroy Residents Association formed in response to the slum clearances and the state government's proposed large-scale demolition in Fitzroy and Fitzroy North. The Association was successful in saving much of Fitzroy's historic building stock. In the late 1970s, the City of Fitzroy recognised the cultural significance of the area and was the first municipality to complete building conservation studies in 1978 and 1979. In the 1980s, Council and local residents' groups banded together to prevent further high-rise projects by the Housing Commission, and to thwart St Vincent's Hospital from demolishing a row of houses on Gertrude Street for expansion of the complex (Kiss, 2014:53).

Figure 12. Looking east down Gertrude Street, c1969. Right is the Macedonian Social Club at 218 Gertrude Street, now Rose Chong's costume shop (SLV Image H2010.105/160e).

Figure 13. Houses in poor condition on Gertrude Street, 1983 (COYL, Id. FL180).

Some larger-scale developments occurred in the late-twentieth century, replacing strips of earlier buildings, particularly west of Brunswick Street. In 1980, costume maker Rose Chong (220 Gertrude Street), recalled that at that date Gertrude Street had many boarded-up shopfronts among the social clubs and European cafes. She recalls that the 'scary' atmosphere of the street still lingered into the early 1990s, however, by the end of the 1990s the street was changing again. The Builders Arms changed ownership and attracted a more cosmopolitan crowd, other businesses arrived, the European social clubs relocated and the street transformed as the area gentrified (Robertson et al, 2008:35).

Twenty-first century

Gertrude Street today is known Australia-wide as an important meeting place for Aboriginal people and remains the location of a number of services to assist the community (Robertson et al, 2008:1). Atherton Gardens and areas near the corner of Gertrude and Gore streets are recognised as areas of Aboriginal Cultural Heritage Sensitivity.

In terms of European settlement, Fitzroy was the first Melbourne suburb and remains the most complete repository of buildings fabric of the 1850s and '60s (Lewis, 2014:6). The local community have long safe-guarded the area's heritage buildings. Some recent development has occurred, including a large-scale apartment building adjacent to George Street.

In 2019, Gertrude Street – with its dominant Victorian-era building stock – continues to serve the local community and is an independent food, fashion and gallery destination with a strong Traders Association. The street again houses owner-occupiers and is known as an 'exciting and dynamic place to be with a diversity of people and businesses' (Robertson et al, 2008:35-7).

Figure 14. Gertrude Street Projection Festival lights up the historic commercial strip (Fitzroyalty, 2010).

Physical Description

The Gertrude Street Precinct is a linear commercial precinct in Fitzroy which comprises Gertrude Street from Smith Street to Brunswick Street and further west to Fitzroy Street on the north side. Abutting the western end of the precinct, on the north side of Gertrude Street, is the World Heritage Environs Area Precinct (HO361). The large section on the north side of Gertrude Street from Brunswick Street to Napier Street, known as Atherton Gardens and occupied by high-rise social housing, is excluded from the precinct.

The main development period of the Gertrude Street Precinct is from the 1850s to the 1890s and the streetscape dates largely from this period. It is a commercial precinct with a dominant streetscape of attached two-storey Victorian shops and residences, with no setback from the street boundary. The facades of these buildings are predominantly cement rendered and parapeted with repetitive rows of upper level fenestration. They vary in both scale and detailing - generally facades from the earlier Victorian period of the 1850s-70s are smaller in scale with little applied decoration, and those from the High Victorian period of the 1880s and 1890s are of greater height with more elaborate detailing. This is evident throughout the precinct including Early Victorian examples (nos. 153-159) and High Victorian examples (nos. 161-167; 184-186; and Blackett's Shop and Residence at nos. 158-164 - an elaborate three-storey red brick row).

Other commercial buildings contribute to the Victorian character of the precinct, including the Former ES&A Bank (nos. 136-138) and corner hotels such as the Builders Arms Hotel (nos. 211-217), the former United Service Club (no. 122) and the former Leviathan Hotel (nos. 146-148).

A small group of Edwardian buildings from the early twentieth century also make a contribution to the precinct. These present as red brick (some overpainted) facades with cement render detailing. The most elaborate, and intact, building from this period is the Champion Hotel at the south-east corner of Brunswick Street and the associated shops and residences to the east in Gertrude Street (nos. 94-100).

The original form and detailing of a small number of shopfronts remains evident in the precinct with display windows, tiled plinths and entry recesses retained.

Figure 15. South side of Gertrude Street – east end (GJM Heritage, October 2019)

Figure 16. South side of Gertrude Street – eastern end (GJM Heritage, October 2019)

Figure 17. North side of Gertrude Street – east of Napier Street (GJM Heritage, October 2019)

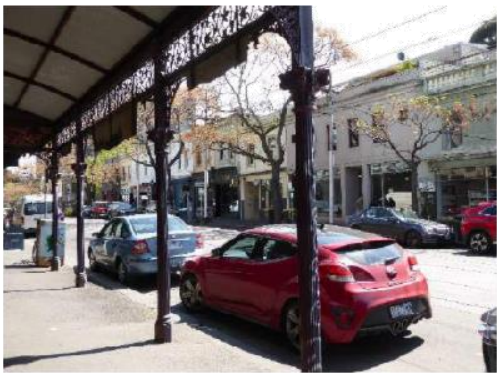

Figure 18. North side of Gertrude Street – west end (GJM Heritage, October 2019)

Integrity

The Gertrude Street Precinct retains a very high degree of integrity to the Victorian and Edwardian period in fabric, form and detail. While some alterations have been made to these buildings, particularly at street level, this does not diminish the ability to understand and appreciate the place as a fine example of a Victorian and Edwardian commercial precinct.

Comparative Analysis

A number of precincts are included in the Heritage Overlay of the City of Yarra as highly intact commercial 'High Streets' which date from the Victorian and Edwardian periods. These include:

- Brunswick Street Precinct, Fitzroy (HO311)

- Smith Street Precinct, Fitzroy/Collingwood (HO333)
- Queens Parade Precinct, North Fitzroy/Clifton Hill (HO330)
- Swan Street Precinct, Richmond (HO335)
- Bridge Road Precinct, Richmond (HO310).

These precincts have been included in the Heritage Overlay as important turn of the century 'High Streets' in the City of Yarra. They have operated as key commercial centres in the municipality since the mid-nineteenth century and retain substantial numbers of intact commercial buildings to enable the clear demonstration of the principal characteristics of a Victorian and Edwardian 'High Street'.

As an important and early 'High Street' in Fitzroy, the Gertrude Street Precinct exhibits similar characteristics to these identified High Street precincts. Operating as a commercial centre from the mid-nineteenth century, the precinct retains substantial numbers of buildings, primarily from the Victorian period, to clearly demonstrate the principal characteristics of a major nineteenth century 'High Street'.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

The Gertrude Street Precinct is an important and early 'High Street' in the City of Yarra and has functioned continuously as one of Fitzroy's key commercial centres since the mid-nineteenth century. It retains a substantial collection of highly intact commercial buildings, predominantly from the Victorian period, including shops and associated residences, hotels and a former bank building. Together these buildings demonstrate the development of this 'High Street', particularly from the 1850s to c1900 when substantial growth in the street occurred, and are illustrative of the enduring role the street has played in the economic and social life of Fitzroy since the establishment of the suburb.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

The highly intact streetscape of the Gertrude Street Precinct clearly demonstrates the principal characteristics of a Victorian 'High Street' in the City of Yarra. Typical characteristics – including a predominantly two-storey Victorian street wall height, parapeted rendered or red brick facades, repetitive upper floor fenestration, and ground floor shopfronts – are displayed in the original forms, fabric and detailing of the majority of the buildings. The streetscape is particularly intact and consistent in architectural form and expression.

Criterion E: *Importance in exhibiting particular aesthetic characteristics (aesthetic significance).*

The Gertrude Street Precinct contains a number of individually significant places which are well-considered and carefully detailed examples of commercial buildings. These include, among others, shops and residences at 153-159 and 184-186 Gertrude Street, the Builders Arms Hotel (211-117 Gertrude Street) and the Champion Hotel and associated shops and residences (50-54 Brunswick Street and 94-100 Gertrude Street). Variations in façade detailing throughout the precinct, including parapet ornamentation, balustrading and pediments, and applied decoration, make an aesthetic contribution to the overall character of the precinct.

Criterion G: *Strong or special association with a particular community or cultural group for social, cultural or spiritual reasons. This includes the significance of the place to Indigenous peoples as part of their continuing and developing cultural traditions (social significance).*

The Gertrude Street Precinct is an important social and political hub in Melbourne for the Aboriginal community. A number of services were established in buildings in the precinct from the 1960s and it has since become a long and enduring meeting place for Aboriginal people.

Grading and Recommendations

It is recommended that the place be included in the Heritage Overlay of the Yarra Planning Scheme as a heritage precinct.

Recommendations for the Schedule to the Heritage Overlay (Clause 43.01) in the Yarra Planning Scheme:

External Paint Controls?	No
Internal Alteration Controls?	No
Tree Controls?	No
Outbuildings or Fences not exempt under Clause 43.01-3?	No
Prohibited Uses Permitted?	No
Incorporated Plan?	Yes - Incorporated Plan under the provisions of clause 43.01 Heritage Overlay, Planning permit exemptions, July 2014
Aboriginal Heritage Place?	No

Executive Summary

Hansen Partnership, on behalf of the City of Yarra (Council), is completing a Built Form Review of Brunswick Street (Fitzroy), Smith Street (Collingwood/Fitzroy) and associated mixed use precincts of Fitzroy East (north of Johnston Street between Young Street and Smith Street) and Town Hall (centred around the Fitzroy Town Hall). The purpose of the Built Form Review is to determine where and how new development can appropriately occur. The desired built form outcomes will be translated into Design and Development Overlay (DDO) controls for the study area.

The heritage advice contained within this report will help ensure that the Built Form Review and the subsequent DDO controls appropriately respond to the heritage fabric and values of the study area.

This advice then considers the built form parameters that are needed to ensure the heritage values of the study area are appropriately managed and protected, and that good heritage outcomes are being achieved for new or redevelopment. This includes a consideration of whether mandatory or discretionary controls are appropriate to achieve greater clarity in heritage outcomes.

A separate Heritage Anomalies report analyses the existing heritage values and qualities along Brunswick, Johnston and Smith Streets, as well as the Fitzroy Town Hall and Fitzroy East mixed-use precincts. It identifies gaps, inconsistencies and inaccuracies with the current heritage controls and provides recommendations for addressing these issues.

Presentation of the Report

This Heritage Analysis and Recommendation Report is presented in three parts:

Part I: The Project and Planning Framework
Part I introduces the project, the methodology applied to the project and the planning framework in which the project is occurring.

Part II: Heritage Analysis
Part II contains a heritage analysis of each built form precinct within the study area. It details the heritage qualities and values of each precinct, identifies any gaps or issues with the existing heritage framework and provides recommendations for appropriately managing heritage places within the study area.

Part III: Built Form Recommendations
Part III contains specific built form recommendations to ensure heritage places and values are appropriately managed within a changing urban context. The specific recommendations are informed by modelling prepared by Hansen Partnership.

Part I: The Project and the Study Area

1. Introduction

1.1 Yarra's High Streets

The City of Yarra is endowed with one of the largest and most highly intact collections of turn of the century 'High Streets' in the State of Victoria. These High Streets include the Major Activity Centres of Swan Street and Bridge Road in Richmond, Brunswick Street in Fitzroy, Smith Street straddling the suburbs of Fitzroy and Collingwood and Victoria Street, in Abbotsford and Richmond. They also include a number of Neighbourhood Activity Centres, including Rathdowne Street and Nicholson Street in Carlton North, St Georges Road in Fitzroy North, Queens Parade in Fitzroy North/Clifton Hill, Gertrude Street in Fitzroy, and Johnston Street in Fitzroy and Collingwood.

This collection of High Streets is unique to Melbourne and helps to define the character of the municipality. Their value to the community is recognised by their inclusion in the Heritage Overlay of the Yarra Planning Scheme. However, the Activity Centre status of these high streets presents a challenge: how do we manage the tension between the desire to retain these heritage values of these areas and the need to ensure the long-term sustainability of these centres and meet the growth objectives of the Yarra Planning Scheme?

1.1.1 Brief History of Brunswick Street

The following brief history is drawn from the citation for HO311 Brunswick Street Precinct, the 1998 *City of Yarra Thematic History* (Allom Lovell & Associates) and supplemented with additional research.

Brunswick Street was among the first streets in Fitzroy to develop commercially, with Crown Allotments sold from 1839. Benjamin Baxter was responsible for the creation of the earliest sections of Brunswick Street, quartering his allotment to form the first intersection (with Gertrude Street) of Newtown, now Fitzroy, in what was unofficially the 'District of Collingwood'. The alignment of Brunswick Street was extended north by neighbouring land owners and by 1851, it had reached Alexandra Parade. It was one of the first north-south thoroughfares through Fitzroy.

Prominent and wealthy Melbourne individuals were the first to populate Newtown. By 1841, a number of small houses and villas had been constructed between Victoria Parade and Palmer Street. Shops were also established to provide local residents with everyday needs such as food, clothing and building materials. Following the discovery of gold in the early 1850s, Fitzroy was the fastest growing ward within the City of Melbourne. By 1854 subdivision was near complete and according to one memoir '…shops rivalling those in Bourke-street, Melbourne, were to be found in Brunswick-street'. From 1853, terrace houses became the preferred residential housing type, with Melbourne's wealthy favouring the elevated land at the southern end of Brunswick Street. The house at 21 Brunswick Street (1851), named 'Mononia', and designed by architect Charles Laing, is an important surviving example of an early mansion built for a wealthy resident of Fitzroy.

The 1860s to 1880s was a period of consolidation for Fitzroy. Sites occupied by humble or unsubstantial structures were replaced with more permanent premises, terraces were completed, and unoccupied land was built upon. By the 1870s, the scale of retail outlets had increased and large premises had been established, with Brunswick Street continuing to rival Melbourne's central business district for trade. A cable tram, installed in 1886 and later electrified, aided Brunswick Street's development and further boosted trade. Today the Brunswick Street streetscape has a strong presence of Victorian buildings dating from the 1870s and 1880s. Notable buildings constructed during this period were the Fitzroy Post Office (no. 296, 1883) and the three-storey shop row at no. 236-252, designed by John Beswicke (1888).

The 1890s depression caused construction in Fitzroy, and wider Melbourne, to slow significantly for a decade, though the development of Brunswick Street was largely complete by the turn of the century. Brunswick Street continued as a local retail and service precinct and some development occurred during the Edwardian period. An example of development from this period is the Perseverance Hotel (no. 196), which was constructed in 1911. Large commercial premises continued to trade until the arrival of the car, which saw the introduction of suburban shopping centres.

In the post-war period, there was increased demand for housing for returned servicemen and immigrants. The changed demographics of the area was reflected in the small-scale industrial use of the shops along Brunswick Street. An important transformation in the character of Brunswick Street in this period was the demolition of a large area of 'slum housing' in the 1960s and the erection of the Atherton Gardens estate in the early 1970s. More than 120 houses and 60 shops, many fronting Brunswick Street, were demolished as a result.

In the same period, Brunswick Street was viewed as a derelict street with many closed shops and few commercial businesses serving locals. Low rent encouraged artists and students to move into the area, which resulted in the street's revitalisation in the late 1970s. Brunswick Street has since transformed into Melbourne's centre for Bohemian cafes, bars, restaurants, bookshops and boutiques and its Victorian and Edwardian streetscape character remains remarkably intact.

1.1.2 Brief History of Smith Street

The following brief history is drawn from the Statement of Significance for HO333 Smith Street Precinct, the 1998 *City of Yarra Thematic History* (Allom Lovell & Associates) and supplemented with additional research.

Smith Street was originally established as a route from Melbourne to Heidelberg, following an irregular track that ran north-east from the top of Bourke Street. Robert Hoddle's survey re-routed and formalised the track into the new Eastern Road, later named Smith Street. It was to form the boundary between Fitzroy and Collingwood and was first subdivided by the colonial government in 1838. Private subdivisions on the western (Fitzroy) side of the street occurred from 1842. Subdivision commenced on the eastern (Collingwood) side in 1849.

Allotments in Smith Street remained largely undeveloped until 1851 when industry began to develop in the area. The absence of a local government and the subsequent lack of local facilities accounted for this slow growth. The area experienced a rapid population boom following the gold rush and by the mid-1860s a number of small businesses were operating on Smith Street; the east side of the street in particular accommodated a variety of shops serving local everyday needs. Examples of this type of development include the shops at 293-295 Smith Street (1852-3), which are some of the earliest surviving retail buildings in Melbourne. The Grace Darling Hotel (no. 144), built in 1854 and the former Foresters Hall at no. 114 (1868) are early buildings of architectural note on Smith Street.

Smith Street catered for a diverse social mix in the 1860s and 1870s – the Collingwood working class (including artisans, labourers, pensioners and widows, who occupied the 'flats' at the bottom of the 'Collingwood Slope', east of Wellington Street). The period was one of consolidation for Smith Street, with many of the early insubstantial structures replaced with more permanent premises, and single-fronted shop buildings replaced with shop rows. Examples include the two-storey shops at no. 196-198 (1867) and no. 252-254 (1875). Smith Street soon became known as one of the largest and most diverse commercial centres in Melbourne and was described in the 1870s as being 'a thoroughfare only second to three or four of the central streets in the city'. Retail businesses included drapers, grocers, shoemakers and clothiers.

The economic boom of the 1880s left its mark on Smith Street. The period saw the replacement of many single-fronted shops with more substantial and elaborate buildings, including large-scale emporia, and Smith Street became identified with businesses which combined manufacturing and retailing. Most notable of these enterprises was Foy and Gibson, which developed a series of buildings stretching for approximately two kilometres from north to south. One of the remaining Foy and Gibson buildings fronting Smith Street is the former Ladies Clothing Store at no. 145-163, built in the Edwardian period (c1911). Similarly, Henry Ackman & Co occupied shops, warehouses and factories on both sides of Smith Street and built the Stanford Block (no. 119-129) in 1888-9.

A cable tram, introduced in 1886-7 and including one route running from Gertrude Street to Smith Street, helped to boost trade. By the turn of the century, Smith Street had been almost fully developed, and was characterised by its highly ornate Victorian buildings dating from the 1870s and 1880s. Examples from this period of development include the Italianate shops at no. 298-312 (c1880-89) and the former Collingwood Post Office (1891, no. 174). Of particular note are the three-storey Victoria Buildings (1888-9) at 193-207 Smith Street.

Hints of the 1890s depression were felt in Collingwood from the 1880s, when rents in the area began to rise while wages remained stagnant. The depression hit the working class hard, earning Collingwood its reputation as a 'slum' that would persist well into the 1900s. The community united however, and commercial trade endured along Smith Street. In the early to mid-twentieth century, Smith Street became the furniture retailing centre for the northern and eastern suburbs. Paterson's Furniture Warehouse at no. 173-181 (1911) is a prime example of this phase of development.

The 1930s depression exacerbated the community's earlier financial struggles and the fortunes of Smith Street declined following World War II. The emporia and factories closed and buildings were demolished or partly abandoned. In the 1950s, residents moved to the outer suburbs following the Housing Commission of Victoria's 'slum clearance' projects that targeted large stretches of Collingwood's residential areas. European immigrants, primarily from Greece, Italy, Yugoslavia, Turkey and Lebanon, moved into the area to occupy vacant property and subsequently began to revitalise Smith Street.

In recent times, many of the large industrial complexes have been adapted for residential use and Smith Street has become more gentrified.

1.1.3 Brief History of South Fitzroy

The majority of the study area is included within the South Fitzroy Precinct (HO334) with part of Gertrude Street subject to HO361 (World Heritage Environs Area Precinct), part of the Alexandra Parade Boulevard Precinct subject to HO321 (Gold Street Precinct, Collingwood), and part of the Victoria Parade Boulevard Precinct subject to HO336 (Victoria Parade Precinct, Collingwood). In addition, individual Heritage Overlays apply to Barcelona Terrace Gardens, 25-37 Brunswick Street (HO153), 4 Henry Street (HO422) and State School No.450, George Street (HO157). Numerous properties are also included within the Victorian Heritage Register.

The following brief history of this area is drawn from the Statement of Significance for HO334 South Fitzroy Precinct, the 1998 *City of Yarra Thematic History* (Allom Lovell & Associates) and supplemented with additional research.

The first 'suburban' land allotments to be sold outside of the Melbourne town reserve were in the areas now known as Fitzroy, Collingwood and Richmond. Allotments 48 to 88 covered the area known colloquially in the mid-nineteenth century as the 'district of Collingwood'. These allotments lay to the north-east of the City of Melbourne and covered the area bounded by Nicholson Street, Reilly Street (now Alexandra Parade), the Yarra River and Victoria Parade. A smaller portion of this area, bounded by Nicholson Street, Smith Street, Victoria Parade and Alexandra Parade came to be known as Fitzroy. The original allotments in Fitzroy varied in size, with most falling between 12 and 28 acres. These were suitable for large estates, and for small-scale rural or semi-industrial pursuits such as dairy farms, market gardens and brickyards.

Land reserved by the Government for roads consisted solely of Nicholson Street, Johnston Street, Smith Street, and Victoria and Alexandra Parades. Following the first land sales in 1838-9, there were no controls imposed upon the purchasers of the land. The lack of controls on the size and orientation of subdivision and the width of private roads led to the emergence of an ad-hoc street pattern and layout of allotments in South Fitzroy. The *Act for Improvements in Fitz Roy Ward in the City of Melbourne*, passed in 1854, was designed to solve the street alignment problem and local politics in the area in the 1850s and 1860s were largely concerned with the realignment of the worst of these streets.

Despite these issues, Fitzroy was an attractive residential locale in the 19th century and large villas were built for bankers and merchants on the wide thoroughfares between Gertrude Street and Victoria Parade. It was simultaneously a favoured location for manufacturing, including the boot and clothing trades and metal industries. Workers lived in more cramped conditions, generally comprising one or two-roomed terraces.

In 1850, the *Act for regulating Buildings and Party Walls, and for preventing mischiefs by fire in the City of Melbourne,* which enforced fireproof construction and minimum street widths in the City of Melbourne was introduced. This encompassed South Fitzroy and resulted in most buildings of the period being constructed of bluestone or brick. One of the earliest surviving houses in Fitzroy is the two-storeyed central section of Osborne

House, constructed in 1850 at 38-44 Nicholson Street. The following two decades (1860s and 1870s) were a period of consolidation for South Fitzroy – works included the replacement of insubstantial structures of the earlier decades with more permanent premises along commercial strips, as well as the completion of terraces and the renovation of many 1850s bluestone buildings. An example of a commercial shop row is the former Gertrude Hotel (63-65 Gertrude Street), which was designed with a row of shops attached in 1873. The first stage of the Fitzroy Town Hall was completed in 1873-4, four years after the area was proclaimed a town. It was proclaimed a City in 1878.

In 1886-7, a cable tram was introduced to South Fitzroy. Comprising routes along Nicholson Street from the city, Gertrude Street to Smith Street, and Brunswick Street, the new transport system boosted trade along these commercial strips. The tram also increased the mobility of Melbourne's population and as a result, inner suburban residents began to move further out. The former cable tram engine house (1886) survives at the corner of Gertrude and Nicholson streets.

With the onset of the 1890s depression and the movement of Fitzroy's wealthier residents to the outer suburbs, the large villas located at the southern end of Fitzroy were repurposed as boarding houses for factory workers and the suburb became more working class. Brothels also began to appear, with Gertrude Street in particular becoming a 'red light' district. The economic fortunes of Victoria recovered after the turn of the century, and while there was a period of optimism at the beginning of the century accompanied by some new development, Fitzroy had become a less desirable place to live. The already low number of owner-occupied properties decreased further, as more owners moved out of the working-class suburb and leased their buildings to tenants.

Following World War I, there was an increased demand for housing from returned servicemen, from people moving towards the city for improved job prospects, an increased number of immigrants, and the return of Aboriginal people to the area. With this influx, Fitzroy became a poorer population and, because of its proximity to Melbourne, continued to attract the unemployed and homeless. Criminal activities thrived and by the 1930s, Fitzroy was regarded as slum territory, its name synonymous with crime, poverty and immorality. In the 1950s, the State Government drew up plans for slum clearance and two public housing estates were built in South Fitzroy in the 1970s: one in Hanover Street and one at the southern end of Brunswick Street.

During the post-war period, a number of Aboriginal people returned from rural locations to their friends and family around Gertrude Street, in part due to the closure of reserves and missions which were subdivided by the government to make way for soldier settlements. Fitzroy – and Gertrude Street in particular – became the social and political hub of Melbourne for the Aboriginal community. From the 1960's to 1980s a number of services for the Aboriginal community were set up on Gertrude Street, focussed on health, legal and housing assistance.

The demographic landscape of Fitzroy also transformed in the post-World War II era with the arrival of large numbers of European immigrants from Greece, Italy, Yugoslavia, Turkey, Lebanon and Spain. These groups altered the commercial and street life of the suburb, introducing new foods and languages as well as institutions such as espresso bars, cabarets and gambling clubs. Fitzroy witnessed further revitalisation in the 1970s when the began attracting an increasing number of university students and artists. This new influx again altered the social and economic fabric of Fitzroy and it is today regarded as a vibrant centre for food, culture, and the arts.

1.1.4 Brief Description of the Brunswick and Smith Street Study Area

The Brunswick and Smith Street study area is bound by Alexandra Parade to the north, Nicholson Street to the west, Wellington Street to the east and Victoria Parade to the south.

The land specifically considered in this report is subject to either a commercial (C1Z and C2Z) or mixed use (MUZ) zone within the study area (refer to Figure 3).

Part II of this report describes the study area in greater detail.

1.2 Scope of the Heritage Analysis & Recommendations Report

GJM Heritage has been commissioned to provide a detailed analysis of the heritage considerations for the following precincts within the Brunswick and Smith Street study area and to detail recommendations for the future management of these areas in the context of potential new development. The precincts considered in this report are:

- Brunswick Street Activity Centre Spine
- Town Hall Mixed Use Precinct
- Smith Street Activity Centre Spine
- Johnston Street Activity Centre Spine
- Fitzroy East Mixed Use Precinct.

The Collingwood Mixed Use Precinct was considered as part of a separate study: *Collingwood Mixed Use Pocket Heritage Analysis & Recommendations*, GJM Heritage, 6 June 2018. The Gertrude Street Activity Spine, Fitzroy West Mixed-Use Precinct and the Alexandra and Victoria Parade Boulevard Precincts are subject to further strategic heritage and planning studies.

The purpose of our advice is to ensure that any DDO controls arising from the Built Form Review take proper account of the heritage values of the precincts and individual buildings within the study area, to ensure appropriately weight is given to heritage when considering new development within the Brunswick and Smith Street corridors and surrounding mixed use precincts.

The analysis within this report considers:

- The suitability of the extent of the Heritage Overlays for places and precincts within the Brunswick and Smith Street corridors and surrounding mixed use precincts.
- The heritage grading of each property within the Heritage Overlay in the *City of Yarra: Review of Heritage Overlay Areas 2007 – Appendix 8, Revised May 2018* (Appendix 8).
- The currency of the existing Statements of Significance for places and/or precincts to ensure they provide adequate guidance for the management of important heritage features.
- Places not currently included in the Heritage Overlay but which warrant further consideration for inclusion in the Heritage Overlay.
- Built form parameters necessary to appropriately manage increased commercial and residential development within the context of the existing heritage place and/or precinct.

1.3 Methodology

The key resources on which the heritage analysis is based are:

- Victorian Heritage Register
- Yarra Planning Scheme Heritage Overlay Maps 1HO, 2HO, 5HO and 6HO
- Relevant Statements of Significance for heritage places and precincts within the study area and associated heritage studies
- Appendix 8.

The above documents have been reviewed in the context of the following clauses from the Yarra Planning Scheme and the relevant Planning Practice Notes (PPNs) published by the Department of Environment, Land, Water and Planning:

- The relevant provisions of the Yarra Planning Scheme, in particular:
  - Clause 15.03-1S 'Heritage conservation
  - Clause 21.05-1 'Heritage'
  - Clause 22.02 'Development Guidelines for Sites Subject to the Heritage Overlay'
  - Clause 22.03 'Landmarks and Tall Structures'
  - Clause 22.10 'Built Form and Design Policy'

  - Clause 43.01 'Heritage Overlay'
  - Clause 43.01 'Schedule to the Heritage Overlay'
  - Clause 55.07 'Apartment Developments'
- PPN 1: *Applying the Heritage Overlay* (August 2018) (PPN1)
- PPN 59: *The role of mandatory provisions in the planning schemes* (June 2015) (PPN59)
- PPN 60: *Height and setback controls for activity centres* (September 2018) (PPN60).

The following Planning Panels Victoria (Panel) reports are relevant to the implementation of the Built Form Review as they consider the appropriateness of DDOs (containing both mandatory and discretionary provisions) within activity centres (or in the case of Melbourne Amendment C240, the Capital City Zone) that are also subject, in part, to the Heritage Overlay:

- Boroondara C108 'Neighbourhood Centres and Commercial Corridors' (26 February 2014)
- Banyule Planning Scheme Amendment C93 'Implementation of the Ivanhoe Structure Plan' (1 July 2014)
- Moreland Planning Scheme Amendment C134 'Brunswick Activity Centre' (15 May 2015)
- Melbourne Planning Scheme Amendment C240 'Bourke Hill' (4 May 2015)
- Bayside Planning Scheme Amendments C113, C114 and C115 'Mandatory provisions for the Sandringham Village, Bay Street and Church Street Activity Centres' (14 January 2015)
- Whitehorse Planning Scheme Amendment C175 'Box Hill Metropolitan Activity Centre' (6 October 2017).
- Stonnington Planning Scheme Amendment C223 'Glenferrie Road and High Street Activity Centre' (15 December 2017)
- Darebin Planning Scheme Amendment C161 'Fairfield Village' (3 December 2018)
- Yarra Planning Scheme Amendment C220 'Johnston Street Built Form Controls' (22 February 2019)
- Melbourne Planning Scheme Amendment C308 'Central Melbourne Urban Design' (16 May 2019)
- Melbourne Planning Scheme Amendment C258 'Heritage Policies Review' (21 May 2019).

Relevant Panel reports are discussed further in Section 3 of this report.

We have approached the preparation of our heritage analysis as follows:

1. Completion of a desktop review of the above listed documents, Panel Reports, heritage mapping and grading information, and the Statements of Significance for heritage precincts and individually significant buildings, including those places registered on the Victorian Heritage Register (VHR). The extent of the Heritage Overlays were cross-checked against Google Streetview. This preliminary review familiarised the project team with the heritage fabric of the study area prior to fieldwork being undertaken.
2. Completion of fieldwork by Jim Gard'ner and Ros Coleman. All buildings and structures within the study area were inspected from the public realm with particular attention paid to the presentation of heritage buildings to the street frontage. The rear and side interfaces to the neighbouring residential areas subject to the Heritage Overlay were also considered, where relevant. The purpose of the fieldwork was to:
   - Review the suitability of the extent of the existing Heritage Overlays and to identify if gaps existed.
   - Review the suitability of the existing Statements of Significance for heritage places and precincts against the extant heritage fabric and to identify where the statements required updating for the purposes of properly considering built form recommendations.
   - Review the extant heritage fabric against the heritage gradings contained within Appendix 8 and to identify any inconsistencies and inaccuracies.
   - Review the heritage buildings and streetscapes within the study area to identify the architectural and streetscape heritage features (e.g. parapets, roof forms, view lines, corner sites) that are relevant to a consideration of built form recommendations.
3. Participation in workshops with Council and Hansen Partnership. The workshops:

- Reviewed the proposed 'built form precincts' within the study area, characterised by existing built form characteristics.
- Identified the desired future character of the built form precincts against heritage analysis and state and local planning policy drivers.
- Reviewed the key views of landmarks identified in Clause 22.03 – Landmarks and Tall Structures. Analysis was also informed by the Appendix A - 'Landmarks & Views Assessment' of the report entitled *Review & Development of the City of Yarra Landmarks Policy*, Ethos Urban, December 2017.
- Identified local landmarks within each streetscape or precinct
- Tested built form parameters for new development against the existing heritage fabric utilising oblique views from natural eye level (1.6m) on the public footpath, informed by modelling prepared by Hansen Partnership. Views were only considered from public streets; laneway and private realm views were not assessed. Note: this advice took the ¾ : ¼ ratio of street wall to new built form sightline test from Moreland DDO18 (discussed further at section 3.3) as a starting point and also considered oblique views along streets.

4. Finalisation of heritage recommendations for new built form parameters having considered the above.

2. Analysis of the Planning Context

2.1 Activity Centre Planning and Heritage

The *Planning & Environment Act 1987* and the Victoria Planning Provisions (VPP) requires planning and responsible authorities to take a balanced approach to strategic and statutory planning functions that consider potentially competing objectives in an integrated manner to deliver a net community benefit for current and future generations.

The objectives of planning in Victoria as set out in Section 4(1) of the Planning and Environment Act are:

- *To provide for the fair, orderly, economic and sustainable use and development of land.*
- *To provide for the protection of natural and man-made resources and the maintenance of ecological processes and genetic diversity.*
- *To secure a pleasant, efficient and safe working, living and recreational environment for all Victorians and visitors to Victoria.*
- *To conserve and enhance those buildings, areas or other places which are of scientific, aesthetic, architectural or historical interest, or otherwise of special cultural value.*
- *To protect public utilities and other assets and enable the orderly provision and coordination of public utilities and other facilities for the benefit of the community.*
- *To facilitate development in accordance with the objectives set out in the points above.*
- *To facilitate the provision of affordable housing in Victoria.*
- *To balance the present and future interests of all Victorians.*

Clause 71.02-3 of the VPP addresses 'integrated decision making', and states:

> *Society has various needs and expectations such as land for settlement, protection of the environment, economic well-being, various social needs, proper management of resources and infrastructure. Planning aims to meet these by addressing aspects of economic, environmental and social wellbeing affected by land use and development.*
>
> *Planning and responsible authorities should endeavour to integrate the range of panning policies relevant to the issues to be determined and balance conflicting objectives in favour of net community benefit and sustainable development for the benefit of present and future generations. However, in bushfire affected areas, planning and responsible authorities must prioritise the protection of human life over all other policy considerations.*
>
> *Planning authorities should identify the potential for regional impacts in their decision making and coordinate strategic planning with their neighbours and other public bodies to achieve sustainable development and effective and efficient use of resources.*

Activity Centres that are also subject to extensive Heritage Overlay controls such as Brunswick and Smith Streets are examples of where the tension between competing planning objectives must be resolved in a balanced way. Brunswick and Smith Streets have excellent public transport connections, vibrant retail, commercial and hospitality uses and a high demand for housing choice. The streets also contain highly intact, commercial precincts containing predominantly late nineteenth and early twentieth century heritage fabric that is highly valued by the local community. A balance between the demand for more intensive development with the protection of the heritage buildings and precincts is therefore required. To achieve this, it is considered necessary that any DDO – and the background work that underpins it – specifically includes heritage considerations which frames the design objectives.

2.2 Yarra Planning Scheme – Heritage Provisions

Council has well-established heritage provisions within its planning scheme at Clauses 21.05-1 and 22.02. Also of relevance to the protection of the heritage values of the study area is Clause 22.03, which includes policy to

protect the visual prominence of several landmarks within the study area, in addition to other landmarks within the municipality.

2.2.1 Heritage policy

The relevant objective within Clause 21.05-1 'Heritage' of the Municipal Strategic Statement (MSS) is *Objective 14: To protect and enhance Yarra's heritage places*. The relevant strategies to implement this objective are:

- *Strategy 14.1 - Conserve, protect and enhance identified sites and areas of heritage significance including pre-settlement ecological heritage.*
- *Strategy 14.3 - Protect the heritage skyline of heritage precincts.*
- *Strategy 14.4 - Protect the subdivision pattern within heritage places.*
- *Strategy 14.6 - Protect buildings, streetscapes and precincts of heritage significance from the visual intrusion of built form both within places and from adjoining areas.*

Objective 14 and its associated strategies are considered to be generally compatible with appropriately sited and scaled higher density development on Brunswick and Smith Streets. Strategy 14.3 to 'Protect the heritage skyline of heritage precincts' would not be achieved unless new upper level development was to be of such low scale that it was fully concealed when viewed from the opposite side of the street as defined by the sightline tests described in Figures 2 and 3 of Clause 22.02 (refer Appendix 1). Avoiding any new visible built form above the parapets of buildings within the Heritage Overlay - although achieving the 'best' heritage outcome - would not enable a level of development that may reasonably be expected to be achieved on these commercial high streets nor meet other strategic directions of the Yarra Planning Scheme. A balance therefore needs to be struck between achieving the outcome sought by Strategy 14.3 and meeting the development objectives of the City of Yarra. An acceptable heritage outcome would be one where, although new built fabric is visible above the parapets, roofline or chimneys of these buildings, the development was of a scale, set back and massing such that it retains the primacy of the heritage streetscape and avoids visually dominating the existing buildings.

Clause 22.02 'Development Guidelines for Sites Subject to the Heritage Overlay' provides detailed guidance for development of places within the Heritage Overlay, including demolition. The relevant objectives of Clause 22.02 are:

- *To conserve Yarra's natural and cultural heritage.*
- *To conserve the historic fabric and maintain the integrity of places of cultural heritage significance.*
- *To retain significant view lines to, and vistas of, heritage places.*
- *To preserve the scale and pattern of streetscapes in heritage places.*
- *To encourage the preservation, maintenance, restoration and where appropriate, reconstruction of heritage places.*
- *To ensure the adaptation of heritage places is consistent with the principles of good conservation practice.*
- *To ensure that additions and new works to a heritage place respect the significance of the place.*
- *To encourage the retention of 'individually significant' and 'contributory' heritage places.*
- *To protect archaeological sites of cultural heritage significance.*

Again, these objectives do not preclude higher density development along Brunswick and Smith Streets with the possible exception of '*To preserve the scale … of streetscapes in heritage places*'.

The demolition policy provided at Clause 22.02-5.1 encourages the retention of 'individually significant' and 'contributory' buildings within a heritage precinct. Removal of part of a heritage place or contributory element is contemplated if (in general terms) it can be demonstrated that the removal of the part will not adversely affect the significance of the building, or – for a contributory building – the part is not visible from the street, abutting a park or public open space.

Given that the significance of most heritage places along Brunswick and Smith Streets lies predominantly in their streetscape presentation, facade detailing and fine-grained pattern of subdivision, it is considered that a certain amount of rear demolition and redevelopment can be contemplated under the existing heritage policy.

Further, with the exception of those heritage places included on the VHR – and therefore regulated under the *Heritage Act 2017* – internal controls generally do not apply to heritage places within the study area[1].

The significance of the heritage precincts within the study area lies primarily in fabric visible from the public realm. Therefore, in most circumstances, the heritage controls within the Yarra Planning Scheme effectively limits the control of heritage fabric within the study area to that which is visible from the street, including primary building facades, side elevations and visible roof and chimney elements.

In relation to 'New Development, Alterations and Additions', Clause 22.02-5.7.1 sets out the following policy:

> ***General***
>
> *Encourage the design of new development and alterations and additions to a heritage place or a contributory element to a heritage place to:*
>
> - *Respect the pattern, rhythm, orientation to the street, spatial characteristics, fenestration, roof form, materials and heritage character of the surrounding historic streetscape.*
> - *Be articulated and massed to correspond with the prevailing building form of the heritage place or contributory elements to the heritage place.*
> - *Be visually recessive and not dominate the heritage place.*
> - *Be distinguishable from the original historic fabric.*
> - *Not remove, cover, damage or change original historic fabric.*
> - *Not obscure views of principle façades.*
> - *Consider the architectural integrity and context of the heritage place or contributory element.*
>
> *Encourage setbacks from the principal street frontage to be similar to those of adjoining contributory buildings; where there are differing adjoining setbacks, the greater setback will apply.*
>
> *Encourage similar façade heights to the adjoining contributory elements in the street. Where there are differing façade heights, the design should adopt the lesser height.*
>
> *Minimise the visibility of new additions by:*
>
> - *Locating ground level additions and any higher elements towards the rear of the site.*
> - *Encouraging ground level additions to contributory buildings to be sited within the 'envelope' created by projected sight lines (see Figure 1).*
> - *Encouraging upper level additions to heritage places to be sited within the 'envelope' created by projected sight lines (for Contributory buildings refer to Figure 2 and for Individually significant buildings refer to Figure 3).*
> - *Encouraging additions to individually significant places to, as far as possible, be concealed by existing heritage fabric when viewed from the front street and to read as secondary elements when viewed from any other adjoining street.*
>
> *Discourage elements which detract from the heritage fabric or are not contemporary with the era of the building such as unroofed or open upper level decks or balconies, reflective glass, glass balustrades and pedestrian entrance canopies.*

The policy for full or partial concealment of rear additions to residential buildings as described in Figures 2 and 3 of the General Policy at Clause 22.02 is modified by the Specific Requirements at Clause 22.02-5.7.2 that applies to corner sites and sites with dual frontages, and industrial, commercial and retail heritage places:

> ***Corner Sites and Sites with Dual Frontages***
>
> *Encourage new building and additions on a site with frontages to two streets, being either a corner site or a site with dual street frontages, to respect the built form and character of the heritage place and*

[1] The exception to this are six shop / residences within HO464 – Smith Street South Precinct, Fitzroy and Collingwood at 51-53, 59-61 and 67-69 Smith Street, Fitzroy, which retain pressed metal ceilings on their ground floor.

adjoining or adjacent contributory elements to the heritage place.

Encourage new buildings on corner sites to reflect the setbacks of buildings that occupy other corners of the intersection.

…

Industrial, Commercial and Retail Heritage Place or Contributory Elements

Encourage new upper level additions and works to:

- *Respect the scale and form of the existing heritage place or contributory elements to the heritage place by being set back from the lower built form elements. Each higher element should be set further back from lower heritage built forms.*
- *Incorporate treatments which make them less apparent.*

The specific provisions prevail over the general policy where there is a conflict or inconsistency. This establishes an expectation that new development behind industrial, commercial and retail buildings within the Heritage Overlay is not going to be fully or substantially concealed from public realm views. In addition, it should be noted that Brunswick and Smith Streets, like the typical commercial high streets in the City of Yarra, are 20m wide where the residential examples shown in Figures 2 and 3 of Clause 22.02-5.7.1 show a sightline test from across an approx. 10m wide residential street. The wider the street, the more visible a new rear development will be, and likewise the lower the heritage façade the greater the visibility of new development behind.

Although a greater level of concealment would generally provide a better heritage outcome, this specific sightline-based guidance in the heritage policy is designed to preserve and enhance the character and appearance of predominantly one and two-storey dwellings within more typical narrow residential streets and the policy does not require that this be applied to multi-storey development within a major Activity Centre.

Likewise, the policy to '*Discourage elements which … are not contemporary with the era of the building such as … reflective glass, glass balustrades and pedestrian entrance canopies*' may not achieve an appropriate urban design and architectural outcome in areas such as Brunswick and Smith Streets. In such areas, a 'contrasting' or 'interpretative' design approach for new taller development above the heritage building is likely to be more recessive than a 'respectful' or 'historicist' one that would lead to the new additions inappropriately mimicking the historic form and potentially being more visually intrusive.

2.2.2 Landmarks and Tall Structures

Clause 22.03 – 'Landmarks and Tall Structures' identifies a number of landmark buildings and advertising signs to which views should be protected. This includes the clock tower of the Fitzroy Town Hall and the spire of St Marks Church, George Street, Fitzroy. Although St Marks Church is located outside an activity spine or mixed use precinct, views of the spire are provided from Hodgson and Moor Streets. There are no landmark signs within the study area. The Clifton Hill Shot tower is located outside the study area but is highly visible from the northern edge of the study area.

The identification of key views has been informed by Appendix A - 'Landmarks & Views Assessment' of the report entitled *Review & Development of the City of Yarra Landmarks Policy*, Ethos Urban, December 2017.

Clause 22.03 also recognises the key views of the drum, dome, lantern and flagpole of the Royal Exhibition Building, which although located within the City of Melbourne, is visible from Gertrude Street:

> *Development should protect the views to the drum, dome, lantern and flagpole of the World Heritage Listed Royal Exhibition Building seen from the footpath on the south side of Gertrude Street and along Marion Lane, west of Fitzroy Street.*

The relevant policies within Clause 22.03 include:

- *Maintain the prominence of Yarra's valued landmark signs.*
- *Protect views to the silhouette and profile of Yarra's valued landmarks to ensure they remain as the principal built form reference.*

- *Ensure the profile and silhouette of new tall structures adds to the interest of Yarra's urban form and skyline.*

The policy seeks to ensure new buildings within the vicinity of these landmarks and tall structures are designed so that these elements remain the principal built form reference in the area.

Royal Exhibition Building

The views of the drum, dome, lantern and flagpole of the Royal Exhibition Building (refer Figure 6) along the south side of Gertrude Street and Marion Lane are protected by Schedule 8 to the Design and Development Overlay (DDO8), which was informed by the World Heritage Environs Area Strategy Plan for the Royal Exhibition Building and Carlton Gardens.[2]

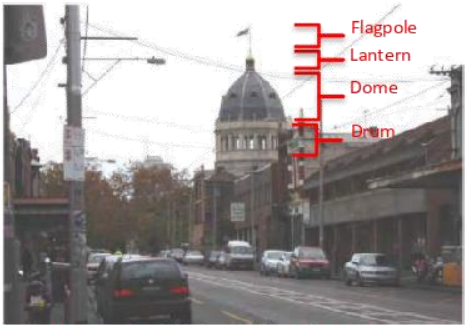

Figure 6. Royal Exhibition Building from Gertrude Street (at Fitzroy Street) looking east (©DPCD, adapted from Figure 13, page 48, World Heritage Environs Area Strategy Plan: Royal Exhibition Building & Carlton Gardens)

Figure 7. View lines of the Royal Exhibition Building within the Study Area – locations taken from Figures 13, 14 and 20 of the World Heritage Environs Area Strategy Plan (GJM adapted from nearmap)

Fitzroy Town Hall

To achieve the objective of Clause 22.03, we consider that it is appropriate to retain a clear sky silhouette of the whole of the clock tower of the Fitzroy Town Hall. At a minimum, the key elements of the clock tower which should remain visible and prominent include the flag pole, cupola, clock stage, balustrade and entablature. To ensure that the clock tower is read as a prominent stand-alone object, any new development should not appear to be closer to the tower than it is wide.

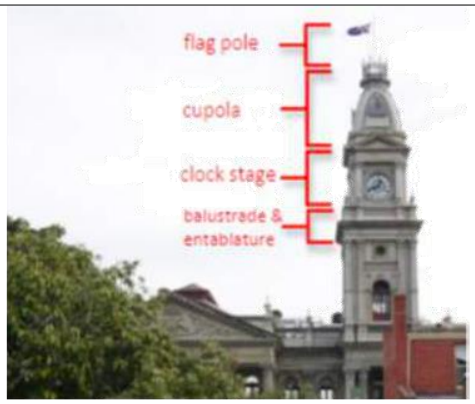

Figure 8. Fitzroy Town Hall, 201 Napier Street, Fitzroy

2 *World Heritage Environs Area Strategy Plan: Royal Exhibition Building & Carlton Gardens*, Department of Planning and Community Development, 2009.

Figure 9. Map of views to Fitzroy Town Hall (©Ethos Urban, Dec 2017)

St Marks Church

Clause 22.03 only identifies views of the spire of St Marks Church, however we consider that it is appropriate that views of the belfry and spire in combination should be considered (refer Figure 8). The belfry provides a visual anchor to the spire of the church and contributes to the key views of the church.

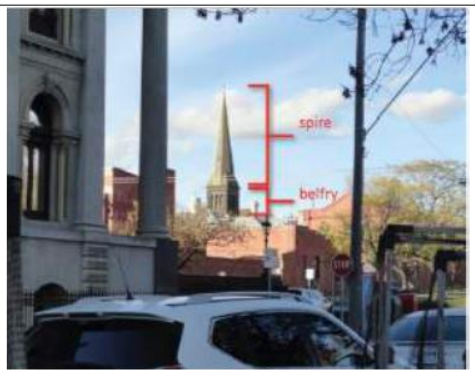

Figure 10. View to St Marks Church, Fitzroy from Condell Street adjacent to the Fitzroy Town Hall (looking northeast)

Figure 11. Map of views to St Marks Church, Fitzroy (©Ethos Urban, Dec 2017)

St Patricks Cathedral

Clause 22.03 identifies the need to "...protect the silhouette/profile of St Patrick's Cathedral seen from the Intersection of Brunswick Street with St George's Road." The spire of St Patricks Cathedral is clearly visible along the length of the Brunswick Street carriageway and particularly when pedestrians are crossing the street.

Figure 12. View to St Patricks Cathedral looking south along Brunswick Street.

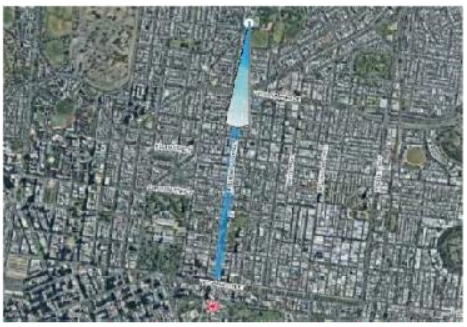

Figure 13. Map of views to St Patricks Cathedral (©Ethos Urban, Dec 2017)

St Lukes Church

Clause 22.03 provides a more limited requirement to "...protect the silhouette/profile of the church spire [of St Lukes Church] on the corner of Watkins Street and St Georges Road, North Fitzroy, seen from the intersection of Brunswick Street with Victoria Parade." This is a distant view, that like that towards St Patricks Cathedral is generally provided from within the carriageway of Brunswick Street (looking north).

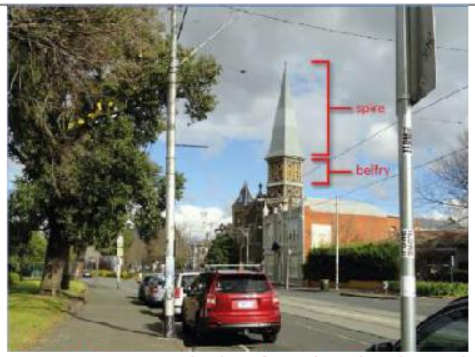

Figure 14. Tower and spire of St Lukes Church, North Fitzroy

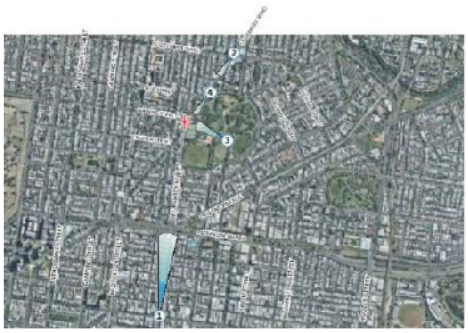

Figure 15. Map of views to St Lukes Church, North Fiztroy (©Ethos Urban, Dec 2017)

2.2.3 Heritage Overlay

The head heritage provision of the VPP, Clause 43.01 'Heritage Overlay', has the following purpose:

- *To implement the Municipal Planning Strategy and the Planning Policy Framework.*
- *To conserve and enhance heritage places of natural or cultural significance.*
- *To conserve and enhance those elements which contribute to the significance of heritage places.*
- *To ensure that development does not adversely affect the significance of heritage places.*
- *To conserve specifically identified heritage places by allowing a use that would otherwise be prohibited if this will demonstrably assist with the conservation of the significance of the heritage place.*

Clause 43.01-8 sets out 'Decision Guidelines' – in addition to those included in Clause 65 – that the Responsible Authority must consider before determining a permit application. These are:

- *The Municipal Planning Strategy and the Planning Policy Framework.*
- *The significance of the heritage place and whether the proposal will adversely affect the natural or cultural significance of the place.*
- *Any applicable statement of significance (whether or not specified in the schedule to this overlay), heritage study and any applicable conservation policy.*
- *Any applicable heritage design guideline specified in the schedule to this overlay*
- *Whether the location, bulk, form or appearance of the proposed building will adversely affect the significance of the heritage place.*
- *Whether the location, bulk, form and appearance of the proposed building is in keeping with the character and appearance of adjacent buildings and the heritage place.*
- *Whether the demolition, removal or external alteration will adversely affect the significance of the heritage place.*
- *Whether the proposed works will adversely affect the significance, character or appearance of the heritage place.*
- *Whether the proposed subdivision will adversely affect the significance of the heritage place.*
- *Whether the proposed subdivision may result in development which will adversely affect the significance, character or appearance of the heritage place.*
- *Whether the proposed sign will adversely affect the significance, character or appearance of the heritage place.*
- *Whether the lopping or development will adversely affect the health, appearance or significance of the tree.*
- *Whether the location, style, size, colour and materials of the proposed solar energy facility will adversely affect the significance, character or appearance of the heritage place.*

While some of these considerations are not obviously consistent with the addition of higher density development behind heritage buildings, the first purpose of 43.01 and the first decision guideline encompasses the whole Municipal Planning Strategy and the Planning Policy Framework (integrated decision-making). Therefore, a balance must be struck by the Responsible Authority between achieving the objectives of the Heritage Overlay and meeting the objectives of other parts of the VPPs including Activity Centre policy and commercial zoning. There is established precedent for new rear development to be accommodated behind heritage buildings in commercial precincts throughout inner Melbourne without substantially compromising the identified significant values of these heritage places.

3. Heritage in Design and Development Overlays – Panel Findings

Planning Panels Victoria has considered a number of Planning Scheme Amendments that are of particular relevance to this project: Banyule Amendment C93, Bayside Amendments C113, C114 and C115, Boroondara C108, Darebin Amendment C161, Moreland Amendment C134, Melbourne Amendments C240 and C258, Stonnington Amendment C223, Whitehorse Amendment C175 and Yarra Amendment C220.

These amendments considered the appropriateness of mandatory controls in the context of PPN59 and provide guidance on which circumstances they should be applied. In response to submissions, they also considered the issue of whether or not the DDO control should include objectives to protect heritage or whether this should be the sole domain of the Heritage Overlay provisions. In addition to these panel reports, Amendment C123 to the Banyule Planning Scheme, approved via ministerial intervention, provides further instruction as to the role of mandatory controls.

These reports provide useful guidance on the form and wording of DDO controls. In summary, Panel has concluded that:

- The Heritage Overlay identifies what is significant within an Activity Centre.
- Heritage is an appropriate issue for DDOs to provide guidance on to inform future development.
- Mandatory controls should be used in exceptional circumstances and their application should be guided by PPN59 and PPN60.
- Formulae defining the proportion of new built form that can be viewed above the street wall is an appropriate mechanism for informing the design and massing of new built form.

The approach taken in the formulation of the built form controls to manage development affecting heritage places is to complement existing policy. Clause 22.02 - 'Development Guidelines for Sites Subject to the Heritage Overlay' and relevant parts of Clause 22.10 – 'Built Form and Design Policy' have been taken as the starting point for the development of these complementary controls and policy.

Where existing policy is considered to be satisfactory, no additional policy has been recommended. However, specific policy has been recommended where it is considered necessary to provide guidance to recognise the current role of these commercial strips and mixed use pockets and enable their future development while protecting their heritage values and streetscape character.

A discussion of the most relevant of the Panel reports is provided below, and at section 3.9 the recommendations for each panel are summarise with comment on the implications of the outcome.

3.1 Yarra Planning Scheme Amendment C220 (C220)

Similar to Brunswick and Smith streets, Johnston Street in Collingwood and the western part of Abbotsford (west of the railway viaduct) is a highly intact, predominantly Victorian/early Edwardian-era streetscape covered by the Heritage Overlay. The streets have a similar mix of historic and current uses, a similarly high proportion of 'Contributory' and 'Individually Significant' buildings with a high level of integrity, and similar existing street wall heights (generally between 8m and 11m). It is noted that unlike Brunswick and Smith streets, Johnston Street in designated as a Neighbourhood Activity Centre.

C220 seeks to introduce built form controls along Johnston Street in the form of DDO15. The Panel report recommended the inclusion of the following DDO objective which is also relevant to Brunswick and Smith Streets:

> *To preserve the valued heritage character of the streetscape and ensure that the predominantly two storey (heritage scale) street-wall remains the visually prominent built form of Johnston Street west of the railway line bridge...*

The Panel report provides commentary which is of relevance to a consideration of the proposed built form controls for Brunswick and Smith Streets. In particular, the Panel stated:

> *In urban design terms, the 6 metre setback will retain the 'human scale' of Johnston Street, secure the distinction between the street wall and upper levels and will reduce the potential for overshadowing and adverse wind conditions.*
>
> ...
>
> *The Panel does not agree that less significant sections* [of Johnston Street] *warrant a different treatment. Less significant areas equally deserve to exhibit the overall urban design outcome: a strong street wall with a distinct setback to the mid level form.*

To achieve these objectives Panel recommended that a building envelope requirement be established that, rather than being based on a sightline test from the opposite side of the street new, required new development to be within a 45° 'angular plane' drawn from the maximum street wall height. In combination with upper-level front setbacks and maximum building heights the angular plane creates a further upper-level setback consistent with the application of the policy objective at Clause 22.02-5.7.1 i.e. that each higher element behind industrial, commercial and retail buildings should be set further back from the lower heritage built form.

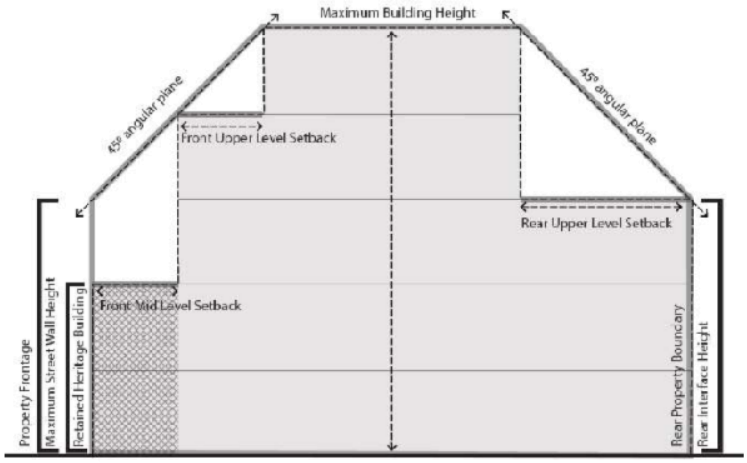

Figure 16. Building envelope requirement – Heritage Building (Figure 1 in Yarra DDO15 (version for adoption dated 14 May 2019)

3.2 Melbourne Planning Scheme Amendment C258 (C258)

C258 seeks, in part, to rationalise heritage gradings applied within the City of Melbourne from alphabetical and numerical gradings to 'significant', 'contributory' or not graded. In terms of 'streetscape' gradings, C258 seeks to transition from numerical gradings to 'Significant' or ungraded,[3] however the Panel recommended abandoning the streetscape grading altogether as they considered that the concept of significant streetscapes had been overtaken by the concept of heritage precinct. Further, the Panel considered that these streetscapes could be referred to in the Statements of Significance or, if necessary, defined as their own precinct.

In terms of heritage place gradings within the *Heritage Places Inventory* Incorporated Document, C258 seeks to transition from alphabetical gradings to 'significant', 'contributory' and ungraded, however the Panel recommended using an 'Individual' grading for places of site-specific significance and a 'contributory' grading for places that contribute to a heritage precinct. The Panel went on to recommend that the distinction within the proposed heritage policy that sought different outcomes in terms of fabric retention or the concealment of

[3] *Significant streetscapes are collections of buildings outstanding either because they are a particularly well preserved group from a similar period or style, or because they are highly significant buildings in their own right.*

new built form etc. for heritage places of different grades should be removed and a single set of heritage policies apply irrespective of building grading.

3.3 Moreland Amendment C134 (C134)

Sydney Road, Brunswick is a Major Activity Centre with highly intact, predominantly Victorian streetscapes covered by the Heritage Overlay. Sydney Road, Brunswick Street and Smith Street Activity Centres share common traits within their commercial cores including a tram route, a similar mix of historic and current uses, similar historic built form (predominantly two-storey Victorian-era or early twentieth-century commercial buildings), a high proportion of 'contributory' and 'individually significant' buildings with a high level of integrity, and similar existing street wall heights (generally between 8m and 11m).

The Statement of Significance for Moreland HO149 – Sydney Road Precinct[4] notes the precinct is of historical, architectural and social significance to the City of Moreland. It includes a number of close similarities with the Statement of Significance for HO311 – Brunswick Street Precinct and HO333 – Smith Street Precinct, including:

- Importance as a predominantly intact late 19th and early 20th century retail and commercial strip;
- Reflecting the considerable expansion and growth of the streets, and the suburbs as a whole, during the 19th century Boom period; and
- Largely intact upper floor facades of the shops.

Gazetted on 11 August 2016, C134 introduced DDO18, DDO19 and DDO20. DDO18 set mandatory street wall heights on Sydney Road north of Brunswick Road of between 8m and 11m, which would be an appropriate precedent for the Brunswick and Smith Street Activity Centres given the similarities in their architectural form.

DDO18 also provides a preferred minimum 5m setback for development above the street wall and to establish a preferred ratio of ¾ : ¼ street wall to new built form through the following design objective:

- *Be designed to ensure that it occupies no more than one quarter of the vertical angle defined by the whole building in the view from an eye-level of 1.7 metres on the opposite side of the street, as illustrated in Figure 1 below.*

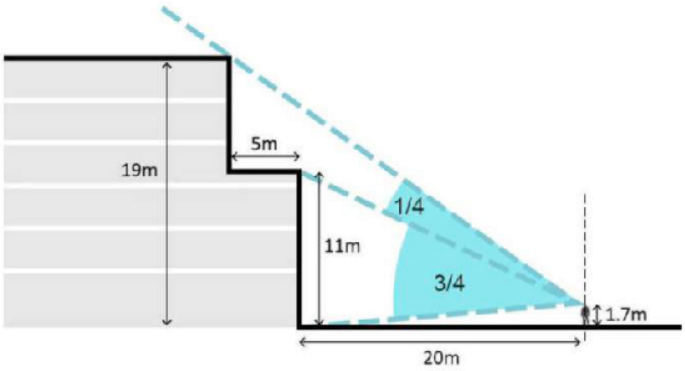

Figure 17. Upper level setbacks along Sydney Road (Figure 1 in Moreland DDO18, retrieved 2 June 2017).

DDO18 also provides a useful model for dealing with upper level development where the existing heritage building has a street wall height of less than the 11m street wall height provided in that control:

- *Where an existing building with a street wall height of less than 11 metres is to be retained for heritage reasons new development may occupy more than one quarter of the vertical angle defined by the whole*

4 Retrieved from Victorian Heritage Database, 16 June 2017 (http://vhd.heritagecouncil.vic.gov.au/places/56076#sthash.7LcbbSIM.dpuf)

building outlined in Figure 1 above.

3.4 Boroondara Amendment C108 (C108)

The Panel considering C108 discussed the use of mandatory street wall height, upper level setbacks and overall heights across 31 Neighbourhood Activity Centres and three commercial corridors (Camberwell Road/Burwood Road and Canterbury Road).

In its report dated 26 February 2014, the Panel noted its strong support for the protection of heritage assets in Boroondara and recommended reinstatement of policy in the exhibited Amendment that encouraged new development on or adjoining a heritage place to be moderated. In particular, the Panel recommended that policy guidance be included that:

> *The combination of the height, setbacks and design treatment of new buildings should ensure a heritage place on or adjoining the site is not overwhelmed or dominated.*

The Panel also considered the use of mandatory height and setback controls, and recognised that the version of *Plan Melbourne* at that time foreshadowed stronger policy support for the use of mandatory provisions in neighbourhood centres (and residential areas) to increase planning certainty.

The Panel report recognised that mandatory provisions that prescribed standards without a capacity for departures have been supported in areas of consistently high heritage value with consistent character. While acknowledging the heritage values and 'main street' character of the Neighbourhood Activity Centres subject to C108, the Panel also recognised that new development will be visible behind the retained façades – particularly from oblique views – and that invisibility of upper level development is either unreasonable or not necessary to achieve the primacy of the street wall.

In conclusion, the Panel accepted some use of mandatory controls within Boroondara's neighbourhood centres, but not in the commercial corridors:

> *The Panel recognises that Plan Melbourne foreshadows stronger policy support for the use of mandatory provisions in neighbourhood centres (and residential areas) to increase certainty. The Panel considers the combination of the street wall and upper level setbacks is critical in neighbourhood centres to maintain the established main street character and in these situations mandatory controls can be justified. However, we consider development with elements that exceed the nominated height and/or adopt alternative setbacks should not be precluded as they may produce better outcomes in some circumstances. The overall maximum height limits should therefore remain discretionary to allow for such circumstances.*

It was the Panel's conclusion that mandatory street wall heights which reflected the dominant character of the neighbourhood centres were acceptable (either 8m or 11m, depending on the context). It also found that if mandatory upper level setbacks were to be adopted, they should be sufficient to ensure that in most cases the upper storey will be clearly distinguishable from the street wall of the heritage building and be a recessive element in neighbourhood centre streetscapes. To achieve this, the Panel identified 5m as being an appropriate mandatory minimum setback for upper level development in the context of Boroondara's Neighbourhood Activity Centres.

3.5 Whitehorse Amendment C175 (C175)

C175 sought to implement the *Box Hill Metropolitan Activity Centre Built Form Guidelines* (Hansen Partnership, 2016) by rezoning land, introducing the Built Form Guidelines as a reference document and applying a new DDO Schedule to introduce built form controls. In its consideration of this amendment, the Panel Report dated 6 October 2017 stated:

> *The Panel would have benefited from a more sophisticated analysis of the heritage precinct that utilised three-dimensional modelling, sight lines and view-sheds to help understand the rationale for the proposed heritage related controls. Without this basic information, it is difficult to determine whether*

the proposed controls are appropriate…

and concluded that in the absence of this modelling:

- *The Built Form Responses regarding Heritage should not proceed in their current form.*

The absence of three-dimensional modelling, and sight line and view-shed analysis in relation to those areas of the Box Hill Activity Centre that are subject to the Heritage Overlay appears to have been critical in Panel recommending that the proposed built form controls not be applied to address heritage.

3.6 Stonnington Planning Scheme Amendment C223 (C223)

The Glenferrie Road and High Street Major Activity Centre encompasses the two linear commercial strips of Glenferrie Road and High Street in Malvern as well as two peripheral areas. The Heritage Overlay, which covers all of Glenferrie Road and most of High Street, acknowledges the area for its '*metropolitan significance as one of the major strip shopping centres to have retained its role into the late twentieth century, and for the quality and integrity of its Victorian, Federation and Interwar building stock*'.[5] C223 sought to apply new built form provisions through the application of DDO19 to the entire Activity Centre, with precincts A and B covering the commercial and heritage precincts of Glenferrie Road and High Street respectively.

While the amendment proposed an 8-10m setback above the street wall for precincts A and B, the Panel found it to be effectively a concealment of upper level additions, supporting instead a 5m setback as adequate to respect heritage values without removing development capacity. This was derived from the precedent in the Boroondara Planning Scheme and was seen to equate to the first room in a Victorian-era building. The amendment was otherwise generally supported by the Panel as an appropriate balance between protecting heritage values and enabling growth. Discretionary preferred maximum building heights between 14.5 metres (4 storeys) and 21 metres (6 storeys) were supported through precincts A and B.

The Panel also reviewed the drafting of discretionary and mandatory provisions, addressing the appropriateness of the terms 'should' and 'must'. The Panel noted that confusion arose from the DDO parent clause, and until such time as the clause is redrafted, the term 'must' is to be used for schedule requirements with the addition of further clarification if it can be varied with a permit.

3.7 Darebin Amendment C161 (C161)

C161 proposed to implement the '*Fairfield Village Heritage Assessment, 2017*' (Heritage Intelligence) and '*Fairfield Village Built Form Guidelines 2017*' (Hansen Partnership) through the application of Heritage Overlay (HO313) and DDO21 to the Fairfield Village Neighbourhood Centre. DDO21 created two sub precincts: Area 1 to be applied to the proposed HO313 precinct; with the remainder of the centre covered by Area 2.

Though a smaller scale activity centre than the study area, the Panel provides some guidance on the drafting of development controls for Brunswick and Smith Streets. The Panel found the application of the Heritage Overlay in conjunction with the DDO would enable the precinct '*to support a variety of housing typologies at increased densities*' in a way that '*allows the heritage place to be identified and understood*'. Further, the Panel supported the application of a mixture of mandatory and discretionary controls to Area 1 of the DDO in the form of:

- Mandatory maximum building heights at 14.5m and 17.5m (four and five storey), triggered by a lot width of 24m for five-storey.
- Mandatory maximum street wall height to be the greater of 8.5m or the adjacent street wall.
- Discretionary minimum front setbacks above the street wall at generally 4m, and 8m if constructing to a 5th level.

[5] Retrieved from Victorian Heritage Database, 18 January 2018 (https://vhd.heritagecouncil.vic.gov.au/places/31530)

- The addition of a 3m side setback at the fifth-floor level – introduced as a discretionary provision to prevent the creation of a dominating wall of development along Station Street.

The Panel found that DDO21, as proposed, had several failings. In addition to drafting and content recommendations, the inclusion of a 'Valued Street Façade' provision was questioned. 'Valued Street Facades' were identified for their contribution to local character due to their form and/or detail across both Area 1 and 2. They were not identified as a feature of previous heritage studies and were not all of historic value. The Panel was not convinced '*that a DDO can be structured to require the retention or incorporation of a building*', finding the Heritage Overlay to be the appropriate mechanism for such a provision. Due to their largely arbitrary identification and the lack of urban design advice justifying their inclusion, the Panel recommended that in addition to being removed from Area 2 and non-contributory buildings in Area 1, the be reviewed to be made workable or removed in its entirety.

3.8 Banyule Amendment C123 (C123)

The Ivanhoe Shopping Centre is part of the Ivanhoe Activity Centre and is a traditional linear strip of retail and commercial activity located along the historic thoroughfare of Upper Heidelberg Road, Ivanhoe. HO90 identifies the Ivanhoe Shopping Centre for its local historical and social significance in the form of one and two-storey shops predominantly from the 1915-1940 period.

C123 was approved by Ministerial intervention in September 2018 and applied to the Ivanhoe Activity Centre. Initially introduced as an interim control attached to the Activity Centres Pilot Program run by the Department of Environment, Land, Water and Planning, C123 did not progress through a Panel process. C123 amended DDO11 and applied mandatory height controls across the Ivanhoe Activity Centre. The application of mandatory heights was in response to the quantity and scale of development proposed within the area, particularly in relation to building heights in excess of the approved structure plan heights, and resulted in mandatory heights of generally 15m being applied to the HO90 area.

3.9 Table of summarised recommendations and implications

Yarra Amendment C220	
Recommendation	***Implications***
A 6m upper level setback will retain the 'human scale' of Johnston Street, secure the distinction between the [heritage] street wall and upper levels.	A 6m mandatory upper level setback is appropriate.
The less significant sections of Johnston Street do not warrant lesser built from controls.	The same controls should be applied within the DDO irrespective of the significance of the street.
A preferred ratio of 2/3:1/3 street wall to new upper level built from should be replaced with a 45 degree angular plane.	A 45 degree angular plane above a nominal 11m street wall height can inform the preferred mid-level built form rather than a ratio based sightline test.
In combination with upper-level front setbacks and maximum building heights the angular plane creates a further upper-level setback from the mid-level setback.	Upper level development should be set further back from the street wall consistent with the guidance at 22.02-5.7.2.
Melbourne Planning Scheme Amendment C258	
Recommendation	***Implications***
Heritage policy should not seek different outcomes in terms of fabric retention or the concealment of new built form based on gradings.	The same controls should be applied within the DDO irrespective of the grading of properties within a precinct.

The streetscape grading system should be abandoned.	Applying a streetscape grading is unnecessary for the justifying the use of mandatory controls.
Moreland Amendment C134	
Recommendation	***Implications***
The application of mandatory street wall heights to Sydney Road is justified.	Provides a justification for the application of mandatory street wall heights within the Study Area.
Established a preferred ratio of ¾ : ¼ street wall to new upper level built form.	The use of a sightline test to inform new upper level built from is appropriate.
Boorondara Amendment C108	
Recommendation	***Implications***
The combination of the height, setbacks and design treatment of new buildings should ensure a heritage place on or adjoining the site is not overwhelmed or dominated.	The DDO can included height, setback and design treatment controls to avoiding dominating heritage places.
New development will be visible behind the retained façades – particularly from oblique views – and that invisibility of upper level development is either unreasonable or not necessary to achieve the primacy of the street wall.	There is an expectation that the visibility of new upper level development (including from oblique views) will be acceptable and complete concealment is not necessary.
Mandatory upper level setbacks to the commercial corridors are justified.	Provides a justification for the application of mandatory upper level setbacks within the Study Area.
Whitehorse Amendment C175	
Recommendation	***Implications***
In the absence of modelling built form heritage controls should not proceed.	That three-dimensional modelling, sightlines and view shed analysis should inform built form controls.
Stonnington Planning Scheme Amendment C223	
Recommendation	***Implications***
Panel supported a 5m upper level setback instead of the 8-10m setbacks proposed that effectively concealed upper level development.	There is an expectation that the visibility of some new upper level built from will be acceptable and complete concealment is not necessary.
Application of the words 'should' and 'must' within controls.	Use 'should' used for preferred controls and 'must' for mandatory controls.
Darebin Amendment C161	
Recommendation	***Implications***
The application of mandatory building heights to Fairfield Village is justified.	Provides a justification for the application of mandatory building heights within the Study Area.
The application of mandatory street wall heights to Fairfield Village is justified.	Provides a justification for the application of mandatory street wall heights within the Study Area.

The use of 'Valued Street Façade' provision not supported.	Confirms reliance on the Heritage Overlay to protect valued streetscapes.
Banyule Amendment C123	
Recommendation	***Implications***
The application of mandatory building heights to the Ivanhoe Activity Centre is justified.	Provides a justification for the application of mandatory building heights within the Study Area.

4. Mandatory and Discretionary Height and Setback Controls

Planning Practice Note 59: The Role of Mandatory Provisions in Planning Schemes (June 2015) (PPN59) notes that the VPPs are predominantly performance-based and that mandatory provisions are the exception. The PPN sets out a series of five criteria against which to test proposed mandatory provisions, being:

- Is the mandatory provision strategically supported?
- Is the mandatory provision appropriate to the majority of proposals?
- Does the mandatory provision provide for the preferred outcome?
- Will the majority of proposals not in accordance with the mandatory provision be clearly unacceptable?
- Will the mandatory provision reduce administrative costs?

Planning Practice Note 60: Height and Setback Controls for Activity Centres (PPN60) provides specific guidance on the use of mandatory height and setback controls in activity centres. In September 2018, the Department of Environment, Land, Water and Planning published an updated version of PPN60 following the completion of the pilot project *Better Height Controls in Activity Centres*[6]. Of relevance to this matter, PPN60 now provides an additional justification for the use of mandatory controls based on 'comprehensive strategic work', and reads:

> *Mandatory height or setback controls should only be applied where:*
>
> - *exceptional circumstances exist; or*
> - *council has undertaken comprehensive strategic work and is able to demonstrate that mandatory controls are appropriate in the context, and*
> - *they are absolutely necessary to achieve the preferred built form outcomes and it can be demonstrated that exceeding these development parameters would result in unacceptable built form outcomes.*

In relation to 'exceptional circumstances', PPN60 states:

> *Exceptional circumstances may be identified for individual locations or specific and confined precincts, and might include:*
>
> - *significant heritage places where other controls are demonstrated to be inadequate to protect unique heritage values.*
> - *sites of recognised State significance where building heights can be shown to add to the significance of the place, for example views to the Shrine of Remembrance...*

The amended version of PPN60 reflects a broader shift over time within the application of the VPPs in favour of the use of mandatory controls.

The purpose of the Hansen Built Form Review and this report is to provide a comprehensive strategic basis for height and setback controls within the study area. The inclusion of individual heritage places and precincts on the VHR and the Heritage Overlay demonstrate the significance of the unique heritage values of the study area.

PPN60 identifies the following criteria for 'exceptional circumstances' that *"...may be identified for individual locations or specific and confined precincts"*. These include (as relevant):

- *significant heritage places where other controls are demonstrated to be inadequate to protect unique heritage values*
- *sites of recognised State significance where building heights can be shown to add to the significance of the place, for example views to the Shrine of Remembrance...*

---

6 Refer to the Panel Report to Yarra C220 chapter 1.2 for further discussion on the pilot project and the amendment to PPN60.

To pursue mandatory controls, PPN60 also states:

> *Where exceptional circumstances are identified, mandatory height and setback controls should only be applied where they are absolutely necessary to achieve the built form objectives or outcomes identified from the comprehensive built form analysis. Where mandatory controls are proposed, it will need to be demonstrated that discretionary controls could result in an unacceptable built form outcome.*

The Panels that considered Boroondara C108, Darebin C161, Moreland C134 and Yarra C220 provide further guidance on the application of mandatory height, street wall height and upper level setback controls along Brunswick and Smith Streets.

These Panels concluded that for Heritage Overlays within activity centres:

- Mandatory controls were appropriate for street wall heights along Sydney Road, in 31 neighbourhood centres in Boroondara and Area 1 of the Fairfield Village Neighbourhood Centre.
- Mandatory upper level setbacks were appropriate in many of Boroondara's neighbourhood centres.
- Mandatory heights were appropriate for Area 1 of the Fairfield Village Neighbourhood Centre
- Mandatory upper level setback were appropriate for Johnstone Street and should not be applied based on heritage significance or gradings within Appendix 8.

It is our view that Sydney Road and Johnston Street in particular share similarities with Brunswick and Smith Streets in terms of heritage fabric and streetscape characteristics.

Part II: Heritage Analysis

5. Heritage Analysis

5.1 Precinct Boundaries

For the purposes of this project, the study area has been divided into 10 precincts:

A – Alexandra Parade Boulevard Precinct
B – Brunswick Street Activity Spine
C – Collingwood Mixed Use Precinct
FE – Fitzroy East Mixed Use Precinct
FW – Fitzroy West Mixed Use Precinct
G – Gertrude Street Activity Spine
J – Johnston Street Activity Spine
TH – Town Hall Mixed Use Precinct
V – Victoria Parade Boulevard Precinct
S – Smith Street Activity Spine

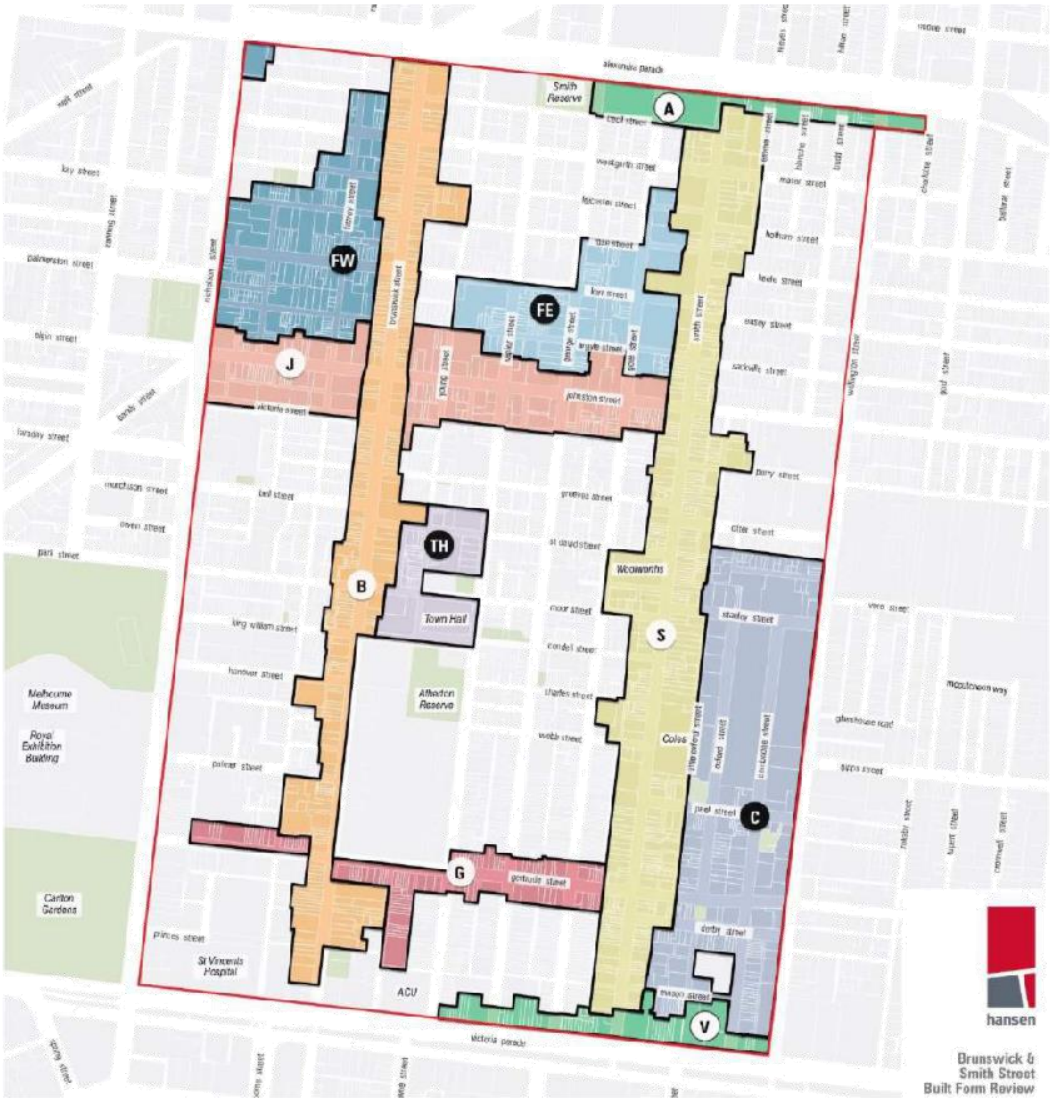

Figure 18. Precinct boundaries (©Hansen, 6 June 2018)

As noted previously, the precincts considered in this report are:

- Brunswick Street Activity Spine
- Town Hall Mixed Use Precinct
- Smith Street Activity Spine
- Johnston Street Activity Spine
- Fitzroy East Mixed Use Precinct.

The Collingwood Mixed Use Precinct was considered as part of a separate study: *Collingwood Mixed Use Pocket Heritage Analysis & Recommendations*, GJM Heritage, 6 June 2018. The Gertrude Street Activity Spine, Fitzroy West Mixed-Use Precinct and the Alexandra and Victoria Parade Boulevard Precincts are subject to future strategic heritage and planning studies.

Following is an analysis of the heritage components and qualities of each of the precincts, including significant views and streetscapes found within the precincts. An analysis of future built form character considerations has been provided along with recommended built form parameters to appropriately manage heritage values.

5.2 Heritage Characteristics

5.2.1 VHR Places

There are a number of places within the Study Area that are included in the VHR. These are frequently grander, more architecturally accompanied and elaborately detailed, or associated with a historically significant use in comparison with typical 'Individually significant' graded buildings within the Heritage Overlay. The *Heritage Act 2017* regulates changes to places included on the VHR including the development of new built form. There may, however be planning issues that might not be considered in relation a permit under the Heritage Act, and it is therefore appropriate for built form controls to be applied to placed included in the VHR for urban design and other reasons.

5.2.2 Activity Spines

Two storey shop / residence buildings are common to the City of Yarra's historic high streets and make up the majority of the streetscapes included within the Heritage Overlay along the activity spines. These buildings share the same typical characteristics, which include:

- Attached terraced construction
- Masonry construction with less than 40% of the upper level street wall face comprised with openings such as windows and doors
- Painted render or face brick façades
- Parapeted front facades with solid parapets, open balustrades or more elaborate gables
- No setback from the street boundary
- Early or altered shop fronts taking up the majority of the ground floor
- Verandahs or later canopies, particularly on the south side of the street
- Visible chimneys normally set back between 3m and 4m from the front of the building.

The Brunswick and Smith Streets also include larger commercial buildings and department stores of up to five storeys in height as well as elaborately detailed buildings on street corners.

The following examples show typical building types found within the Activity Spines. It must be noted that buildings of a particular type will not necessarily demonstrate all the features identified below, and may include other features such as visible roofs and chimneys, which should be retained at least to the extent they are visible from the public realm.

Figure 19. Two-storey shop/residence showing the typical relationship between solid (walls) and void (windows) on the front façade. The first-floor windows making up less than 40% of the wall area (excluding the parapet, gable or balustrade) and the shopfront glazing and entrance door occupies the majority of the ground floor façade.

Shopfronts commonly feature a low plinth or upstand, flanking pilasters, recessed entrances and plain or leadlight highlights.

Figure 20. Roof plan (403-407 Brunswick Street, ©nearmap, 26 Sep 2017) showing the typical location of chimneys at the centre of each of the front rooms on the party wall (i.e. approx. 3m back from the front façade) and the typical 12m deep main roof form of the building.

On some buildings, particularly those located on a corner the roof form and a larger number of chimneys may be visible from the public realm. In these cases the chimneys should be retained and the roof form retained, at least to the extent that it is visible.

Figure 21. Two-storey shop/residence with return façade on a major intersection (corner of Brunswick and Johnston Streets)

Figure 22. An elaborately decorated terrace of shop/residences (193 Smith Street)

Figure 23. Simple or modest shop / residence (246-256 Johnston Street)

Figure 24. Prominent commercial buildings (bank or hotel) (169 Smith Street)

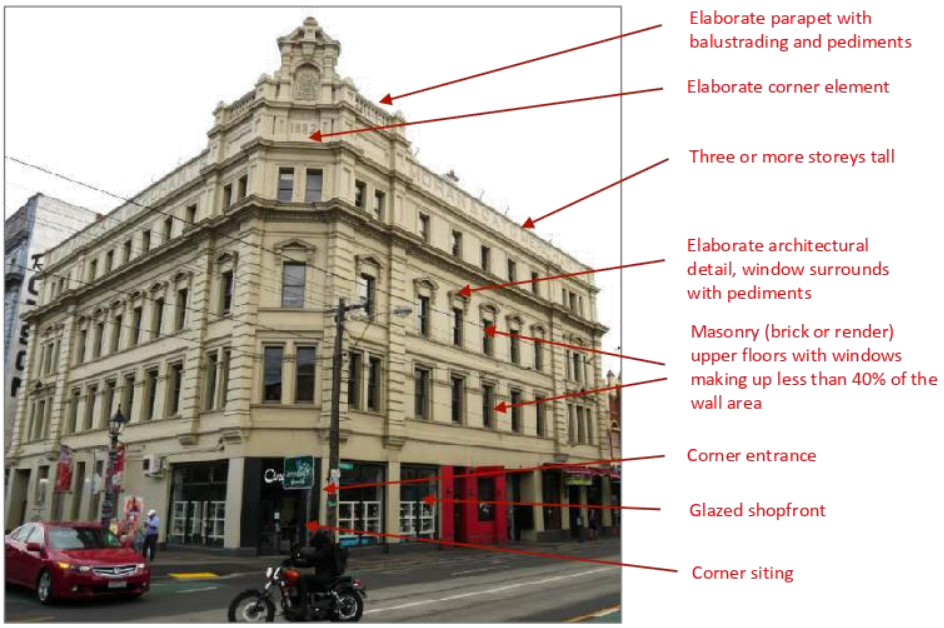

Figure 25. Department store / large commercial building (285 Brunswick Street)

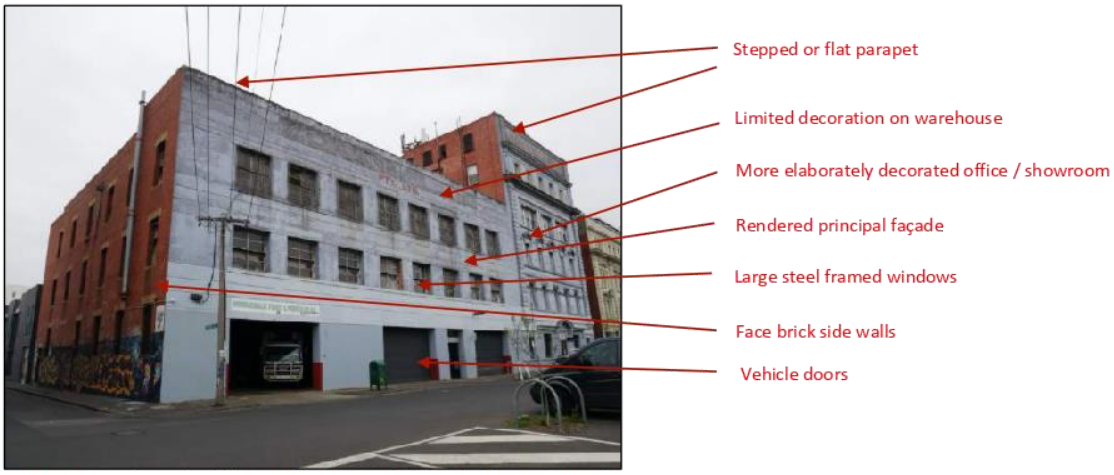

Figure 26. Medium-rise (three to five storey) industrial / warehouse buildings (corner of Fitzroy and Victoria Streets)

2.5.2 Mixed Used Precincts

The mixed use precincts vary greatly in the building types within them from large religious, institutional and civic buildings such as Fitzroy Town Hall, large and small scale factories and industrial buildings and terraced housing. There is also generally a higher proportion of later development including mid-late twentieth century low-scale factory and commercial buildings and more recent apartment and townhouse developments. The buildings that are graded within Appendix 8 are generally late-nineteenth to early twentieth century houses and early twentieth century factory and warehouse buildings.

The following examples show typical building examples of these buildings. The majority of the houses remain in domestic use and their redevelopment should generally be informed by the guidance for residential buildings at Clause 22.02-5.7.1 of the Yarra Planning Scheme. Common to these buildings are visible roofs and chimneys, which should be retained to a two-room depth / the main form of the building.

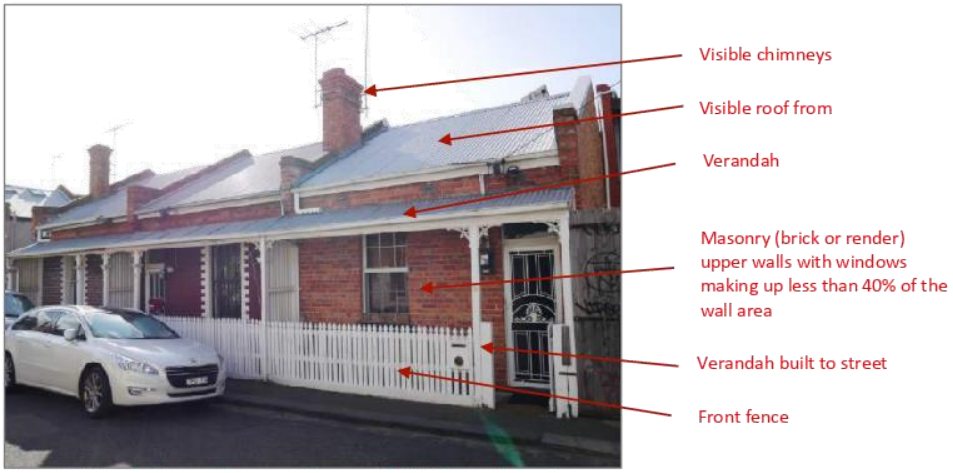

Figure 27. Single Storey Terraced Houses (35-39 Chapel Street)

Figure 28. Two Storey Terraced Houses (332-334 Gore Street)

Figure 29. Low-rise (one to two storey) industrial buildings (399 Gore Street)

5.3 Local landmarks

While municipal-wide landmarks within the City of Yarra are identified within Clause 22.03 'Landmarks and Tall Structures' of the Yarra Planning Scheme the location, scale, function and architectural form and detail of some other buildings within the study area has resulted in these buildings acting as local landmarks. These buildings serve as markers, wayfinding aids or landmarks in the local streetscape context and are often located on major intersections along Brunswick and Smith streets.

In identifying these local landmarks this report has also considered the 2017 Ethos Urban report entitled *Review & Development of the City of Yarra Landmarks Policy*.

Within the study area the following municipal-wide landmarks are identified in Clause 22.03-4:

- Clocktower of Fitzroy Town Hall
- Spire of St Marks Church, George Street, Fitzroy.

In addition, the following views from within the study area are identified in Clause 22.03-4 as warranting protection:

- The silhouette/profile of St Patricks Cathedral seen from the intersection of Brunswick Street with St Georges Road (by extension this is taken to include the terminating views of St Patricks Cathedral south along Brunswick Street).
- The silhouette/profile of the church spire [St Lukes] on the corner of Watkins Street and St Georges Road, North Fitzroy, seen from the intersection of Brunswick Street with Victoria Parade.
- The views to the drum, dome, lantern and flagpole of the World Heritage Listed Royal Exhibition Building seen from the footpath on the south side of Gertrude Street and along Marion Lane, west of Fitzroy Street.

In the context of Brunswick and Smith Street Activity Spines the local landmarks act as wayfinding aids, signal public or semi-public buildings, articulate street corners and promote or advertise important local businesses.

These buildings include, but may not necessarily be limited to:

- Civic buildings including post offices
- Hotels
- Banks

- Department stores
- Important local commercial businesses (e.g. the Moran & Cato Merchants building)
- Commercial buildings (often small scale) at an intersection that have been designed to specifically articulate the corner through the use of towers, belvederes or other elements.

The features that distinguish these buildings include:

- Public use (civic or post office)
- Semi-public use (hotels and banks)
- Major commercial enterprises requiring larger buildings or use the building to advertise their presence (department stores and commercial showrooms)
- Prominent corner locations
- More elaborate architectural detailing, particularly the use of Neo-classical, Mannerist or Baroque elements (columns and pilasters, aedicule, quoining, rusticated masonry etc.) and high-status materials including polychromatic brickwork and natural stone
- Elements that project above the parapet line particularly at street corners including pediments, towers, turrets, lanterns, belvederes or domes etc.

These buildings are generally identified within Appendix 8 as 'Individually Significant' or included on the VHR with the exception of the Paterson Furniture Warehouse/Department Store (231 Smith Street)which is graded 'Contributory' and the Gasometer Hotel (484 Smith Street) which is not subject to the Heritage Overlay.

Figure 30. The former Collingwood Post Office, 174-180 Smith Street (VHD H0973) is an example of a local landmark due to its former civic function, elaborate architectural decorative scheme and prominent French Second Empire tower element (VHD, 2008)

Figure 31. The Perseverance Hotel, 196 Brunswick Street (HO311) is an example of a local landmark due to its prominent corner location, function, elaborate architectural decorative scheme and oriel tower and turret (VHD, 2008)

Figure 32. Patersons Building, 173-181 Smith Street (HO333) is an example of a local landmark due to its former use as a department store, scale and multistorey height and elaborate architectural detailing (VHD, 2008)

Figure 33. Former Union Bank of Australia, 165-167 Smith Street (VHR H0506) is an example of a local landmark due to its former use as a bank, it prominent corner location and elaborate architectural detailing (VHD, 2008)

6. Brunswick Street and Town Hall Mixed Use Precinct, Fitzroy

6.1 Description

6.1.1 Brunswick Street Activity Spine

The Brunswick Street Activity Spine runs in a north-south direction between Alexandra Parade (north) to a point just north of Victoria Parade (south) where it meets the institutional precinct occupied by the Australian Catholic University. The corridor generally extends to the depth of one property to the east and west. Brunswick Street rises gently to the south (Eastern Hill) and is crossed by a regular succession of east-west running streets, which is broken only by the Atherton Gardens housing estate.

The precinct excludes the Atherton Gardens housing estate, the former Eastern Hill Hotel (VHR H0816) at 77 Victoria Parade the adjoining property at 5 Brunswick Street, as well as the Australian Catholic University campus on the eastern side of Brunswick Street. The precinct extends east of Brunswick Street to include the land bounded by Leicester, Young, Rose and Brunswick Streets and the MUZ zoned land south of Gertrude Street and west of Young Street. West of Brunswick Street the precinct includes the land bounded by Hanover and Fitzroy Streets and Brunswick Place and the MUZ zoned land bounded by Palmer, Brunswick and Fitzroy Streets.

With the exception of the Atherton Gardens housing estate, the eastern side of Brunswick Street is commercial in character as is the western side north of Gertrude Street. The western side of Brunswick Street south of Gertrude Street is predominantly made up of two and three storey residential grand terraces and houses. While lacking the larger scale department stores and showrooms that typify the centre of the Smith Street corridor, the predominantly two-storey commercial streetscape of Brunswick Street is highly intact. The northern part of Brunswick Street between Leicester and Johnston Streets has a particularly intact and consistent two storey heritage built form. There are some larger infill sites north of Westgarth Street, between Greeves and King William Streets, and between Palmer and Gertrude Streets. In comparison with Johnston or Smith Street, there has been limited new development approved within the corridor, a notable exception being the approval of a seven-storey building behind the three-storey VHR-listed residence at 11 Brunswick Street (VHR H0149, approved but not constructed).

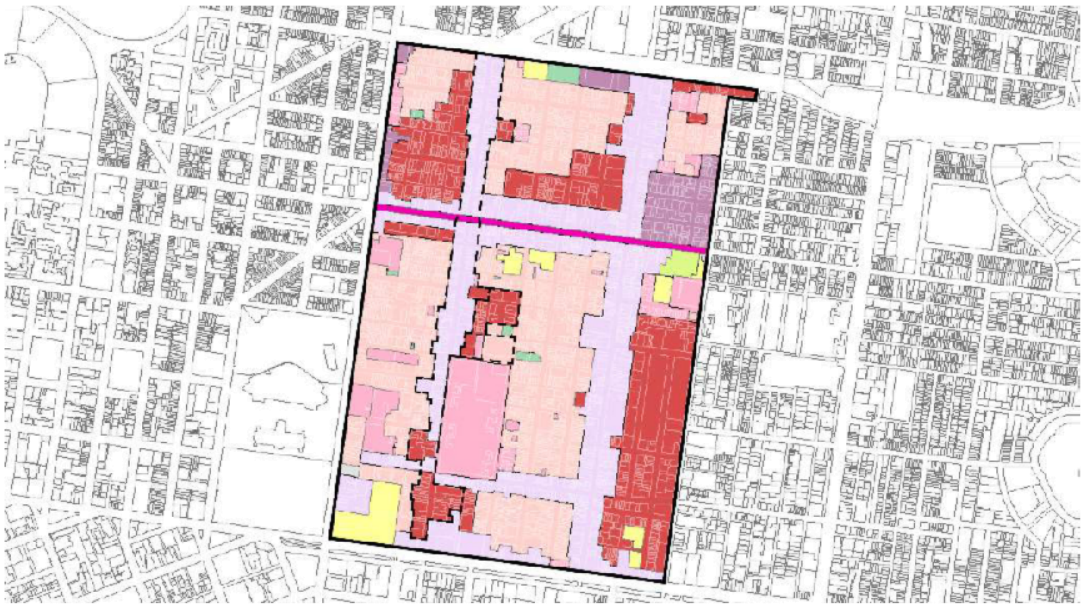

Figure 34. Zoning map – Brunswick Street Activity Spine and Town Hall Precinct outlined in black dashed line (VicPlan, accessed 29 August 2019)

6.1.2 Town Hall Mixed Use Precinct

The Town Hall Mixed Use Precinct is located immediately east of the properties facing Brunswick Street and is generally bounded by Exhibition Street to the north, Napier Street to the east, King William Street to the south and Kent Street to the west. The precinct excludes the public housing at 125 Moor Street and the Whitlam Place pocket park (addressed as 209 Moor Street).

The precinct is dominated by the imposing Classical Revival-style Fitzroy Town Hall (VHR H0147) which forms the heart of a small civic precinct that includes the Fitzroy Police Station. West of Young Street the Town Hall Mixed Use Precinct includes Sacred Heart School and All Saints Parish Church and Church Hall (c.1855); the latter of which is included on the VHR (H2172). North of Moor Street the Town Hall Mixed Use Precinct is made of a row of highly intact Victorian-era terraced houses, small-scale late nineteenth and early twentieth century factory and warehouse buildings (many of which have been converted to residential uses), and more recent apartment developments of up to four storeys in height.

Developments along Napier Street have been approved at up five storeys in height, and there are few development sites remaining within the Town Hall Mixed Use Precinct.

6.2 Heritage Status

6.2.1 Existing Conditions

The majority of the Brunswick Street Activity Spine is included within HO311 – Brunswick Street Precinct, Fitzroy. South of Gertrude Street a large proportion of the Brunswick Street corridor is included within HO334 – South Fitzroy Precinct. There is a single place (the shops at 236-252 Brunswick Street) included on the VHR within the commercial section of Brunswick Street with the majority of VHR-listed places being located between Gertrude Street and Victoria Parade.

The Town Hall Mixed Use Precinct is subject to HO334 – South Fitzroy Precinct with the exception of the two places included in the VHR, namely Fitzroy Town Hall and All Saints Church Hall.

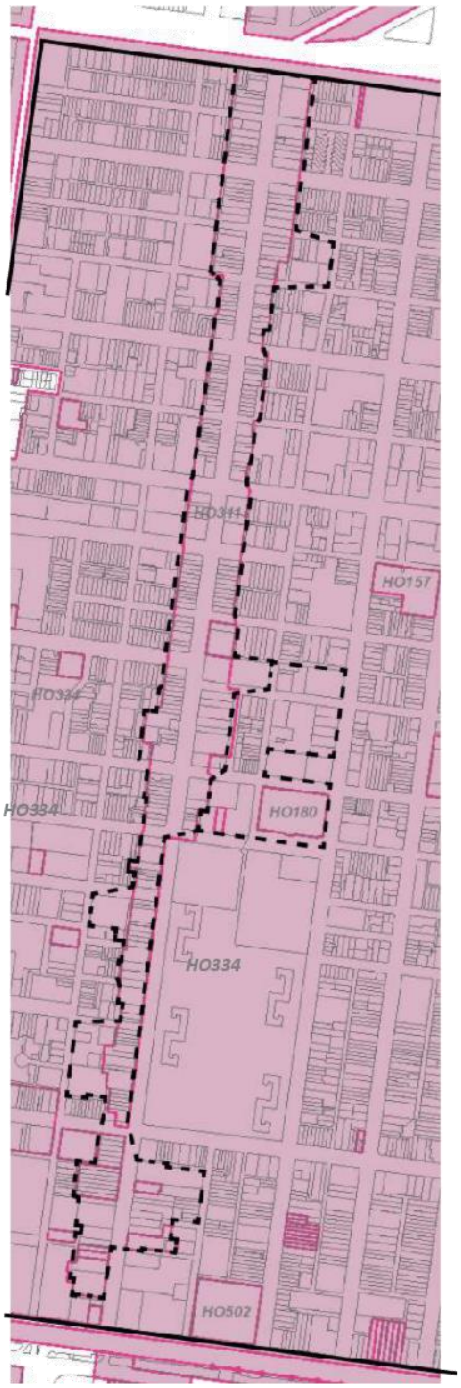

Figure 35. Heritage Overlay map – Brunswick Street Activity Spine and Town Hall Precinct outlined in black dashed line (VicPlan, accessed 29 August 2019)

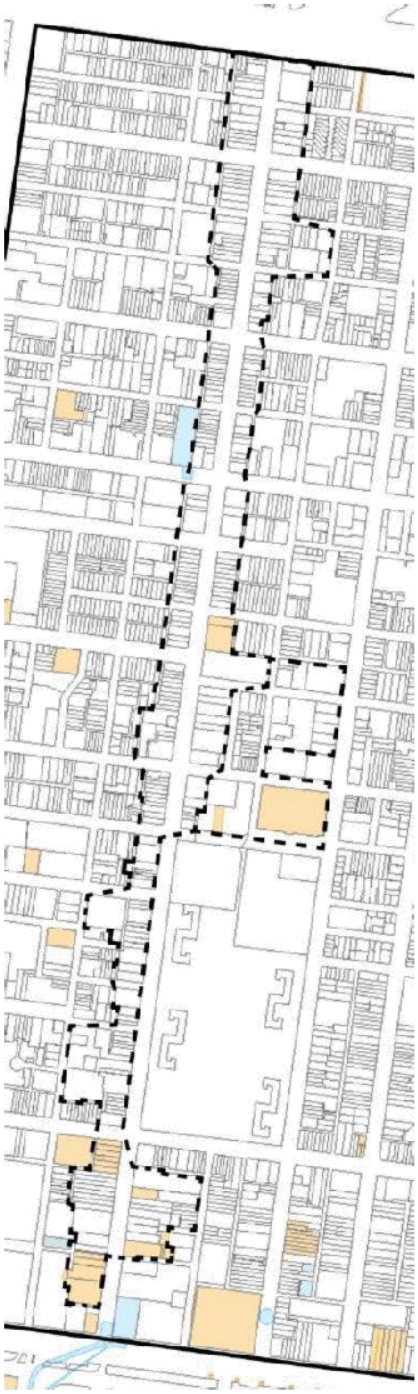

Figure 36. VHR shaded in yellow and VHI shaded in blue Brunswick Street Activity Spine and Town Hall Precinct outlined in black dashed line (VicPlan, accessed 29 August

In summary, the existing heritage status for the Brunswick Street Activity Spine and Town Hall Mixed Use Precinct is:

Victorian Heritage Register (those VHR places marked with an asterisk (*) are identified as the building only and may not include any land within the extent of registration)				
VHR	*Name*	*Address*	*Heritage Overlay*	*Date*
H0147	Fitzroy Town Hall*	201 Napier Street, Fitzroy	HO180	1873-90
H0149	Residence*	11 Brunswick Street, Fitzroy	HO151	1891
H0150	Shop and Residence*	13 Brunswick Street, Fitzroy	HO152	1892
H0479	Terrace*	39-49 Brunswick Street, Fitzroy	HO154	1856
H0559	Shops	236-252 Brunswick Street, Fitzroy	HO155	1888
H1706	Dodgshun House	9 Brunswick Street, Fitzroy	HO150	1865
H01939	Former Melbourne Veterinary College	38-40 Brunswick Street, Fitzroy	HO345	1886
H01967	Cathedral Hall	20-22 Brunswick Street, Fitzroy	HO347	1873, 1908
H2172	All Saints Church Hall	95 King William Street, Fitzroy	HO358	c.1855
Individual Heritage Overlays				
Heritage Overlay	*Name*	*Address*	*Appendix 8 grading*	*Date*
HO153	Barcelona Terrace Gardens	25-37 Brunswick Street, Fitzroy	Individually Significant	1881
Precinct Heritage Overlays				
Heritage Overlay	*Name*	*Address*	*Appendix 8 grading*	*Date*
HO311	Brunswick Street Precinct	various	various	various
HO334	South Fitzroy Precinct	various	various	various

6.2.2 Recommended Changes

The Brunswick Street Activity Spine is, in its entirety, subject to State or local-level heritage controls. The Atherton Gardens housing estate occupies approximately 6.7 ha and is included within the extent of HO334 but does not contribute to the values of either the Brunswick Street or South Fitzroy Precincts. The existing Statement of Significance for HO311 reads:

> *... the greatest loss in the street was the development of the Atherton Gardens Estate by Housing Commission of Victoria when shop rows and an early stone church, between King William and Gertrude Streets, were demolished. Four twenty-storey residential towers were built in their place in 1970-1972.*

It is recommended that the land occupied by Atherton Gardens (bounded by Condell, Napier, Gertrude and Brunswick Streets) be removed from the Heritage Overlay.

In addition, a number of anomalies within the Heritage Overlay and the grading within Appendix 8 were identified and amendments recommended to existing heritage gradings these are addressed in the Heritage Anomalies Report.

6.3 Zoning

6.3.1 Existing Conditions

The land within the Brunswick Street Activity Spine is included within the C1Z, MUZ and Road Zone – Category 1 (RDZ1). Parts of the Town Hall Mixed Use Precinct are also zoned GRZ3 (Sacred Heart School) and PPRZ (Whitlam Place). A number of dwellings that remain in residential use are zoned MUZ when their immediate neighbours are more appropriately zoned NRZ. Where these properties are residential in form, character and use, consideration should be given to their rezoning to reflect similar adjacent properties. This includes the group of terraced houses on Young Street which are located within the Brunswick Activity Spine and Gertrude Street Precinct, that are zoned MUZ but abut NRZ1 land on Napier, George and Gore Streets between Gertrude Street and Victoria Parade.

6.3.2 Recommended Changes

It is recommended that the following heritage-graded residential properties be rezoned from MUZ to NRZ to reflect their low-rise residential character and context:

21-49 Brunswick Street

100-104 Leicester Street

39-41 Little Napier Street

113-121 Moor Street

44-72 Young Street

45-53 Young Street.

This would restrict development to that of adjoining NRZ land and ensure that the sight line tests at Figures 2 and 3 of Clause 22.02 of the Yarra Planning Scheme would apply.

The at-grade car park at 64-66 Hanover Street is located within HO334 and zoned NRZ1 while the rest of the block bounded by Hanover and Fitzroy Streets and Brunswick Place is zoned C1Z. Consideration should therefore be given to rezoning this land C1Z as this change will have no adverse effect on the heritage values of HO334 but would better reflect underlying land use.

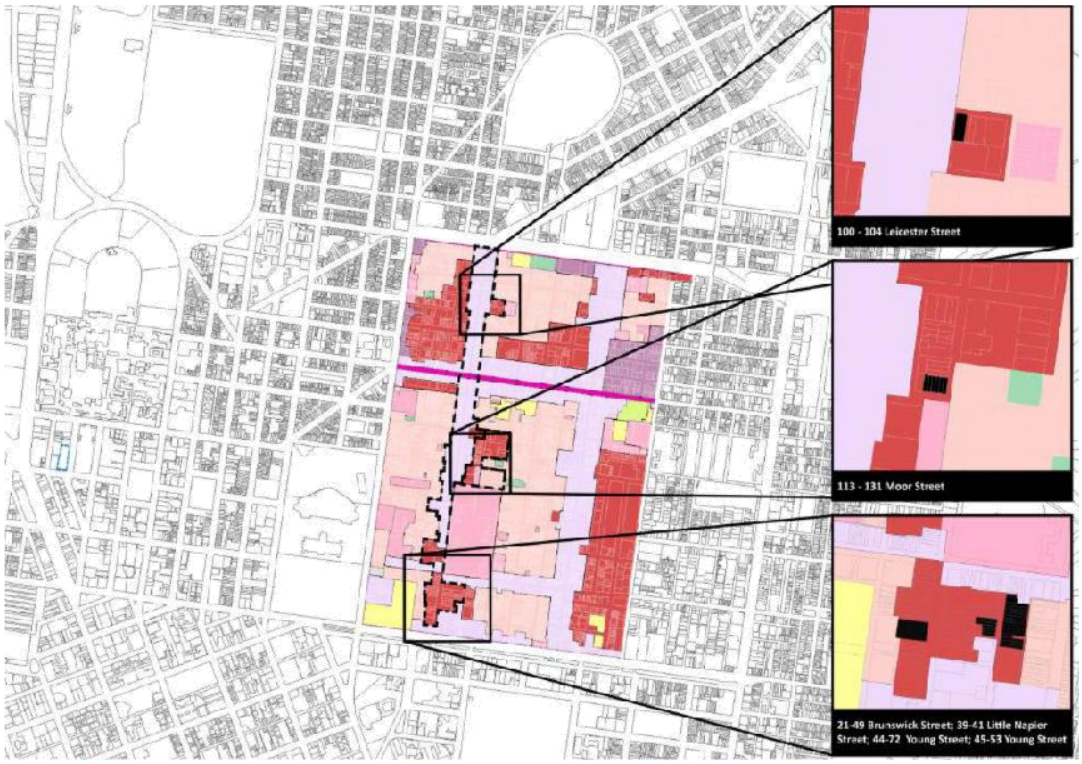

Figure 37. Planning map showing properties (shaded in black) that should be considered for rezoning from MUZ to NRZ, (VicPlan, accessed 29 August 2019))

6.4 Key Views and Landmarks

6.4.1 Brunswick Street Activity Spine

One of the key view sheds for the spire of St Patrick's Cathedral is along Brunswick Street looking south. Clause 22.03 of the Yarra Planning Scheme seeks the following design response:

> *Development should protect the silhouette/profile of St Patrick's Cathedral seen from the intersection of Brunswick Street with St Georges Road.*

While this point is outside the study area, development along the street has the potential to impact on this key view point. We also note that there are a number of incidental views of the tower and spire of St Patrick's Cathedral at the pedestrian crossings along Brunswick Street.

Figure 38. View of the spire of St Patricks Cathedral from the intersection of Brunswick Street and St Georges Road (©Ethos Urban)

In addition to the view to the spire of St Patrick's Cathedral, there are a number of buildings along Brunswick Street, which can be considered local landmarks when applying the criteria set out in Section 5.2. These are set out in the table below:

Table 1. Local Landmarks – Brunswick Street

Address	Building Name	Type	Corner	Grading	Image*
50-54 Brunswick Street	Former Champion Hotel	Hotel with corner domed belvedere on a prominent corner	Gertrude Street	Individually significant (HO334)	
51 Brunswick Street	Rob Roy Hotel	Hotel on a prominent corner	Gertrude Street	Individually significant (part HO331 / part HO334)	
196 Brunswick Street	Perseverance Hotel	Hotel with corner turret on a prominent corner	Moor Street	Individually significant (HO311)	
236-252 Brunswick Street	Shops	Three storey shops on a prominent corner	Greeves Street	VHR H0559	
277-287 Brunswick Street	Moran & Cato Merchants	Major commercial building on a prominent corner	Victoria Street	Individually significant (HO311)	

287-295 Brunswick Street	AOF House	Shops with corner oriel dome on a prominent corner	Johnston Street	Individually significant / Contributory (HO311)	
296 Brunswick Street	Fitzroy Post Office	Civic building on a prominent corner	Johnston Street	Individually significant (HO311)	
298 Brunswick Street	Former Union Bank	Bank on a prominent corner	Johnston Street	Individually significant (HO311)	
299 Brunswick Street	Former Liverpool Arms Hotel	Hotel on a prominent corner	Johnston Street	Individually significant (HO311)	
446 Brunswick Street	Royal Derby Hotel	Hotel on a prominent corner	Alexandra Parade	Individually significant (HO311)	

* Photos either taken by GJM or sourced from VHD or Google Streetview.

6.4.2 Town Hall Mixed Use Precinct

The Fitzroy Town Hall is located within the Town Hall Mixed Use Precinct and views to its clocktower are protected through the Landmarks and Tall Structures policy at Clause 22.03 of the Yarra Planning Scheme. The relevant policies within Clause 22.03 include:

- *Maintain the prominence of Yarra's valued landmark signs.*
- *Protect views to the silhouette and profile of Yarra's valued landmarks to ensure they remain as the principal built form reference.*
- *Ensure the profile and silhouette of new tall structures adds to the interest of Yarra's urban form and skyline.*

Of the key views identified within Appendix A – *Landmarks & Views Assessment* (Ethos Urban, 22 December 2017), only the view from the intersection of Kent and Moor Street would be impacted by development within the Town Hall Mixed Use Precinct. The height of new development on the Sacred Heart School site should therefore be limited to retain this key view. Development along Brunswick Street will not adversely impact on key views of the clocktower however, consideration will need to be given to ensuring that the silhouette of the tower remains as the principal built form reference when viewed from the Condell Street Reserve and residential streets to the east, particularly George Street. The views to the spire of St Marks Church, George Street are effectively protected through the NRZ zoning of the surrounding area. Neither development along Brunswick Street or within the Town Hall Mixed Use Precinct will adversely affect the visual prominence or landmark qualities of St Marks Church spire.

Figure 39. Identified views of the Fitzroy Town Hall clock tower: note views 1, 2 & 3 are considered of 'primary' importance in the Ethos Urban report and 4 & 5 'secondary' (©Ethos Urban, Dec 2017). Note: the specific location of each view is described in Appendix A to the Ethos Urban Report.

6.5 Potential Future Character Considerations

The Brunswick Street Activity Spine has highly consistent built form north of Gertrude Street which is only disrupted by Atherton Gardens and some low rise twentieth century development. Its built form is characterised by continuous runs of intact nineteenth century shop / residences and mix of grand terraced and freestanding residences south of Gertrude Street. The Brunswick Street corridor is a highly cohesive and intact commercial high street which largely retains its late-nineteenth and early-twentieth century character. It contains a number of local landmarks and buildings with prominent corner features (turrets, towers etc), visible roof forms and chimneys. New development has been limited and is generally in the range of three to five storeys in height with a small number of approved six storey developments and a seven-storey apartment building approved by the Heritage Council on review at 11 Brunswick Street (but not constructed).

6.5.1 Brunswick Street (north of Gertrude Street)

The Heritage Overlay will ensure the retention of 'contributory' and 'individually significant' buildings within the Brunswick Street Activity Spine. Within the land subject to the Heritage Overlay there remains a range of development opportunities from small scale infill between intact terrace rows of shop / residences (such as 386-388 Brunswick Street) to larger redevelopment sites (such as 430-444 Brunswick Street). Infill development should reflect the existing highly consistent two-storey street wall with new built form constructed to the street boundary with a street wall height no higher than the predominant two (Victorian-era) storeys. Single-storey development should be discouraged and infill facades should respect the materiality and relationship between solid and void established by 'contributory' and 'individually significant' buildings. The narrow depth and sensitive rear interfaces of some sites such as those between Johnston and Rose Streets are unlikely to be developed beyond their existing Victorian two-storey scale with a single storey addition possible, whereas other deeper lots are able to generally accommodate four and five with some six-storey development possible on larger ('not-contributory' graded) redevelopment sites.

Any new upper-level development within the Heritage Overlay should be set back from the street wall to retain the low-scale, turn of the century high street character of the commercial strip and to retain the prominence of

the heritage fabric in the streetscape. New upper-level development should be designed so as to be recessive in the context of the heritage buildings when viewed from the opposite side of the street.

Prominent corner buildings, including those buildings considered to be local landmarks, provide less development opportunity as new built form should be setback off both street façades and visible roofs and chimneys retained. The intersections of Brunswick Street with Gertrude and Johnston Street are key wayfinding and nodal points that require consistent setbacks from each of these principal Activity Spines.

6.5.2 Brunswick Street (south of Gertrude Street)

There are more limited redevelopment opportunities south of Gertrude Street and, given the more diverse residential and institutional character of this area, new development will need to consider the particular scale, form, setback and significance of the individual adjacent heritage buildings as well as the streetscape more broadly. The built form outcomes for the six places included in the VHR will largely be a matter for heritage permits under the Heritage Act although there may be urban design outcomes that require additional built from controls to be applied through the DDO.

The intersection of Brunswick and Gertrude Street provides key wayfinding views towards the World Heritage Listed Royal Exhibition Building and Carlton Gardens and views to the drum, dome and cupola of the Royal Exhibition Building should be maintained and its low-scale nineteenth century context retained.

The residential buildings south of Gertrude Street should be retained to at least a two-room depth, including their primary roof form and visible chimneys. As per the recommendations at Section 6.3.2, the heritage values of residential buildings zoned MUZ would be more appropriately managed through rezoning these to GRZ or NRZ where a mandatory height limit and the application of the sightline tests at Figures 2 and 3 of Clause 22.02-5.7.1 would apply.

6.5.3 Town Hall Mixed Use Precinct

Only limited opportunities for new development within the Town Hall Mixed Use Precinct remain with many sites either converted to multiunit developments or subject to existing approvals, particularly along Napier Street. The former C.F. Rojo & Sons building at 239-241 Napier Street has been developed to six storeys behind the retained single storey façade. A DDO control applied to the Town Hall Mixed Use Precinct should reflect the more diverse character of the existing and emerging built form and ensure that the three-dimensional form of the existing heritage buildings remain legible and that heritage buildings, particularly those included on the VHR, are not visually dominated. This will.

6.6 Recommended Built Form Parameters

A DDO should apply to those parts of the Brunswick Street Activity Spine and the Town Hall Mixed Use Precinct that are subject to the Heritage Overlay to ensure that new built form is respectful of the heritage context.

A DDO control applied to properties within the Brunswick Street Activity Spine should ensure new built form protects the visual prominence of the existing predominant two-storey character of the streetscape. If rezoning of the residential properties south of Gertrude Street from MUZ to NRZ proceeds there will be no need for a DDO to apply in those locations.

Informed by the heritage analysis above and the 3D modelling prepared by Hansen Partnership, it is recommended that a DDO should seek built form outcomes that:

General

- Retain the visual prominence of the local landmarks in the streetscape.
- Retain chimneys and roof forms visible from the public realm.
- Ensure that new development within the Heritage Overlay does not visually dominate the existing heritage fabric.

- Ensure that any upper-level or infill development is subservient to the heritage fabric and is visually recessive in mass, scale and materiality.
- Encourage the top-most level (or levels) of new development to be set further back from the principal heritage frontage (as encouraged at Clause 22.02-5.7.2) and treated as a penthouse or roof top element.

Brunswick Street

- Retain the visual prominence of the return façades of buildings that address both Brunswick Street and cross streets particularly at the principal intersections with Gertrude and Johnston Streets by setting back new upper level built form from both street frontages.
- Establish a street wall height for infill development that reflects the established two (Victorian-era) storey scale of the precinct and discourages single-storey infill development.
- Ensure zero setback from the Brunswick Street boundary for infill and new development north of Gertrude Street.
- Encourage setbacks that match the lesser of the adjoining heritage property (or properties) south of Gertrude Street.
- Ensure that the heritage buildings remain prominent within the Brunswick Street streetscape and retain their three-dimensional form as viewed from the public realm to avoid 'facadism'. This will require new upper-level development to be set back a minimum of 8m from the street wall and for redevelopment to respect the existing inter-floor heights of the heritage fabric.
- Ensure that new development does not obscure views of the spire of St Patrick's Cathedral from the intersection of Brunswick Street and St Georges Parade and within Brunswick Street itself.
- Ensure that new development does not obscure views of the spire of St Lukes Church, North Fitzroy from the intersection of Brunswick Street and Victoria Parade and within Brunswick Street itself.
- Ensure that new development does not obscure views of the drum, dome and cupola of the Royal Exhibition Street from the intersection of Brunswick and Gertrude Streets and protects the low-scale nineteenth century context of the Carlton Gardens.

Town Hall Precinct

- Ensure that new development does not obscure views to the Fitzroy Town Hall clock tower from the intersection of Kent and Moor Streets.
- Ensure that the profile and silhouette of the Fitzroy Town Hall clock tower remains the principal built form reference when viewed from Condell Street Reserve and George Street.
- Ensure that new development does not visually dominate the All Saints Church Hall by limiting adjacent development to no more than three storeys.

7. Smith Street Activity Spine

7.1 Description

The Smith Street Activity Spine runs from just south of Alexandra Parade (to the north) to just north of Victoria Parade (to the south) and generally extends to the depth of one property to the east and west. Smith Street is largely flat between Victoria Parade and Johnston Street and falls gently from Johnston Street to Alexandra Parade. Johnston and Gertrude Streets are the principal cross streets and, unlike Brunswick Street, side streets on the west (Fitzroy) side do not generally align with those on the east (Collingwood).

The precinct excludes the large retail site at 230 Alexandra Parade and the Gasometer Hotel at 484 Smith Street to the north, and the commercial properties at 207 Victoria Parade and 1-3 Smith Street, Fitzroy and 1-13 Victoria Parade, Collingwood at the southern end. It also excludes the rear part of 34 Smith Street, Collingwood where this property is included within the MUZ. The precinct extends east of Smith Street to include: the western side of Emma Street, the C1Z zoned land on Bedford Street and the C1Z and MUZ zoned land on the western side of Little Oxford Street. The precinct extends west of Smith Street to Gore Street at 397 Smith Street, between St David and Moor Streets and between Charles Street and the Union Club Hotel on Webb Street.

Smith Street is a highly intact commercial high street with a character that varies over its length, but is predominantly typified by small-scale (single and two-storey) shop / residences with larger-scale former department stores and showrooms towards the centre and factory / warehouses at the northern end. The northern and southern ends are less cohesive and have been subject to more recent development.

There has been a more substantial amount of recent development on Smith Street than Brunswick Street, with a number of constructed and approved developments of up to 12-storeys in height north of Johnston Street, a large seven storey-mixed use development at the Coles site at 132-172 Smith Street, and the seven-storey apartment building at 9 Smith Street, Fitzroy.

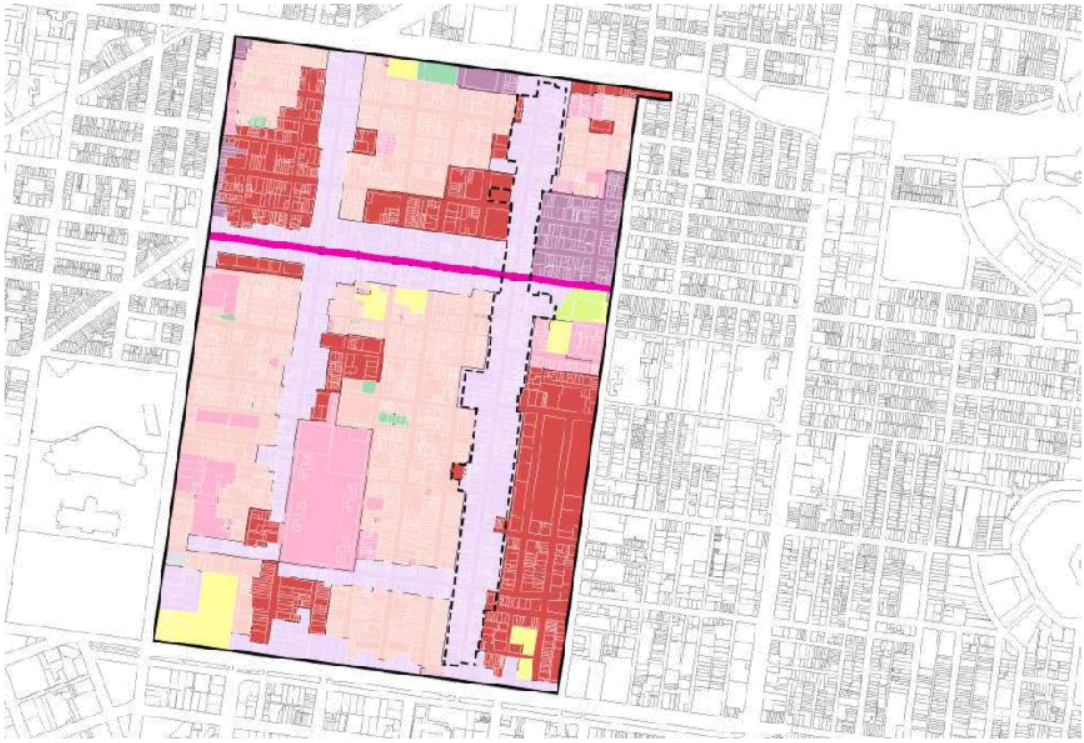

Figure 40. Zoning map – Smith Street Activity Spine outlined in dashed line (VicPlan, accessed 29 August 2019).

7.2 Heritage Status

7.2.1 Existing Conditions

The majority of the Smith Street high street north of the intersection with Gertrude and Langridge Streets is included within HO333 – Smith Street Precinct. North of Westgarth Street (on the western side of Smith Street) and north of 438 Smith Street (immediately south of Mater Street on the eastern side of Smith Street) is not subject to the Heritage Overlay. South of Gertrude and Langridge Streets, the majority of the Smith Street corridor is included within HO464 – Smith Street South Precinct. Larger lots on the western side of Smith Street at nos. 243-255, 397, 411-421 extend into HO334 – South Fitzroy Precinct, as do the projections of the Smith Street precinct boundary along parts of Gore and Little Smith Streets to the west and Bedford and Emma Streets to the east. A small part of the precinct at the intersection of Little Oxford Street and Peel Street is located within HO318 – Collingwood Slope Precinct. There are a small number of places included on the VHR within the Smith Street precinct (namely the Grace Darling Hotel, Former Union Bank of Australia and the former Collingwood Post Office) and a larger number of individual houses and terrace rows on individual Heritage Overlays.

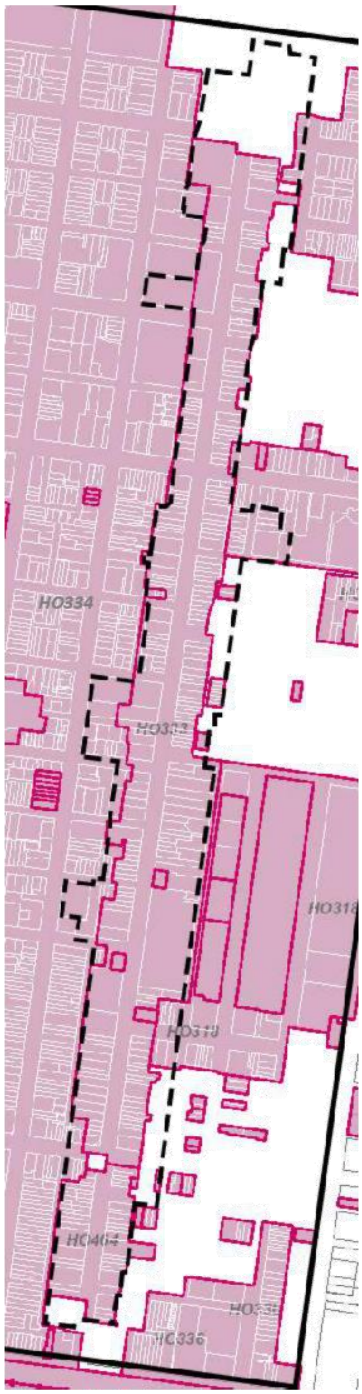

Figure 41. Heritage Overlay map – Smith Street Activity Spine outlined in black dashed line (VicPlan, accessed 29 August 2019)

Figure 42. VHR shaded in yellow and VHI shaded in blue Smith Street Activity Spine outlined in black dashed line (VicPlan, accessed 29 August 2019)

In summary, the existing heritage status for the Smith Street Activity Spine is:

Victorian Heritage Register (those VHR places marked with an asterisk (*) are identified as the building only and may not include any land within the extent of registration)				
VHR	*Name*	*Address*	*Heritage Overlay*	*Date*
H0506	Former Union Bank of Australia*	165-167 Smith Street, Fitzroy	HO187	1889-90
H0660	Grace Darling Hotel	114 Smith Street, Collingwood	HO135	1854
H0973	Former Collingwood Post Office	174-180 Smith Street,	HO136	1868, 1892
Individual Heritage Overlays				
Heritage Overlay	*Name*	*Address*	*Appendix 8 grading*	*Date*
HO95	Former McGan & Fowler Boot Factory	15-17 Bedford Street, Collingwood	Individually Significant	1886
HO96	Purfleet Cottages	33-47 Bedford Street, Collingwood	Individually Significant	1873
HO98	Derby House	1 Derby Street, Collingwood	Individually Significant	1876
HO99	House	2 Derby Street, Collingwood	Individually Significant	1875
HO100	Terrace	3-7 Derby Street, Collingwood	Individually Significant	1876
HO101	Johnston House	8 Derby Street, Collingwood	Individually Significant	1871
HO137	House	2 Stanley Street, Collingwood	Individually Significant	1870-80
Precinct Heritage Overlays				
Heritage Overlay	*Name*	*Address*	*Appendix 8 grading*	*Date*
HO318	Collingwood Slope Precinct	various	various	various
HO333	Smith Street Precinct	various	various	various
HO334	South Fitzroy Precinct	various	various	various
HO464	Smith Street South Precinct	various	various	various

7.2.2 Recommended Changes

A number of anomalies in the application of the Heritage Overlay and gradings within Appendix 8 were identified and amendments recommended to existing heritage gradings these are addressed in the Heritage Anomalies Report.

7.3 Zoning

7.3.1 Existing Conditions

The land within the Smith Street Activity Spine is included within the C1Z, C2Z, MUZ and RDZ1. A number of historic dwellings that remain in residential use are zoned MUZ when their immediate neighbours are more appropriately zoned NRZ. Consideration should be given to their rezoning to reflect similar adjacent properties.

7.3.2 Recommended Changes

It is recommend that the following heritage-graded residential properties be rezoned from C1Z to NRZ to reflect their low-rise residential character and context. This would restrict development to that of adjoining NRZ land and ensure that the sight line tests at Figures 2 and 3 of Clause 22.02 of the Yarra Planning Scheme would apply:

104-106 Charles Street, Fitzroy

105-107 Charles Street, Fitzroy

221-227 Moor Street, Fitzroy

111 St David Street, Fitzroy

100-106 Webb Street, Fitzroy.

In addition, we note that there are single properties which straddle two zones. For example, 34 Smith Street, Collingwood is partially included in the C1Z while the rear part of the same site is located in the MUZ. These zoning anomalies should be further considered by the City of Yarra.

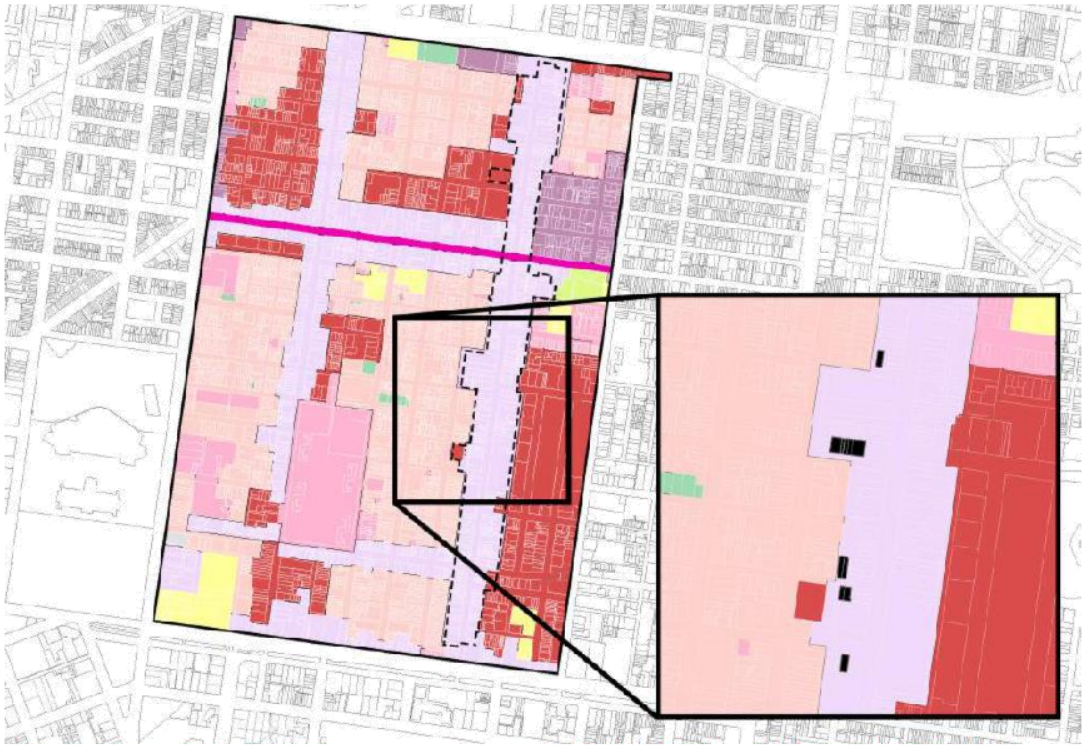

Figure 43. Planning map showing properties (shaded in blue) that should be considered for rezoning from C1Z to NRZ, (VicPlan, accessed 29 August 2019))

7.4 Key Views and Landmarks

There are no key views of landmarks, tall structures or advertising signs identified within Clause 22.03 of the Yarra Planning Scheme that fall within the Smith Street Activity Spine. However, a 'secondary' view of the spire of St Marks Church at 268 George Street, Fitzroy from the intersection of Gore and Hodgson Streets is identified in the within *Appendix A – Landmarks & Views Assessment* (Ethos Urban, 22 December 2017). This location is on the edge of the Smith Street Activity Spine and development within this precinct will not impact on these views.

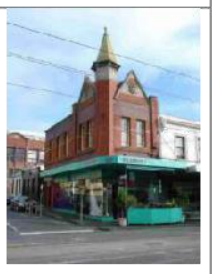

Figure 44. View of the spire of St Marks Church from the intersection of Gore and Hodgson Streets (©Ethos Urban)

In addition to the above, there are a number of buildings along Smith Street, which can be considered local landmarks when applying the criteria set out in Section 5.2. These are set out in the table below:

Table 2. Local Landmarks – Smith Street

Address	Building Name	Type	Corner	Grading	Image*
119-129 Smith Street	Stanford Block	Three storey shops in a prominent mid-block location	-	Individually significant (HO333)	
145 Smith Street	Foy & Gibson Store	Department Store in a prominent mid-block location	-	Individually significant (HO333)	
114 Smith Street	Grace Darling Hotel	Hotel on a corner site	Moor Street	VHR H0135	
165-167 Smith Street	Union Bank of Australia (former)	Bank on a prominent corner site	Webb Street	VHR H0506	

171 Smith Street	National Bank of Australasia	Bank on a prominent corner site	Webb Street	Individually Significant (HO333)	
173-181 Smith Street	Patersons Building	Department Store in a prominent mid-block location	-	Individually significant (HO333)	
174-180 Smith Street	Former Post Office	Civic building in a prominent mid-block location	-	VHR H0136	
231 Smith Street	Paterson Furniture Warehouse	Department Store on a corner site	Moor Street	Contributory (HO333)	
243-247 Brunswick Street	Ackman's Furniture Warehouse façade	Department Store occupying a whole block	Hodgson Street St David Street	Individually significant (HO333)	
257 Smith Street	Shop	Shop with corner turret on a corner site	St David Street	Individually significant (HO333)	
333 Smith Street	Birmingham Hotel	Hotel on a prominent corner site	Johnston Street	Individually significant (HO333)	

337 Smith Street	Former State Savings Bank	Bank on a prominent corner site	Johnston Street	Individually significant (HO333)	
484 Smith Street	Gasometer Hotel	Hotel on a prominent corner site	Alexander Parade	Not within HO	

* Photos either taken by GJM or sourced from VHD or Google Streetview.

7.5 Potential Future Character Considerations

The Smith Street Activity Spine varies considerably in its urban character and heritage built form along its length. North of Argyle and Hotham Streets, Smith Street is characterised by early-mid twentieth century former factory, warehouse and showroom buildings and later mid-rise development of up to 12-storeys in height. The area south of this to Johnston Street retains the finer grained and more highly intact Victorian and Edwardian shop / residence typology with a more consistent two-storey built from. South of Johnston Street the street wall height remains generally two (Victorian-era) storeys in scale but is punctuated by notable showrooms, furniture and department stores of three and four-storeys in height. South of Gertrude and Langridge Streets the heritage character of the street becomes less consistent and reflects a smaller scale, more locally focused shopping strip.

New development is more evident on Smith Street than other parts of the Brunswick / Smith Street study area with substantial change occurring at the northern end and on the Coles site in the centre of the high street.

The Heritage Overlay will ensure the retention of 'contributory' and 'individually significant' buildings within the precinct. Within the land subject to the Heritage Overlay there are smaller scale infill development opportunities within an otherwise intact, predominantly two-storey commercial street scale (infill sites include 83-87, 95-97, 209-211, 215-217, 339 or 384 Smith Street). There are also a number of larger redevelopment sites, particularly at the northern end of Smith Street. These include sites outside the extent of the Heritage Overlay, 'not-contributory' graded late twentieth century showrooms, and graded former industrial buildings. Infill development in all these locations should reflect the existing consistent two-storey (Victorian-era) street wall with new built form constructed to the street boundary. Single-storey development should be discouraged and infill facades should respect the materiality and relationship between solid and void established by the 'contributory' and 'individually significant' buildings. Development bordering residential land within HO334 to the west of Smith Street should moderate its built from to the lower scale of these areas. The industrial character and land use in Collingwood means there is less need for new built form to moderate its scale at the rear on the eastern side of Smith Street.

Any new upper-level development within the Heritage Overlay should be set back from the street wall to retain the low-scale, high street character of the commercial strip and to retain the prominence of the heritage fabric in the streetscape, including the former industrial buildings at the northern end of Smith Street. New upper-level development should be designed so as to be recessive in the context of the heritage buildings when viewed from the opposite side of the street and to retain the visual prominence and local landmark status of the larger-scale former department stores and showrooms.

Prominent corner buildings, including those buildings considered to be local landmarks, provide less development opportunity as new built form should be setback off both street façades and visible roofs and chimneys retained.

Redevelopment of larger scale heritage-graded factory and warehouse buildings should be executed in a way that respects the existing form, fenestration and scale of the heritage fabric with roof-top development setback from the retained front section of the building.

As per the recommendations at Section 7.3.2, the heritage value of residential buildings zoned C1Z would be more appropriately managed through the rezoning of these to GRZ or NRZ where a mandatory height limit and the application of the sightline tests at Figures 2 and 3 of Clause 22.02-5.7.1 would apply.

7.6 Recommended Built Form Parameters

A DDO should apply to those parts of the Smith Street Activity Spine that are subject to the Heritage Overlay to ensure that new built form is respectful of the heritage context. It is also considered necessary to apply the DDO to those areas of Smith Street not subject to the Heritage Overlay to retain the prominence of the heritage street wall across the streetscape as a whole from Alexandra Parade to Victoria Parade.

A DDO applied to properties within the Smith Street Activity Spine should ensure that new built form protects the visual prominence of the existing two-storey street wall and the local landmark qualities of the three and four-storey departments stores and showrooms in the centre of the street. If rezoning of the small number of residential properties west of Smith Street within the precinct boundary from C1Z to NRZ occurs, there will be no need to apply to the DDO to these properties.

Informed by the heritage analysis above and the 3D modelling prepared by Hansen Partnership, it is recommended that a DDO should seek built form outcomes that recognise the different urban characters and heritage fabric various parts of the Smith Street Activity Spine:

Generally

- Retain the visual prominence of the local landmarks in the streetscape.
- Retain chimneys and roof forms visible from the public realm.
- Ensure that new development within the Heritage Overlay does not visually dominate the existing heritage fabric.
- Ensure that any upper-level or infill development is subservient to the heritage fabric and is visually recessive in mass, scale and materiality.
- Encourage the top-most level (or levels) of new development to be set further back from the principal heritage frontage (as encouraged at Clause 22.02-5.7.2) and treated as a penthouse or roof top element.
- Retain the visual prominence of the return façades of buildings that address both Smith Street and cross streets particularly at the principal intersections with Gertrude and Johnston Streets by setting back new upper level built form from both street frontages.
- Establish a street wall height for infill development that reflects the established two (Victorian-era) storey scale of the precinct and discourages single-storey infill development.
- Ensure zero setback from the Smith Street boundary for infill and new development.
- Ensure that the heritage buildings remain prominent within the Smith Street streetscape and retain their three-dimensional form as viewed from the public realm to avoid 'facadism'. This will require new upper-level development to be set back a minimum of 8m from the street wall and for redevelopment to respect the existing inter-floor heights of the heritage fabric.

Industrial buildings

- Mass new development above graded industrial buildings to retain the legibility of their three-dimensional form.
- Retain visible room forms that demonstrate the historic function of industrial buildings.

Multi-storey retail / department store

- Encourage the upper level development to be lightweight one or two storey roof top elements.

- Retain the visual prominence of the larger scale three and four-storey furniture showrooms and department stores and other local landmarks with the streetscape.

8. Johnston Street Activity Spine

8.1 Description

The Johnston Street Activity Spine runs between Nicholson Street to the west and Smith Street to the east. The precinct is bisected by the Brunswick Street Activity Spine. It extends to the depth of one property north of the Johnston Street and generally follows Victoria and Chapel Streets to the south. While predominantly commercial in character, the precinct includes areas of terraced houses and multi-unit residential development. The precinct is particularly diverse with building stock including two-storey shop / residences dating from the late nineteenth century to the mid-twentieth century, larger scale early twentieth century factory / warehouse buildings of up to four storeys in height, later commercial buildings as well as numerous commercial buildings dating from after the Second World War. Several sites are occupied by forecourts which break up the street edge of Johnston Street.

The precinct is not consistently commercial with reasonably intact single and two-storey terraced housing located across the precinct. The late-nineteenth and early twentieth century buildings are generally constructed of rendered or un-rendered brick and are generally more modest in scale and decoration than the commercial buildings associated with higher-status high streets with tram routes such as Brunswick Street or Smith Street.

Recent development in the precinct includes the contemporary seven-storey Abito Apartments at 67 Victoria Street and the five-storey Tyrian Apartments at 91 Johnston Street. The eight-storey Lyric Apartments at 245 Johnston Street and the six-storey redevelopment of the Spanish Club at 57 Johnston Street are currently under construction .

Figure 45. Zoning map – Johnston Street Activity Spine outlined in black dashed line. Study area boundary solid black line. (VicPlan, accessed 29 August 2010)

8.2 Heritage Status

8.2.1 Existing Conditions

Although very diverse in its built form and with large areas without heritage fabric, the whole of the Johnston Street Activity Spine is subject to the Heritage Overlay with the exception of the service station at 244 Nicholson Street. Four properties, the former Avon Butter Factory at 218 Nicholson Street and the three terraced houses that make up Holyrood Terrace at 331-335 Gore Street, are included on the VHR with the remainder of the precinct included within HO334 – South Fitzroy Precinct. HO334 is predominantly residential in character with industrial and commercial pockets. Unlike Brunswick and Smith Streets, the commercial high street character of

Johnston Street is not recognised through a separate Heritage Overlay. HO334 does not explicitly include commercial high streets under the contributory elements identified in the Statement of Significance.

Several blocks on the northern side of Johnston Street between Brunswick and Smith Street contain few, if any, buildings identified within Appendix 8 as being 'contributory' or 'individually significant' within HO334.

Figure 46. Heritage Overlay map – Johnston Street Activity Spine outlined in black dotted line. Study area boundary solid black line. (VicPlan, accessed 29 August 2010)

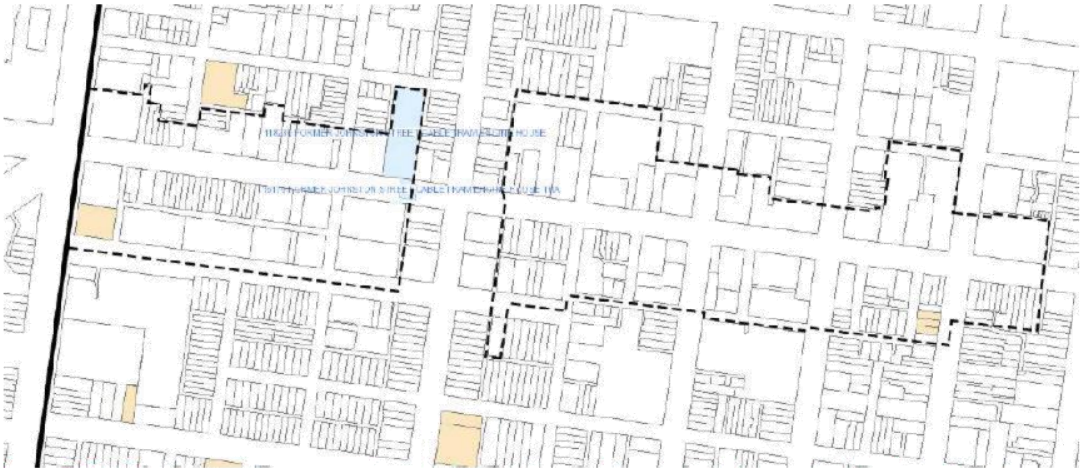

Figure 47. VHR shaded in yellow and VHI shaded in blue – Johnston Street Activity Spine outlined in black dotted line. Study area boundary solid black line. (VicPlan, accessed 29 August 2010)

In summary, the existing heritage status for the Johnston Street Activity Spine is:

Victorian Heritage Register (those VHR places marked with an asterisk (*) are identified as the building only and may not include any land within the extent of registration)				
VHR	*Name*	*Address*	*Heritage Overlay*	*Date*
H0159	Holyrood Terrace (part)*	331 Gore Street	HO168	1874
H0160	Holyrood Terrace (part)*	333 Gore Street	HO169	1874

H0161	Holyrood Terrace (part)*	335 Gore Street	HO170	1874
H2315	Former Avon Butter Factory	218-222 Nicholson Street	HO471	1932
Individual Heritage Overlays				
Heritage Overlay	*Name*	*Address*	*Appendix 8 grading*	*Date*
none				
Precinct Heritage Overlays				
Heritage Overlay	*Name*	*Address*	*Appendix 8 grading*	*Date*
HO334	South Fitzroy Precinct	various	various	various

8.2.2 Recommended Changes

The Johnston Street Acitivity Spine is atypical within the context of HO334 and its heritage values can be more accurately described and more effectively managed through a new Heritage Overlay created to reflect its commercial high street character. This would be consistent with the approach taken with Bridge Road and Brunswick, Smith, Swan and Victoria Streets as well as Johnston Street to the east of Smith Street. Figure 37 provides the recommended extent of a new Heritage Overlay covering the 'Johnston Street West' precinct.

Figure 48. Heritage Overlay map showing the extent of a potential Johnston Street West Heritage Precinct in magenta (VicPlan, accessed 29 August 2019)

As noted above there are whole blocks north of Johnston Street that have few, if any, graded heritage buildings and it is recommended that the land facing Johnston Street between numbers 163 and 223 (inclusive) be removed from the Heritage Overlay.

Figure 49 shows the extent of the land recommended to be removed from HO334, which also includes land within the Fitzroy East Mixed Use Precinct.

Figure 49. Heritage Overlay map showing properties (shaded in red) that should be considered for removing from HO334. Extent of Johnston Street Activity Spine outlined in red. Proposed Johnston Street West Heritage Precinct in magenta (VicPlan, accessed 29 August 2019)

In addition, a number of anomalies within the Heritage Overlay and the grading within Appendix 8 were identified and amendments recommended to existing heritage gradings these are addressed in the Heritage Anomalies Report.

8.3 Zoning

8.3.1 Existing Conditions

The land within the Johnston Street Activity Spine is included within the C1Z, MUZ and RDZ1. A number of heritage dwellings that remain in residential use are zoned C1Z when their immediate neighbours are more appropriately zoned NRZ. Consideration should be given to their rezoning to reflect similar adjacent properties.

8.3.2 Recommended Changes

We recommend that the following heritage-graded residential properties be rezoned from C1Z to NRZ to reflect their low-rise residential character and context:

7-9 Chapel Street

23 Chapel Street

35-39 Chapel Street

1-3 Elliot Street

342-346 George Street

331-337 Gore Street

334-336 Gore Street.

Figure 50. Planning map showing properties (shaded in blue) that should be considered for rezoning from C1Z to NRZ (VicPlan, accessed 29 August 2019)

8.4 Key Views and Landmarks

There are no key views of landmarks, tall structures or advertising signs identified within Clause 22.03 of the Yarra Planning Scheme that fall within the Johnston Street Activity Spine. However, there are a number of buildings along Johnston Street that can be considered local landmarks when applying the criteria set out in Section 5.2. These are:

Table 3. Local Landmarks – Johnston Street

Address	Building Name	Type	Corner	Grading	Image*
230-236 Nicholson Street	Tankerville Arms Hotel	Hotel on a prominent corner site	Nicholson Street	Individually significant (HO334)	
120 Johnston Street	Dr Peacock's Surgery & Residence	Elaborately detailed three storey building with prominent Mansard roof	-	Individually significant (HO334)	

166-170 Johnston Street	Town Hall Hotel	Hotel on a corner site	Napier Street	Individually significant (HO334)	
202-204 Johnston Street	Rochester Hotel	Hotel on a corner site	George Street	Individually significant (HO334)	

* Photos either taken by GJM or sourced from VHD or Google Streetview

8.5 Potential Future Character Considerations

The Johnston Street Activity Spine is very diverse with a less cohesive heritage and built form character than Brunswick, Gertrude or Smith Streets. Its built form ranges from short runs of intact nineteenth century shop / residences and terraced housing to low-rise twentieth century commercial buildings and medium rise contemporary development. The lack of consistency in heritage fabric and high proportion of 'not-contributory' buildings provides greater opportunity for new development than many comparable high streets within Yarra.

The Heritage Overlay will ensure the retention of 'contributory' and 'individually significant' buildings. Within the land subject to the Heritage Overlay there remains a wide range of development opportunities from small scale infill within otherwise intact terraces of shop / residences (such as 48-50 Johnston Street) to major redevelopment sites. Infill development in the sections of Johnston Street with narrow frontage fine-grained lots should reflect the existing relatively consistent two-storey street wall with new built form constructed to the street boundary with a street wall height no higher than the predominant two (Victorian-era) storeys. Single-storey development should be discouraged and infill facades should respect the materiality and relationship between solid and void established by the 'contributory' and 'individually significant' buildings. The larger development sites, some of which take up a significant proportion of a block, provide the opportunity to step up to a taller (four-storey) street wall, as has already occurred in some of the twentieth century development.

Any new upper-level development within the Heritage Overlay should be set back from the street wall – where this exists – to retain the low-scale, high street character of the commercial strip and to retain the prominence of the heritage fabric in the streetscape. New upper-level development should be designed so as to be recessive in the context of the heritage buildings when viewed from the opposite side of the street.

Prominent corner buildings, including the existing hotels, provide less development opportunity as new built form should be setback off both street façades and visible roofs and chimneys should be retained.

The residential buildings, facing both Johnston Street and on streets to the immediate south, should be retained to a two-room depth including their primary roof form and visible chimneys. It is acceptable for new development to be visible behind the retained terraced houses within the C1Z, but additions should be scaled to avoid visually dominating the heritage building.

Redevelopment of larger scale heritage-graded factory and warehouse buildings should be executed in a way that respects the existing form, fenestration and scale of the heritage fabric with roof-top development setback from the retained front section of the building.

The area proposed to be removed from HO334 provides the greatest opportunity for new development; however, where these opportunities are immediately adjacent to land subject to the Heritage Overlay, the policy at Clause 22.10 should limit the height of abutting development to avoid visually dominating the heritage place. Consideration should also be given to the street wall height to avoid an unreasonable juxtaposition between the new built form and the heritage buildings on the opposite side of Johnston Street.

8.6 Recommended Built Form Parameters

A DDO should apply to those parts of the Johnston Street Activity Spine that are subject to the Heritage Overlay to ensure that new built form is respectful of the heritage context. It may also be necessary to apply the DDO to those areas of Johnston Street not subject to the Heritage Overlay for urban design reasons.

A DDO applied to properties within the Johnston Street Activity Spine should ensure new built form protects the protects the visual prominence of the existing two-storey character of the streetscape at the western end of Johnston Street. If rezoning of the residential properties south of Johnston Street from C1Z to NRZ proceeds there is be no need for a DDO to apply in those locations.

Informed by the heritage analysis above and the 3D modelling prepared by Hansen Partnership it is recommended that a DDO seek built form outcomes that:

- Retain the visual prominence of the local landmarks in the streetscape.
- Retain chimneys and roof forms visible from the public realm.
- Ensure that new development within the Heritage Overlay does not visually dominate the existing heritage fabric.
- Ensure that any upper-level or infill development is subservient to the heritage fabric and is visually recessive in mass, scale and materiality.
- Encourage the top-most level (or levels) of new development to be set further back from the principal heritage frontage (as encouraged at Clause 22.02-5.7.2) and treated as a penthouse or roof top element.
- Establish a street wall height for infill development that reflects the established two (Victorian-era) storey scale of the precinct and discourages single-storey infill development.
- Ensure zero setback from the Johnston Street boundary for infill and new development.
- Ensure that the heritage buildings remain prominent within the Johnston Street streetscape and retain their three-dimensional form as viewed from the public realm to avoid 'facadism'. This will require new upper-level development to be set back a minimum of 8m from the street wall and for redevelopment to respect the existing inter-floor heights of the heritage fabric.
- Retain the visual prominence of the return façades of heritage buildings that address both Johnston Street and cross streets particularly at the principal intersections with Brunswick and Smith Streets by setting back new upper level built form from both street frontages.

9. Fitzroy East Mixed Use Precinct

9.1 Description

The Fitzroy East Mixed Use Precinct is comprised of the majority of the MUZ land north of Johnston Street between Brunswick Street to the west and Smith Street to the east as well as a small amount of the C1Z land fronting Smith Street. To the north the precinct is generally bounded by Kerr Street (between Young and George Streets) and Rose Street (between George and Gore Streets). The precinct extents north above Leicester Street to include the single storey mid-twentieth century factory building at 450 Gore Street.

The scale, period and style of buildings within this precinct are very diverse ranging from small mid-nineteenth century terraced houses, later industrial and commercial buildings including parts of the MacRobertson's Confectionary Works, and more recent medium rise development including the eight-storey apartment complex that dominates the block bounded by Kerr, Young, Argyle and Napier Streets.

There are also large areas of the precinct that have few, if any, graded buildings or where heritage buildings are very dispersed. Medium rise development has also occurred, with greater or lesser degrees of appropriateness, behind the retained façades of graded industrial buildings including the five-storey residential developments at 160-164 Argyle Street and 420-428 Gore Street.

The precinct contains a number of development sites, some of which have little or no heritage context or interfaces.

Figure 51. Zoning map – Fitzroy East Mixed Use Precinct outlined in black dashed line (VicPlan accessed 29 August 2019)

9.2 Heritage Status

9.2.1 Existing Conditions

The whole of the Fitzroy East Mixed Use Precinct is included within HO334 and, like the Johnston Street Activity Spine, it is very diverse in its built form with a large proportion of 'not-contributory' graded buildings. There are large areas without any heritage buildings or a small number of isolated heritage buildings within blocks of post-Second World War development. The mixed industrial and residential heritage character of the Fitzroy East Mixed Use Precinct is broadly captured in the Statement of Significance for HO334. There are no heritage places included on the VHR within the precinct.

Several blocks to the north of Johnston Street between Brunswick and Smith Streets contain few, if any, buildings identified within Appendix 8 as being 'contributory' or 'individually significant' within HO334.

Figure 52. Heritage Overlay map – Fitzroy East Mixed Use Precinct outlined in black dashed line. (VicPlan, accessed 29 August 2019)

In summary, the existing heritage status for Fitzroy East Mixed Use Precinct is:

Victorian Heritage Register				
None				
Individual Heritage Overlays				
None				
Precinct Heritage Overlays				
Heritage Overlay	*Name*	*Address*	*Appendix 8 grading*	*Date*
HO334	South Fitzroy Precinct	various	various	various

9.2.2 Recommended Changes

As noted above, there are whole blocks north of Johnston Street that have few, if any, heritage graded buildings and it is recommended that this land be removed from the Heritage Overlay.

Figure 53. Heritage Overlay map showing properties (shaded in red) that should be considered for removing from HO334. Extent of Fitzroy East Mixed Use Precinct outlined in black dashed line (VicPlan, accessed 29 August 2019)

In addition, a number of anomalies within the Heritage Overlay and the grading within Appendix 8 were identified and amendments recommended to existing heritage gradings these are addressed in the Heritage Anomalies Report.

9.3 Zoning

9.3.1 Existing Conditions

The land within the Fitzroy East Mixed Use Precinct is included within the MUZ and C1Z.

A number of heritage dwellings that remain in residential use are zoned MUZ when their immediate neighbours are more appropriately zoned NRZ. Where these properties that are residential in form, character and use, consideration should be given to their rezoning to reflect adjacent or neighbouring properties.

9.3.2 Recommended Changes

It is recommended that the following heritage-graded residential properties be rezoned from MUZ to NRZ to reflect their low rise residential character and context:

143-149 Argyle Street

159-171 Argyle Street

330-346 Napier Street

331-341 Napier Street.

In order to create a logical boundary between the MUZ and NRZ the following un-graded small-scale residential properties could also be rezoned:

348-352 Napier Street.

Figure 54. Planning map showing properties (shaded in black) that are recommended for re-zoning from MUZ to NRZ (Vicplan, accessed 29 August 2019).

9.4 Key Views and Landmarks

There are no key views of landmarks, tall structures or advertising signs identified within Clause 22.03 of the Yarra Planning Scheme that fall within the Fitzroy East Mixed Use Precinct.

The following building can be considered a local landmark by applying the criteria set out in Section 5.2:

Table 4. Local Landmarks – Fitzroy East Mixed Use Precinct

Address	Building Name	Type	Corner	Grading	Image*
411 George Street	Marquis of Lorne Hotel	Hotel on a corner site	Nicholson Street	Individually significant (HO334)	

* Photo sourced from VHD

9.5 Potential Future Character Considerations

Like the adjacent Johnston Street Activity Spine, the Fitzroy East Mixed Use Precinct is very diverse with built form that ranges from terraced housing, early twentieth century factory buildings, low rise twentieth century commercial buildings and medium rise contemporary development. The lack of consistency in heritage fabric and the high proportion of 'not-contributory' buildings provides greater opportunity for new development than other areas within HO334.

The Heritage Overlay will ensure the retention of 'contributory' and 'individually significant' buildings. Within the land subject to the Heritage Overlay there remains a wide range of development opportunities from small

vacant lots to major redevelopment sites. The street wall height of new development should respond to adjacent and nearby heritage buildings and should generally not exceed two-storeys in height.

Any new upper-level development within the Heritage Overlay should be set back from the street wall – where this exists – to retain the low-scale character and the prominence of the heritage fabric in the streetscape. New upper-level development should be designed so as to be recessive in the context of the heritage buildings when viewed from the opposite side of the street.

Prominent corner buildings such as the Marquis of Lorne Hotel at 411 George Street provide less development opportunity, as new built form should be setback off both street façades and visible roofs and chimneys should be retained.

Residential buildings should be retained to a two-room depth including their primary roof form and visible chimneys. It is acceptable for new development to be visible behind the retained terraced houses within the MUZ, but additions should be scaled to avoid visually dominating the heritage building. Consideration should be given to rezoning the terraces of intact heritage housing on Argyle and Napier Streets from MUZ to the NRZ applied to the majority of HO334.

Larger-scale heritage factory and warehouse buildings should be redeveloped in a way that respects the existing form, fenestration and scale of the heritage fabric with roof-top development setback from the retained front section of the building.

The area recommended to be removed from HO334 provides the greatest opportunity for new development; however, where this is immediately adjacent to land subject to the Heritage Overlay, the policy at Clause 22.10 should limit the height of abutting development to avoid visually dominating the heritage place. Consideration should also be given to the street wall height to avoid an unreasonable juxtaposition between the new built form and the heritage buildings on the opposite side of the street.

9.6 Recommended Built Form Parameters

A DDO should apply to those parts of the Fitzroy East Mixed Use Precinct that are subject to the Heritage Overlay to ensure heritage fabric is appropriately managed and new built form is respectful of the heritage context.

A DDO applied to properties within the Heritage Overlay should ensure new built form protects the existing predominantly low-scale of the area. If rezoning of the residential properties within the precinct from MUZ to NRZ proceeds there is be no need for a DDO to apply in those locations.

Informed by the heritage analysis above and the 3D modelling prepared by Hansen Partnership it is recommended that a DDO seek built form outcomes that:

- Retain the visual prominence of the local landmarks in the streetscape.
- Retain chimneys and roof forms visible from the public realm.
- Ensure that new development within the Heritage Overlay does not visually dominate the existing heritage fabric.
- Ensure that any upper-level or infill development is subservient to the heritage fabric and is visually recessive in mass, scale and materiality.
- Encourage the top-most level (or levels) of new development to be set further back from the principal heritage frontage (as encouraged at Clause 22.02-5.7.2) and treated as a penthouse or roof top element
- Adopt a street wall height (where a street wall exists) for infill development that reflects the established built form of adjacent heritage places.
- Match the setback of adjoining graded buildings.
- Ensure that the heritage buildings remain prominent within the streetscape and retain their three-dimensional form as viewed from the public realm to avoid 'facadism'.

- Mass new development above graded industrial buildings to retain the legibility of their three-dimensional form.
- Retain the visual prominence of the return façades of heritage buildings that address two streets, such as the Marquis of Lorne Hotel.
- Retain chimneys and roof forms visible from the public realm.

10. Built Form Testing

In order to translate the 'Recommended Built Form Parameters' in Part II into specific guidance that can be translated into a DDO control, Hansen prepared 3D computer modelling to test the appropriateness of particular built form outcomes that achieved the intent of the recommended built form parameters.

The Built Form Review Recommendations have been determined based on comprehensive built form testing and 3D computer modelling of potential bulk and massing envelopes for the study area. It was established and operated as a 'working' massing model used to informally measure built form heights and setbacks to the properties along the length of Brunswick, Smith and Johnston Streets (within the study area) to serve as a useful general tool in comparative visual analysis. The Town Hall and Fitzroy East Mixed Use Precincts were not been modelled in the same way as this area has limited development opportunity and lacks consistent linear street walls.

The impacts of new built form considered views from the opposite side of the street at natural eye level (1.6m) on the public footpath. As well as 3D modelling cross sections were prepared across a range of the site types within the study area within particular attention given to heritage street wall or façade heights, lot depth and rear interface conditions (street, laneway, commercial, residential, mixed use etc.).

The heritage advice took the ¾ : ¼ ratio of street wall to new built form sightline test from Moreland DDO18 (discussed further at section 3.3) as a starting point and also considered oblique views as they would be experienced by a pedestrian traversing the street. Extensive field work was undertaken and site visits were used to inform the recommendations made in the Built Form Review. Views of heritage places were only considered from the public realm including streets and parkland; laneway and private realm views were not assessed.

Part III: Built Form Recommendations

11. Built Form Recommendations

Any DDO applied to the study area should include provisions to complement, but not duplicate, the decision guidelines at Clause 43.01-8 (Heritage Overlay), State Planning Policy at Clause 15.03-1S and the relevant local policy within Clauses 22.02, 22.03 and 22.10 of the Yarra Planning Scheme to inform new development.

Having regard to the heritage analysis and modelling prepared by Hansen Partnership, it is recommended that the following built form controls be applied to new development to ensure appropriate weight is given to the established heritage values within the study area. The recommended maximum heights vary within the study area. They have been informed by existing built form and heritage street wall heights, lot sizes and depths, and 3D modelling which demonstrated whether or not the upper-level development would 'be visually recessive and not dominate the heritage place' as sought at Clause 22.02-5.7.1. These recommended controls have also been informed by the version of DDO15 – Johnston Street Activity Centre as adopted by Yarra City Council on 14 May 2019. The application of upper-level setbacks and maximum heights within the proposed DDO should be supplemented by a recession plane or sight line test such as proposed at Figures 1 and 2 of the adopted version of DDO15 (refer section 3.1 of this report).

Buildings graded 'individually significant' and 'contributory' are referred to as 'heritage buildings' within the table below and those graded 'not-contributory' or that are vacant are considered 'infill sites'. It is not recommended that different built form controls be applied based on the grading of a building within Appendix 8.

11.1 Brunswick Street and the Town Hall Mixed Use Precinct

Built Form Element	Requirement	Rationale
Brunswick Street (north of Gertrude Street)		
New built form	New built form should protect the silhouette/profile of St Patricks Cathedral and the spire of St Lukes Church, North Fitzroy when viewed along Brunswick Street.	A single view of St Patricks Cathedral, East Melbourne from the intersection of Brunswick Street and St George's Road and of the spire of St Lukes Church, North Fiztroy from the intersection of Brunswick Street and Victoria Parade is recognised in Clause 22.03 however numerous other views exist from within the road reserve at intersections and trams stops along Brunswick Street.
Maximum street wall height (infill development)	11m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding infill above three storeys. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Minimum street wall height (infill development)	8m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding single storey infill. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Street wall height (infill development)	Match the parapet height of the adjacent taller heritage building	To ensure new built form responds to its immediate heritage context.

	(preferred)	A discretionary control is appropriate given the variation in heights within the Precinct. Note: it is not intended that the new street wall of infill development would exceed 11m in height when it is adjacent to taller heritage buildings.
Front setback (infill development)	Zero (mandatory)	To ensure new built form responds to the heritage context which has a consistent zero setback.
Minimum setbacks above street wall (Brunswick Street, Johnston Street and Gertrude Street)	8m (mandatory)	An 8m setback above the street wall is the minimum necessary to ensure that the heritage buildings remain prominent within the Brunswick Street streetscape and will retain their three-dimensional form as viewed from the public realm to avoid 'facadism'. An 8m setback will also be sufficient to ensure that majority of existing chimneys at the front of the buildings are retained. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Minimum setbacks above street wall (side streets other than Gertrude and Johnston Streets)	6m (preferred)	The heritage built form of buildings that address side streets varies considerably. Some buildings have elaborate return facades while others are plain end-of-terrace forms. A preferred control will enable a wide range of design responses which encouraging new development to the setback on prominent corner buildings.
Minimum upper-level setbacks	As defined by a 45° angular plane drawn from the maximum street wall height (11m) (preferred)	The upper levels of new development beyond the secondary street wall should be recessive and 'each higher element set further back from lower heritage built forms' as sought at Clause 22.02-5.7.2. Note: the application of this test may reduce the maximum achievable height on particular sites to lower than a maximum building height identified in the proposed DDO.
Maximum building height	4-5 storeys between Alexandra Parade and Rose Street. 3 storeys between Rose and Johnston Streets. 4-5 storeys between Johnston Street and Gertrude Street with the potential for some 6 storey development deeper sites. 3-6 storeys on deeper sites fronting Fitzroy Street.	To retain the primacy of the heritage buildings and for development above the street wall to be recessive, recognising that deeper sites can generally accommodate a greater height if the upper levels are set further back from the secondary street wall. Mandatory controls are necessary to protect the heritage character of the street as a whole.

	4 storeys on Young Street between Rose and Leicester Streets. (mandatory)	
Brunswick Street (south of Gertrude Street)		
New built form	New built form should protect the silhouette/profile of St Patricks Cathedral and the spire of St Lukes Church, North Fitzroy when viewed along Brunswick Street.	A single view of St Patricks Cathedral, East Melbourne from the intersection of Brunswick Street and St George's Road and of the spire of St Lukes Church, North Fiztroy from the intersection of Brunswick Street and Victoria Parade is recognised in Clause 22.03 however numerous other views exist from within the road research at intersections and trams stops along Brunswick Street.
Maximum street wall height (infill development)	11m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding infill above three storeys. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Minimum street wall height (infill development)	8m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding single storey infill. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Street wall height (infill development)	Match the parapet height of adjacent taller heritage building (preferred)	To ensure new built form responds to its immediate heritage context. A discretionary control is appropriate given the variation in heights within the Precinct. Note: it is not intended that the new street wall of infill development would exceed 11m in height when it is adjacent to taller heritage buildings.
Front setback (infill development)	Match the lesser of the adjacent heritage building (preferred)	To ensure new built form responds to the heritage context where the adjacent buildings are set back from Brunswick Street. A discretionary control is appropriate given the variation in setbacks south of Gertrude Street.
Minimum setbacks above street wall (Brunswick Street and Gertrude Street) (heritage buildings)	Retain the depth of the principal roof form of the heritage building. (preferred) 8m (mandatory)	To recognise the generally residential and institutional character of Brunswick Street between Gertrude Street and Victoria Parade (which differs from the parapeted shop / residence building type north of Gertrude Street) new development should be set back beyond the principal (generally two room deep) roof form. An 8m setback above the street wall is the minimum necessary to ensure that the heritage buildings remain prominent within the Brunswick Street streetscape.

		An 8m setback will also be sufficient to ensure that majority of existing chimneys at the front of the buildings are retained
Minimum setbacks above street wall (Brunswick Street) (infill development)	8m (mandatory)	An 8m setback above the street wall is the minimum necessary to ensure that the heritage buildings remain prominent within the Brunswick Street streetscape. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Minimum upper-level setbacks	As defined by a 45° angular plane drawn from the maximum street wall height (11m) (preferred)	The upper levels of new development beyond the secondary street wall should be recessive and 'each higher element set further back from lower heritage built forms' as sought at Clause 22.02-5.7.2. Note: the application of this test may reduce the maximum achievable height on particular sites to lower than a maximum building height identified in the proposed DDO.
Maximum building height	3-4 storeys (mandatory)	To retain the primacy of the heritage buildings and for development above the street wall (where this exists) to be recessive. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Town Hall Mixed Use Precinct		
New built form	New built form should ensure that the clocktower of Richmond Town Hall remains the principal built form reference within the precinct and new development should not obscure key views to it.	The key views of the spire of the Fitzroy Town Hall are recognised in Clause 22.03. The primary views of landmarks are defined in *Appendix A – Landmarks & Views Assessment*, Ethos Urban, 22 December 2017.
Street wall height (infill development)	Match the parapet height of adjacent taller heritage building (preferred)	To ensure new built form responds to the heritage context. A discretionary control is appropriate given the variation in heights within the Precinct.
Front setback (infill development)	Match the lesser of the adjacent heritage building (preferred)	To ensure new built form responds to the heritage context where adjacent buildings are set back from the street. A discretionary control is appropriate given the variation in setbacks.
Minimum setbacks above street wall (heritage building)	Retain the depth of the principal roof form of the heritage building. (preferred)	To recognise the generally residential, industrial and institutional character of the Town Hall Mixed Use Precinct new development should be set back beyond the principal (generally two room deep) roof form. A mandatory 6m minimum is necessary to protect the heritage character of the street as a whole.

	6m (mandatory)	
Minimum setbacks above streetwall (infill development)	6m (preferred)	A 6m setback above the street wall is the minimum necessary to ensure that the heritage buildings remain prominent within the streetscape. Preferred controls are appropriate given the diversity of heritage forms within this precinct.
Maximum building height	3-5 storeys (preferred)	To retain the primacy of the heritage buildings and for development above the street wall (where this exists along Kent and Young Streets) to be recessive.

11.2 Smith Street

Built Form Element	Requirement	Rationale
Maximum street wall height (infill development)	11m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding infill above three storeys. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Minimum street wall height (infill development)	8m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding single storey infill. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Street wall height (infill development)	Match the parapet height of the adjacent taller heritage building (preferred)	To ensure new built form responds to its immediate heritage context. A discretionary control is appropriate given the variation in heights within the Precinct. Note: it is not intended that the new street wall of infill development would exceed 11m in height when it is adjacent to taller heritage buildings.
Front setback (infill development)	Zero (mandatory)	To ensure new built form responds to the heritage context which has a consistent zero setback.
Minimum setbacks above street wall (Smith Street, Johnston Street and Gertrude Street)	8m (mandatory)	An 8m setback above the street wall is the minimum necessary to ensure that the heritage buildings remain prominent within the Smith Street streetscape and will retain their three-dimensional form as viewed from the public realm to avoid 'facadism'. An 8m setback will also be sufficient to ensure that majority of existing chimneys at the front of the buildings are retained. Mandatory controls are necessary to protect the heritage character of the street as a whole.

Minimum setbacks above street wall (side streets other than Gertrude and Johnston Streets)	6m (preferred)	The heritage built form of buildings that address side streets varies considerably. Some buildings have elaborate return facades while others are plain end-of-terrace forms. A preferred control will enable a wide range of design responses which encouraging new development to the setback on prominent corner buildings.
Minimum upper-level setbacks	As defined by a 45° angular plane drawn from the maximum street wall height (11m) (preferred)	The upper levels of new development beyond the secondary street wall should be recessive and 'each higher element set further back from lower heritage built forms' as sought at Clause 22.02-5.7.2. Note: the application of this test may reduce the maximum achievable height on particular sites to lower than a maximum building height identified in the proposed DDO.
Maximum building height	5-9 storeys between Westgarth and Mater Streets and Kerr and Hotham Streets. 3-5 storeys between Kerr and Hotham Streets and Johnston Street. 3-6 storeys between Johnston and St David Streets on the western side of Smith Street and between Johnston and Stanley Streets on the eastern side. 3-7 storeys between St David Street and south of Gertrude Streets on the western side of Smith Street and between Stanley Street and Derby Street on the eastern side. 4-6 storeys south of Derby Street on the eastern side of Smith Street with up to 7 storeys either side of Little Smith Street on the western side. Some sites can accommodate up to 8-9 storeys e.g. the Coles redevelopment (132-158 Smith Street) and the Woolworths site (243-255 Smith Street).	To retain the primacy of the heritage buildings and for development above the street wall to be recessive, recognising that deeper sites can generally accommodate a greater height if the upper levels are set further back from the secondary street wall. A greater degree of visibility of new built form is anticipated behind the retained form of former industrial buildings at the northern end of Smith Street, some of which occupy whole city blocks. Smith Street includes larger sites that have been (or have the potential to redeveloped) to a taller scale. The consistency of the heritage streetscape diminishes south of Gertrude and Langridge Streets (HO464). Mandatory controls are necessary to protect the heritage character of the street as a whole.

	(mandatory)	

11.3 Johnston Street

Built Form Element	Requirement	Rationale
Maximum street wall height (infill development) North side of Johnston Street between Brunswick and Young Streets South side of Johnston Street except between Fitzroy and Brunswick Street)	11m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding infill above three storeys. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Maximum street wall height (infill development) North side of Johnston Street except between Brunswick and Young Streets South Side of Johnston Street between Fitzroy and Brunswick Street.	14m (preferred)	Preferred control appropriate as there are few or no heritage buildings in these areas.
Minimum street wall height (infill development)	8m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding single storey infill. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Street wall height (infill development)	Match the parapet height of adjacent taller heritage building (preferred)	To ensure new built form responds to its immediate heritage context. A discretionary control is appropriate given the variation in heights within the Precinct. Note: it is not intended that the new street wall of infill development would exceed 11m in height when it is adjacent to taller heritage buildings.
Front setback (infill development)	Zero (mandatory)	To ensure new built form responds to the heritage context which has a consistent zero setback.
Minimum setbacks above street wall (Johnston Street,	6m	A 6m setback above the street wall is the minimum necessary to ensure that the heritage buildings remain prominent within the Johnston Street streetscape and

Nicholson, Brunswick Street, Smith Street and Victoria Street)	(mandatory except the north side of Johnston Street between Spring and Fitzroy Streets and Young and Gore Streets) 6m (discretionary on the north side of Johnston Street between Spring and Fitzroy Streets and Young and Gore Streets, and Victoria Street)	will retain their three-dimensional form as viewed from the public realm to avoid 'facadism' noting that this street is less consistent and intact than Brunswick or Smith Streets. Mandatory controls are necessary in parts of Johnston Street to protect the heritage character of the street as a whole. Preferred controls appropriate in parts of Johnston Street where there are few or no heritage buildings.
Minimum setbacks above street wall (side streets other than Nicholson, Brunswick and Smith Streets)	6m (preferred)	The heritage built form of buildings that address side streets varies considerably. Some buildings have elaborate return facades while others are plain end-of-terrace forms. A preferred control will enable a wide range of design responses which encouraging new development to the setback on prominent corner buildings.
Minimum upper-level setbacks	As defined by a 45° angular plane drawn from the maximum street wall height (11m) (preferred)	The upper levels of new development beyond the secondary street wall should be recessive and 'each higher element set further back from lower heritage built forms' as sought at Clause 22.02-5.7.2. Note: the application of this test may reduce the maximum achievable height on particular sites to lower than a maximum building height identified in the proposed DDO.
Maximum building height	4-8 storeys on the north side of Johnston Street between Nicholson and Young Streets. 9 storeys on the north side of Johnston Street between Young and Smith Streets. (preferred) 4-6 storeys on the south side of Brunswick Street between Nicholson and Brunswick Streets with some specific sites that can accommodate up to 8 storeys. 3-6 storeys on the south side of Johnston Street between Brunswick and Smith Streets. 6-8 storeys on the north side of Victoria Street. (mandatory)	To retain the primacy of the heritage buildings and for development above the street wall to be recessive, recognising that deeper sites can generally accommodate a greater height if the upper levels are set further back from the secondary street wall. A greater degree of visibility is anticipated behind the street wall in the larger infill sites along Johnston Street. Mandatory controls are necessary to protect the heritage character of the south side of Johnston Street where it is more highly intact.

11.4 Fitzroy East Mixed Use Precinct

Built Form Element	Requirement	Rationale
Street wall height (infill development)	Match the parapet height of the adjacent taller heritage building (preferred)	To ensure new built form responds to the heritage context. A discretionary control is appropriate given the variation in heights within the Precinct.
Front setback (infill development)	Match the lesser of the adjacent heritage building (preferred)	To ensure new built form responds to the heritage context where adjacent buildings are set back from the street. A discretionary control is appropriate given the variation in setbacks.
Minimum setbacks above street wall (heritage building)	Retain the depth of the principal roof form of the heritage building. (preferred) 6m (preferred)	To recognise the generally mixed residential and industrial character of the precinct new development should be set back beyond the principal (generally two room deep) roof form. Preferred controls are appropriate given the variety of heritage and non-heritage buildings in this precinct.
Minimum mid-level setbacks (infill development)	6m (preferred)	A 6m setback above the street wall will ensure that the heritage buildings remain prominent within the Brunswick Street streetscape. Preferred controls are appropriate given the variety of heritage and non-heritage buildings in this precinct.
Minimum upper-level setbacks	As defined by a 45° angular plane drawn from the maximum street wall height (11m) (preferred)	The upper levels of new development beyond the secondary street wall should be recessive and 'each higher element set further back from lower heritage built forms' as sought at Clause 22.02-5.7.2. Note: the application of this test may reduce the maximum achievable height on particular sites to lower than a maximum building height identified in the proposed DDO.
Maximum building height	3-6 storeys on land with heritage buildings. (mandatory) 7-9 storeys on land without heritage buildings. (preferred)	Various heights have been described in the Hansen report. Mandatory controls are necessary to protect the scale of heritage buildings, elsewhere preferred controls are appropriate.

11.5 Additional guidance

In addition to the above recommended controls relating to street wall height, upper level setback and visibility of new built form, we recommend that the following design objectives be included within a DDO to complement the existing heritage provisions at Clauses 15.03-1S, 21.05-1, 22.02 and 43.01 of the Yarra Planning Scheme.

Note these heritage design guidelines should be amended as required to avoid duplication with policy within the proposed Clause 15.03-1L.

- New infill development within the heritage streetscape should:
  - Interpret the historic façade rhythm, including fenestration patterns and proportions, the relationship between solid and void, and the existing module of structural bays.
  - Be set back to retain the visual prominence of prominent corner buildings and local landmarks.
  - Be distinguishable from the original heritage fabric and adopt a high quality and respectful contextual design response.
  - Ensure façade treatments and the articulation of new development are simple and do not compete with the more elaborate detailing of nineteenth and early twentieth century buildings.
  - Ensure fenestration patterns of new development generally reflects the vertical proportions of nineteenth and early twentieth century façades and avoids large expanses of glazing with a horizontal emphasis except to ground floor shopfronts.
  - Maintain the existing canopy/verandah height.
  - Avoid the use of unarticulated curtain glazing or highly reflective glass.
  - Avoid the replication of existing decorative features and architectural detail.
- The adaptation of existing heritage buildings should:
  - Discourage highly reflective glazing in historic openings.
  - Ensure the inter-floor height of the existing building is maintained and avoid new floor plates and walls cutting through historic openings.
  - Encourage the retention of solid built form behind retained facades and avoid balconies behind existing openings.
- New upper level development behind the heritage buildings should:
  - Retain the visual prominence of parapet and roof-top elements including parapets, balustrades, pediments, lanterns, towers, belvederes, urns and other architectural features.
  - Be set back to retain the visual prominence of prominent corner buildings and local landmarks.
  - Ensure that the design and setback of the addition does not visually dominate the heritage building or surrounding heritage places.
  - Retain the primacy of the three-dimensional form of the heritage building within the streetscape.
  - Incorporate materials and finishes that are recessive in texture and colour.
  - Generally utilise visually lightweight, but high quality, materials that create a juxtaposition with the heavier masonry of the heritage facades.
  - Incorporate simple architectural detailing so it does not detract from significant elements of the existing building or streetscape.
  - Provide a recessive backdrop to the heritage street wall and individual heritage buildings.
  - Avoid highly articulated facades with recessed and projecting elements.
  - Avoid highly contrasting or vibrant primary colours.
  - Avoid unarticulated façades that give a bulky appearance, especially from oblique views.
  - Be articulated to reflect the fine grained character of narrow sites.
  - Encourage that upper-level development behind rows of identical or similar shop/residences is consistent in form, massing and façade treatment as existing upper-level development (where this exists).

Executive Summary

Hansen Partnership, in conjunction with GJM Heritage and on behalf of the City of Yarra (Council), has prepared a Built Form Framework for the Gertrude Street area in Fitzroy (*Gertrude Street Built Form Framework*, November 2019) (Built Form Framework). The purpose of the Built Form Framework is to determine where and how new development can appropriately occur within the Gertrude Street area. The desired built form outcomes will be translated into Design and Development Overlay (DDO) controls for the area. The Built Form Framework forms part of a broader project to consider appropriate built form parameters for the Brunswick Street and Smith Street areas.

The advice in this report considers the built form parameters that are needed to ensure the heritage values of the Gertrude Street area are appropriately managed and protected, and that good heritage outcomes are being achieved for new or redevelopment. This includes a consideration of whether mandatory or discretionary controls are appropriate to achieve greater clarity in heritage outcomes and impacts on the Royal Exhibition Building and Carlton Gardens World Heritage Environs Area (WHEA).

A separate *Brunswick and Smith Street Built Form Review: Heritage Assessments* report (GJM Heritage, 25 November 2019) analyses the existing heritage values and qualities along Gertrude Street as well as Brunswick, Johnston and Smith Streets, and the Fitzroy Town Hall and Fitzroy East mixed-use precincts, which are the subject of a separate heritage built form review. The Heritage Assessments Report identifies gaps, inconsistencies and inaccuracies with the current heritage controls and provides recommendations for addressing these issues and should be read in conjunction with this report.

Presentation of the Report

This Heritage Analysis and Recommendation Report is presented in three parts:

Part I: The Project and Planning Framework
Part I introduces the project, the methodology applied to the project and the planning framework in which the project is occurring.

Part II: Heritage Analysis
Part II contains a heritage analysis of the study area. It details the heritage qualities and values of the Gertrude Street precinct, identifies any gaps or issues with the existing heritage framework and provides recommendations for appropriately managing heritage places within the area.

Part III: Built Form Recommendations
Part III contains specific built form recommendations to ensure heritage places and values are appropriately managed within a changing urban context. The specific recommendations are informed by modelling prepared by Hansen Partnership.

Part I: The Project and the Study Area

1. Introduction

1.1 Yarra's High Streets

The City of Yarra is endowed with one of the largest and most highly intact collections of turn of the century 'High Streets' in the State of Victoria. These High Streets include the Major Activity Centres of Swan Street and Bridge Road in Richmond, Brunswick Street in Fitzroy, Smith Street straddling the suburbs of Fitzroy and Collingwood and Victoria Street, in Abbotsford and Richmond. They also include a number of Neighbourhood Activity Centres, including Gertrude Street in Fitzroy, Johnston Street in Fitzroy & Collingwood, Rathdowne Street and Nicholson Street in Carlton North, St Georges Road in Fitzroy North, and Queens Parade in Fitzroy North & Clifton Hill.

This collection of High Streets is unique to Melbourne and helps to define the character of the municipality. Their value to the community is recognised by their inclusion in the Heritage Overlay of the Yarra Planning Scheme. However, the Activity Centre status of these high streets presents a challenge: how do we manage the tension between the desire to retain the heritage values of these areas and the need to ensure the long-term sustainability of these centres and meet the growth objectives of the Yarra Planning Scheme?

This project considers development within the area of Gertrude Street, Fitzroy.

1.1.1 Brief history of the Gertrude Street Area

The following brief history of this area is drawn from the Statement of Significance for HO334 South Fitzroy Precinct, the 1998 *City of Yarra Thematic History* (Allom Lovell & Associates) and supplemented with additional research.

The first 'suburban' land allotments to be sold outside of the Melbourne town reserve were in the areas now known as Fitzroy, Collingwood and Richmond. Allotments 48 to 88 covered the area known colloquially in the mid-nineteenth century as the 'district of Collingwood'. These allotments lay to the north-east of the City of Melbourne and covered the area bounded by Nicholson Street, Reilly Street (now Alexandra Parade), the Yarra River and Victoria Parade. A smaller portion of this area, bounded by Nicholson Street, Smith Street, Victoria Parade and Alexandra Parade came to be known as Fitzroy. The original allotments in Fitzroy varied in size, with most falling between 12 and 28 acres. These were suitable for large estates, and for small-scale rural or semi-industrial pursuits such as dairy farms, market gardens and brickyards.

Land reserved by the Government for roads consisted solely of Nicholson Street, Johnston Street, Smith Street, and Victoria and Alexandra Parades. Following the first land sales in 1838-9, there were no controls imposed upon the purchasers of the land. The lack of controls on the size and orientation of subdivision and the width of private roads led to the emergence of an ad-hoc street pattern and layout of allotments in South Fitzroy. The *Act for Improvements in Fitz Roy Ward in the City of Melbourne*, passed in 1854, was designed to solve the street alignment problem and local politics in the area in the 1850s and 1860s were largely concerned with the realignment of the worst of these streets.

Despite these issues, Fitzroy was an attractive residential locale in the 19th century and large villas were built for bankers and merchants on the wide thoroughfares between Gertrude Street and Victoria Parade. It was simultaneously a favoured location for manufacturing, including the boot and clothing trades and metal industries. Workers lived in more cramped conditions, generally comprising one or two-roomed terraces.

In 1850, the *Act for regulating Buildings and Party Walls, and for preventing mischiefs by fire in the City of Melbourne,* which enforced fireproof construction and minimum street widths in the City of Melbourne was introduced. This encompassed South Fitzroy and resulted in most buildings of the period being constructed of bluestone or brick. One of the earliest surviving houses in Fitzroy is the two-storeyed central section of Osborne House, constructed in 1850 at 38-44 Nicholson Street. The following two decades (1860s and 1870s) were a period of consolidation for South Fitzroy – works included the replacement of insubstantial structures of the earlier decades with more permanent premises along commercial strips, as well as the completion of terraces

and the renovation of many 1850s bluestone buildings. An example of a commercial shop row is the former Gertrude Hotel (63-65 Gertrude Street), which was designed with a row of shops attached in 1873. The first stage of the Fitzroy Town Hall was completed in 1873-4, four years after the area was proclaimed a town. It was proclaimed a City in 1878.

In 1886-7, a cable tram was introduced to South Fitzroy. Comprising routes along Nicholson Street from the city, Gertrude Street to Smith Street, and Brunswick Street, the new transport system boosted trade along these commercial strips. The tram also increased the mobility of Melbourne's population and as a result, inner suburban residents began to move further out. The former cable tram engine house (1886) survives at the corner of Gertrude and Nicholson streets.

With the onset of the 1890s depression and the movement of Fitzroy's wealthier residents to the outer suburbs, the large villas located at the southern end of Fitzroy were repurposed as boarding houses for factory workers and the suburb became more working class. Brothels also began to appear, with Gertrude Street in particular becoming a 'red light' district. The economic fortunes of Victoria recovered after the turn of the century, and while there was a period of optimism at the beginning of the century accompanied by some new development, Fitzroy had become a less desirable place to live. The already low number of owner-occupied properties decreased further, as more owners moved out of the working-class suburb and leased their buildings to tenants.

Following World War I, there was an increased demand for housing from returned servicemen, from people moving towards the city for improved job prospects, an increased number of immigrants, and the return of Aboriginal people to the area. With this influx, Fitzroy became a poorer population and, because of its proximity to Melbourne, continued to attract the unemployed and homeless. Criminal activities thrived and by the 1930s, Fitzroy was regarded as slum territory, its name synonymous with crime, poverty and immorality. In the 1950s, the State Government drew up plans for slum clearance and two public housing estates were built in South Fitzroy in the 1970s: one in Hanover Street and one at the southern end of Brunswick Street. More than 120 houses and 60 shops were demolished as a result.

During the post-war period, a number of Aboriginal people returned from rural locations to their friends and family around Gertrude Street, in part due to the closure of reserves and missions which were subdivided by the government to make way for soldier settlements. Fitzroy – and Gertrude Street in particular – became the social and political hub of Melbourne for the Aboriginal community. From the 1960s to 1980s a number of services for the Aboriginal community were set up on Gertrude Street, focussed on health, legal and housing assistance.

The demographic landscape of Fitzroy also transformed in the post-World War II era with the arrival of large numbers of European immigrants from Greece, Italy, Yugoslavia, Turkey, Lebanon and Spain. These groups altered the commercial and street life of the suburb, introducing new foods and languages as well as institutions such as espresso bars, cabarets and gambling clubs. Fitzroy witnessed further revitalisation in the 1970s when the area began attracting an increasing number of university students and artists. This new influx again altered the social and economic fabric of Fitzroy and it is today regarded as a vibrant centre for food, culture, and the arts.

At the end of the twentieth century and into the first decades of the twenty-first century Fitzroy has undergone in gentrification (or 'trendification'[1]) which has resulted resurgence of popularity as a residential area as well as commercial, entertainment and cultural destination.

1.1.2 Brief description of the Gertrude Street Study Area

The following description is drawn from the citation prepared by GJM Heritage in October 2019 as part of the *Brunswick Street and Smith Street Built Form Review Heritage Assessments* report (25 November 2019).

The Gertrude Street Study Area is a commercial precinct in Fitzroy that:

[1] As described in *Trendyville: The Battle for Australia's Inner Cities,* Renate Howe, David Nicols and Graeme Davison, Monash University Press, 2014.

- runs on the northern side of Gertrude Street from Nicholson Street to Brunswick Street (excluding the terraces fronting Nicholson Street);
- runs on both the northern and southern sides of Gertrude Street from Brunswick Street to Smith Street (excluding the Atherton Gardens Estate and properties fronting Smith Street); and
- extends along the eastern side of Young Street south towards the Australian Catholic University complex.

The main development period of the Gertrude Street commercial strip is from the 1850s to the 1890s and the streetscape dates largely from this period. It is a commercial precinct with a dominant streetscape of attached two-storey Victorian shops and residences, with no setback from the street boundary. The facades of these buildings are predominantly cement rendered and parapeted with repetitive rows of upper level fenestration. They vary in both scale and detailing - generally facades from the earlier Victorian period of the 1850s-70s are smaller in scale with little applied decoration, and those from the High Victorian period of the 1880s and 1890s are of greater height with more elaborate detailing. This is evident throughout the streetscape including Early Victorian examples (nos. 153-159) and High Victorian examples (nos. 161-167; 184-186; and Blackett's Shop and Residence at nos. 158-164 - an elaborate three-storey red brick row).

Other commercial buildings contribute to the Victorian character of the precinct, including the Former ES&A Bank (nos. 136-138) and corner hotels such as the Builders Arms Hotel (nos. 211-217), the former United Service Club (no. 122) and the former Leviathan Hotel (nos. 146-148).

A small group of Edwardian buildings from the early twentieth century also make a contribution to the precinct. These present as red brick (some overpainted) facades with cement render detailing. The most elaborate and intact building from this period is the Champion Hotel at the south-east corner of Brunswick Street and the associated shops and residences to the east in Gertrude Street (nos. 94-100).

The original form and detailing of a small number of shopfronts remains evident in the precinct with display windows, tiled plinths and entry recesses retained.

Unlike Brunswick, Smith and Johnston Streets, Gertrude Street is notable for its limited amount of early twentieth century development and as such retains a higher degree of consistency in scale, form and architectural detailing than comparable high streets.

1.1.3 Brief description of the broader Brunswick and Smith Street Study Area

The Gertrude Street Built Form Framework forms part of a broader built form review of the Brunswick and Smith Street study area. This broader area is bound by Alexandra Parade to the north, Nicholson Street to the west, Wellington Street to the east and Victoria Parade to the south (Figure 2).

The land specifically considered in this report is subject to either a commercial (C1Z and C2Z) or mixed use (MUZ) zone within the study area (refer to Figure 3). The Heritage Overlay coverage within the study area is extensive (see Figure 4).

Part II of this report describes the Gertrude Street study area in greater detail.

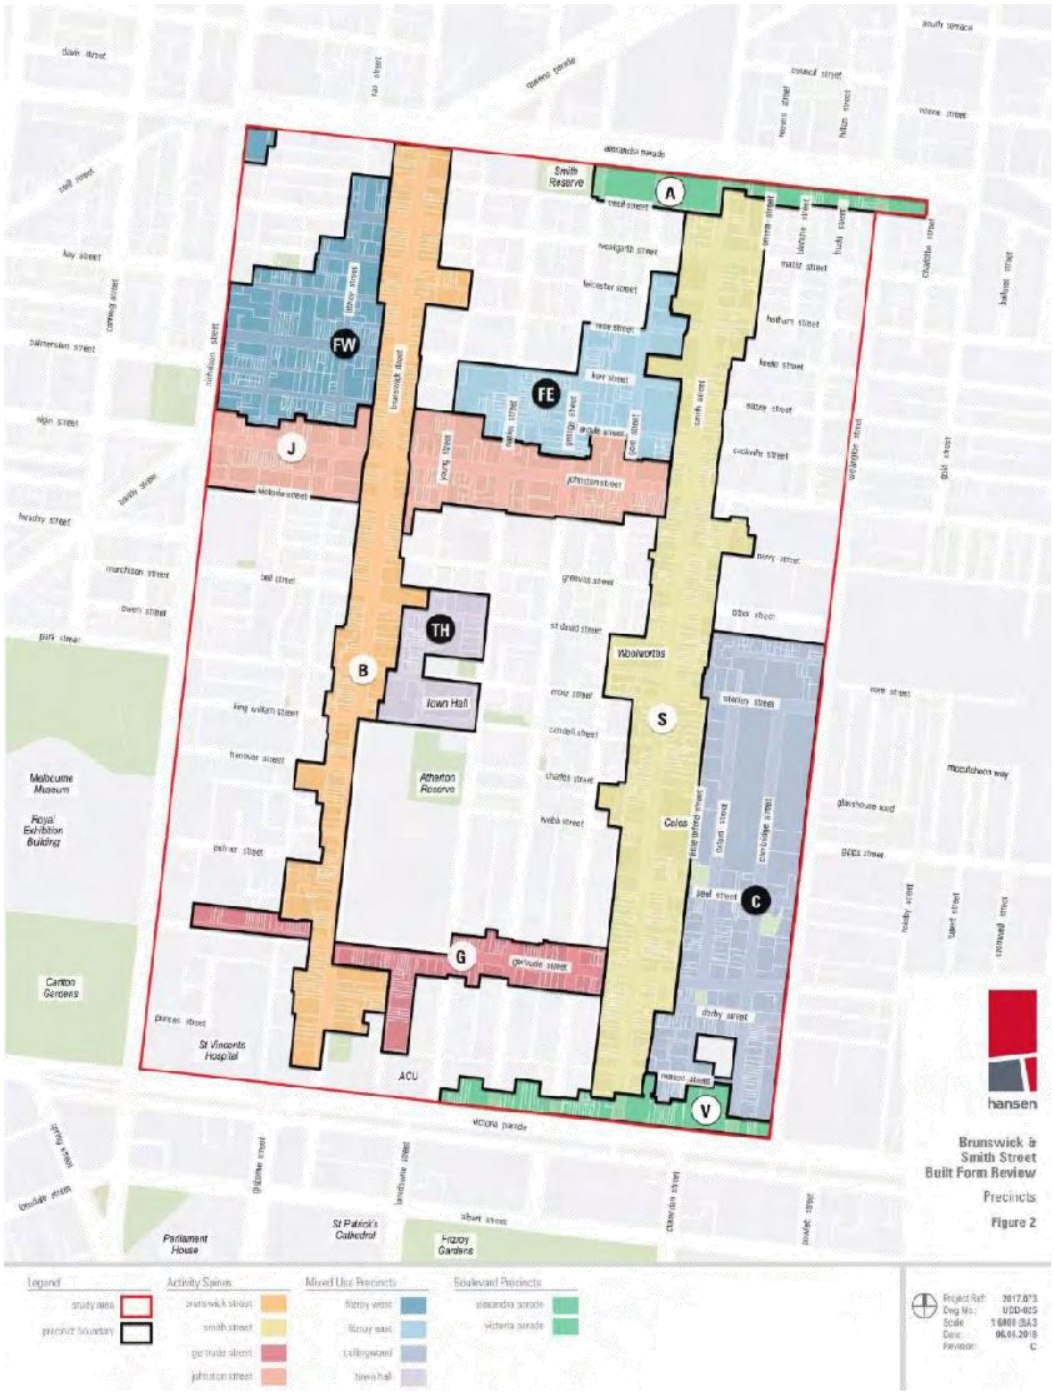

Figure 2. Precinct Map – Gertrude Street study area identified as area G (©Hansen, 6 June 2018)

Figure 3. Zoning map – Brunswick and Smith Street study area outlined in black (VicPlan, accessed 29 August 2019)

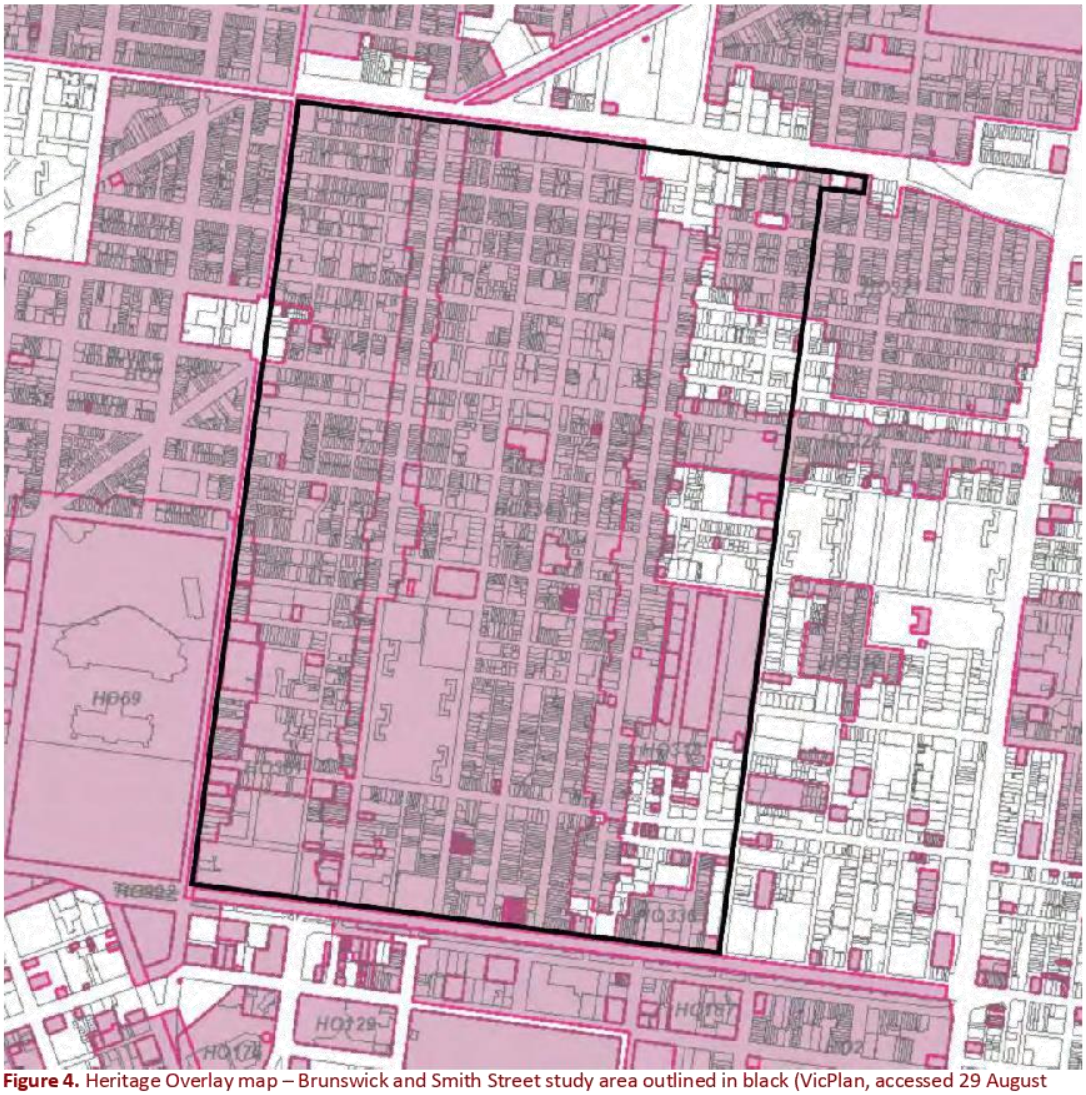

Figure 4. Heritage Overlay map – Brunswick and Smith Street study area outlined in black (VicPlan, accessed 29 August 2019)

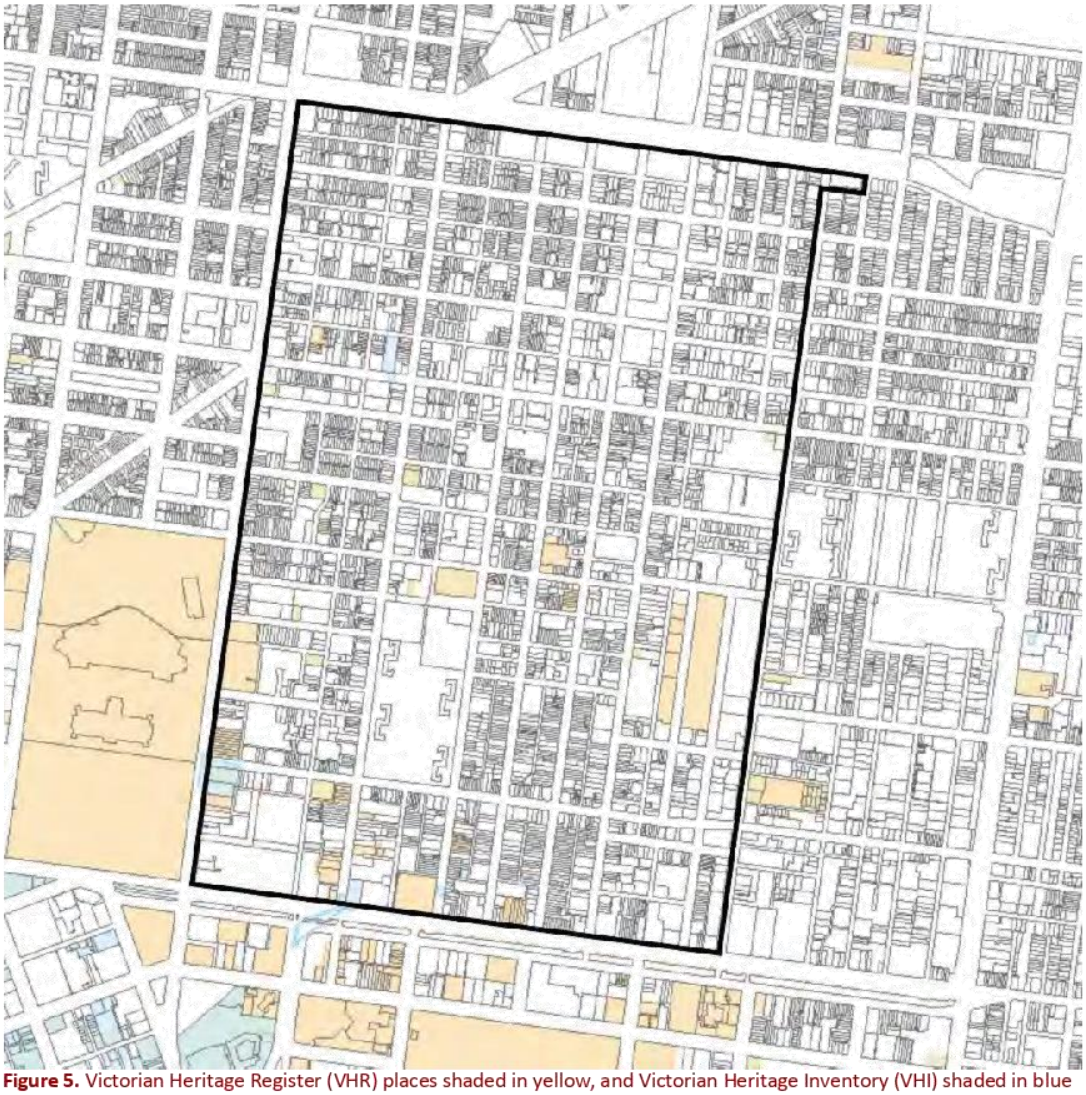

Figure 5. Victorian Heritage Register (VHR) places shaded in yellow, and Victorian Heritage Inventory (VHI) shaded in blue – study area outlined in black (VicPlan, accessed 29 August 2019)

1.2 Scope of the Heritage Analysis & Recommendations Report

GJM Heritage has been commissioned to provide a detailed analysis of the heritage considerations for the broader Brunswick and Smith Street study area and to detail recommendations for the future management of these areas in the context of potential new development.

The following precincts were considered in the *Brunswick and Smith Street Built Form Review: Heritage Analysis & Recommendations* (GJM Heritage, 25 November 2019):

- Brunswick Street Activity Centre Spine
- Town Hall Mixed Use Precinct
- Smith Street Activity Centre Spine
- Johnston Street Activity Centre Spine

- Fitzroy East Mixed Use Precinct.

The Collingwood Mixed Use Precinct was considered as part of a separate study: *Collingwood Mixed Use Pocket Heritage Analysis & Recommendations* (GJM Heritage, 6 June 2018). The Fitzroy West Mixed-Use Precinct and the Alexandra and Victoria Parade Boulevard Precincts are subject to further strategic heritage and planning studies.

This report specifically considers the Gertrude Street commercial spine and the MUZ area south of Gertrude Street between Young and Little Napier Streets.

The purpose of our advice is to ensure that any DDO controls arising from the Built Form Framework are properly informed by the heritage values of the precincts and individual buildings within the study area, in order to ensure appropriate weight is given to heritage when considering new development within the Gertrude Street area.

The analysis within this report builds on the *Brunswick and Smith Street Built Form Review: Heritage Analysis & Recommendations* and the *Brunswick and Smith Street Built Form Review: Heritage Assessments* reports prepared by GJM Heritage, and considers the parameters necessary to appropriately manage increased commercial and residential development within the context of Gertrude Street. Of particular relevance to this precinct is its role in protecting the key views to the Royal Exhibition Building (REB) and the setting of the Royal Exhibition Building and Carlton Garden World Heritage Site (REB & CG WHS).

1.3 Methodology

The key background documents on which the heritage analysis is based are:

- Yarra Planning Scheme Heritage Overlay Maps 5HO and 6HO
- Relevant Statements of Significance for heritage places and precincts within the study area and associated heritage studies
- World Heritage Environs Area Strategy Plan: Royal Exhibition Building & Carlton Gardens, Department of Planning and Community Development (as approved by the Minister for Planning, 21 October 2009)
- Incorporated Document 'City of Yarra Review of Heritage Overlay Areas 2007: Appendix 8 (revised May 2018) (Appendix 8).

The above documents have been reviewed in the context of the following clauses from the Yarra Planning Scheme and the relevant Planning Practice Notes (PPNs) published by the Department of Environment, Land, Water and Planning:

- The relevant provisions of the Yarra Planning Scheme, in particular:
  - Clause 15.03-1S 'Heritage conservation'
  - Clause 21.05-1 'Heritage'
  - Clause 22.02 'Development Guidelines for Sites Subject to the Heritage Overlay'
  - Clause 22.03 'Landmarks and Tall Structures'
  - Clause 22.10 'Built Form and Design Policy'
  - Clause 43.01 'Heritage Overlay'
  - Clause 43.01 'Schedule to the Heritage Overlay'
  - Clause 55.07 'Apartment Developments'
- PPN 1: *Applying the Heritage Overlay* (August 2018) (PPN1)
- PPN 59: *The role of mandatory provisions in the planning schemes* (June 2015) (PPN59)
- PPN 60: *Height and setback controls for activity centres* (September 2018) (PPN60).

We note that Council endorsed a draft Municipal Planning Strategy, local policies and supporting documents as a basis for Yarra Planning Scheme Amendment C269 on 26 November 2019 and resolved to seek authorisation from the Minister for Planning to prepare and exhibit Yarra Amendment C269. Of particular relevance to this report was the endorsement of proposed Clause 11.03-1L – Activity Centres and Clause 15.03-1L – Heritage.

The following Planning Panels Victoria (Panel) reports are relevant to the implementation of the Built Form

Framework as they consider the appropriateness of DDOs (containing both mandatory and discretionary provisions) within activity centres (or in the case of Melbourne Amendment C240, the Capital City Zone) that are also subject, in part, to the Heritage Overlay:

- Boroondara C108 'Neighbourhood Centres and Commercial Corridors' (26 February 2014)
- Banyule Planning Scheme Amendment C93 'Implementation of the Ivanhoe Structure Plan' (1 July 2014)
- Moreland Planning Scheme Amendment C134 'Brunswick Activity Centre' (15 May 2015)
- Melbourne Planning Scheme Amendment C240 'Bourke Hill' (4 May 2015)
- Bayside Planning Scheme Amendments C113, C114 and C115 'Mandatory provisions for the Sandringham Village, Bay Street and Church Street Activity Centres' (14 January 2015)
- Whitehorse Planning Scheme Amendment C175 'Box Hill Metropolitan Activity Centre' (6 October 2017).
- Stonnington Planning Scheme Amendment C223 'Glenferrie Road and High Street Activity Centre' (15 December 2017)
- Darebin Planning Scheme Amendment C161 'Fairfield Village' (3 December 2018)
- Yarra Planning Scheme Amendment C220 'Johnston Street Built Form Controls' (22 February 2019)
- Melbourne Planning Scheme Amendment C308 'Central Melbourne Urban Design' (16 May 2019)
- Melbourne Planning Scheme Amendment C258 'Heritage Policies Review' (21 May 2019)
- Yarra Planning Scheme Amendment C231 'Queens Parade Built Form Review' (31 October 2019).

Relevant Panel reports are discussed further in Section 3 of this report.

The following reports have also informed this study:

- *Brunswick Street and Smith Street Built Form Review: Gertrude Street Built Form Framework*, Hansen Partnership, November 2019 (post Council review).
- *Brunswick and Smith Street Built Form Review: Heritage Analysis & Recommendations*, GJM Heritage, 25 November 2019.
- *Brunswick and Smith Street Built Form Review: Heritage Assessments*, GJM Heritage, 25 November 2019 (Heritage Assessments Report).

We have approached the preparation of this heritage analysis as follows:

1. Completion of a desktop review of the above listed documents, including Panel Reports, heritage mapping and grading information, and the Statements of Significance for heritage precincts and individually significant buildings, including those places registered on the (VHR). The extent of the Heritage Overlays were cross-checked against Google Streetview. This preliminary review familiarised the project team with the heritage fabric of the study area prior to fieldwork being undertaken.
2. Completion of fieldwork by Jim Gard'ner and Ros Coleman. All buildings and structures within the study area were inspected from the public realm with particular attention paid to the presentation of heritage buildings to the street frontage. The rear and side interfaces to the neighbouring residential areas subject to the Heritage Overlay were also considered, where relevant. The purpose of the fieldwork was to:
    - Review the suitability of the extent of the existing Heritage Overlays and to identify if gaps existed.
    - Review the suitability of the existing Statements of Significance for heritage places and precincts against the extant heritage fabric and to identify where the statements required updating for the purposes of properly considering built form recommendations.
    - Review the extant heritage fabric against the heritage gradings contained within Appendix 8 and to identify any inconsistencies and inaccuracies.
    - Identify those continuous lengths of streetscapes that demonstrate a degree of consistency in terms of scale, setbacks, street wall height, architectural form and style, and construction period.
    - Review the heritage buildings and streetscapes within the study area to identify the architectural

and streetscape heritage features (e.g. parapets, roof forms, view lines, corner sites) that are relevant to a consideration of built form recommendations.

3. Participation in workshops with Council and Hansen Partnership. The workshops:
    - Identified the desired future character of the built form precinct against heritage analysis and state and local planning policy drivers.
    - Reviewed the key views of landmarks identified in Clause 22.03 – Landmarks and Tall Structures, in particular the drum, dome, lantern and flagpole of the REB.
    - Identified local landmarks within the streetscape or precinct.
    - Tested built form parameters for new development against the existing heritage fabric utilising oblique views from natural eye level (1.6m) on the public footpath, informed by modelling prepared by Hansen Partnership. Views were only considered from public streets; laneway and private realm views were not assessed.
4. Finalisation of heritage recommendations for new built form parameters having considered the above.

2. Analysis of the Planning Context

2.1 Activity Centre Planning and Heritage

The *Planning & Environment Act 1987* and the Victoria Planning Provisions (VPP) requires planning and responsible authorities to take a balanced approach to strategic and statutory planning functions that consider potentially competing objectives in an integrated manner to deliver a net community benefit for current and future generations.

The objectives of planning in Victoria as set out in Section 4(1) of the Planning and Environment Act are:

- *To provide for the fair, orderly, economic and sustainable use and development of land.*
- *To provide for the protection of natural and man-made resources and the maintenance of ecological processes and genetic diversity.*
- *To secure a pleasant, efficient and safe working, living and recreational environment for all Victorians and visitors to Victoria.*
- *To conserve and enhance those buildings, areas or other places which are of scientific, aesthetic, architectural or historical interest, or otherwise of special cultural value.*
- *To protect public utilities and other assets and enable the orderly provision and coordination of public utilities and other facilities for the benefit of the community.*
- *To facilitate development in accordance with the objectives set out in the points above.*
- *To facilitate the provision of affordable housing in Victoria.*
- *To balance the present and future interests of all Victorians.*

Clause 71.02-3 of the VPP addresses 'integrated decision making', and states:

> *Society has various needs and expectations such as land for settlement, protection of the environment, economic well-being, various social needs, proper management of resources and infrastructure. Planning aims to meet these by addressing aspects of economic, environmental and social wellbeing affected by land use and development.*
>
> *Planning and responsible authorities should endeavour to integrate the range of panning policies relevant to the issues to be determined and balance conflicting objectives in favour of net community benefit and sustainable development for the benefit of present and future generations. However, in bushfire affected areas, planning and responsible authorities must prioritise the protection of human life over all other policy considerations.*
>
> *Planning authorities should identify the potential for regional impacts in their decision making and coordinate strategic planning with their neighbours and other public bodies to achieve sustainable development and effective and efficient use of resources.*

Activity Centres that are also subject to extensive Heritage Overlay controls such as Gertrude Street is an example of where the tension between competing planning objectives must be resolved in a balanced way. Gertrude Street has excellent public transport connections, vibrant retail, commercial and hospitality uses and within the broader study area a high demand for housing choice. Gertrude street is a highly consistent and intact commercial containing predominantly late nineteenth century heritage fabric that is highly valued by the local community. A balance between the demand for more intensive development with the protection of the heritage buildings and precincts is therefore required. To achieve this, it is considered necessary that any DDO – and the background work that underpins it – specifically includes heritage considerations which frames the design objectives.

Amendment C269 proposes to introduce Clause 11.03-1L to the Yarra Planning Scheme which provides local policy in relation to Major, Neighbourhood and Local Activity Centre. The object of this policy is to:

To manage a sustainable network of activity centres that facilitate appropriate economic and housing growth and provide attractive places for social and community interaction.

The Strategies applying to Yarra's Activity Centres that are relevant to heritage and this report include:

Support high quality mid-rise buildings in major and neighbourhood activity centres as identified in the relevant Design and Development Overlay.

Support development that improves the built form character of activity centres, whilst conserving heritage buildings, streetscapes and views to identified landmarks.

Support development that transitions to and is sensitive to the interfaces with low-rise residential neighbourhoods.

Encourage the sensitive, adaptive re-use and restoration of heritage buildings in activity centres.

Gertrude Street is identified as a Neighbourhood Activity Centre, objectives of which are to:

Promote the retail role of the activity centre defined in the Major and Neighbourhood Activity Centres in Fitzroy Plan.

Manage licensed premises and interface and amenity impacts with adjacent residential areas.

Retain the low scale form and the fine grain pattern of the highly intact heritage streetscape and the heritage buildings in the activity centre.

Retain the visual prominence of the existing Victorian and Edwardian heritage streetscape, including local landmarks, and corner sites.

Protect views to the drum dome lantern and flagpole of the Royal Exhibition Building and Carlton Gardens.

Figure 6. Major and Neighbourhood Activity Centres in Fitzroy (Council endorsed version of Clause 11.03-1L)

2.2 Yarra Planning Scheme – Heritage Provisions

Council has well-established heritage provisions within its planning scheme at Clauses 21.05-1 and 22.02, noting that it has recently endorsed a new local heritage policy at Clause 15.03-1L, which is proposed to be introduced through C269. Also of relevance to the protection of the heritage values of the study area is Clause 22.03, which includes policy to protect the visual prominence of landmarks visible from within the study area.

2.2.1 Heritage policy

The relevant objective within the current Clause 21.05-1 'Heritage' of the Municipal Strategic Statement (MSS) is *Objective 14: To protect and enhance Yarra's heritage places*. The relevant strategies to implement this objective are:

- *Strategy 14.1 - Conserve, protect and enhance identified sites and areas of heritage significance including pre-settlement ecological heritage.*
- *Strategy 14.3 - Protect the heritage skyline of heritage precincts.*
- *Strategy 14.4 - Protect the subdivision pattern within heritage places.*
- *Strategy 14.6 - Protect buildings, streetscapes and precincts of heritage significance from the visual intrusion of built form both within places and from adjoining areas.*

Objective 14 and its associated strategies are considered to be generally compatible with appropriately sited and scaled higher density development on Gertrude Street. Strategy 14.3 to 'Protect the heritage skyline of heritage precincts' would not be achieved unless new upper level development was to be of such low scale that it was fully concealed when viewed from the opposite side of the street as defined by the sightline tests described in Figures 2 and 3 of Clause 22.02 (refer Appendix 1). Avoiding any new visible built form above the parapets of buildings within the Heritage Overlay - although achieving the 'best' heritage outcome - would not enable a level of development that may reasonably be expected to be achieved on this commercial high street nor meet other strategic directions of the Yarra Planning Scheme. A balance therefore needs to be struck between achieving the outcome sought by Strategy 14.3 and meeting the development objectives of the City of Yarra. An acceptable heritage outcome would be one where, although new built fabric is visible above the parapets, roofline or chimneys of these buildings, the development was of a scale, set back and massing such that it retains the primacy of the heritage streetscape, avoids visually dominating the existing buildings and protects the views to the drum and dome of the REB.

Clause 22.02 'Development Guidelines for Sites Subject to the Heritage Overlay' provides detailed guidance for development of places within the Heritage Overlay, including demolition. The relevant objectives of Clause 22.02 are:

- *To conserve Yarra's natural and cultural heritage.*
- *To conserve the historic fabric and maintain the integrity of places of cultural heritage significance.*
- *To retain significant view lines to, and vistas of, heritage places.*
- *To preserve the scale and pattern of streetscapes in heritage places.*
- *To encourage the preservation, maintenance, restoration and where appropriate, reconstruction of heritage places.*
- *To ensure the adaptation of heritage places is consistent with the principles of good conservation practice.*
- *To ensure that additions and new works to a heritage place respect the significance of the place.*
- *To encourage the retention of 'individually significant' and 'contributory' heritage places.*
- *To protect archaeological sites of cultural heritage significance.*

Again, these objectives do not preclude higher density development within the Gertrude Street precinct with the possible exception of '*To preserve the scale … of streetscapes in heritage places*'.

The demolition policy provided at Clause 22.02-5.1 encourages the retention of 'individually significant' and 'contributory' buildings within a heritage precinct. Removal of part of a heritage place or contributory element is contemplated if (in general terms) it can be demonstrated that the removal of the part will not adversely affect the significance of the building, or – for a contributory building – the part is not visible from the street, abutting a park or public open space. It is noted, that while the intent of the policy within the proposed Clause 15.03-1L is largely consistent with that included within Clause 22.02 it does not differentiate between 'individually significant' and 'contributory' buildings in terms of the either the extent of acceptable demolition or the level of concealment sought behind the retained heritage form.

Given that the significance of most heritage places along Gertrude Street lies predominantly in their streetscape presentation, facade detailing and fine-grained pattern of subdivision, it is considered that a certain amount of rear demolition and redevelopment can be contemplated under the existing (or proposed) heritage policy.

Further, with the exception of those heritage places included on the VHR – and therefore regulated under the

Heritage Act 2017 – internal controls do not apply to heritage places within the precinct.

The significance of the heritage precincts within the study area lies primarily in fabric visible from the public realm. Therefore, in most circumstances, the heritage controls within the Yarra Planning Scheme effectively limits the control of heritage fabric within the study area to that which is visible from the street, including primary building facades, rear laneway views (where they exist) and visible roof and chimney elements.

In relation to 'New Development, Alterations and Additions', Clause 22.02-5.7.1 currently sets out the following policy:

> ***General***
>
> *Encourage the design of new development and alterations and additions to a heritage place or a contributory element to a heritage place to:*
>
> - *Respect the pattern, rhythm, orientation to the street, spatial characteristics, fenestration, roof form, materials and heritage character of the surrounding historic streetscape.*
> - *Be articulated and massed to correspond with the prevailing building form of the heritage place or contributory elements to the heritage place.*
> - *Be visually recessive and not dominate the heritage place.*
> - *Be distinguishable from the original historic fabric.*
> - *Not remove, cover, damage or change original historic fabric.*
> - *Not obscure views of principle façades.*
> - *Consider the architectural integrity and context of the heritage place or contributory element.*
>
> *Encourage setbacks from the principal street frontage to be similar to those of adjoining contributory buildings; where there are differing adjoining setbacks, the greater setback will apply.*
>
> *Encourage similar façade heights to the adjoining contributory elements in the street. Where there are differing façade heights, the design should adopt the lesser height.*
>
> *Minimise the visibility of new additions by:*
>
> - *Locating ground level additions and any higher elements towards the rear of the site.*
> - *Encouraging ground level additions to contributory buildings to be sited within the 'envelope' created by projected sight lines (see Figure 1).*
> - *Encouraging upper level additions to heritage places to be sited within the 'envelope' created by projected sight lines (for Contributory buildings refer to Figure 2 and for Individually significant buildings refer to Figure 3).*
> - *Encouraging additions to individually significant places to, as far as possible, be concealed by existing heritage fabric when viewed from the front street and to read as secondary elements when viewed from any other adjoining street.*
>
> *Discourage elements which detract from the heritage fabric or are not contemporary with the era of the building such as unroofed or open upper level decks or balconies, reflective glass, glass balustrades and pedestrian entrance canopies.*

The policy for full or partial concealment of rear additions to residential buildings as described in Figures 2 and 3 of the General Policy at Clause 22.02 is modified by the Specific Requirements at Clause 22.02-5.7.2 that applies to corner sites and sites with dual frontages, and industrial, commercial and retail heritage places:

> ***Corner Sites and Sites with Dual Frontages***
>
> *Encourage new building and additions on a site with frontages to two streets, being either a corner site or a site with dual street frontages, to respect the built form and character of the heritage place and adjoining or adjacent contributory elements to the heritage place.*
>
> *Encourage new buildings on corner sites to reflect the setbacks of buildings that occupy other corners*

of the intersection.

...

Industrial, Commercial and Retail Heritage Place or Contributory Elements

Encourage new upper level additions and works to:

- *Respect the scale and form of the existing heritage place or contributory elements to the heritage place by being set back from the lower built form elements. Each higher element should be set further back from lower heritage built forms.*
- *Incorporate treatments which make them less apparent.*

The specific provisions prevail over the general policy where there is a conflict or inconsistency. This establishes an expectation that new development behind industrial, commercial and retail buildings within the Heritage Overlay is not going to be fully or substantially concealed from public realm views. In addition, it should be noted that Gertrude Street, like the typical commercial high streets in the City of Yarra, is 20m wide (building line to building line) where the residential examples shown in Figures 2 and 3 of Clause 22.02-5.7.1 show a sightline test from across an approx. 10m wide residential street. The wider the street, the more visible a new rear development will be.

Although a greater level of concealment would generally provide a better heritage outcome, this specific sightline-based guidance in the heritage policy is designed to preserve and enhance the character and appearance of predominantly one and two-storey dwellings within more typical narrow residential streets and the policy does not require that this be applied to multi-storey development within a major Activity Centre. It is noted that the proposed Clause 15.03-1L does not include a sightline test and that the policy instead relies on retaining a two-room depth of the original or early fabric of the residential dwelling and requiring that additions be 'substantially concealed'.

Likewise, the policy at 22.02-5.7.1 to '*Discourage elements which ... are not contemporary with the era of the building such as ... reflective glass, glass balustrades and pedestrian entrance canopies*' may not achieve an appropriate urban design and architectural outcome in an area such as Gertrude Street. In such areas, a 'contrasting' or 'interpretative' design approach for new taller development above the heritage building is likely to be more recessive than a 'respectful' or 'historicist' one that would lead to the new additions inappropriately mimicking the historic form and potentially being more visually intrusive.

2.2.2 Landmarks and Tall Structures

Clause 22.03 – 'Landmarks and Tall Structures' identifies a number of landmark buildings and advertising signs to which views should be protected and provides the following policies:

- *Maintain the prominence of Yarra's valued landmark signs.*
- *Protect views to the silhouette and profile of Yarra's valued landmarks to ensure they remain as the principal built form reference.*
- *Ensure the profile and silhouette of new tall structures adds to the interest of Yarra's urban form and skyline.*

Of particular relevance to Gertrude Street are the views of the drum, dome, lantern and flagpole of the REB, the design response for which is:

Development should protect the views to the drum, dome, lantern and flagpole of the World Heritage Listed Royal Exhibition Building seen from the footpath on the south side of Gertrude Street and along Marion Lane, west of Fitzroy Street.

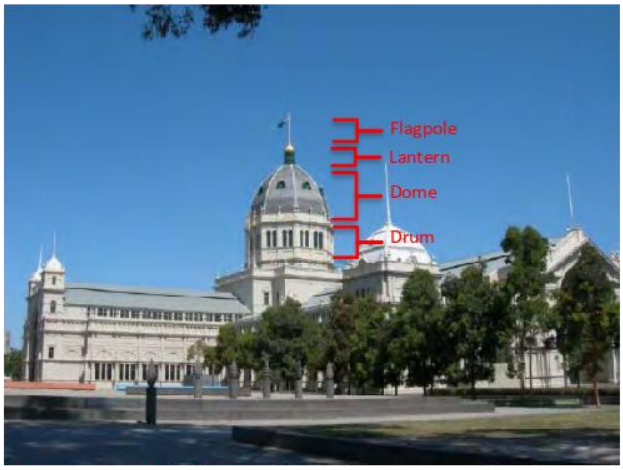

Figure 7. Royal Exhibition Building showing elements of the drum and dome (adapted from VHD, SOHE 2008)

In addition to the views of the REB, Clause 22.03 also identifies "…the silhouette/profile of St Patrick's Cathedral…" and "… the silhouette/profile of the church spire [St Lukes] on the corner of Watkins Street and St Georges Road, North Fitzroy…" amongst others. While the specified view points within Clause 22.03-4 for these two churches are not within the Gertrude Street precinct, views of these landmarks are afforded from Gertrude Street when crossing Brunswick Street. These two view sheds are discussed in more detail in the *Brunswick and Smith Street Built Form Review: Heritage Analysis & Recommendations* report.

2.2.3 World Heritage Environs Area Strategy Plan

The World Heritage Environs Areas (WHEA) Strategy Plan identifies the importance of the views of the REB from surrounding areas including Gertrude Street. It states:

> *The visibility (views and vistas) of the Royal Exhibition Building is an important aspect of its prominence within the local context, and of its overall presentation. Views to the REB and dome in particular, highlight and draw attention to the building's scale and presence. The scale, in turn, helps demonstrate the building's original historical role in hosting major international exhibitions. Views out of the REB and Carlton Gardens site into the surrounding area (particularly to the east, north and west) also reinforce an understanding of the original nineteenth century context of the place, and contribute to an appreciation of the largely intact nineteenth century setting.* (chapter 4.4, pp.14-15)

The Strategy Plan identifies the important visual and presentational aspects, and landmark qualities, of the World Heritage Site including (as relevant to the Gertrude Street precinct):

- *The visual prominence of the REB, including the dramatic contrast in scale with much of the surrounding lower scale nineteenth century development.*
- *The visibility of the dome within the local context.*

The views to the World Heritage Site identified within the Strategy Plan are classed as 'Direct', 'Proximate', 'Partial/restricted' and 'More distant'. Of these, the Gertrude Street precinct provides the following views:

> *Proximate views/vistas to the REB dome from Gertrude Street and Marion Lane in Fitzroy … running east … of the REB (within WHEA)*
>
> *Partial/restricted views (glimpses) of the building, dome, landscape, gardens and trees from points in south Fitzroy … (within WHEA)*

More distant views to the REB dome from the east along Gertrude … (outside WHEA) (chapter 4.4.2, pp.15-16).

Figure 8. Specific views to the drum and dome of the REB identified in the WHEA Strategy Plan (adapted from nearmap)

The following views to the REB from the Gertrude Street are illustrated in the Strategy Plan:

Figure 9. View to the dome from Gertrude Street, Fitzroy (east) [Figure 13 from the WHEA Strategy Plan]

Figure 10. View to the dome from Marion Lane, Fitzroy above the roof of Royal Terrace on Nicholson Street (east) [Figure 14 from the WHEA Strategy Plan]

Figure 11. Distant view to the dome from east along Gertrude Street (at junction with Napier Street) [Figure 20 from the WHEA Strategy Plan]

The WHEA Strategy Plan was implemented into the Yarra Planning Scheme as DDO8, which protects the views of the drum, dome, lantern and flagpole of the REB. DDO8 includes the following design objectives:

- *To protect the World Heritage values of the Royal Exhibition Building and Carlton Gardens.*
- *To reinforce the built form character of the area as being essentially of low-rise buildings.*
- *To protect views of the drum, dome, lantern and flagpole of the Royal Exhibition Building from the footpath on the south side of Gertrude Street and along Marion Lane, west of Fitzroy Street.*

2.2.4 Schedule 8 to the Design and Development Overlay

Schedule 8 to the Design and Development Overlay (DDO8) provides the following decision guideline which is relevant for development on the northern side of Gertrude Street:

> *Before deciding on an application, the responsible authority must consider the impact on the view of the drum, dome, lantern and flagpole of the Royal Exhibition Building.*

We note that the WHEA Strategy Plan is currently under review by Heritage Victoria, through which the views and vistas analysis of the REB & CG WHS may be revisited. In advance of this work, our analysis has identified the key views of the drum, dome, lantern and flagpole of the REB within the Gertrude Street precinct as being those looking west from the south side of Gertrude Street (particularly from both sides of the intersections of Fitzroy Street [Figure 12] and Brunswick Street [Figure 13]) as well as along Marion Lane over the top of Royal Parade (particularly from the intersection with Fitzroy Street [Figure 14]).

Figure 12. View of the REB from the south side of Gertrude Street at intersection of Fitzroy Street (photo taken from the western side of the intersection)

Figure 13. View of the REB from the south side of Gertrude Street at intersection of Brunswick Street (photo taken from the eastern side of the intersection)

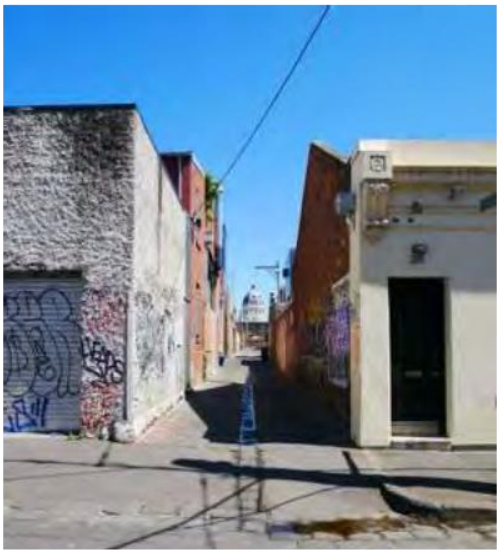

Figure 14. View of the REB from the intersection of Marion Lane and Fitzroy Street

To achieve the objective of Clause 22.03 and DDO8, we consider that it is appropriate to retain a clear sky silhouette of the whole of the drum, dome, lantern and flagpole of the REB and for this element to remain the most prominent visual element within the key views identified above.

Further discussion on local landmarks within the Gertrude Street commercial spine is discussed in Section 5.4 of this report.

2.2.5 Heritage Overlay

The head heritage provision of the VPP, Clause 43.01 'Heritage Overlay', has the following purposes:

- *To implement the Municipal Planning Strategy and the Planning Policy Framework.*
- *To conserve and enhance heritage places of natural or cultural significance.*
- *To conserve and enhance those elements which contribute to the significance of heritage places.*
- *To ensure that development does not adversely affect the significance of heritage places.*
- *To conserve specifically identified heritage places by allowing a use that would otherwise be prohibited*

if this will demonstrably assist with the conservation of the significance of the heritage place.

Clause 43.01-8 sets out 'Decision Guidelines' – in addition to those included in Clause 65 – that the Responsible Authority must consider before determining a permit application. These are:

- *The Municipal Planning Strategy and the Planning Policy Framework.*
- *The significance of the heritage place and whether the proposal will adversely affect the natural or cultural significance of the place.*
- *Any applicable statement of significance (whether or not specified in the schedule to this overlay), heritage study and any applicable conservation policy.*
- *Any applicable heritage design guideline specified in the schedule to this overlay*
- *Whether the location, bulk, form or appearance of the proposed building will adversely affect the significance of the heritage place.*
- *Whether the location, bulk, form and appearance of the proposed building is in keeping with the character and appearance of adjacent buildings and the heritage place.*
- *Whether the demolition, removal or external alteration will adversely affect the significance of the heritage place.*
- *Whether the proposed works will adversely affect the significance, character or appearance of the heritage place.*
- *Whether the proposed subdivision will adversely affect the significance of the heritage place.*
- *Whether the proposed subdivision may result in development which will adversely affect the significance, character or appearance of the heritage place.*
- *Whether the proposed sign will adversely affect the significance, character or appearance of the heritage place.*
- *Whether the lopping or development will adversely affect the health, appearance or significance of the tree.*
- *Whether the location, style, size, colour and materials of the proposed solar energy facility will adversely affect the significance, character or appearance of the heritage place.*

While some of these considerations are not obviously consistent with the addition of higher density development behind heritage buildings, the first purpose of 43.01 and the first decision guideline encompasses the whole Municipal Planning Strategy and the Planning Policy Framework (integrated decision-making). Therefore, a balance must be struck by the Responsible Authority between achieving the objectives of the Heritage Overlay and meeting the objectives of other parts of the VPPs including Activity Centre policy and commercial zoning. There is established precedent for new rear development to be accommodated behind heritage buildings in commercial precincts throughout inner Melbourne without substantially compromising the identified significant values of these heritage places.

3. Heritage in Design and Development Overlays – Panel Findings

Planning Panels Victoria has considered a number of Planning Scheme Amendments that are of particular relevance to this project: Banyule Amendment C93, Bayside Amendments C113, C114 and C115, Boroondara C108, Darebin Amendment C161, Moreland Amendment C134, Melbourne Amendments C240 and C258, Stonnington Amendment C223, Whitehorse Amendment C175 and Yarra Amendments C220 and C231.

These amendments considered the appropriateness of mandatory controls in the context of PPN59 and provide guidance on which circumstances they should be applied. In response to submissions, they also considered the issue of whether or not the DDO control should include objectives to protect heritage or whether this should be the sole domain of the Heritage Overlay provisions. In addition to these panel reports, Amendment C123 to the Banyule Planning Scheme, approved via ministerial intervention, provides further instruction as to the role of mandatory controls.

These reports provide useful guidance on the form and wording of DDO controls. In summary, Panel has concluded that:

- The Heritage Overlay identifies what is significant within an area.
- Heritage is an appropriate issue for DDOs to provide guidance on to inform future development.
- Mandatory controls should be used in exceptional circumstances and their application should be guided by PPN59 and PPN60.
- Formulae defining the proportion of new built form that can be viewed above the street wall is an appropriate mechanism for informing the design and massing of new built form.

The approach taken in the formulation of the built form controls to manage development affecting heritage places is to complement existing policy. Clause 22.02 - 'Development Guidelines for Sites Subject to the Heritage Overlay' and relevant parts of Clause 22.10 – 'Built Form and Design Policy' have been taken as the starting point for the development of these complementary controls and policy.

Where existing policy is considered to be satisfactory, no additional policy has been recommended. However, specific policy has been recommended where it is considered necessary to provide guidance to recognise the current role of these commercial strips and mixed use pockets and enable their future development while protecting their heritage values and streetscape character.

A discussion of the most relevant of the Panel reports is provided below, and at Section 3.10 the recommendations for each panel are summarises with comment on the implications of the outcome.

3.1 Yarra Planning Scheme Amendment C231

GJM Heritage prepared the *Queens Parade Built Form Heritage Analysis and Recommendations* (11 December 2017) which informed Yarra Amendment C231. C231 sought to apply built form controls in the form of DDOs to Queens Parade, Fitzroy North and Clifton Hill and to amend Heritage Overlay controls that apply within the study area. Precinct 4 within DDO20 covers the commercial shopping strip that forms part of the Queens Parade Neighbourhood Activity Centre. While Queens Parade - as a 60m wide boulevard - is three times the width of Gertrude Street, their traditional high street built form is remarkably similar in terms scale, consistency of built form and architectural quality.

The Panel for Amendment C231 found that the strategic work undertaken in support of the amendment was strong and that it assisted in justifying the majority of the built form parameters recommended in the respective DDOs, particularly with respect to mandatory controls. At p29 of the Panel Report, the Panel notes that:

> *Exceptional circumstances exist for the application of mandatory controls for development as the QPAC* (Queens Parade Activity Centre) *includes a number of significant and contributory heritage places and heritage fabric set within a consistent streetscape form.*

Panel recognised that the wider boulevard urban context would lead to a high visibility of upper level development which in turn warrants the application of height limits.

The Panel supported the mandatory upper level setback of 8m within the Council preferred DDO and the combination of mandatory and preferred height controls where this will provide certainty where distinctive heritage fabric warrants greater protection. It also recognised that an activity centre with diverse built form can have areas of little change where growth can be accommodated elsewhere.

3.2 Yarra Planning Scheme Amendment C220

Similar to Gertrude Street, Johnston Street in Collingwood and the western part of Abbotsford (west of the railway viaduct) is a highly intact, predominantly Victorian/early Edwardian-era streetscape covered by the Heritage Overlay. The streets have a similar mix of historic and current uses, a similarly high proportion of 'Contributory' and 'Individually Significant' buildings with a high level of integrity, and similar existing street wall heights (generally between 8m and 11m) as Gertrude Street. Like Gertrude Street, Johnston Street is designated as a Neighbourhood Activity Centre.

Amendment C220 seeks to introduce built form controls along Johnston Street in the form of DDO15. The Panel report recommended the inclusion of the following DDO objective which is also relevant to Gertrude Street:

> *To preserve the valued heritage character of the streetscape and ensure that the predominantly two storey (heritage scale) street-wall remains the visually prominent built form of Johnston Street west of the railway line bridge...*

The Panel report provides commentary which is of relevance to a consideration of the proposed built form controls for Gertrude Street. In particular, the Panel stated:

> *In urban design terms, the 6 metre setback will retain the 'human scale' of Johnston Street, secure the distinction between the street wall and upper levels and will reduce the potential for overshadowing and adverse wind conditions.*
>
> ...
>
> *The Panel does not agree that less significant sections* [of Johnston Street] *warrant a different treatment. Less significant areas equally deserve to exhibit the overall urban design outcome: a strong street wall with a distinct setback to the mid level form.*

To achieve these objectives Panel recommended that a building envelope requirement be established that, rather than being based on a sightline test from the opposite side of the street new, required new development to be within a 45° 'angular plane' drawn from the maximum street wall height. In combination with upper-level front setbacks and maximum building heights the angular plane creates a further upper-level setback consistent with the application of the policy objective at Clause 22.02-5.7.1 that each higher element to industrial, commercial and retail buildings should be set further back from the lower heritage built form.

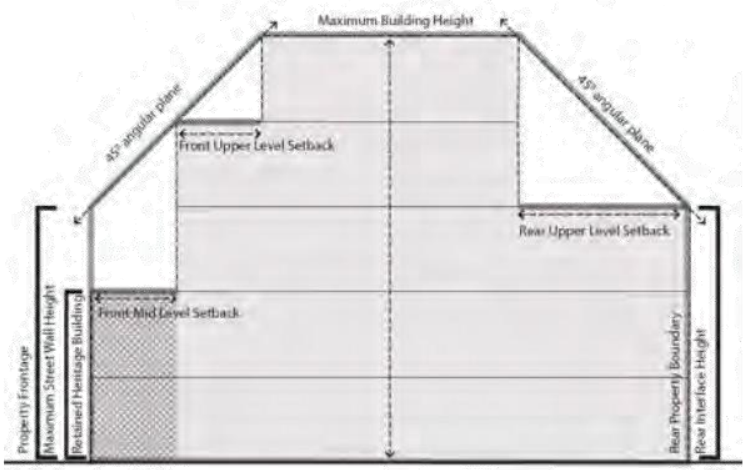

Figure 15. Building envelope requirement – Heritage Building (Figure 1 in Yarra DDO15 (version for adoption dated 14 May 2019)

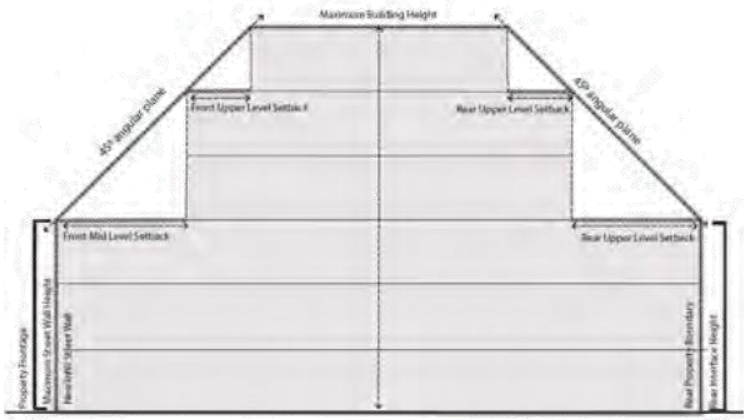

Figure 16. Building envelope requirement – Infill Building (Figure 2 in Yarra DDO15 (version for adoption dated 14 May 2019)

3.3 Melbourne Planning Scheme Amendment C258

Amendment C258 seeks, in part, to rationalise heritage gradings applied within the City of Melbourne from alphabetical and numerical gradings to 'significant', 'contributory' or not graded. In terms of 'streetscape' gradings, C258 seeks to transition from numerical gradings to 'significant' or ungraded,[2] however the Panel recommended abandoning the streetscape grading altogether as they considered that the concept of significant streetscapes had been overtaken by the concept of heritage precinct. Further, the Panel considered that these streetscapes could be referred to in the Statements of Significance or, if necessary, defined as their own precinct.

In terms of heritage place gradings within the *Heritage Places Inventory* Incorporated Document, C258 seeks to transition from alphabetical gradings to 'significant', 'contributory' and ungraded, however the Panel

[2] *Significant streetscapes are collections of buildings outstanding either because they are a particularly well preserved group from a similar period or style, or because they are highly significant buildings in their own right.*

recommended using an 'Individual' grading for places of site-specific significance and a 'contributory' grading for places that contribute to a heritage precinct.

The Panel went on to recommend that the distinction within the proposed heritage policy that sought different outcomes in terms of fabric retention or the concealment of new built form etc. for heritage places of different grades should be removed and a single set of heritage policies apply irrespective of building grading:

> *The Panel has noted that some of the management policies at Clauses 22.04 and 22.05 distinguish between Significant and Contributory buildings. Also, as earlier commented the distinctions contribute to identifying Significant buildings as being more valuable and warranting stricter management policies. The management policies that differentiate between Significant and Contributory buildings, however, are few in number (approximately five) and the Panel considers that they can be reworded into a single management statement.* (p.39)

3.4 Moreland Planning Scheme Amendment C134

Sydney Road, Brunswick is a Major Activity Centre with highly intact, predominantly Victorian streetscapes covered by the Heritage Overlay. Sydney Road and Gertrude Street share common traits within their commercial cores including a tram route, a similar mix of historic and current uses, similar historic built form (predominantly two-storey Victorian-era or early twentieth-century commercial buildings), a high proportion of 'contributory' and 'individually significant' buildings with a high level of integrity, and similar existing street wall heights (generally between 8m and 11m).

The Statement of Significance for Moreland HO149 – Sydney Road Precinct[3] notes the precinct is of historical, architectural and social significance to the City of Moreland. It includes a number of close similarities with the cultural heritage significance of Gertrude Street as follows:

- Importance as a predominantly intact late 19th and early 20th century retail and commercial strip;
- Reflecting the considerable expansion and growth of the streets, and the suburbs as a whole, during the 19th century Boom period; and
- Largely intact upper floor facades of the shops.

Gazetted on 11 August 2016, C134 introduced DDO18, DDO19 and DDO20. DDO18 set mandatory street wall heights on Sydney Road north of Brunswick Road of between 8m and 11m, which would be an appropriate precedent for the proposed controls Gertrude Street precinct given the similarities in their architectural form.

DDO18 provides a preferred minimum 5m setback for development above the street wall and to establish a preferred ratio of ¾ : ¼ street wall to new built form through the following design objective:

- *Be designed to ensure that it occupies no more than one quarter of the vertical angle defined by the whole building in the view from an eye-level of 1.7 metres on the opposite side of the street, as illustrated in Figure 1 below.*

[3] Retrieved from Victorian Heritage Database, 16 June 2017 (http://vhd.heritagecouncil.vic.gov.au/places/56076#sthash.7LcbbSIM.dpuf)

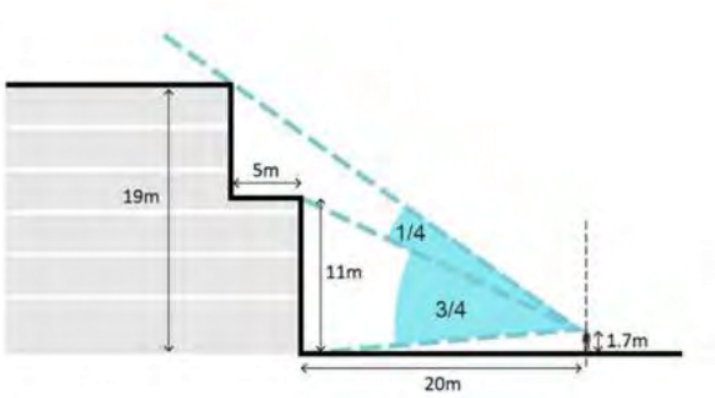

Figure 17. Upper level setbacks along Sydney Road (Figure 1 in Moreland DDO18, retrieved 2 June 2017).

DDO18 also provides a useful model for dealing with upper level development where the existing heritage building has a street wall height of less than the 11m street wall height provided in that control:

- *Where an existing building with a street wall height of less than 11 metres is to be retained for heritage reasons new development may occupy more than one quarter of the vertical angle defined by the whole building outlined in Figure 1 above.*

3.5 Boroondara Planning Scheme Amendment C108

The Panel considering Amendment C108 discussed the use of mandatory street wall height, upper level setbacks and overall heights across 31 Neighbourhood Activity Centres and three commercial corridors (Camberwell Road/Burwood Road and Canterbury Road).

In its report dated 26 February 2014, the Panel noted its strong support for the protection of heritage assets in Boroondara and recommended reinstatement of policy in the exhibited Amendment that encouraged new development on or adjoining a heritage place to be moderated. In particular, the Panel recommended that policy guidance be included that:

> *The combination of the height, setbacks and design treatment of new buildings should ensure a heritage place on or adjoining the site is not overwhelmed or dominated.*

The Panel also considered the use of mandatory height and setback controls, and recognised that the version of *Plan Melbourne* at that time foreshadowed stronger policy support for the use of mandatory provisions in neighbourhood centres (and residential areas) to increase planning certainty.

The Panel report recognised that mandatory provisions that prescribed standards without a capacity for departures have been supported in areas of consistently high heritage value with consistent character. While acknowledging the heritage values and 'main street' character of the Neighbourhood Activity Centres subject to C108, the Panel also recognised that new development will be visible behind the retained façades – particularly from oblique views – and that invisibility of upper level development is either unreasonable or not necessary to achieve the primacy of the street wall.

In conclusion, the Panel accepted some use of mandatory controls within Boroondara's neighbourhood centres, but not in the commercial corridors:

> *The Panel recognises that Plan Melbourne foreshadows stronger policy support for the use of mandatory provisions in neighbourhood centres (and residential areas) to increase certainty. The Panel considers the combination of the street wall and upper level setbacks is critical in neighbourhood centres to maintain the established main street character and in these situations mandatory controls can be justified. However, we consider development with elements that exceed the nominated height and/or*

> *adopt alternative setbacks should not be precluded as they may produce better outcomes in some circumstances. The overall maximum height limits should therefore remain discretionary to allow for such circumstances.*

It was the Panel's conclusion that mandatory street wall heights which reflected the dominant character of the neighbourhood centres were acceptable (either 8m or 11m, depending on the context). It also found that if mandatory upper level setbacks were to be adopted, they should be sufficient to ensure that in most cases the upper storey will be clearly distinguishable from the street wall of the heritage building and be a recessive element in neighbourhood centre streetscapes. To achieve this, the Panel identified 5m as being an appropriate mandatory minimum setback for upper level development in the context of Boroondara's Neighbourhood Activity Centres.

3.6 Whitehorse Planning Scheme Amendment C175

Amendment C175 sought to implement the *Box Hill Metropolitan Activity Centre Built Form Guidelines* (Hansen Partnership, 2016) by rezoning land, introducing the Built Form Guidelines as a reference document and applying a new DDO Schedule to introduce built form controls. In its consideration of this amendment, the Panel Report dated 6 October 2017 stated:

> *The Panel would have benefited from a more sophisticated analysis of the heritage precinct that utilised three-dimensional modelling, sight lines and view-sheds to help understand the rationale for the proposed heritage related controls. Without this basic information, it is difficult to determine whether the proposed controls are appropriate…*

and concluded that in the absence of this modelling:

- *The Built Form Responses regarding Heritage should not proceed in their current form.*

The absence of three-dimensional modelling, and sight line and view-shed analysis in relation to those areas of the Box Hill Activity Centre that are subject to the Heritage Overlay appears to have been critical in Panel recommending that the proposed built form controls not be applied to address heritage.

3.7 Stonnington Planning Scheme Amendment C223

The Glenferrie Road and High Street Major Activity Centre encompasses the two linear commercial strips of Glenferrie Road and High Street in Malvern as well as two peripheral areas. The Heritage Overlay, which covers all of Glenferrie Road and most of High Street, acknowledges the area for its '*metropolitan significance as one of the major strip shopping centres to have retained its role into the late twentieth century, and for the quality and integrity of its Victorian, Federation and Interwar building stock*'.[4] Amendment C223 sought to apply new built form provisions through the application of DDO19 to the entire Activity Centre, with precincts A and B covering the commercial and heritage precincts of Glenferrie Road and High Street respectively.

While the amendment proposed an 8-10m setback above the street wall for precincts A and B, the Panel found it to be effectively a concealment of upper level additions, supporting instead a 5m setback as adequate to respect heritage values without removing development capacity. This was derived from the precedent in the Boroondara Planning Scheme and was seen to equate to the first room in a Victorian-era building. The amendment was otherwise generally supported by the Panel as an appropriate balance between protecting heritage values and enabling growth. Discretionary preferred maximum building heights between 14.5 metres (4 storeys) and 21 metres (6 storeys) were supported through precincts A and B.

The Panel also reviewed the drafting of discretionary and mandatory provisions, addressing the appropriateness of the terms 'should' and 'must'. The Panel noted that confusion arose from the DDO parent clause, and until

[4] Retrieved from Victorian Heritage Database, 18 January 2018 (https://vhd.heritagecouncil.vic.gov.au/places/31530)

such time as the clause is redrafted, the term 'must' is to be used for schedule requirements with the addition of further clarification if it can be varied with a permit.

3.8 Darebin Planning Scheme Amendment C161

Amendment C161 proposed to implement the '*Fairfield Village Heritage Assessment, 2017*' (Heritage Intelligence) and '*Fairfield Village Built Form Guidelines 2017*' (Hansen Partnership) through the application of Heritage Overlay (HO313) and DDO21 to the Fairfield Village Neighbourhood Centre. DDO21 created two sub precincts: Area 1 to be applied to the proposed HO313 precinct; with the remainder of the centre covered by Area 2.

The Panel Report provides some guidance on the drafting of development controls for Gertrude Street. The Panel found the application of the Heritage Overlay in conjunction with the DDO would enable the precinct '*to support a variety of housing typologies at increased densities*' in a way that '*allows the heritage place to be identified and understood*'. Further, the Panel supported the application of a mixture of mandatory and discretionary controls to Area 1 of the DDO in the form of:

- Mandatory maximum building heights at 14.5m and 17.5m (four and five storey), triggered by a lot width of 24m for five-storey.
- Mandatory maximum street wall height to be the greater of 8.5m or the adjacent street wall.
- Discretionary minimum front setbacks above the street wall at generally 4m, and 8m if constructing to a 5th level.
- The addition of a 3m side setback at the fifth-floor level – introduced as a discretionary provision to prevent the creation of a dominating wall of development along Station Street.

The Panel found that DDO21, as proposed, had several failings. In addition to drafting and content recommendations, the inclusion of a 'Valued Street Façade' provision was questioned. 'Valued Street Facades' were identified for their contribution to local character due to their form and/or detail across both Area 1 and 2. They were not identified as a feature of previous heritage studies and were not all of historic value. The Panel was not convinced '*that a DDO can be structured to require the retention or incorporation of a building*', finding the Heritage Overlay to be the appropriate mechanism for such a provision. Due to their largely arbitrary identification and the lack of urban design advice justifying their inclusion, the Panel recommended that in addition to being removed from Area 2 and non-contributory buildings in Area 1, the be reviewed to be made workable or removed in its entirety.

3.9 Banyule Planning Scheme Amendment C123

The Ivanhoe Shopping Centre is part of the Ivanhoe Activity Centre and is a traditional linear strip of retail and commercial activity located along the historic thoroughfare of Upper Heidelberg Road, Ivanhoe. HO90 identifies the Ivanhoe Shopping Centre for its local historical and social significance in the form of one and two-storey shops predominantly from the 1915-1940 period.

Amendment C123 was approved by Ministerial intervention in September 2018 and applied to the Ivanhoe Activity Centre. Initially introduced as an interim control attached to the Activity Centres Pilot Program run by the Department of Environment, Land, Water and Planning, C123 did not progress through a Panel process. C123 amended DDO11 and applied mandatory height controls across the Ivanhoe Activity Centre. The application of mandatory heights was in response to the quantity and scale of development proposed within the area, particularly in relation to building heights in excess of the approved structure plan heights, and resulted in mandatory heights of generally 15m being applied to the HO90 area.

3.10 Table of Summarised Recommendations and Potential Implications for Gertrude Street

Yarra Amendment C231	
Recommendation	***Potential Implications***
Significant and contributory heritage places and heritage fabric set within a consistent streetscape form warrants mandatory controls	Gertrude Street displays similar levels of consistency in heritage streetscape to warrant mandatory controls
8m upper-level setbacks justified	An 8m mandatory setback can be justified for highly intact heritage streetscape such as found within Gertrude Street
Combination of preferred and mandatory heights appropriate to respond to a variety of built form conditions	The use of a balanced combination of preferred and mandatory heights is appropriate to respond to varied conditions
Limiting heights within heritage precincts while allowing housing capacity to be met elsewhere in the broader study area	The most highly intact areas warrant low heights to protect heritage streetscapes
Yarra Amendment C220	
Recommendation	***Implications***
A 6m upper level setback will retain the 'human scale' of Johnston Street, secure the distinction between the [heritage] street wall and upper levels	A minimum 6m mandatory upper level setback is appropriate
The less significant sections of Johnston Street do not warrant lesser built from controls	The same controls should be applied within the DDO irrespective of the significance of the streetscape quality
A preferred ratio of 2/3:1/3 street wall to new upper level built from should be replaced with a 45 degree angular plane	A 45 degree angular plane above a nominal 11m street wall height can inform the preferred mid-level built form rather than a ratio based sightline test
In combination with upper level front setbacks and maximum building heights, the angular plane creates a further upper-level setback from the mid-level setback	Upper level development should be set further back from the street wall consistent with the guidance at 22.02-5.7.2
Melbourne Planning Scheme Amendment C258	
Recommendation	***Implications***
Heritage policy should not seek different outcomes in terms of fabric retention or the concealment of new built form based on gradings	The same controls should be applied within the DDO irrespective of the grading of properties within a precinct
The streetscape grading system should be abandoned	Applying a streetscape grading is unnecessary for the justifying the use of mandatory controls

Moreland Amendment C134	
Recommendation	***Implications***
The application of mandatory street wall heights to Sydney Road is justified	Provides a justification for the application of mandatory street wall heights within the Study Area
Established a preferred ratio of ¾ : ¼ street wall to new upper level built form	The use of a sightline test to inform new upper level built from is appropriate
Boroondara Amendment C108	
Recommendation	***Implications***
The combination of the height, setbacks and design treatment of new buildings should ensure a heritage place on or adjoining the site is not overwhelmed or dominated	The DDO can included height, setback and design treatment controls to avoiding dominating heritage places
New development will be visible behind the retained façades – particularly from oblique views – and that invisibility of upper level development is either unreasonable or not necessary to achieve the primacy of the street wall	There is an expectation that the visibility of new upper level development (including from oblique views) will be acceptable and complete concealment is not necessary
Mandatory upper level setbacks to the commercial corridors are justified	Provides a justification for the application of mandatory upper level setbacks within the study area
Whitehorse Amendment C175	
Recommendation	***Implications***
In the absence of modelling, built form controls should not proceed	That three-dimensional modelling, sightlines and view shed analysis should inform built form controls
Stonnington Amendment C223	
Recommendation	***Implications***
A 5m upper level setback instead of the 8-10m setbacks proposed should effectively conceal upper level development	There is an expectation that the visibility of some new upper level built form will be acceptable and complete concealment is not necessary
Application of the words 'should' and 'must' within controls should be carefully considered	Use 'should' used for preferred controls and 'must' for mandatory controls
Darebin Amendment C161	
Recommendation	***Implications***
The application of mandatory building heights to Fairfield Village is justified	Provides a justification for the application of mandatory building heights within the study area
The application of mandatory street wall heights to Fairfield Village is justified	Provides a justification for the application of mandatory street wall heights within the study area
The use of 'Valued Street Façade' provision not supported	Confirms reliance on the Heritage Overlay to protect valued streetscapes

Banyule Amendment C123	
Recommendation	***Implications***
The application of mandatory building heights to the Ivanhoe Activity Centre is justified	Provides a justification for the application of mandatory building heights within the study area

4. Mandatory and Discretionary Height and Setback Controls

Planning Practice Note 59: The Role of Mandatory Provisions in Planning Schemes (June 2015) (PPN59) notes that the VPPs are predominantly performance-based and that mandatory provisions are the exception. The PPN sets out a series of five criteria against which to test proposed mandatory provisions, being:

- Is the mandatory provision strategically supported?
- Is the mandatory provision appropriate to the majority of proposals?
- Does the mandatory provision provide for the preferred outcome?
- Will the majority of proposals not in accordance with the mandatory provision be clearly unacceptable?
- Will the mandatory provision reduce administrative costs?

Planning Practice Note 60: Height and Setback Controls for Activity Centres (PPN60) provides specific guidance on the use of mandatory height and setback controls in activity centres. In September 2018, the Department of Environment, Land, Water and Planning published an updated version of PPN60 following the completion of the pilot project *Better Height Controls in Activity Centres*[5]. Of relevance to this matter, PPN60 now provides an additional justification for the use of mandatory controls based on 'comprehensive strategic work', and reads:

> *Mandatory height or setback controls should only be applied where:*
>
> - *exceptional circumstances exist; or*
> - *council has undertaken comprehensive strategic work and is able to demonstrate that mandatory controls are appropriate in the context, and*
> - *they are absolutely necessary to achieve the preferred built form outcomes and it can be demonstrated that exceeding these development parameters would result in unacceptable built form outcomes.*

In relation to 'exceptional circumstances', PPN60 states:

> *Exceptional circumstances may be identified for individual locations or specific and confined precincts, and might include:*
>
> - *significant heritage places where other controls are demonstrated to be inadequate to protect unique heritage values.*
> - *sites of recognised State significance where building heights can be shown to add to the significance of the place, for example views to the Shrine of Remembrance...*

The amended version of PPN60 reflects a broader shift over time within the application of the VPPs in favour of the use of mandatory controls.

The purpose of the Built Form Framework and this report is to provide a comprehensive strategic basis for height and setback controls within the study area. The inclusion of individual heritage places and precincts in the Heritage Overlay demonstrates the significance of the unique heritage values of the study area.

PPN60 identifies the following criteria for 'exceptional circumstances' that *"...may be identified for individual locations or specific and confined precincts"*. These include (as relevant):

- *significant heritage places where other controls are demonstrated to be inadequate to protect unique heritage values*
- *sites of recognised State significance where building heights can be shown to add to the significance of the place, for example views to the Shrine of Remembrance...*

To pursue mandatory controls, PPN60 also states:

> *Where exceptional circumstances are identified, mandatory height and setback controls should*

[5] Refer to the Panel Report to Yarra C220 chapter 1.2 for further discussion on the pilot project and the amendment to PPN60.

> *only be applied where they are absolutely necessary to achieve the built form objectives or outcomes identified from the comprehensive built form analysis. Where mandatory controls are proposed, it will need to be demonstrated that discretionary controls could result in an unacceptable built form outcome.*

The Panels that considered Boroondara C108, Darebin C161, Moreland C134 and Yarra C220 & C231 provide further guidance on the application of mandatory height, street wall height and upper level setback controls along Brunswick and Smith Streets.

These Panels concluded that for Heritage Overlays within activity centres:

- Mandatory controls were appropriate for street wall heights along Sydney Road, in 31 neighbourhood centres in Boroondara, Area 1 of the Fairfield Village Neighbourhood Centre and in parts of Johnston Street and Queens Parade
- Mandatory upper level setbacks were appropriate in many of Boroondara's neighbourhood centres and in parts of Johnston Street and Queens Parade
- Mandatory heights were appropriate for Area 1 of the Fairfield Village Neighbourhood Centre and in Queens Parade
- Mandatory setbacks were appropriate for Johnston Street with a mixture of preferred and mandatory height limited combined with a 45 degree angular plane test.

It is our view that Queens Parade – Precinct 4 in particular shares similarities with Gertrude Street in terms of heritage fabric and streetscape characteristics.

Part II: Heritage Analysis

5. The Gertrude Street Study Area

5.1 Study Area Boundary

As noted previously, this report focuses on the Gertrude Street commercial spine as defined in Figure 2.

Following is an analysis of the heritage components and qualities of the Gertrude Street area, including significant views and landmarks. An analysis of future built form character considerations has been provided along with recommended built form parameters to appropriately manage heritage values.

As detailed in the *Brunswick and Smith Street Built Form Review: Heritage Assessments* report (GJM Heritage, 25 November 2019) and Section X of this report, it is recommended that a new Gertrude Street, Fitzroy Heritage Precinct be created to appropriately recognise the specific history and architectural quality of this important streetscape.

5.2 Physical Description

The Gertrude Street commercial spine runs in an east-west direction between Royal Lane (east of Nicholson Street) to Smith Street. The corridor generally extends to the depth of one property to the north side of the street west of Brunswick Street, to the depth of one property on the south of the street between Brunswick and Napier Streets, and to the depth of one property on both sides of the street between Napier and Smith Streets. Gertrude Street is generally flat but falls to the east from Gore Street to Smith Street. It is crossed by a regular succession of north-south running streets, which is broken by the Atherton Gardens housing estate.

The study area excludes the Atherton Gardens housing estate and the properties to the south of Gertrude Street, west of Brunswick Street. The precinct extends south of Gertrude Street between Young and Little Napier Streets to include MUZ zoned land.

With the exception of the Atherton Gardens housing estate, Gertrude Street is commercial in character. The MUZ zoned land between Young and Little Napier Streets is residential in use and character, with a number of graded single-storey terraced houses and some later low-medium rise apartment development.

While only occupying both sides of the street between Napier and Smith Streets, Gertrude Street is one of the most intact commercial high streets within inner Melbourne. Its consistency of form and very high level of intactness compares with the commercial section of Queens Parade, Fitzroy North / Clifton Hill and the northern part of Brunswick Street between Leicester and Johnston Streets or the central section of Smith Street north and south of the Johnston Street intersection.

The wholesale demolition of the shop/residences that once lined the northern side of Gertrude Street to make way for the construction of the Atherton Gardens housing estate in the early 1970s had the most profound impact on the intactness of the street. Other late-twentieth century development was smaller scale (one or two storey) commercial infill that has not disrupted the visual cohesiveness of the precinct. The only substantial recent development is the five-storey mixed use development at no. 166 Gertrude Street, the principal elevation of which does not exceed the height of the tall three-storey Blackett's Building at nos. 158-164 on the opposite side of Little George Street.

5.3 Heritage Characteristics

Two-storey shop / residence buildings are common to the City of Yarra's historic high streets and make up the majority of the streetscape within the Gertrude Street commercial spine. These buildings share typical characteristics, which include:

- Attached terraced construction
- Masonry construction with less than 40% of the upper level street wall face comprised with openings such as windows and doors

- Painted render or face brick façades
- Parapeted front facades with solid parapets, open balustrades or more elaborate gables
- No setback from the street boundary
- Early or altered shop fronts taking up the majority of the ground floor often with recessed entries
- Splayed corners to return façades or end-of-terrace elevations to laneways and side streets
- Architectural features such as belvederes and towers at prominent corner site
- Verandahs or later canopies, particularly on the south side of the street
- Visible chimneys normally set back between 3m and 4m from the front of the building.

In addition to the above, Gertrude Street also includes a small number of isolated taller late nineteenth and early twentieth century buildings including the four-storey building at no. 108-110 (graded 'contributory', c.1880-90); and the three-storey buildings at nos. 158-164 (graded 'individually significant', 1888), 198-200 (graded 'contributory', c.1870-90) and 202-204 (graded 'individually significant', 1900-1915).

Mid-late twentieth century development is generally two-storey and contextual in scale, form and materiality, including nos. 1-9, 19-35, 54-60 and 142-144 Gertrude Street. The five-storey mixed use building constructed at 166 Gertrude Street in 2017 is the only substantial recent development within the study area.

The following examples show the typical building types found within the study area. It must be noted that buildings of a particular type will not necessarily demonstrate all the features identified below, and may include other features such as visible roofs and chimneys.

Figure 18. Two-storey shop/residence at 233-235 Gertude Street showing the typical relationship between solid (walls) and void (windows) on the front façade. The first-floor windows make up less than 40% of the wall area (excluding the parapet, gable or balustrade) and the early shopfront glazing and entrance door occupies the majority of the ground floor façade.

Figure 19. Aerial photograph (153-167 Gertrude Street, nearmap, 31 August 2019) showing the typical location of chimneys at the centre of each of the front rooms on the party wall i.e. approx. 3m back from the front façade. The principal front part of the buildings range from 6m deep to in excess of 20m with typical depths being 10-15m deep.

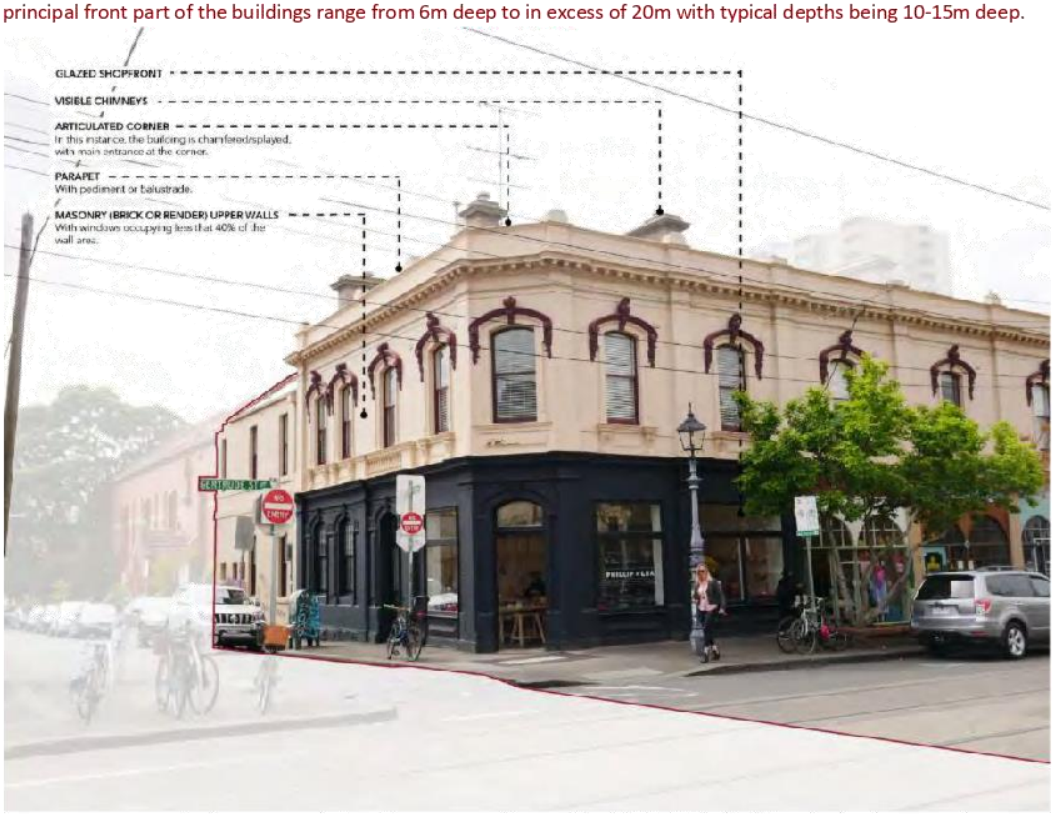

Figure 20. Two-storey corner shop/residence with return façade (northeast corner of the intersection of Gertrude and Fitzroy Streets).

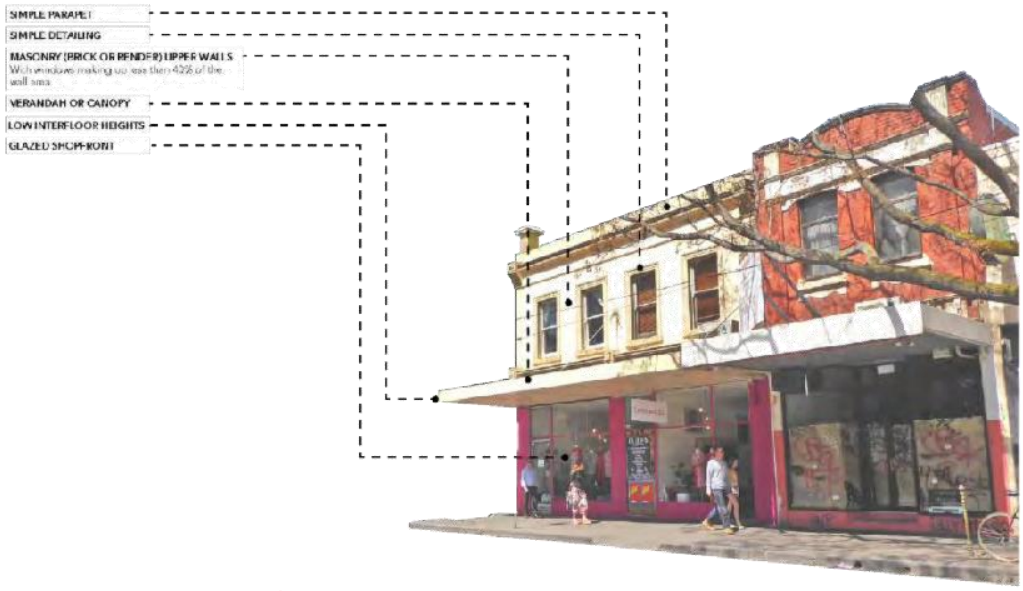

Figure 21. Simple or modest shop / residence (Looking southeast to 132-134 Gertrude Street)

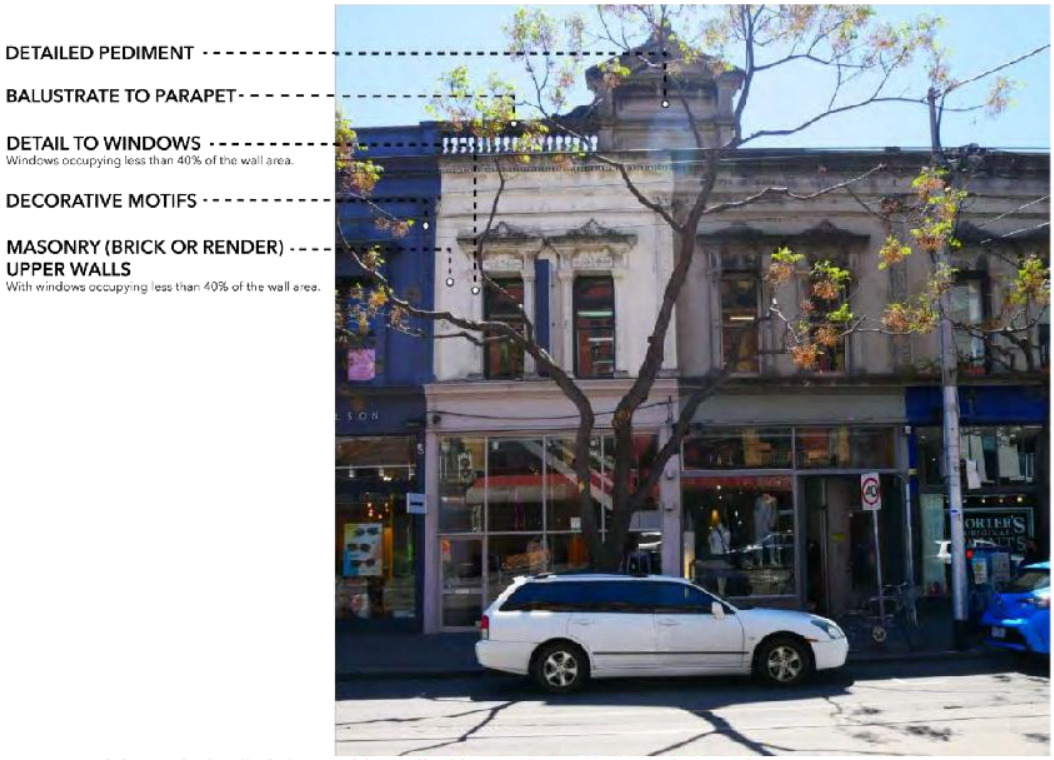

Figure 22. Elaborately detailed shop residence (looking north to 163 Gertrude Street)

5.4 Local Landmarks

While municipal-wide landmarks within the City of Yarra are identified within Clause 22.03 'Landmarks and Tall Structures' of the Yarra Planning Scheme, the location, scale, function and architectural form and detail of some other buildings within the study area has resulted in these buildings acting as local landmarks. These buildings serve as markers, wayfinding aids or landmarks in the local streetscape context. There are no municipal-wide landmarks identified in Clause 22.03-4 within the Gertrude Street Precinct, however some of the most important views to the drum and dome of the REB identified within the WHEA Strategy Plan are provided from within the precinct, which is discussed at Section 2.2 above.

In identifying the following local landmarks, this report has also considered the 2017 Ethos Urban report entitled *Review & Development of the City of Yarra Landmarks Policy*.

In the context of Gertrude Street, the local landmarks act as wayfinding aids, signal public or semi-public buildings, articulate street corners and promote or advertise important local businesses.

These buildings include, but may not necessarily be limited to:

- Civic buildings including post offices
- Hotels
- Banks
- Important local commercial businesses
- Commercial buildings (often small scale) at an intersection that have been designed to specifically articulate the corner through the use of towers, belvederes or other elements.

The features that distinguish these buildings include:

- Public use (civic or post office)
- Semi-public use (hotels and banks)
- Major commercial enterprises requiring larger buildings or use the building to advertise their presence (department stores and commercial showrooms)
- Prominent corner locations
- More elaborate architectural detailing, particularly the use of Neo-classical, Mannerist or Baroque elements (columns and pilasters, aedicule, quoining, rusticated masonry etc.) and high-status materials including polychromatic brickwork and natural stone
- Elements that project above the parapet line particularly at street corners including pediments, towers, turrets, lanterns, belvederes or domes etc.

These buildings are generally identified within Appendix 8 as 'Individually Significant'.

Figure 23. The former Champion Hotel at 54 Brunswick Street (at the intersection with Gertrude Street) has elaborate Federation features and prominent corner belvedere (typical of the building's reputed architects, Sydney, Smith & Ogg)[6].

Individually significant within HO334.

Figure 24. The Rob Roy Hotel at 51 Brunswick Street (at the intersection with Gertrude Street) is a long-standing hotel on a prominent corner.

Individually significant within HO331 (part) and HO334 (part).

(VHD, ©City of Yarra)

[6] *Fitzroy Urban Conservation Study Review*, prepared for the City of Fitzroy by Allom Lovell & Associates, dated November 1992. (Page 4.72)

Figure 25. Former ES&A Bank (now Charcoal Lane) at 136-138 Gertrude Street (at the intersection with Little Napier Street) is a freestanding former bank set back from the street.

Individually significant within HO334.

Figure 26. Blackett's Building at 158-164 Gertrude Street (at the intersection with Little George Street) is a freestanding tall, prominent and elaborately detailed three storey building with first floor logia.

Individually significant within HO334.

6. Statutory Framework

6.1 Heritage Status

6.1.1 Existing conditions

The majority of the Gertrude Street commercial spine is currently included within HO334 – South Fitzroy Precinct. West of Fitzroy Street, in the vicinity of the REB & CG WHS, Gertrude Street is subject to HO361 – World Heritage Environs Area Precinct. There is a single place (the shops at 181-183 Gertrude Street and 89 George Street) included on the VHR within the commercial section of Gertrude Street. The VHR-listed residential terraces (Royal Terrace, 50-68 Nicholson Street [VHR H0172]; Glass Terrace, 64-78 Gertrude Street [VHR H0446]; Terraces, 39-49 Brunswick Street [VHR H0470]) and the Former Cable Tram Engine House, 46-48 Nicholson Street (VHR H0584) address Gertrude Street but fall outside the study area.

The residential properties that are zoned MUZ south of Gertrude Street between Young and Little Napier Street are appropriately included within HO334.

In summary, the existing heritage status for the Gertrude Street study area is:

Victorian Heritage Register				
VHR	*Name*	*Address*	*Heritage Overlay*	*Date*
H0886	Shops	181-183 Gertrude Street and 89 George Street	HO160	1852-53
Individual Heritage Overlays				
Heritage Overlay	*Name*	*Address*	*Appendix 8 grading*	*Date*
Nil	-	-	-	-
Precinct Heritage Overlays				
Heritage Overlay	*Name*	*Address*	*Appendix 8 grading*	*Date*
HO311	Brunswick Street Precinct	various	various	various
HO334	South Fitzroy Precinct	various	various	various

The existing conditions are identified in Figures 27-29 (with the proposed Gertrude Street, Fitzroy heritage precinct identified, discussed further in Section 6.1.2).

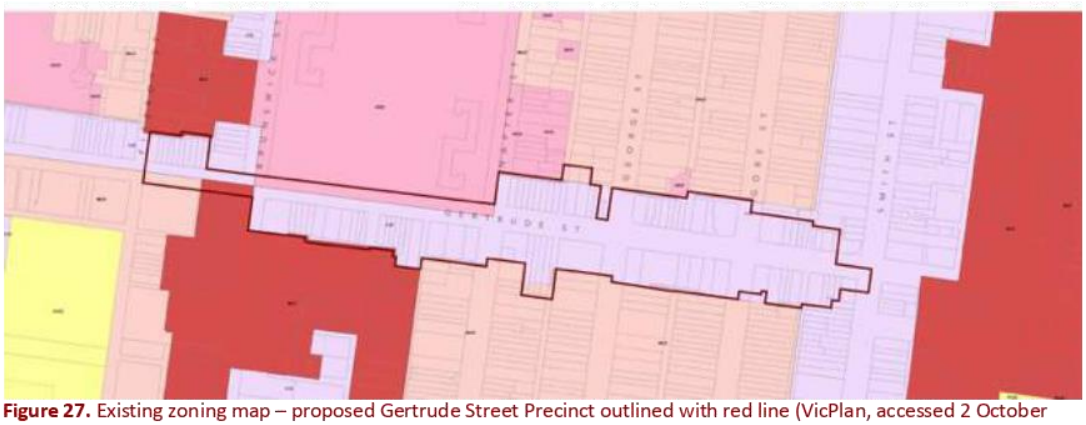

Figure 27. Existing zoning map – proposed Gertrude Street Precinct outlined with red line (VicPlan, accessed 2 October 2019)

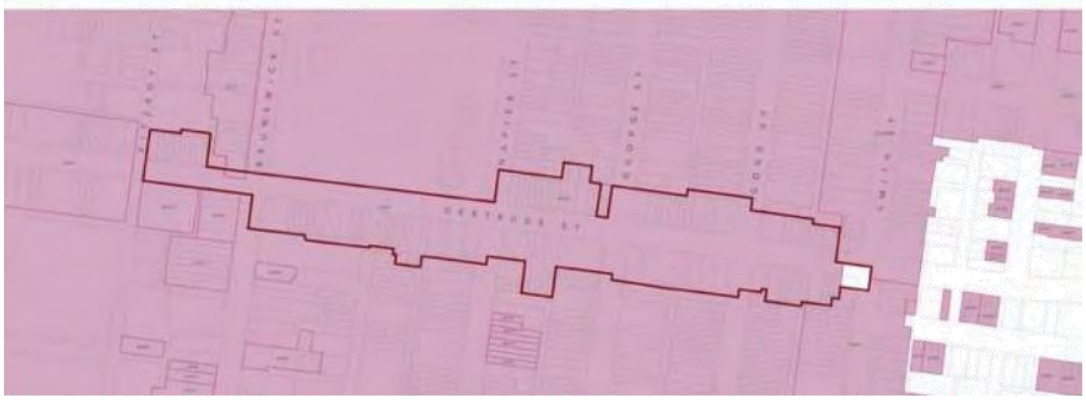

Figure 28. Existing Heritage Overlay map – proposed Gertrude Street Precinct outlined with red line (VicPlan, accessed 2 October 2019)

Figure 29. Existing VHR map – proposed Gertrude Street Precinct outlined with red line (VicPlan, accessed 2 October 2019)

6.1.2 Recommended changes

The Gertrude Street commercial spine is, with the exception of the pocket park at the southwest corner of the intersection of Gertrude and Smith Streets (246-248 Gertrude Street) is currently subject to either State or local-level heritage controls. Notwithstanding this, the Statement of Significance for HO334 – South Fitzroy Precinct, predominantly recognises residential heritage values (as well as some aspects of commercial and industrial buildings) and does not adequately describe the specific values of the Gertrude Street commercial area. Given the specific historic and architectural values of Gertrude Street, it is recommended that a new precinct be created that recognises the unique heritage character of this high street. This is consistent with the approach taken in a number of comparable linear high streets including: Bridge Road (HO310), Brunswick Street (HO311), Johnston Street (HO324 and HO505), Queens Parade (HO330), Smith Street (HO333) and Swan Street (HO335).

Although the land contains no heritage fabric, the inclusion of 246-248 Gertrude Street within the proposed Gertrude Street Precinct Heritage Overlay is recommended to ensure that any future development of this privately-owned site addresses the heritage provisions of the Yarra Planning Scheme.

The *Brunswick and Smith Street Built Form Review: Heritage Assessments* report provides a detailed assessment of the proposed Gertrude Street Precinct and proposes the following Statement of Significance:

> *What is significant?*
>
> Properties within the following areas contribute to the significance of the Gertrude Street Precinct:
>
> - North side of Gertrude Street, Fitzroy from Fitzroy Street to Smith Street excluding Atherton Gardens
> - South side of Gertrude Street, Fitzroy from Brunswick Street to Smith Street
> - Brunswick Street
> - Gore Street
> - Little Napier Street
> - Napier Street.
>
> Elements that contribute to the significance of the precinct include (but are not limited to):
>
> - The consistent Victorian commercial character of the precinct, which includes:
> - A consistent two-storey scale with some taller buildings
> - A variety of simple and highly decorative facade parapets, with pitched roofs behind
> - No front or side setbacks
> - Rendered or face red brick walls
> - Rendered window frames, sills and hoods to upper stories
> - Rendered ornament to upper stories
> - Brickwork with corbelled capping courses
> - Strong horizontal lines formed by parapets, cornices, string courses
> - Repetitive upper floor fenestration patterns
> - Less than 40% of the upper street façade comprises openings such as windows
> - Corrugated iron and slate roof cladding
> - Original post-supported street verandahs
> - Shop fronts with display windows, timber or tiled plinths, and entry recesses
> - Some red brick storage or stable buildings at the rear or side lane frontage
> - Corner buildings with secondary façades to side streets or lanes
> - Splayed corners to buildings at intersections.
> - Examples of intact Edwardian buildings.
> - Bluestone pitched road paving, crossings, stone kerbs and channels and asphalt paved footpaths.

Features that do not contribute to the significance of the precinct include more recent alterations and additions to buildings within the precinct, including highly altered shopfronts.

How is it significant?

The Gertrude Street Precinct is of local historical, architectural, aesthetic and social significance to the City of Yarra.

Why is it significant?

The Gertrude Street Precinct is an important and early local 'High Street' in the City of Yarra and has functioned continuously as one of Fitzroy's key commercial centres since the mid-nineteenth century. It retains a substantial collection of intact commercial buildings, predominantly from the Victorian period, including shops and associated residences, hotels and a former bank building. Together these buildings demonstrate the development of this High Street, particularly from the 1850s to c1900 when substantial growth in the street occurred, and are illustrative of the enduring role the street has played in the economic and social life of Fitzroy since the establishment of the suburb [Criterion A].

The highly intact streetscape of the Gertrude Street Precinct clearly demonstrates the principal characteristics of a Victorian High Street in the City of Yarra. Typical characteristics – including a predominantly two-storey Victorian street wall height, parapeted rendered or red brick facades, repetitive upper floor fenestration, and ground floor shopfronts – are displayed in the original forms, fabric and detailing of the majority of the buildings. The streetscape is particularly intact and consistent in architectural form and expression. [Criterion D].

The Gertrude Street Precinct contains a number of individually significant places which are well-considered and carefully detailed examples of commercial buildings. These include, among others, shops and residences at 153-159 and 184-186 Gertrude Street, the Builders Arms Hotel (211-217 Gertrude Street) and the Champion Hotel and associated shops and residences (50-54 Brunswick Street and 94-100 Gertrude Street). Variations in façade detailing throughout the precinct, including parapet ornamentation, balustrading and pediments, and applied decoration, make an aesthetic contribution to the overall character of the precinct [Criterion E].

The Gertrude Street Precinct is an important social and political hub in Melbourne for the Aboriginal community. A number of services were established in buildings in the precinct from the 1960s and it has long been an important meeting place for Aboriginal people [Criterion G].

A full copy of the proposed Heritage Citation is provided at Appendix A.

The Atherton Gardens housing estate occupies approximately 6.7 ha and is included within the extent of HO334 but does not contribute to the values of either the Brunswick Street or South Fitzroy Precincts, or the proposed Gertrude Street Precinct. The existing Statement of Significance for HO311 (Brunswick Street Precinct) reads:

> *... the greatest loss in the street was the development of the Atherton Gardens Estate by Housing Commission of Victoria when shop rows and an early stone church, between King William and Gertrude Streets, were demolished. Four twenty-storey residential towers were built in their place in 1970-1972.*

Consistent with the *Brunswick and Smith Street Built Form Review: Heritage Analysis & Recommendations*, it is recommended that this land, bounded by Condell, Napier, Gertrude and Brunswick Streets, be removed from the Heritage Overlay.

6.2 Zoning

6.2.1 Existing conditions

The land along the Gertrude Street commercial spine is zoned C1Z ,which is appropriate for the use and form of the buildings along Gertrude Street.

The area south of Gertrude Street between Young and Little Napier Streets is occupied by a number of heritage dwellings that remain in residential use that are zoned MUZ when their immediate neighbours are more appropriately zoned NRZ.

6.2.1 Recommended changes

It is recommended that the following heritage-graded residential properties at 44-72 Young Street and 39-41 Little Napier Street be rezoned from MUZ to NRZ to reflect their low-rise residential character and context. This would restrict development to that of adjoining NRZ land and ensure that residential requirements of the heritage provisions of the Yarra Planning Scheme would apply.

The three storey Australian Catholic University car park at 28-42 Young Street located at the southern end of the street should remain zoned MUZ.

Figure 30. Planning map showing properties (shaded in black) that are recommended for rezoning from MUZ to NRZ (VicPlan, accessed 2 October 2019)

7. Potential Future Character Considerations

Gertrude Street is a highly cohesive commercial high street which largely retains its late-nineteenth century character and consistent two-storey scale. Later development has been limited to small-scale infill and a single five-storey mixed use development. Almost all buildings have a parapeted form, many with elaborate facades and architectural detail, and some have visible chimneys and other roof features. The limited variation of street wall height along Gertrude Street and the consistent height of the parapets of heritage buildings within terraces of shop/residences requires the close matching of street wall height for new development.

In addition, Gertrude Street forms part of the low-scale Victorian context of the REB & CG and development at the western end of the street has the potential to adversely impact on the setting of the World Heritage Site. Gertrude Street also provides important views of the drum and dome of the REB as identified in the WHEA Strategy Plan. Of the views provided from the southern side of Gertrude Street between Fitzroy Street in the west to Napier Street in the east, we consider that the views from the intersection with Fitzroy Street and Brunswick Street are the most important. The former being the current eastern boundary of the WHEA and the latter being a major intersection and important pedestrian wayfinding location.

Figure 31. Aerial photographs showing the key viewpoints towards the drum and dome of the REB from the south side of the intersections of Gertrude Street with Fitzroy Street (1) and Brunswick Street (2) (nearmap, 31 Oct 2019)

The residential pocket south of Gertrude Street between Young and Little Napier Streets predominantly comprises modestly scaled, single and two storey Victorian-era houses with some later townhouse and low-rise apartment development, which will provide little opportunity for larger scale redevelopment.

7.1 Recommended Built Form Parameters

It is recommended that a DDO should apply to those parts of Gertrude Street that are subject to – or are proposed to be subject to – the Heritage Overlay to ensure that new built form is respectful of the heritage context.

A DDO control applied to properties within Gertrude Street should ensure new built form protects the visual prominence of the existing predominant two-storey character of the streetscape. In addition, given the World Heritage Listed status of the REB & CG, new development on the northern side of Gertrude Street must:

- not impede views to the drum and dome of the REB;
- retain a clear sky silhouette of the drum and dome; and

- ensure that the drum and dome remain the principal build from landmarks when viewed from the south side of Gertrude Street.

If rezoning of the residential properties south of Gertrude Street from MUZ to NRZ proceeds there will be no need for a DDO to apply in those locations.

Informed by the heritage analysis above and the 3D modelling prepared by Hansen Partnership and Council, it is recommended that a DDO should seek built form outcomes that:

- Retain the visual prominence of the local landmarks in the streetscape.
- Retain chimneys and roof forms visible from the public realm.
- Ensure that new development within the Heritage Overlay does not visually dominate the existing heritage fabric.
- Ensure that any upper-level or infill development is subservient to the heritage fabric and is visually recessive in mass, scale and materiality.
- Encourage the top-most level (or levels) of new development to be set further back from the principal heritage frontage (as encouraged at Clause 22.02-5.7.2) and treated as a penthouse or roof top element.
- Retain the visual prominence of the return façades of buildings that address both Gertrude Street and cross streets, particularly at the principal intersection with Brunswick Street by setting back new upper level built form from both street frontages.
- Establish a street wall height for infill development that reflects the established two (Victorian-era) storey scale of the precinct and discourages single-storey infill development.
- Ensure zero setback from the Gertrude Street boundary for infill and new development.
- Ensure that the heritage buildings remain prominent within the Gertrude Street streetscape and retain their three-dimensional form as viewed from the public realm to avoid 'facadism'. This will require new upper-level development to be set back a minimum of 8m from the street wall and for redevelopment to respect the existing inter-floor heights of the heritage fabric.
- Ensure that new development does not obscure views of the drum, dome and cupola of the REB from the intersection of Gertrude Street with Fitzroy and Brunswick Streets, and ensures a clear sky silhouette of these features is retained.
- Ensure that the drum, dome and cupola of the REB remains the principal built form when viewed from the south side of Gertrude Street.
- Ensure that new development does not obscure views of the tower and spire of St Patrick's Cathedral from the intersection of Gertrude and Brunswick Streets.
- Ensure that new development does not obscure views of the spire of St Luke's Church, North Fitzroy from the intersection of Gertrude and Brunswick Streets.

8. Built Form Testing

To assist in the translation of the 'Recommended Built Form Parameters' in Part II into specific guidance that could be translated into a DDO control, the heritage analysis was supplemented by cross-sections of potential development and 3D computer modelling prepared by Hansen and Council to test the appropriateness of particular built form outcomes that achieved the intent of the recommended built form parameters.

The following Built Form Recommendations have been determined based on comprehensive built form testing and 3D computer modelling of potential bulk and massing envelopes for the study area. It was established and operated as a 'working' massing model used to informally measure built form heights and setbacks to the properties along the length of Gertrude Street (within the study area) to serve as a useful general tool in comparative visual analysis. The MUZ zoned land south of Gertrude Street between Young and Little Napier Streets were not been modelled as this area has limited development opportunity.

The impacts of new built form were considered in views from the opposite side of the street at natural eye level (1.6m) on the public footpath. As well as 3D modelling ,cross sections were prepared across a range of the site types within the study area with particular attention given to the heritage street wall or façade heights, lot depth and rear interface conditions (street, laneway, commercial, residential, mixed use etc.).

Extensive fieldwork was undertaken and site visits have been used to inform the recommendations. Views of heritage places were only considered from the public footpath as these locations offer the principal public realm experience. Laneway views, other than Marion Lane which is identified in the WHEA Strategy Plan as providing key views to the REB, and private realm views were not assessed.

Part III: Built Form Recommendations

9. Built Form Recommendations

Any DDO applied to the study area should include provisions to complement, but not duplicate, the decision guidelines at Clause 43.01-8 (Heritage Overlay), State Planning Policy at Clause 15.03-1S and local policy within Clauses 22.02, 22.03 and 22.10 (or as translated into the post-VC148 Planning Policy Framework) of the Yarra Planning Scheme to inform new development.

Having regard to the heritage analysis, cross section diagrams and 3D modelling prepared by Hansen Partnership and Council, it is recommended that the following built form controls be applied to new development to ensure appropriate consideration is given to the established heritage values within the study area. The recommended maximum heights have been informed by existing built form and heritage street wall heights, lot sizes and depths, rear interface conditions and the view sheds to the drum and dome of the REB. The cross-section diagrams and 3D modelling helped assess whether or not upper-level development would 'be visually recessive and not dominate the heritage place' as sought at Clause 22.02-5.7.1 and proposed Clause 15.03-1L as endorsed by Council.

The recommended application of three and four storey height limits along Gertrude Street removes the need for a ¾ : ¼ ratio of street wall to new built form sightline (as per Moreland DDO18) or a '45° angular plane' test (as per Yarra DDO15) to protect the visual prominence of the street wall.

Buildings graded 'Individually Significant' and 'Contributory' are referred to as 'heritage buildings' within the table below and those graded 'Not-contributory' or that are vacant are considered 'infill sites'.

9.1 Recommended Controls

Built Form Element	Requirement	Rationale
New built form	New built form must: • not impede views to the drum and dome of the REB; • retain a clear sky silhouette of the drum and dome; and • ensure that the drum and dome remain the principal built form when viewed from the south side of Gertrude Street.	The REB & CG is a World Heritage Site and the view shed to the drum and dome of the REB along Gertrude Street is identified within the WHEA Strategy Plan as a key view to be protected.
Maximum street wall height (infill development)	11m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding infill above three storeys. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Minimum street wall height (infill development)	8m (mandatory)	To ensure the predominant two (Victorian-era) storey street wall height is maintained by avoiding single storey infill. Mandatory controls are necessary to protect the heritage character of the street as a whole.

Street wall height (infill development)	Match the parapet height of the adjacent two storey heritage building (mandatory)	To ensure new built form responds to its immediate heritage context. A mandatory control is necessary given the highly consistent street wall heights within the study area.
Street wall setback (infill development)	Zero (mandatory)	To ensure new built form responds to the heritage context which has a consistent zero setback.
Minimum setbacks above street wall (Gertrude Street and Brunswick Street)	8m (mandatory)	An 8m setback above the street wall is the minimum necessary to ensure that the heritage buildings remain prominent within the streetscape and will retain their three-dimensional form as viewed from the public realm to avoid 'facadism'. An 8m setback will also be sufficient to ensure that majority of existing chimneys at the front of the buildings are retained. Mandatory controls are necessary to protect the heritage character of the street as a whole.
Minimum setbacks above street wall (side streets other than Gertrude and Brunswick Streets)	6m (preferred)	The built form of heritage buildings that address side streets varies. Some buildings have elaborate return facades while others are plainer end-of-terrace forms. A preferred control will enable a wide range of design responses which encourages new development to be set back on prominent corner buildings.
Maximum building height	3-4 storeys	Gertrude Street is a highly intact Neighbourhood Activity Centre that sits within a key view shed of the drum and dome of the REB. Its highly consistent and intact built form warrants limiting new built form so that it is substantially concealed. Whereas a three storey height limit is appropriate within the key view shed to the REB and on the majority of shallow lots within Gertrude Street, four storeys may be achieved on deeper lots and those associated with existing taller built form.

9.2 Additional Guidance

The proposed heritage policy at Clause 15.03-1L, as endorsed by Council, includes specific strategies to address new development and alterations to existing commercial heritage places. If these provisions are implemented, additional heritage design requirements are not likely to be needed within a DDO for the study area. However, if new development is to be informed by the existing heritage provisions at Clauses 15.03-1S, 21.05-1, 22.02 and 43.01 of the Yarra Planning Scheme, we recommend that the following heritage design requirements be applied as part of a DDO:

- New infill development within the heritage streetscape should:
  - Interpret the historic façade rhythm, including fenestration patterns and proportions, the relationship between solid and void, and the existing module of structural bays.
  - Be set back to retain the visual prominence of prominent corner buildings and local landmarks.
  - Be distinguishable from the original heritage fabric and adopt a high quality and respectful contextual design response.
  - Ensure façade treatments and the articulation of new development are simple and do not compete with the more elaborate detailing of nineteenth and early twentieth century buildings.
  - Ensure fenestration patterns of new development generally reflects the vertical proportions of nineteenth and early twentieth century façades and avoids large expanses of glazing with a horizontal emphasis except to ground floor shopfronts.
  - Maintain the existing canopy/verandah height.
  - Avoid the use of unarticulated curtain glazing or highly reflective glass.
  - Avoid the replication of existing decorative features and architectural detail.
- The adaptation of existing heritage buildings should:
  - Discourage highly reflective glazing in historic openings.
  - Ensure the inter-floor height of the existing building is maintained and avoid new floor plates and walls cutting through historic openings.
  - Encourage the retention of solid built form behind retained facades and avoid balconies behind existing openings.
- New upper level development behind existing heritage buildings should:
  - Retain the visual prominence of parapet and roof-top elements including parapets, balustrades, pediments, lanterns, towers, belvederes, urns and other architectural features.
  - Be set back to retain the visual prominence of prominent corner buildings and local landmarks.
  - Ensure that the design and setback of the addition does not visually dominate the heritage building or surrounding heritage places.
  - Retain the primacy of the three-dimensional form of the heritage building within the streetscape.
  - Incorporate materials and finishes that are recessive in texture and colour.
  - Generally utilise visually lightweight, but high quality, materials that create a juxtaposition with the heavier masonry of the heritage facades.
  - Incorporate simple architectural detailing so it does not detract from significant elements of the existing building or streetscape.
  - Provide a recessive backdrop to the heritage street wall and individual heritage buildings.
  - Avoid highly articulated facades with recessed and projecting elements.
  - Avoid highly contrasting or vibrant primary colours.
  - Avoid unarticulated façades that give a bulky appearance, especially from oblique views.
  - Be articulated to reflect the fine grained character of narrow sites.
  - Encourage that upper-level development behind rows of identical or similar shop/residences is consistent in form, massing and façade treatment as existing upper-level development (where this exists).

Appendix 1: Proposed Heritage Citation – Gertrude Street Precinct

GJM Heritage, October 2019

GJM Heritage

Heritage Citation

GERTRUDE STREET PRECINCT

Address: **65-83, 153-179, 187-247 & 90-248 Gertrude Street, 50-54 Brunswick Street, 74-78 Gore Street, 44 Little Napier Street & 70-74 Napier Street, Fitzroy**

Prepared by: GJM Heritage

Date: October 2019

Place type: Commercial precinct
Integrity: Very High
Recommendation: Include in the Heritage Overlay
Extent of Overlay: Refer to plan at Figure 19

Figure 1. South side of Gertrude Street, east of Brunswick Street (GJM Heritage, October 2019)

Statement of Significance

What is significant?

Properties within the following areas contribute to the significance of the Gertrude Street Precinct:

- North side of Gertrude Street, Fitzroy from Fitzroy Street to Smith Street excluding Atherton Gardens
- South side of Gertrude Street, Fitzroy from Brunswick Street to Smith Street
- Brunswick Street
- Gore Street
- Little Napier Street
- Napier Street.

Elements that contribute to the significance of the precinct include (but are not limited to):

- The consistent Victorian commercial character of the precinct, which includes:
  - A consistent two-storey scale with some taller buildings
  - A variety of simple and highly decorative facade parapets, with pitched roofs behind
  - No front or side setbacks
  - Rendered or face red brick walls
  - Rendered window frames, sills and hoods to upper stories
  - Rendered ornament to upper stories
  - Brickwork with corbelled capping courses
  - Strong horizontal lines formed by parapets, cornices, string courses
  - Repetitive upper floor fenestration patterns
  - Less than 40% of the upper street façade comprises openings such as windows
  - Corrugated iron and slate roof cladding
  - Original post-supported street verandahs
  - Shop fronts with display windows, timber or tiled plinths, and entry recesses
  - Some red brick storage or stable buildings at the rear or side lane frontage
  - Corner buildings with secondary façades to side streets or lanes
  - Splayed corners to buildings at intersections.
- Examples of intact Edwardian buildings.
- Bluestone pitched road paving, crossings, stone kerbs and channels and asphalt paved footpaths.

Features that do not contribute to the significance of the precinct include more recent alterations and additions to buildings within the precinct, including highly altered shopfronts.

How is it significant?

The Gertrude Street Precinct is of local historical, architectural, aesthetic and social significance to the City of Yarra.

Why is it significant?

The Gertrude Street Precinct is an important and early local 'High Street' in the City of Yarra and has functioned continuously as one of Fitzroy's key commercial centres since the mid-nineteenth century. It retains a substantial collection of intact commercial buildings, predominantly from the Victorian period, including shops and associated residences, hotels and a former bank building. Together these buildings demonstrate the development of this High Street, particularly from the 1850s to c1900 when substantial growth in the street occurred, and are illustrative of the enduring role the street has played in the economic and social life of Fitzroy since the establishment of the suburb [Criterion A].

The highly intact streetscape of the Gertrude Street Precinct clearly demonstrates the principal characteristics of a Victorian High Street in the City of Yarra. Typical characteristics – including a predominantly two-storey Victorian street wall height, parapeted rendered or red brick facades, repetitive

upper floor fenestration, and ground floor shopfronts – are displayed in the original forms, fabric and detailing of the majority of the buildings. The streetscape is particularly intact and consistent in architectural form and expression. [Criterion D].

The Gertrude Street Precinct contains a number of individually significant places which are well-considered and carefully detailed examples of commercial buildings. These include, among others, shops and residences at 153-159 and 184-186 Gertrude Street, the Builders Arms Hotel (211-217 Gertrude Street) and the Champion Hotel and associated shops and residences (50-54 Brunswick Street and 94-100 Gertrude Street). Variations in façade detailing throughout the precinct, including parapet ornamentation, balustrading and pediments, and applied decoration, make an aesthetic contribution to the overall character of the precinct [Criterion E].

The Gertrude Street Precinct is an important social and political hub in Melbourne for the Aboriginal community. A number of services were established in buildings in the precinct from the 1960s and it has long been an important meeting place for Aboriginal people [Criterion G].

Historical Themes

This precinct is associated with the following themes as identified in the *City of Yarra Heritage Review Thematic History* (Lovell 1998):

2.0 The suburban extension of Melbourne

- 2.1 Settlement, land sales and subdivision
- 2.2 A street layout emerges

4.0 Developing local economies

- 4.4 Smaller retailers: Strip shopping

5.0 Local council and council services

- 5.5 Private and public transportation

7.0 Leisure and Entertainment in the Suburbs

- 7.1 Licensed Hotels and 'Sly Grog'.

Precinct History

Fitzroy established

Prior to European settlement, the Wurundjeri-Willum people, a distinct language group of the Woiworrung tribe, occupied Fitzroy. Since European contact, many traditional owners of the land and descendants of the Woiwurrung have returned to meet and settle in Fitzroy (Robertson et al, 2008:1).

Two years after the European settlement of Melbourne in 1835, Crown land immediately to the north and east was subdivided into 88 portions by surveyor Robert Hoddle. These allotments were auctioned in Sydney in 1839 as part of the first land sales outside of the town reserve of Melbourne (Barrett 1971:14-15; Lewis, 2014:7). This land now forms the suburbs of Fitzroy, Collingwood, Richmond and Abbotsford. Crown portions 48 to 88 in the north were unofficially referred to as the 'district of Collingwood', and were administratively divided into two local government areas. The area west of Smith Street, now Fitzroy, was governed by the City of Melbourne until 1858 when the municipality of Fitzroy was established. Fitzroy was first called Newtown, then more commonly Collingwood West, and is attributed as being Melbourne's first suburb. The area east of Smith Street, now Collingwood and Abbotsford, was known as East Collingwood and did not form part of any local government until 1855, when the municipality of East Collingwood was formed (Barrett 1971:14-15).

The development of these localities was influenced by both the status of local governance within the two areas and the topography of the landscape. At the southern extent of what is now Fitzroy, near Victoria Parade, is Eastern Hill. To the east, the hill descends to a slope between Smith Street and Wellington Street (Collingwood Slope), followed by a flat plain that extends to the Yarra River (the Flat). These topographically distinct areas underwent substantially different urban development from 1850 (Barrett 1971:14-15).

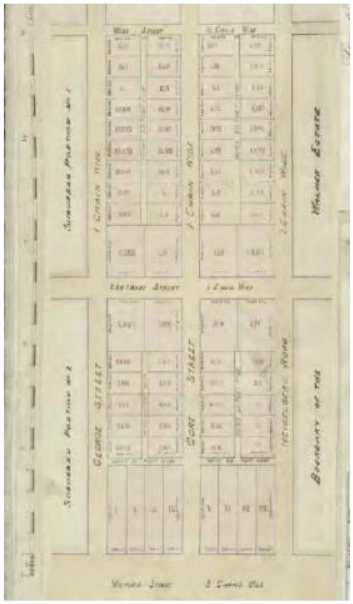

Figure 2. The c1850 subdivision plan of Crown Portion 51 which extended Gertrude Street to Smith Street (SLV, no image no.)

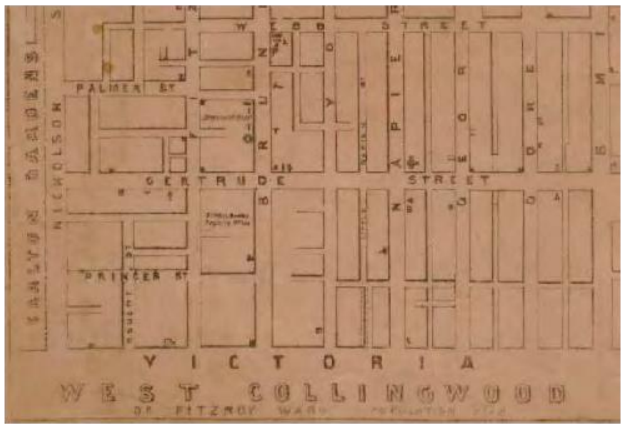

Figure 3. Proeschel's c1855 map of 'West Collingwood' (current Fitzroy) showing key buildings along Gertrude Street. The map is annotated, 'showing the western part (or Fitzroy ward) as it will be in a very short time according to the Collingwood improvements act'.

Nineteenth century

The first stage of non-Government development in what is now Fitzroy began in 1839, when pastoralist Benjamin Baxter and then Captain Brunswick Smyth subdivided Portion 49, creating the first sections of Gertrude and Brunswick streets, the intersection upon which Newtown (or New Town) established. Gertrude Street was extended by neighbouring property owners to Nicholson Street in the late 1840s and to Smith Street in 1850, by which date Brunswick Street had extended to Reilly Street (now Alexandra Parade) (Barrett, 1971:17-19; Robertson et al, 2008:2). Brunswick and Gertrude streets were the most important non-Government streets in Fitzroy, mainly due to the fact that their original alignments were continued for a considerable distance by a number of adjacent landowners. This contrasted strongly with the ad hoc pattern of subdivision and street layout which developed in other allotments in Fitzroy (Lovell 1998:14).

The city's wealthy were the first to populate Newtown on Eastern Hill from the early 1840s, with villas constructed along Gertrude Street from 1850. From its first stages of development Gertrude Street was considered a 'noble street', occupied by colonial aristocrats (Robertson et al, 2008:3-4; Lewis 1989:12). During the years of gold immigration in the early 1850s, development increased dramatically in Fitzroy and (East) Collingwood. Contemporary newspapers reported that new residents included gentleman and working men, with tensions developing between the two groups. The working class predominantly resided on the Collingwood Slope to the east, while the gentleman occupied Eastern Hill, where the land was high and dry and the main streets of Gertrude and Brunswick streets were maintained by Melbourne City Council (Barrett 1971:20-21). Fitzroy was the fastest growing ward in Melbourne following the discovery of gold, and it was

during this period that Gertrude Street firmly established itself as a commercial centre – one of the first outside of Melbourne's city centre (Robertson et al, 2008:4). Trevena's shops at 181-183 Gertrude Street (VHR H866) are illustrative of 1850s development.

The 1849 *Melbourne Building Act* further shaped development on Gertrude Street. Under the provisions of the Act, which enforced fireproof construction, dwellings and commercial premises constructed in Fitzroy from the 1850s were typically exposed or cement rendered bluestone or brick buildings (Barrett 1971:20-21; Lovell 1998:16).

The occupations of Fitzroy residents reflected the social class of the area. Census records from the 1850s indicate that male residents were predominantly government clerks, lawyers, clergymen, physicians, surgeons, dentists, merchants and gentleman (Barrett 1917:31). Serving these residents were the high street businesses. In the 1860s, Gertrude Street, like Brunswick Street, was occupied by a wide range of small businesses, most of which served local needs. The 1860 Sands & McDougall Directory illustrates that Gertrude Street was a developed commercial strip occupied by hotels, dealers, drapers, grocers, fruiteries, bakers, butchers, tailors, dressmakers, upholsterers, bootmakers, watchmakers and booksellers amongst other services, with a cluster of residences west of Brunswick Street. Fourteen hotels were built on Gertrude Street from the 1850s to 1870s (Robertson et al, 2008:10); nine of which remain in 2019.

Reflecting a prospering trade and a growing community, the 1860s to 1880s saw the redevelopment of properties with less-substantial structures, the renovation of existing buildings, completion of terraces and rows, and the in-fill of the remaining land in Fitzroy (Lewis, 2014:26; Lovell 1998:51). Along Gertrude Street, buildings of brick or stone were constructed or renovated, forming predominantly single or two-storey (some taller) buildings, the latter with a shop to the ground floor and residence above. The 1880 Sands & McDougall Directory lists a variety of shops and services consistent with the 1860s occupancies, but in greater number. A majority of the buildings in Gertrude Street reflect this Victorian period of development, illustrating the pre-eminence of the commercial strip in the late nineteenth century (Lovell, 1998:51; Robertson et al, 2008:12). Prominent late-Victorian development included Blackett's shop and residence row at 158-164 Gertrude Street (1888).

Figure 4. Looking west down Gertrude Street (from Young Street) towards the Royal Exhibition Buildings, c1890. The buildings on the right were later demolished to make way for the Atherton Gardens development (SLV, Image No. a13938).

Many Fitzroy residents vehemently opposed the establishment of a horse-drawn cable car route through Fitzroy in the 1860s – an opposition that was continued into the 1880s against cable trams, to no avail. The Gertrude Street cable tram route was established in 1886, and the cable tram engine house built on the corner of Gertrude and Nicholson streets in 1886-87 (VHR H584; west of precinct) (Lovell 1998:64). This new form of transport boosted trade on Gertrude Street but also reduced the number of owner-occupiers in the area, with many seeking a suburban lifestyle that was now accessible with public transport (Lewis, 2014:26).

The prosperous 1880s came to an end with the 1890s depression, which caused construction in Fitzroy, and Melbourne more broadly, to virtually cease. In Gertrude Street, premises became vacant and property prices plummeted, transitioning Fitzroy into a working-class suburb. Along Gertrude Street, many of the grand

houses were turned into boarding houses as demand for housing increased, the unemployed took shelter, and criminals and illegal activities moved in. Gertrude Street became synonymous with trouble, while Brunswick Street became the principal commercial street (Robertson et al, 2008:15-16).

The 1898-99 series of Melbourne and Metropolitan Board of Works (MMBW) Detail Plans illustrate the dense commercial and residential occupation of Gertrude Street at the time. The 1900 Sands & McDougall Directory lists the street's numerous hotels and boardinghouses, and fewer commercial enterprises specialising in more luxury items. However, the practical businesses were sustained – bootmakers, bakers, grocers, butchers, furniture dealers and makers, laundries and bicycle makers.

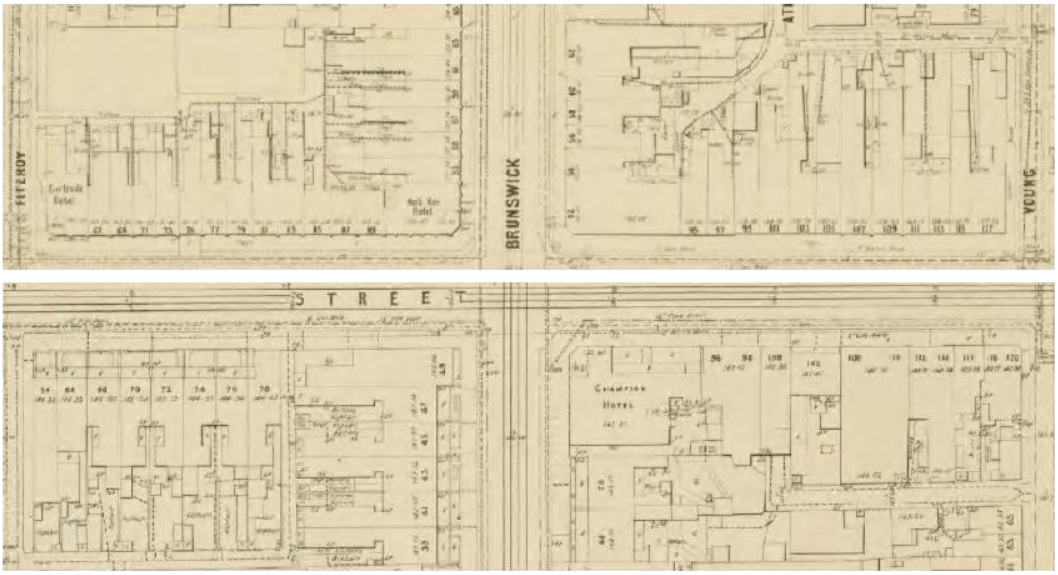

Figure 5. The dense development at the intersection of Gertrude and Brunswick streets in 1898-99 (MMBW DP 1205 & 1206, 1898 & 1899).

Twentieth century

The economic fortunes of Victoria recovered after the turn of the century, and while there was a period of optimism at the beginning of the century accompanied by some new development, Gertrude Street would not regain its aristocratic status of the 1800s. Fitzroy had become a less desirable place to live and the low number of owner-occupiers decreased further as more owners moved out of the working-class suburb, leasing their buildings to tenants. Gertrude Street continued its commercial activities, serving locals and visitors, but was now overshadowed by trade on Smith and Brunswick streets (Robertson et al, 2008:21). Key Edwardian development within the strip at this time included the Champion Hotel at 50-54 Brunswick Street and its associated shops at 94-100 Gertrude Street (1911).

Figure 6. Looking east down Gertrude Street in 1905, at the intersection with Brunswick Street (right is Glass Terrace) (COYL Id. FL294).

Figure 7. Looking west down Gertrude Street in 1905. On the left is the three-storey buildings at 158-164 Gertrude Street (COYL Id. FL666).

Figure 8. Photo of Gertrude Street dating to 1905 (COYL, Id. FL667).

Figure 9. Illustration from the 1905 Collingwood and Fitzroy illustrated Directory and Handbook, of the multi-storeyed Chas. Johnston & Co., Furniture Manufacturers building at 184-186 Gertrude Street. The top two floors were destroyed by fire in 1963 (COYL, Id. FL670).

Following World War I, there was an increased demand for housing for returned servicemen, people moving towards the city for improved job prospects, an increasing number of immigrants, and return of Aboriginal people to the area. With this influx, Fitzroy became a poorer population and – due to its proximity to Melbourne – continued to attract the unemployed and homeless. Along Gertrude Street some buildings were condemned. Criminal activities thrived; the infamous Melbourne criminal Squizzy Taylor is often mentioned in association with the Renown Hotel (former Leviathan) at 146-148 Gertrude Street. By the end of the 1920s Fitzroy was regarded as one of Melbourne's worst slums, with a very high level of unemployment. In an attempt to remedy the situation, the government reduced the number of hotels permitted to operate to seven premises by 1930 (Robertson et al, 2008:23).

Some businesses took advantage of the low property values and vacancies. It was in the 1920s and '30s that Gertrude Street became known for its furniture stores between Napier and Gore streets (Robertson et al, 2008:24). Commercial occupants along the remainder of Gertrude Street in 1930 comprised a range of businesses serving the local community, such as grocers, Chinese laundries, dressmakers, dry cleaners, a plumber, chemist, hardware shop, butchers, clothing dealers, secondhand dealers, pawnbrokers, hairdressers and dressmakers.

During the Depression of the 1930s some Gertrude Street businesses survived while others succumbed to financial hardship. The illegal activities and criminal aspect of the street continued. However, 'against this backdrop of despair and misery developed the fabric of camaraderie, trust and support that characterised Fitzroy' during this period. A pharmacist on Gertrude Street in the 1930s, Duncan Reilly, stated that 'though poor and depressed, there was still a richness of life in Fitzroy' (Robertson et al, 2008:24).

The community of Gertrude Street struggled into the 1940s. During World War II, Gertrude Street experienced further overcrowding and poverty and the terraces that lined the street also housed American servicemen. Buildings fell into disrepair and the rate books recorded an increasing number of condemned buildings (Robertson et al, 2008:25, 31). By the early 1940s the Sands & McDougall Directories listed a lower number of businesses operating, and a higher proportion of residents. European names began to appear as occupants of Gertrude Street, and cafes and social clubs emerged, opened by new immigrants (Robertson et al, 2008:25, 31).

Figure 10. The poor condition of some shops in Gertrude Street in 1948 (COYL, Id. FL411).

Post-War

Homelessness, overcrowding of houses and criminality continued into the 1950's, 60's and 70's. Gertrude Street was considered a 'red light' district with gambling at the back of cafes (Rittman & Wilson 2017:41). However, change was starting.

Following World War II, Gertrude Street experienced a wave of post-war immigration. New immigrants, particularly from Mediterranean countries, moved into the vacant buildings and established green grocers, fruit shops, fish and chip shops, cafes and clubs, bringing a new community and vibrancy to the street. By 1972, 12 clubs and coffee lounges had been opened in Gertrude Street by Greek, Macedonian, Turkish, Albanian and Yugoslav community members (Robertson et al, 2008:26). Despite this reinvigoration, Gertrude Street in the 1950s no longer compared to the commercial scale of Brunswick and Smith streets, with its drastically reduced number of businesses (Harding 2008:295).

During the post-war period, an increasing number of Aboriginal people returned from rural locations to their friends and family around Gertrude Street, in part due to the closure of reserves and missions which were subdivided by the government to make way for soldier settlements. Fitzroy, and Gertrude Street in particular, became the social and political hub for the Aboriginal community in Melbourne (Robertson et al, 2008:25, 39). From the 1960's onwards, a number of services for this community were set up on Gertrude Street, focusing on health, legal and housing assistance. The Aboriginal Community Health Centre was located on the corner of Charcoal Lane at 136 Gertrude Street from 1979 (previously at no. 229 from 1973). The Koori Club, a social club, opened in 1969 (no. 41), Fitzroy Stars Aboriginal Community Youth Club Gymnasium in 1977 (no. 184-186) and the Koori Information Centre in 1982 (no. 120). Hotels often became meeting places. The Builders Arms Hotel (no. 211; built c1850-1970) was known as the 'Black Pub of Melbourne' where people knew they would meet friends from Country, and would mix with the old locals and post-war immigrants. In the 1960s and '70s the Builders Arms was the base for Australia's black power movement, led by Bruce McGuinness (Robertson et al, 2008:31-33, 43; Fitzroy Aboriginal Heritage Walking Trail).

Figure 11. Land Rights demonstrators march down Gertrude Street in 1973. Pictured are Monica Hoffman, Sue Chilly, Bruce McGuinness and Hillary Saunders (Alick Jackamos Collection, via the Fitzroy Aboriginal Heritage Walking Trail).

Parts of the Gertrude Street streetscape saw drastic changes in the 1960s as a result of 'slum clearance', particularly on the north side of the street. Investigations into sub-standard housing in Fitzroy had commenced in the late 19th century, managed by local councils who would condemn and demolish unsanitary buildings and makeshift housing. Concern and investigations into slum housing continued to increase into the 1930s, when the Housing Commission and Slum Abolition Board were formed in the late 1930s. The Commission turned its focus to Fitzroy, Collingwood and Richmond by the 1950s with its 'slum clearance', or 'housing reclamation', to make way for high-density housing and new developments. In the 1960s and '70s the state government concentrated on the clearance of slums that had developed since the Depression of the 1890s. In the late 1960s, the entire block of over 60 shops and 120 houses between Gertrude, Brunswick and Napier streets was demolished by the Housing Commission, and replaced with the high-rise development of Atherton Gardens. These high-rise apartments housed locals in need, the Aboriginal community and later waves of immigrants, including those from Africa in the 1980s (Barrett 1971:166; Robertson et al, 2008:33). Atherton Gardens became a popular meeting place for the Aboriginal community, where families would reunite and stories were passed down.

In 1969, the Fitzroy Residents Association formed in response to the slum clearances and the state government's proposed large-scale demolition in Fitzroy and Fitzroy North. The Association was successful in saving much of Fitzroy's historic building stock. In the late 1970s, the City of Fitzroy recognised the cultural significance of the area and was the first municipality to complete building conservation studies in 1978 and 1979. In the 1980s, Council and local residents' groups banded together to prevent further high-rise projects by the Housing Commission, and to thwart St Vincent's Hospital from demolishing a row of houses on Gertrude Street for expansion of the complex (Kiss, 2014:53).

Figure 12. Looking east down Gertrude Street, c1969. Right is the Macedonian Social Club at 218 Gertrude Street, now Rose Chong's costume shop (SLV Image H2010.105/160e).

Figure 13. Houses in poor condition on Gertrude Street, 1983 (COYL, Id. FL180).

Some larger-scale developments occurred in the late-twentieth century, replacing strips of earlier buildings, particularly west of Brunswick Street. In 1980, costume maker Rose Chong (220 Gertrude Street), recalled that at that date Gertrude Street had many boarded-up shopfronts among the social clubs and European cafes. She recalls that the 'scary' atmosphere of the street still lingered into the early 1990s, however, by the end of the 1990s the street was changing again. The Builders Arms changed ownership and attracted a more cosmopolitan crowd, other businesses arrived, the European social clubs relocated and the street transformed as the area gentrified (Robertson et al, 2008:35).

Twenty-first century

Gertrude Street today is known Australia-wide as an important meeting place for Aboriginal people and remains the location of a number of services to assist the community (Robertson et al, 2008:1). Atherton Gardens and areas near the corner of Gertrude and Gore streets are recognised as areas of Aboriginal Cultural Heritage Sensitivity.

In terms of European settlement, Fitzroy was the first Melbourne suburb and remains the most complete repository of buildings fabric of the 1850s and '60s (Lewis, 2014:6). The local community have long safe-guarded the area's heritage buildings. Some recent development has occurred, including a large-scale apartment building adjacent to George Street.

In 2019, Gertrude Street – with its dominant Victorian-era building stock – continues to serve the local community and is an independent food, fashion and gallery destination with a strong Traders Association. The street again houses owner-occupiers and is known as an 'exciting and dynamic place to be with a diversity of people and businesses' (Robertson et al, 2008:35-7).

Figure 14. Gertrude Street Projection Festival lights up the historic commercial strip (Fitzroyalty, 2010).

Physical Description

The Gertrude Street Precinct is a linear commercial precinct in Fitzroy which comprises Gertrude Street from Smith Street to Brunswick Street and further west to Fitzroy Street on the north side. Abutting the western end of the precinct, on the north side of Gertrude Street, is the World Heritage Environs Area Precinct (HO361). The large section on the north side of Gertrude Street from Brunswick Street to Napier Street, known as Atherton Gardens and occupied by high-rise social housing, is excluded from the precinct.

The main development period of the Gertrude Street Precinct is from the 1850s to the 1890s and the streetscape dates largely from this period. It is a commercial precinct with a dominant streetscape of attached two-storey Victorian shops and residences, with no setback from the street boundary. The facades of these buildings are predominantly cement rendered and parapeted with repetitive rows of upper level fenestration. They vary in both scale and detailing - generally facades from the earlier Victorian period of the 1850s-70s are smaller in scale with little applied decoration, and those from the High Victorian period of the 1880s and 1890s are of greater height with more elaborate detailing. This is evident throughout the precinct including Early Victorian examples (nos. 153-159) and High Victorian examples (nos. 161-167; 184-186; and Blackett's Shop and Residence at nos. 158-164 - an elaborate three-storey red brick row).

Other commercial buildings contribute to the Victorian character of the precinct, including the Former ES&A Bank (nos. 136-138) and corner hotels such as the Builders Arms Hotel (nos. 211-217), the former United Service Club (no. 122) and the former Leviathan Hotel (nos. 146-148).

A small group of Edwardian buildings from the early twentieth century also make a contribution to the precinct. These present as red brick (some overpainted) facades with cement render detailing. The most elaborate, and intact, building from this period is the Champion Hotel at the south-east corner of Brunswick Street and the associated shops and residences to the east in Gertrude Street (nos. 94-100).

The original form and detailing of a small number of shopfronts remains evident in the precinct with display windows, tiled plinths and entry recesses retained.

Figure 15. South side of Gertrude Street – east end (GJM Heritage, October 2019)

Figure 16. South side of Gertrude Street – eastern end (GJM Heritage, October 2019)

Figure 17. North side of Gertrude Street – east of Napier Street (GJM Heritage, October 2019)

Figure 18. North side of Gertrude Street – west end (GJM Heritage, October 2019)

Integrity

The Gertrude Street Precinct retains a very high degree of integrity to the Victorian and Edwardian period in fabric, form and detail. While some alterations have been made to these buildings, particularly at street level, this does not diminish the ability to understand and appreciate the place as a fine example of a Victorian and Edwardian commercial precinct.

Comparative Analysis

A number of precincts are included in the Heritage Overlay of the City of Yarra as highly intact commercial 'High Streets' which date from the Victorian and Edwardian periods. These include:

- Brunswick Street Precinct, Fitzroy (HO311)

- Smith Street Precinct, Fitzroy/Collingwood (HO333)
- Queens Parade Precinct, North Fitzroy/Clifton Hill (HO330)
- Swan Street Precinct, Richmond (HO335)
- Bridge Road Precinct, Richmond (HO310).

These precincts have been included in the Heritage Overlay as important turn of the century 'High Streets' in the City of Yarra. They have operated as key commercial centres in the municipality since the mid-nineteenth century and retain substantial numbers of intact commercial buildings to enable the clear demonstration of the principal characteristics of a Victorian and Edwardian 'High Street'.

As an important and early 'High Street' in Fitzroy, the Gertrude Street Precinct exhibits similar characteristics to these identified High Street precincts. Operating as a commercial centre from the mid-nineteenth century, the precinct retains substantial numbers of buildings, primarily from the Victorian period, to clearly demonstrate the principal characteristics of a major nineteenth century 'High Street'.

Assessment Against Criteria

Following is an assessment of the place against the recognised heritage criteria set out in *Planning Practice Note 1: Applying the Heritage Overlay* (August 2018).

Criterion A: *Importance to the course or pattern of our cultural or natural history (historical significance).*

The Gertrude Street Precinct is an important and early 'High Street' in the City of Yarra and has functioned continuously as one of Fitzroy's key commercial centres since the mid-nineteenth century. It retains a substantial collection of highly intact commercial buildings, predominantly from the Victorian period, including shops and associated residences, hotels and a former bank building. Together these buildings demonstrate the development of this 'High Street', particularly from the 1850s to c1900 when substantial growth in the street occurred, and are illustrative of the enduring role the street has played in the economic and social life of Fitzroy since the establishment of the suburb.

Criterion D: *Importance in demonstrating the principal characteristics of a class of cultural or natural places or environments (representativeness).*

The highly intact streetscape of the Gertrude Street Precinct clearly demonstrates the principal characteristics of a Victorian 'High Street' in the City of Yarra. Typical characteristics – including a predominantly two-storey Victorian street wall height, parapeted rendered or red brick facades, repetitive upper floor fenestration, and ground floor shopfronts – are displayed in the original forms, fabric and detailing of the majority of the buildings. The streetscape is particularly intact and consistent in architectural form and expression.

Criterion E: *Importance in exhibiting particular aesthetic characteristics (aesthetic significance).*

The Gertrude Street Precinct contains a number of individually significant places which are well-considered and carefully detailed examples of commercial buildings. These include, among others, shops and residences at 153-159 and 184-186 Gertrude Street, the Builders Arms Hotel (211-117 Gertrude Street) and the Champion Hotel and associated shops and residences (50-54 Brunswick Street and 94-100 Gertrude Street). Variations in façade detailing throughout the precinct, including parapet ornamentation, balustrading and pediments, and applied decoration, make an aesthetic contribution to the overall character of the precinct.

Criterion G: *Strong or special association with a particular community or cultural group for social, cultural or spiritual reasons. This includes the significance of the place to Indigenous peoples as part of their continuing and developing cultural traditions (social significance).*

The Gertrude Street Precinct is an important social and political hub in Melbourne for the Aboriginal community. A number of services were established in buildings in the precinct from the 1960s and it has since become a long and enduring meeting place for Aboriginal people.

GJM Heritage

Grading and Recommendations

It is recommended that the place be included in the Heritage Overlay of the Yarra Planning Scheme as a heritage precinct.

Recommendations for the Schedule to the Heritage Overlay (Clause 43.01) in the Yarra Planning Scheme:

External Paint Controls?	No
Internal Alteration Controls?	No
Tree Controls?	No
Outbuildings or Fences not exempt under Clause 43.01-3?	No
Prohibited Uses Permitted?	No
Incorporated Plan?	Yes - Incorporated Plan under the provisions of clause 43.01 Heritage Overlay, Planning permit exemptions, July 2014
Aboriginal Heritage Place?	No

Contents

Preamble 3

Part 1 : Brunswick & Smith Context 5

Part 2 : Brunswick Street Precinct Influences 8

Part 3 : A Built Form Proposition 17

Part 4 : Recommended Controls 22

Identified Local Landmark at the corner of Moor and Brunswick Streets

Version	Draft	Final
Issue Date	25.09.2019	25.11.2019

** Note: This Draft document is a part only of a broader Built Form Review for the Brunswick Street and Smith Street Activity Centres : Built Form Review. It is a component part of a broader body of work that sets out a future proposition for two of Yarra's key Activity Centre spines and their adjoining mixed use precincts.*

Preamble

The following urban design report has been prepared for the City of Yarra as the basis for an urban design vision for the Brunswick Street Activity Centre Spine and Fitzroy Town Hall Mixed Use Zone precinct. It sets out a preferred built form framework underpinned by an integrated urban design and heritage assessment.

The report has been prepared by a multidisciplinary team comprising Hansen Partnership (Urban Design) and GJM Heritage (Heritage) with the support of City of Yarra's internal working group.

The study area is identified in Figure 1.

This report sets out the rationale for proposed built from controls for Brunswick Street and is underpinned by key components, namely:

Part 1: Brunswick & Smith Context

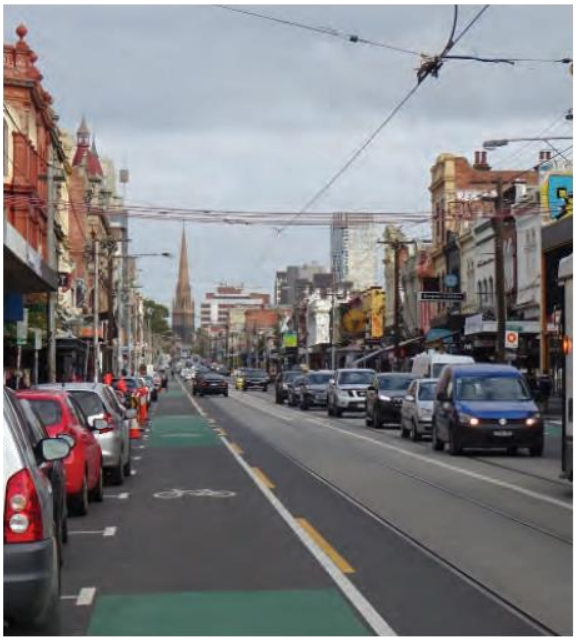
Part 2: Brunswick Street Precinct - Influences

Part 3: Brunswick Street - Built Form Proposition

Part 4: Recommended Controls

The report is part of a broader Built Form Review.

Oblique View of the Study Area and Surrounding Context



PART 1
BRUNSWICK ST & SMITH ST CONTEXT

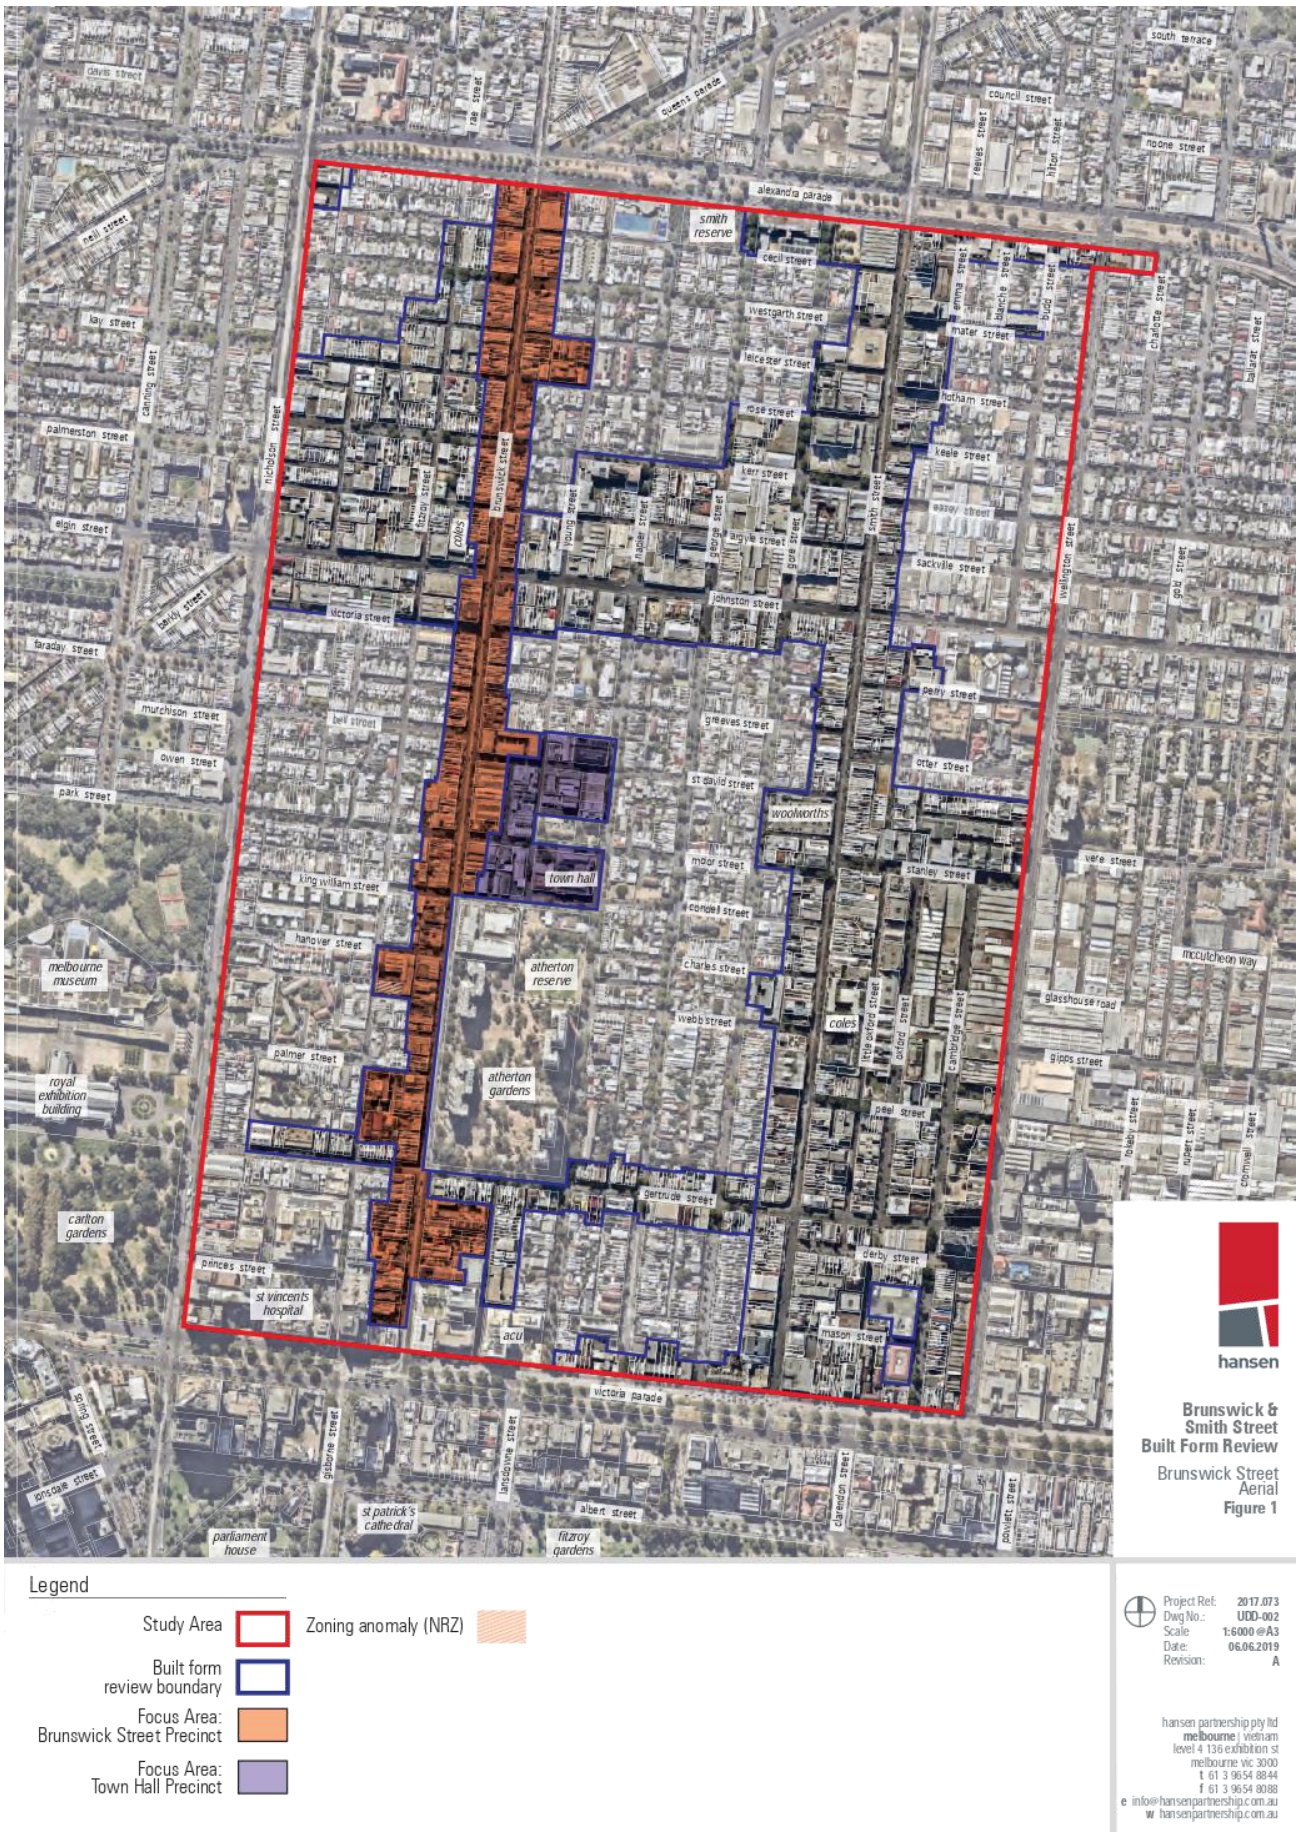
The Brunswick Street and Smith Street Built Form Review seeks to set a clear framework for future change within two of Yarra's key Activity Centres and their adjoining Mixed Use area. Planning policy identifies such Activity Centres as areas for accommodating growth and change. Therefore, these are the areas that must be carefully planned and managed in order to accommodate progressive change while protecting (or indeed enhancing) existing established character and heritage values.

The project was initiated in May 2017 and encompasses large areas bound by Alexandra Parade (to the north), Victoria Parade (to the south), Wellington Street (to the east) and Nicholson Street (to the west).

As part of the process extensive analysis of the existing conditions was undertaken and documented within an overall Background report. This comprehensive analysis identified and divided the overall Review Area into ten 'place specific' precincts. Furthermore, a series of guiding objectives were identified to be contemplated across ten defined precincts.

This report addresses the Brunswick Street and Town Hall Precincts. Both Smith Street and Gertrude Street Precinct reports are also being prepared in 2019. A Collingwood Precinct report was prepared in June 2018 and Johnston St Precinct and Fitzroy East Precinct report were completed in June 2019. The remaining four other precincts will be addressed in subsequent reports.

View toward south along Brunswick Street



1.1 Overarching Built Form Objectives

The following 8 objectives have been identified for the Brunswick and Smith Streets Built Form Review (the Study Area):

Objectives:

1. Recognise and carefully manage potential in key areas within the Activity Centres.
2. Highlight the character distinctions between the different retail streets and mixed use precincts within the Activity Centres.
3. Reinforce the traditional Victorian cityscape of heritage streetscapes as dominant elements, including significant corner elements and identified local landmarks.
4. Ensure continued diversity through sensitive infill within traditional Victorian streetscapes.
5. Shape the retail streets and mixed use areas to ensure a high quality, people-oriented public realm.
6. Ensure development encourages walking, cycling and public transport usages through layout and design responses.
7. Ensure new development is sustainable and adaptive over time.
8. Manage the built form profile of new development to avoid adverse impact to surrounding areas, including heritage places, streetscapes and residential interfaces.

Attachment 5 - Attachment 5 - Brunswick Street Built Form Framework

1.2 Brunswick & Smith Built Form Precincts

Based on the initial analysis phase of the project the following Precincts were identified spatially as relatively coherent parts. The Precincts are largely defined by function as either:

- An Activity Spine;
- A Mixed Use Area; or
- A Boulevard.

Activity Spines

The Activity Spines are defined by the 'traditional' retail and commercial functions along the four main streets within the review area of:

- Brunswick Street;
- Smith Street;
- Gertrude Street; and
- Johnston Street.

Mixed Use Areas

The Mixed Use Areas are defined by the mixed use functions present in the non-residential land located generally in local streets, behind the Spines. The four renewal areas within the review area are:

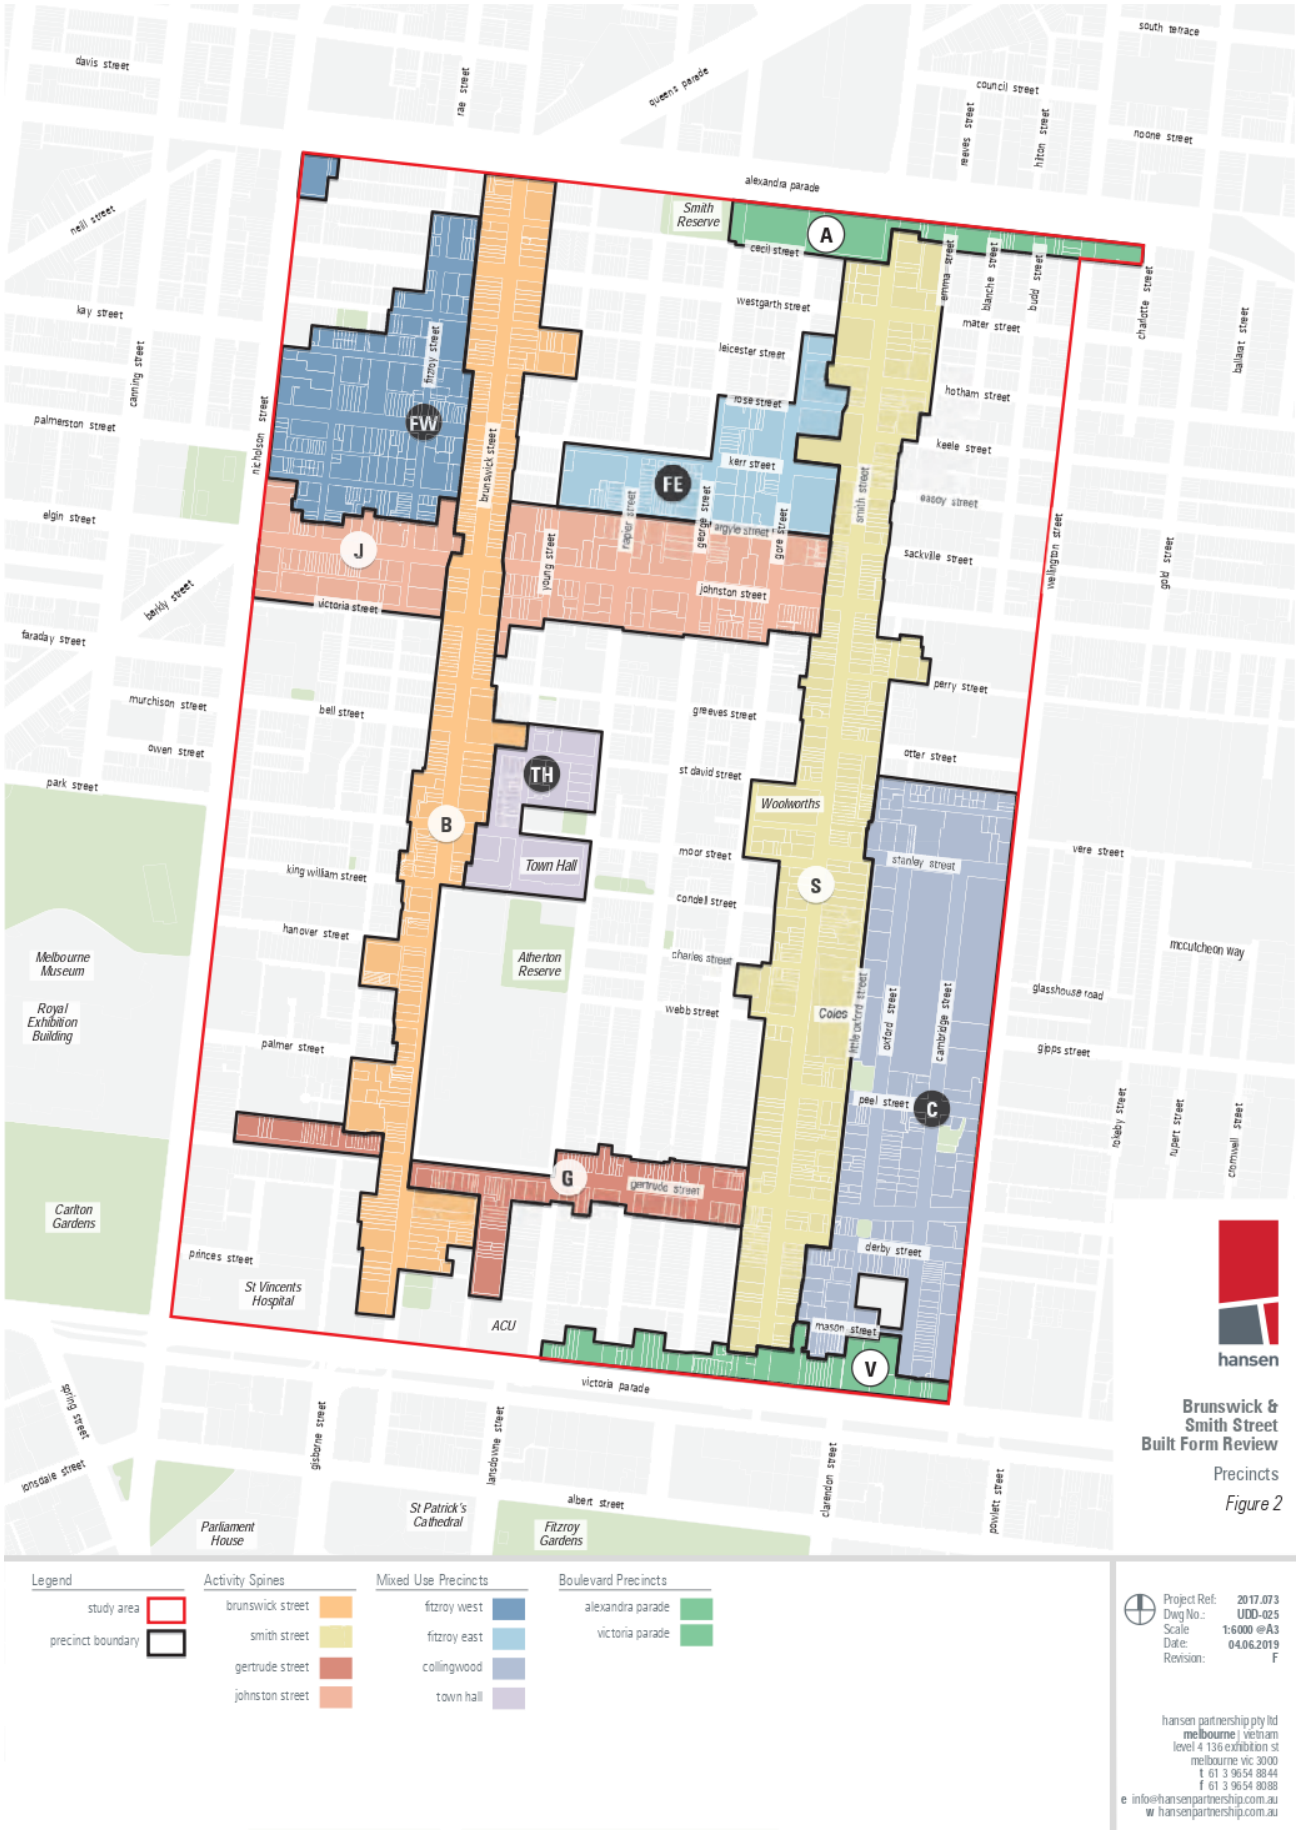
- Fitzroy West;
- Fitzroy East;
- Collingwood; and
- Town Hall.

Boulevards

The Boulevards are the non-residential land to the northern and southern edges of the review area which front the broad road corridors of:

- Alexandra Parade; and
- Victoria Parade.

10 Precincts



The 10 precincts within the Brunswick & Smith Street Built Form Review are:

- Precinct 1: Brunswick Street (B);
- Precinct 2: Smith Street (S);
- Precinct 3: Gertrude Street (G);
- Precinct 4: Johnston Street (J);
- Precinct 5: Fitzroy West (FW);
- Precinct 6: Fitzroy East (FE);
- Precinct 7: Collingwood (C);
- Precinct 8: Town Hall (TH);
- Precinct 9: Alexandra Parade (A); and
- Precinct 10: Victoria Parade (V).

This report addresses Precinct 1: Brunswick Street (B) and Precinct 8: Town Hall (TH).

Attachment 5 - Attachment 5 - Brunswick Street Built Form Framework

PART 2: PRECINCT INFLUENCES

Brunswick Street, Fitzroy is identified as one of the City of Yarra's Major Activity Centres. It is defined by its two main roads being Alexandra Parade to the north and Victoria Parade to the south and represents one of Melbourne's most intact Victorian retail corridors.

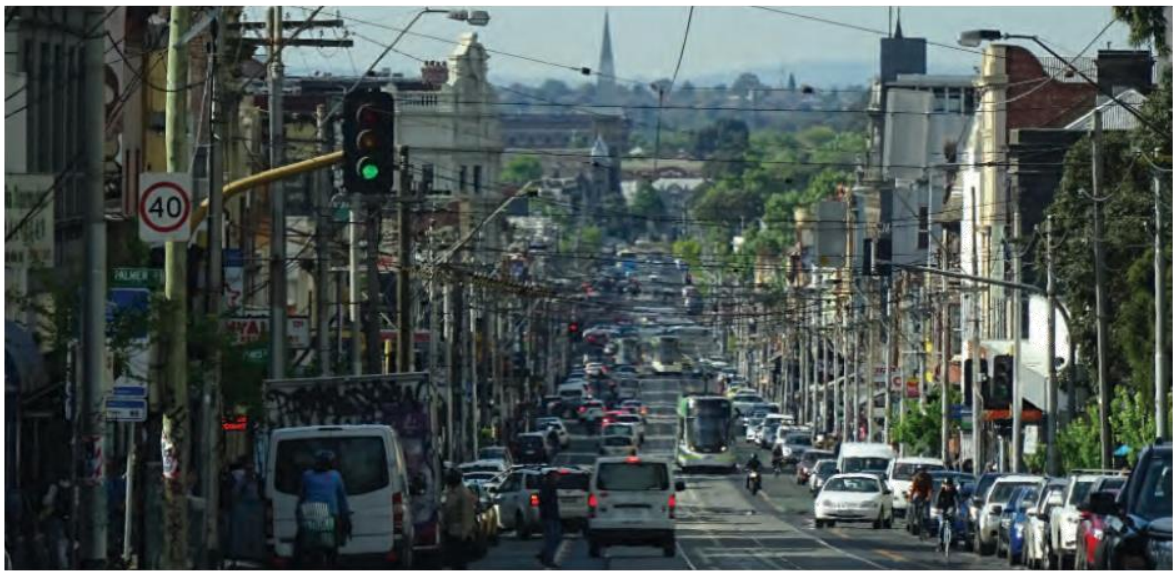
The Brunswick Street corridor is defined by its predominantly traditional Victorian streetscapes, corner pub buildings and larger institutional forms to the south. New developments are typically in shop-top format, or clustered within Mixed Use Zone (MUZ) areas behind the retail spine, including around the Fitzroy Town Hall.

The extent of the Brunswick Street Precinct and Town Hall Precincts is set out in Figure 2 and described below.

Boundary Description

Brunswick Street Precinct

This precinct is bound by Alexandra Parade in the north and Victoria Parade in the south. The western and eastern edges are defined by the rear boundaries of commercial properties fronting Brunswick Street. This precinct encompasses all Commercial 1 Zone (C1Z) land to both sides of Brunswick Street. The precinct also includes Mixed Use Zone (MUZ) areas as defined below:



- MUZ area between Leicester Street and Rose Street;
- MUZ area between Palmer Street and Gertrude Street; and
- MUZ area on both sides of Brunswick Street (south of Gertrude Street).

Town Hall Precinct

Bound by Napier Street to the east, Exhibition Street to the north and King William Street to the south. The western extent is defined by the rear of commercial properties along the eastern side of Brunswick Street. This precinct encompasses all Mixed-Use Zone (MUZ) area fronting St David Street, Young Street, Moor Street and west side of Napier Street.

- The precinct boundary also includes properties in MUZ and Residential Zone (GRZ and NRZ) associated with:
  - Sacred Heart School Fitzroy (107 King William Street);
  - All Saints Parish (King William Street); and
  - Fitzroy Town Hall.

Whitlam Place (public open space) and No. 135 Moor Street are excluded from this study area.

View towards north along Brunswick Street from Palmer Street intersection

Built Form Character

Brunswick Street Precinct

Brunswick Street is a unique Major Activity Centre spine with a particularly strong north-south visual framework informed by largely intact heritage retail buildings. The spine is defined by predominately 2 storeys consistent heritage street walls to the north of Johnston Street and a more diverse street wall mix to the south of Johnston Street. The corridor benefits from a series of important local landmarks, typically found at corners which act as critical wayfinding elements.

The topography slopes gently to the south of St David Street, leading to the open profile of Atherton Gardens and the east-west commercial spine of Gertrude Street. To the south of Gertrude Street are an assemblage of significant heritage residential and commercial buildings of different setbacks associated with St Vincent's Hospital. To the periphery, the precinct is hemmed in by low-scale heritage residential and warehouse forms with discrete contemporary infill in the form of 4-6 storey apartment buildings.

Town Hall Precinct

The Town Hall Precinct is a discreet mixed pocket located behind Brunswick Street, focused around the heritage Town Hall and influenced by the surrounding leafy green residential streets of Fitzroy. Key views to the Town Hall and its associated clocktower are experienced from Brunswick Street and on approach along Moor Street from the west.

This precinct is largely characterised by narrow east-west streets and a varied subdivision pattern which heightens the sense of arrival to Brunswick Street and the transition to fine grain residential interfaces. This confined precinct has transformed considerably in recent years, from predominately low order heritage and post-war warehouse forms to more recent mixed use apartment typologies of 4 to 6 storeys, concentrated along St David Street and Napier Street.

View along Brunswick Street to the south of Johnston Street

View of Fitzroy Town Hall from Napier and Moor Streets

View along Brunswick Street to the south of Gertrude Street

View of recent development along Napier Street & St David Street

2.1 : Foundations

Setting an agreed vision for the Brunswick Street and Town Hall precincts must be underpinned by an understanding of their diverse conditions, including the fabric of existing and approved developments as well as other relevant considerations which will become the 'foundation' for a future built form framework and recommendations. This is illustrated in Figure 3 and described as follows:

Heritage

The entire extent of the study area is subject to the Heritage Overlay (HO311 Brunswick Street Heritage Overlay Area or HO334 South Fitzroy Precinct), comprising a high proportion of individually significant and contributory intact buildings from the Victorian to Inter-War periods including fine grain shops, dwellings, warehouses, pubs and hotels. A high number of heritage buildings on the Victorian Heritage Register (VHR) are located to the south of Johnston Street with a greater concentration south of Gertrude Street.

Municipal Landmarks & Views

Church Spires: This part of Fitzroy is relatively flat, with a gradual rise in topography along Brunswick Street from Moor Street toward the south. Views toward church spires can be experienced at both ends of the Brunswick Street corridor to St Patrick's Cathedral (East Melbourne) and the Hungarian Church (North Fitzroy). The linear nature of the precinct and the relatively consistent street wall profile, frames views toward each end of the corridor.

Clock Tower of Fitzroy Town Hall: The north east corner of the Kent Street and Moor Street intersection is an important pedestrian and cycling route and provides the first glimpse toward the Clocktower of the Fitzroy Town Hall when approaching it from Brunswick Street. Whilst existing trees obscure some parts of the Clock Tower, this location has been identified as a primary view location.

Royal Melbourne Exhibition Building: The views to the drum, dome, lantern and flagpole of the World Heritage Listed Royal Exhibition Building seen from the footpath on the south side of Gertrude Street and along Marion Lane, west of Fitzroy Street.

Key Landmarks within and surrounding the precinct :

- HO327: Spire of St Luke's Church (also referred to as the Hungarian Reformed Church of Australia);
- HO180: Clock Tower of Fitzroy Town Hall;
- HO129: Spire of St Patrick's Cathedral (within the City of Melbourne); and
- HO69: Royal Exhibition Building (within the City of Melbourne).

Local Landmarks

Like many traditional high streets, Brunswick Street comprises a number of local landmarks which act as wayfinding elements along its length. These more distinct and noticeable buildings often comprise (or formally comprised) 'civic' services and display articulated corners which punctuate the streetscape with distinguishing architectural features. Along Brunswick Street, 11 of these 'local landmark' buildings have been identified in collaboration with GJM Heritage. These include:

1. The Former Champion Hotel: 50-54 Brunswick St
2. Rob Roy Hotel: 51 Brunswick St
3. Perserverence Hotel: 198 Brunswick St
4. Shops: 236-252 Brunswick St
5. Moran and Cato Merchants: 277-287 Brunswick St
6. AOF House: 287-295 Brunswick St
7. Fitzroy Post Office: 296 Brunswick St
8. Former Union Bank: 298 Brunswick St
9. Former Liverpool Arms Hotel: 299 Brunswick St
10. Royal Derby Hotel: 446 Brunswick St
11. Former Belvedere Hotel: 77 Victoria Parade

North side of Johnston Street

Rows of continuous, attached low-rise shopfronts define the north part of Brunswick Street. These forms, while varied in architectural style, detail and finishes, represent the consistent and orderly traditional shopfront character of this important Activity Centre spine. To the north of Johnston Street, the 2 storey parapet creates an orderly street wall datum that is visible on both sides of the street, creating a symmetrical street profile.

South side of Johnston Street

Further south, an asymmetrical profile is attributed to varied street wall heights, comprising predominantly 2 storey street walls on the west side and some higher 3 storey street walls on the east side. The open 'green' profile of the Atherton Gardens Housing Estate and open reserve between King William Street Gertrude Street, generates a different quality, demarcating a transition between the traditional retail strip to the north and institution/ residential character to the south, beyond Gertrude Street.

The Perseverance Hotel: local landmark at Moor and Brunswick Street

Consistent 2 storey street wall profile to the north of Johnston Street

Diverse street wall profile south of Johnston Street

Grand Residential forms to the south of Gertrude Street

Grand Residential & Institution Stock

To the south of Gertrude Street, surrounding the institutional precinct of St Vincent's Hospital and ACU are large, highly decorative heritage dwellings of 2- 3 storeys, behind low front fences and established gardens. A number of these properties are on the VHR, presenting a contrast in character compared to the traditional commercial forms found to the north of Gertrude Street. Most of these 'grand residential' forms are on deep allotments (greater than 30m) and accommodate commercial or medical uses. Secondary access to these properties is from rear laneways. More recent contemporary infill in this area includes the 4 storey Metropole Central and townhouses at the rear of existing heritage form (VHR) at 38-40 Brunswick Street.

Larger forms related to the institutional functions along Victoria Parade (outside the precinct boundary) are setback considerably from Brunswick Street. Whilst these are visible from within Brunswick Street due to its open profile, they serve as a backdrop to the more prominent heritage forms and are recessive in the broader view.

Key Junctions

The Brunswick Street spine is intersected by several prominent junctions which serve as important wayfinding elements and create clear divisions in character along the strip. Key junctions include major transport corridors along Alexandra Parade, Johnston street and Gertrude Street.

Prominent Corners

Another defining feature of the Brunswick Street spine are the corners defined by prominent heritage forms (of two and sometimes 3 storeys), which wrap around corners with ornate parapets or architectural details to both frontages. Several significant corner forms have been identified as Local Landmark (refer to Section 3.1) and concentrated around key junctions with Johnston Street and Gertrude Street (intersecting commercial streets).

Side Streets

Other streets feeding into the Brunswick Street spine along the grid network are of a narrower profile (10-15m). To the north of Johnston Street, some streets provide linear visual links between Nicholson and Smith Streets, where to the south of Johnston Street a combination of T-junctions exist, which intersect with Atherton Gardens, Brunswick Street or streets which terminate between the main road spines to the east and west.

Fitzroy Post Office at corner of Brunswick Street and Johnston Street

View of a prominent corner at Johnston and Brunswick Streets

View toward The Max at St David and Brunswick Street

Recent development within the Town Hall precinct

Recent Development Trends

Recent development along Brunswick Street is limited. There are few examples of 'shop top' housing and only 4 contemporary mid-rise apartment developments located to the south side of Johnston Street. The most notable contemporary developments are The Max Apartments (5 storeys) and the mixed use development associated with the Artherton Gardens Housing Estate at 148 Brunswick Street (7 storeys and located outside the precinct boundary). Other shop top infill forms are highly recessive and are relatively inconsequential in long-range views experienced along the corridor.

Within the Town Hall precinct along Napier and St David Streets, a considerable number of sites accommodate recently constructed or have approvals for multi-storey, mixed-use and apartment development ranging between 4-6 storeys (with taller street walls). Smaller townhouse and warehouse conversions have occurred to Young Street in the order of 3 storeys.

Adjoining Built Form Precincts

The majority of lots with a primary frontage to Brunswick Street corridor benefit from secondary access to a rear laneway (typically 3m wide) or local streets. Beyond the laneway are varied combination of residential and non-residential functions in MUZ to the north west and south east, C1Z at intersections with Johnston and Gertrude Streets and GRZ/NRZ elsewhere.

Borrowed Landscape Amenity

Green Streets are a distinctive perpendicular character element, connecting into Brunswick Street. These streets contrast with Brunswick Street, which is too constrained to support street trees and street landscaping. The northern part of Brunswick Street 'borrows' some landscape amenity from the established street trees within these green streets of Westgarth, Kerr and Moore Streets streetscape and are reinforced at ground level through the provision of expanded footpath, creating pedestrian 'pause places'. These spaces often accommodate outdoor dining and public seating nodes.

Attachment 5 - Attachment 5 - Brunswick Street Built Form Framework

Attachment 5 - Attachment 5 - Brunswick Street Built Form Framework

2.2 : Brunswick Street & Town Hall Precincts Built Form Framework

In response to foundation matters, a Built Form Framework has been advanced to reinforce locations for varying levels of change within the focus area. A Framework is not definitive (like a Built Form Control Plan), instead it seeks to identify critical 'gestures' of the City. In this instance, the framework recognises the importance of the following attributes- Refer to Figure 4:

Heritage Values

The precinct has considerable heritage values, comprising traditional shop fronts, notable corner buildings and Municipal Landmarks. Given the broad heritage controls and street wall definition, there is potential for moderate infill for much of the Brunswick Street spine. Behind the commercial strip, including within the Town Hall precinct, a moderate level of future growth can also be realised, consistent with recent development approvals which maintain visual prominence of the Fitzroy Town Hall Clock Tower.

Order

The northern part of Brunswick Street, between Alexandra Parade and Johnston Street, comprises a consistent streetscape character of predominantly 2 storey shopfronts, of a similar parapet height, on both sides of the street. These urban blocks are characterised by a fine grain rhythm on an orderly allotment configuration, with variation in built form appearance attributed to changes in material palettes and individual architectural features. There is an opportunity for future development to continue this orderly street profile, through consistent upper- level presentation (setback and height) when viewed from within Brunswick Street.

Diversity

The middle section of Brunswick Street, between Johnston Street and Gertrude Street has a more varied streetscape profile with some larger heritage buildings (3 storey or more) and single storey, non- contributory buildings positioned on irregular allotment configurations. Contributing to the asymmetrical street profile is the open profile of Atherton Gardens, resulting in a 'one - sided' street profile. Here, distinctive corner buildings also contribute to junction definition, further emphasizing a more varied and diverse character.

Future built form may reference this diverse condition and adopt a more customised response, while acknowledging the prominence of surrounding heritage street walls and landmarks. In some instances, varied upper-level response (setback and height) may be warranted in response to place specific attributes. The level of variation, however, will need to be balanced by retaining visual prominence of the heritage street walls and landmarks.

Grand Residential

The southern part of Gertrude Street comprises the strongest built form legacy defined by the dominant presence of grand residential buildings (with VHR designation). This part of Brunswick Street is not regarded as a commercial street and will continue to evolve as an extension to the institutional, commercial or residential uses around it.

View of mixed street wall heights south of Johnston Street

View of consistent street wall heights north of Johnston Street

Allotment Depth and Width

Block sizes (width and depth) and heritage/ residential abuttal significantly constrained the capacity of the Brunswick Street precinct. While the level of moderate growth may vary across the corridor, it is less likely for a significant shift in the skyline be realised in this context, in absence of a significant topographical change.

Large Non-Contributory Sites

Within the study area are instances of large, non-contributory sites with mulitple street frontages. These are attributes which are favorable to new development in short to medium terms. Clear built form guidance is required to ensure that future forms on these sites maintain and reflect the prevailing streetscape rhythm and valued character of the study area.

Behind the Brunswick Street spine are discrete pockets of 'back block' sites with side street frontages. Traditionally these sites have serviced as an informal transitional area, between the rear of 'main street' forms and abutting residential areas. While these areas can accommodate new forms, their development opportunity is strongly influenced by the proximity and sensitive of neighbouring properties beyond the Precinct. The existing hierarchy of primary and secondary street addresses will assist in managing future 'fronts' and 'backs', of development contributing to the strengthening of pedestrian activity to the Brunswick Street spine.

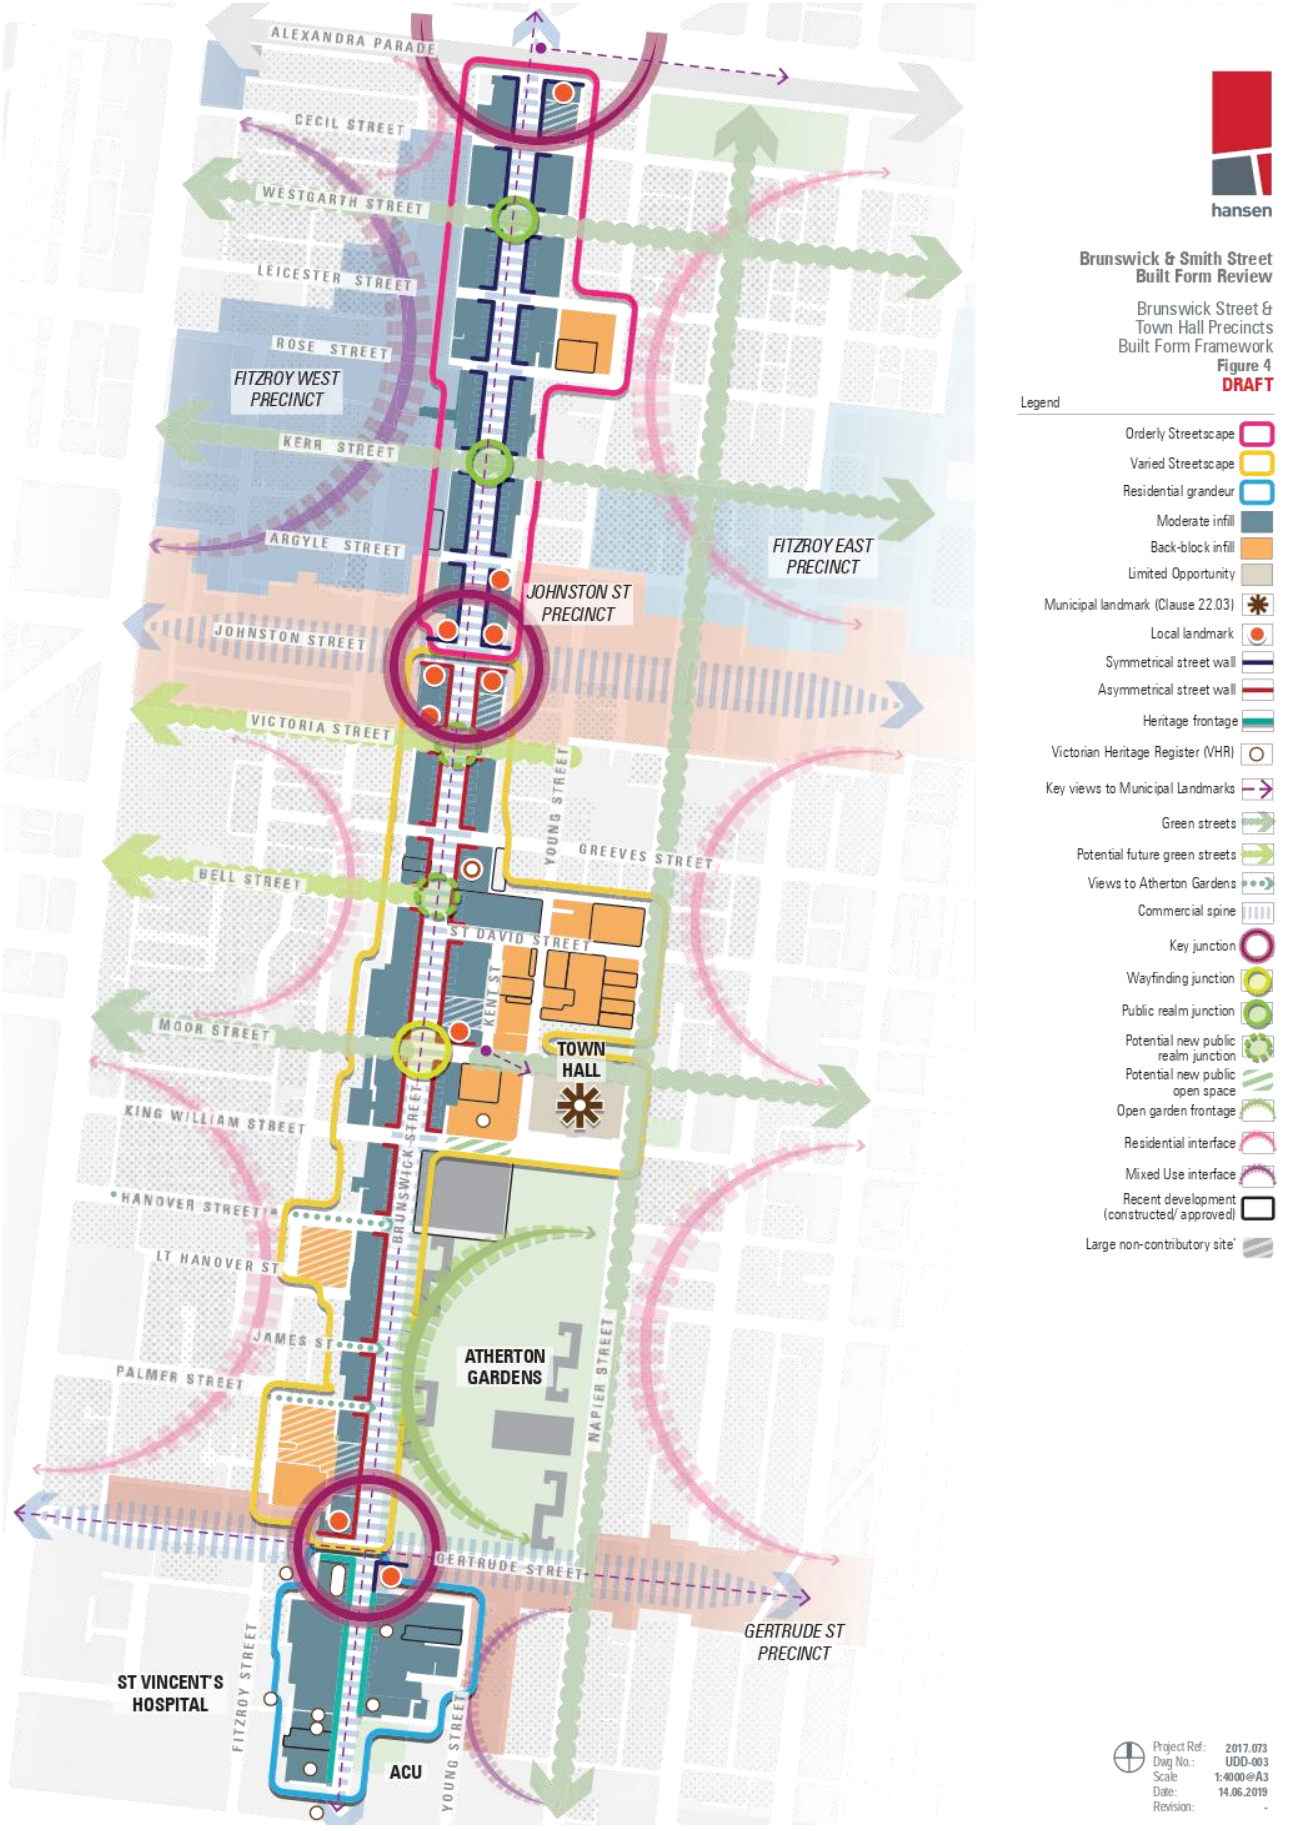
Junctions

Future built form can contribute to junction definition to assist with wayfinding and sense of place. Where Brunswick Street intersects with other major commercial streets at Johnston Street and Gertrude Street, future forms should be shaped to retain primacy of local landmarks when viewed in the round. Higher pedestrian footfall can also be expected along these commercial streets, where pedestrian amenity (solar, sense of enclosure and ground level activation) should be prioritised. While the typical development response at commercial junctions is for larger, taller built form, in this instance, preservation of key heritage features to local landmarks should take precedence.

Green Streets and Open Space

It is essential that future development continues to support these pedestrian functions and do not compromise pedestrian amenity at street level. Brunswick Street is intersected by 20m 'green streets' at Westgarth and Kerr Streets defined by large established trees and kerb extensions for public 'pause spaces' at the intersections.

Opportunities to realise additional 'pause places' at Victoria and Bell Streets and a new 'pocket park' through partial road closure at King William Street should be investigated as part of future Brunswick Street public realm upgrades. Further, future public realm upgrades and careful contemporary corner additions around Moor Street can also assist in distinguishing this junction as the front door to the Town Hall precinct.



Example of a large, non-contributory site along the Brunswick Street spine

View along Westgarth Street, an example of a Green Street

Attachment 5 - Attachment 5 - Brunswick Street Built Form Framework

Future Character Statement

Given this 'Framework' for change, the following future character statement is recommended.

Brunswick Street Future Character Statement

Future development along Brunswick Street will respond to the particular sensitivities of different parts of the spine and the distinctive differences between areas to the north and south of Johnston Street and further south of Gertrude Street. New development in the form of infill will not compromise the traditional image of the spine, but reinforce the fine grained pattern of subdivision on the street and the special views (long and short) to landmarks. In this context, change in Brunswick Street will support the prevailing patterns of order and diversity with careful transition to surrounding residential neighbourhoods.

Town Hall & Back Blocks Future Character Statement

Future development will continue the pattern of recent mid-rise development, retaining the visual prominence of the Fitzroy Town Hall. The streetscape will reinforce the mix of diverse low rise, fine grained residential buildings with a new regime of contemporary infill of a stronger profile.

Framework Principles

In response to the varied urban fabric, the following preferred future-built form character principles apply by adopting the following principles:

1. Strengthen view corridors to municipal landmarks and protect views to local landmarks.
2. Retain the prominence of heritage streetscape along Brunswick Street.
3. Reinforce orderly streetscape to the north of Johnston Street and varied streetscape to the south of Johnston Street.
4. Retain the character of grandeur south of Gertrude Street.
5. Realise development opportunity on large, 'back block' sites.
6. Maintain solar access to opposite footpaths along commercial spines and green streets.
7. Acknowledge existing and approved development.
8. Transition to the residential edges.

PART 3: BUILT FORM PROPOSITION

The Built Form Proposition has been derived from the Built Form Framework which was informed by the Foundations Analysis and underpinned by the overall Background Analysis.

The **Brunswick Street and Town Hall Precincts Built Form Proposition** demonstrates block by block and street by street parameters for the precincts' evolution of new development. The identified parameters are neither fixed, or absolute but are intended to guide future change. The proposed proposition or 'controls' are represented in Figure 4 and are derived from the following basis:

- Heritage assessment and advice;
- Municipal Housing Strategy;
- Precinct character;
- Solar access;
- Local views and vistas;
- Heritage Street walls and upper levels;
- New street walls and upper level setbacks;
- Heritage frontage (including front setback);
- Transitions;
- Residential interfaces and amenity; and
- Building separation, amenity and equitable development.

The rationale for height parameters is outlined as follows:

3.1: Basis for Height Parameters

Heritage Input

GJM Heritage provided extensive heritage input based on comprehensive analysis comprising:

- The heritage grading of each property within the Heritage Overlays;
- The currency of existing Statements of Significance;
- Confirmation of places with Victorian Heritage Register nomination;
- Identification of local landmarks; and
- Recommended built form parameters to appropriately manage development within the heritage context.

Refer to GJM Heritage Report for details.

Housing Strategy

With reference to the adopted Housing Strategy for the Municipality (adopted 2018), the Brunswick Street corridor is designated for moderate change, with the exception of south of Gertrude Street (west side), which is identified as an area for incremental change. The Town Hall precinct is also designated for moderate change.

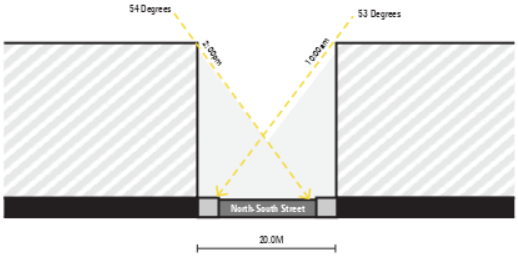
Precinct Character

Key characteristics that distinguish the Brunswick Street corridor and the Town Hall precinct are attributed to intact heritage fabric and perpendicular 'green' streets. Diversity in built form is attributed to a variation in the subdivision pattern, land use function and built form typology (dwellings, traditional shop fronts or warehouses). New development should seek to respond to the unique contextual characteristics and respond to particular sensitivities as required.

Solar access

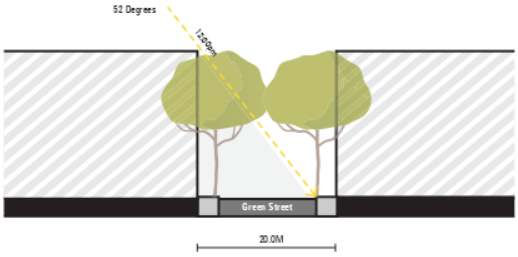
In inner urban areas such as Fitzroy, access to sunlight is an important consideration. Therefore, future urban form should protect sufficient solar access to key public realm and open spaces to ensure 'life and attraction' at the street level for residents and visitors.

The Urban Design Guidelines for Victoria contains the following relevant Objectives and Guidelines:



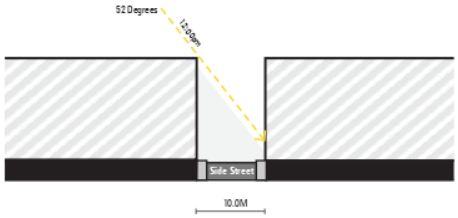
- *'Objective 5.1.3 To ensure buildings in activity centres provide equitable access to daylight and sunlight', and*
- *'5.1.3a Locate and arrange the building to allow daylight and winter sun access to key public spaces and key established street spaces.'*

Along Brunswick Street and the Town Hall Precincts, we recommend the following solar access measures to avoid, or minimise overshadowing outcomes, measured on 22 September (equinox):



- Along Brunswick Street (commercial street): avoid overshadowing of western footpath (3m from property boundary) from 10am onwards.
- Along Brunswick Street (commercial street): avoid overshadowing of eastern footpath (3m from property boundary) before 2pm onwards.
- Along 'green streets' (refer to Figure 4): avoid overshadowing of southern footpath (3m from property boundary) between 10am to 2pm.
- Along side streets (within the study area): avoid overshadowing above the ground floor of buildings. On narrower perpendicular side streets, some overshadowing of footpath (south side) is inevitable. It was determined that protection of solar access to first floor should be supported.
- Along side streets (outside the study area): avoid overshadowing of footpaths to opposite side of the street between 10am to 2pm.
- Existing and future open space: minimise overshadowing between 10am and 2pm.

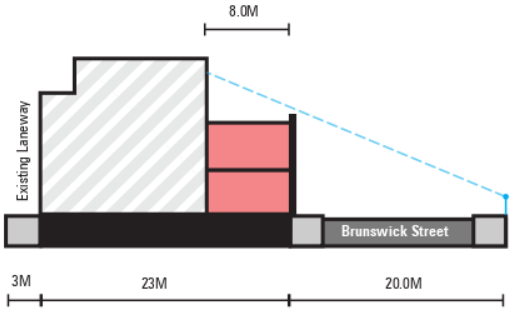
Local views and vistas



Views to some Municipal and Local Landmarks (at key corners) influence the shape of future development (heights and setbacks). Retaining views to and 'breathing space' behind these heritage features is important to ensure protection of key views to Municipal Landmarks and retain the visual prominence of Local Landmarks. For some sites subject to the VHR, designated buildings and new additions will be contained and shaped to ensure they are read as recessive, secondary elements when viewed from the public realm.

10am and 2pm exquinox solar angles along 20m wide Brunswick Street

12pm exquinox solar angle along 20m wide 'Green Streets'



12pm exquinox solar angle along 10m wide side streets

Heritage street walls and upper levels

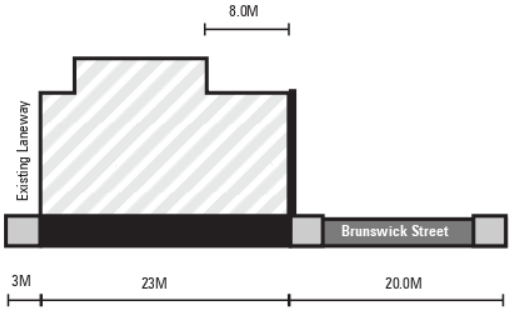
GJM has also provided heritage input for appropriate upper level setback for heritage buildings (including VHR sites), which seek to reinforce the objectives found in Clause 22.02 and 22.10. **A default 8m measurement** (to the new built form and balcony line) is applied to all sites fronting Commercial Streets including Brunswick Street, Johnston Street and Gertrude Street. This is to ensure adequate protection of the primary heritage 'volume' and local landmark features (including chimneys, and exposed roof forms) often found at the junction of these streets. The default upper level setback will also protect facade articulation in the streetscape elevation with spatial separation between the street wall frontage and recessive upper levels (behind).

Where opportunity for taller development exists behind the heritage volume, an upper level setback greater than 8m will be 'required' (as an absolute parameter) in addition to consideration of a sensitive architectural design treatment (massing, form and materiality) to ensure the new form does not visually compete with the heritage element.

Preferred upper level setback above heritage street wall

New street wall and upper levels

In urban areas, almost all urban design guidelines seek to introduce a 'street wall' and 'upper level front setback' measure. The purpose for such a distinction and separation is to ensure predominance of the 'traditional' forms and parapets within the streetscape, while enabling provision of new and increased heights in a recessive order. Upper level setbacks also retain a sense of openness to the street, which are prominent in a pedestrian's field of vision and reinforce the traditional street wall scale. Within the study area, there is extensive heritage fabric which is to be retained and enhanced. The recommended built form parameters for heritage sites draw on the provisions of Clause 22.02 and 22.10 (refer Heritage Street wall).



Along Brunswick Street, heritage street walls vary in height, including greater instances of 1 to 4 storeys to south of Johnston Street, where single storey heritage street wall is bookended by taller street walls. To retain an orderly streetscape characteristic, any new street wall should match the adjoining heritage forms, whilst a variation of up to one storey (lower) is possible in a more 'diverse' streetscape. Importantly, new street wall should not result in diminishing the heritage quality of the streetscape.

For sites with the opportunity to establish a continuous new street wall (that responds to its abutting heritage walls) and recessive upper levels, recommendations are derived from other Planning Scheme Amendments, associated Panel reports as well as recent heritage advice from GJM Heritage.

It is preferred that new built form reinforce the established urban form patterns along Brunswick Street, comprising street walls and recessive upper levels. The visual distinction between street walls and upper levels is an important consideration. For this reason, a 'default' 8m setback along Commercial Streets and a minimum 3m* setback to side streets will be applicable to new form to:

- Provide a clear distinction between 'base' and 'top';
- Create a degree of consistency for upper levels that comprises a mix of heritage and non- heritage forms;
- Ensure new upper level does not visually dominate the streetscapes;
- Ensure no overshadowing of the public realm; and
- Reinforce the visual dominance of the street walls.

** We note that from heritage perspective, a 6m setback is preferred.*

Preferred upper level setback above new street wall

Upper Level Expression

The design of upper levels of new development should:

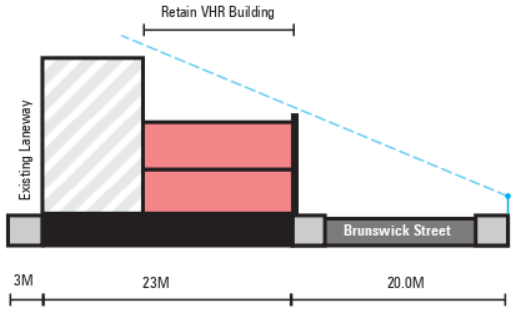
- Be well articulated and break up the building mass;
- Distinguish between the lower and upper levels through materials and articulation;
- Be designed so that side walls are articulated and read as part of the overall building design and not detract from the streetscape when viewed from direct and oblique views along the streetscape; and
- Provide passive surveillance of adjacent streets and public open space.

Heritage frontage

Based on an understanding of heritage advice including the distinct built form character to the south of Gertrude Street, the following parameters guide the preferred built form response for heritage frontages in the study area:

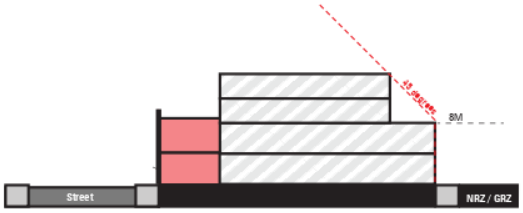
- Retention of all built fabric within sites with VHR designation. It also precludes new built form within the 'air right' above VHR buildings.
- Where new buildings are proposed within the side or rear setback of VHR sites, they are to be positioned behind existing structures, ensuring heritage frontages are not concealed by new forms from streetscape views.
- Heritage forms (both VHR and Non-VHR) should retain existing heritage frontages, including street setbacks.

Transition



In this part of Fitzroy, the transition in building scale is often gradual. The broader skyline is primarily dominated by landmark structures (municipal and local), high-rise developments at Atherton Gardens and mid-rise forms associated with institutional and education facilities further south. There is limited evidence of recent construction along the Brunswick Street spine. Development approvals are predominantly concentrated to the back-block areas, in the Town Hall precinct.

Larger sites may be able to accommodate a gradual transition within its own site, through recessive upper levels, or variation in street wall heights. Overly stepped forms, or 'wedding cake' outcomes should be avoided.

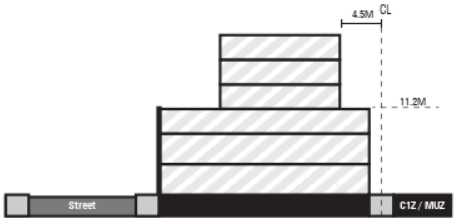


Residential Interfaces (including laneway)

Most residential properties are generally located to the east and west and are separated from the study area by a laneway, or street. There are instances where the study area has a direct abuttal to residential properties (i.e. Between Rose & Kerr Streets and between Moor and Palmer Streets) with shared side boundaries. These common boundaries are mostly defined by building sideages, or party wall (1-2 storeys). There are limited direct abuttals to private open spaces.

Along both interface types, we recommend a 8m (2 storey) form at the interface, with any built form above set back within a 45 degree built form envelope to protect residential amenity.

Preferred upper level setback behind VHR building

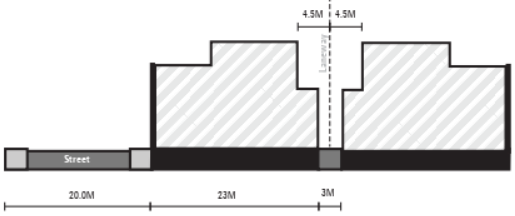


Preferred built form transition to residential zone land (GRZ/NRZ)

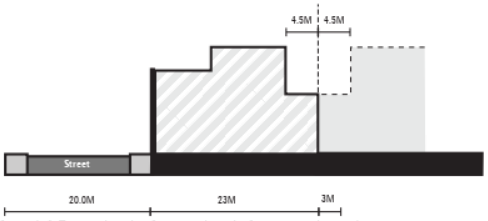
Non-Residential Interfaces (including laneway)

Built form should continue to respond to laneway interfaces with MUZ or C1Z land. Within the study area the existing laneways, their function, widths and arrangements vary. New development will need to appropriately address both the existing laneway condition as well as adjacent (non-residential) properties. Therefore, we recommend:

- To laneway abuttals, new development should present a maximum 11.2m (3 storey) form at the interface, with any built form above set back 4.5m from the centreline of the laneway of up to 17.6m (5 storeys).



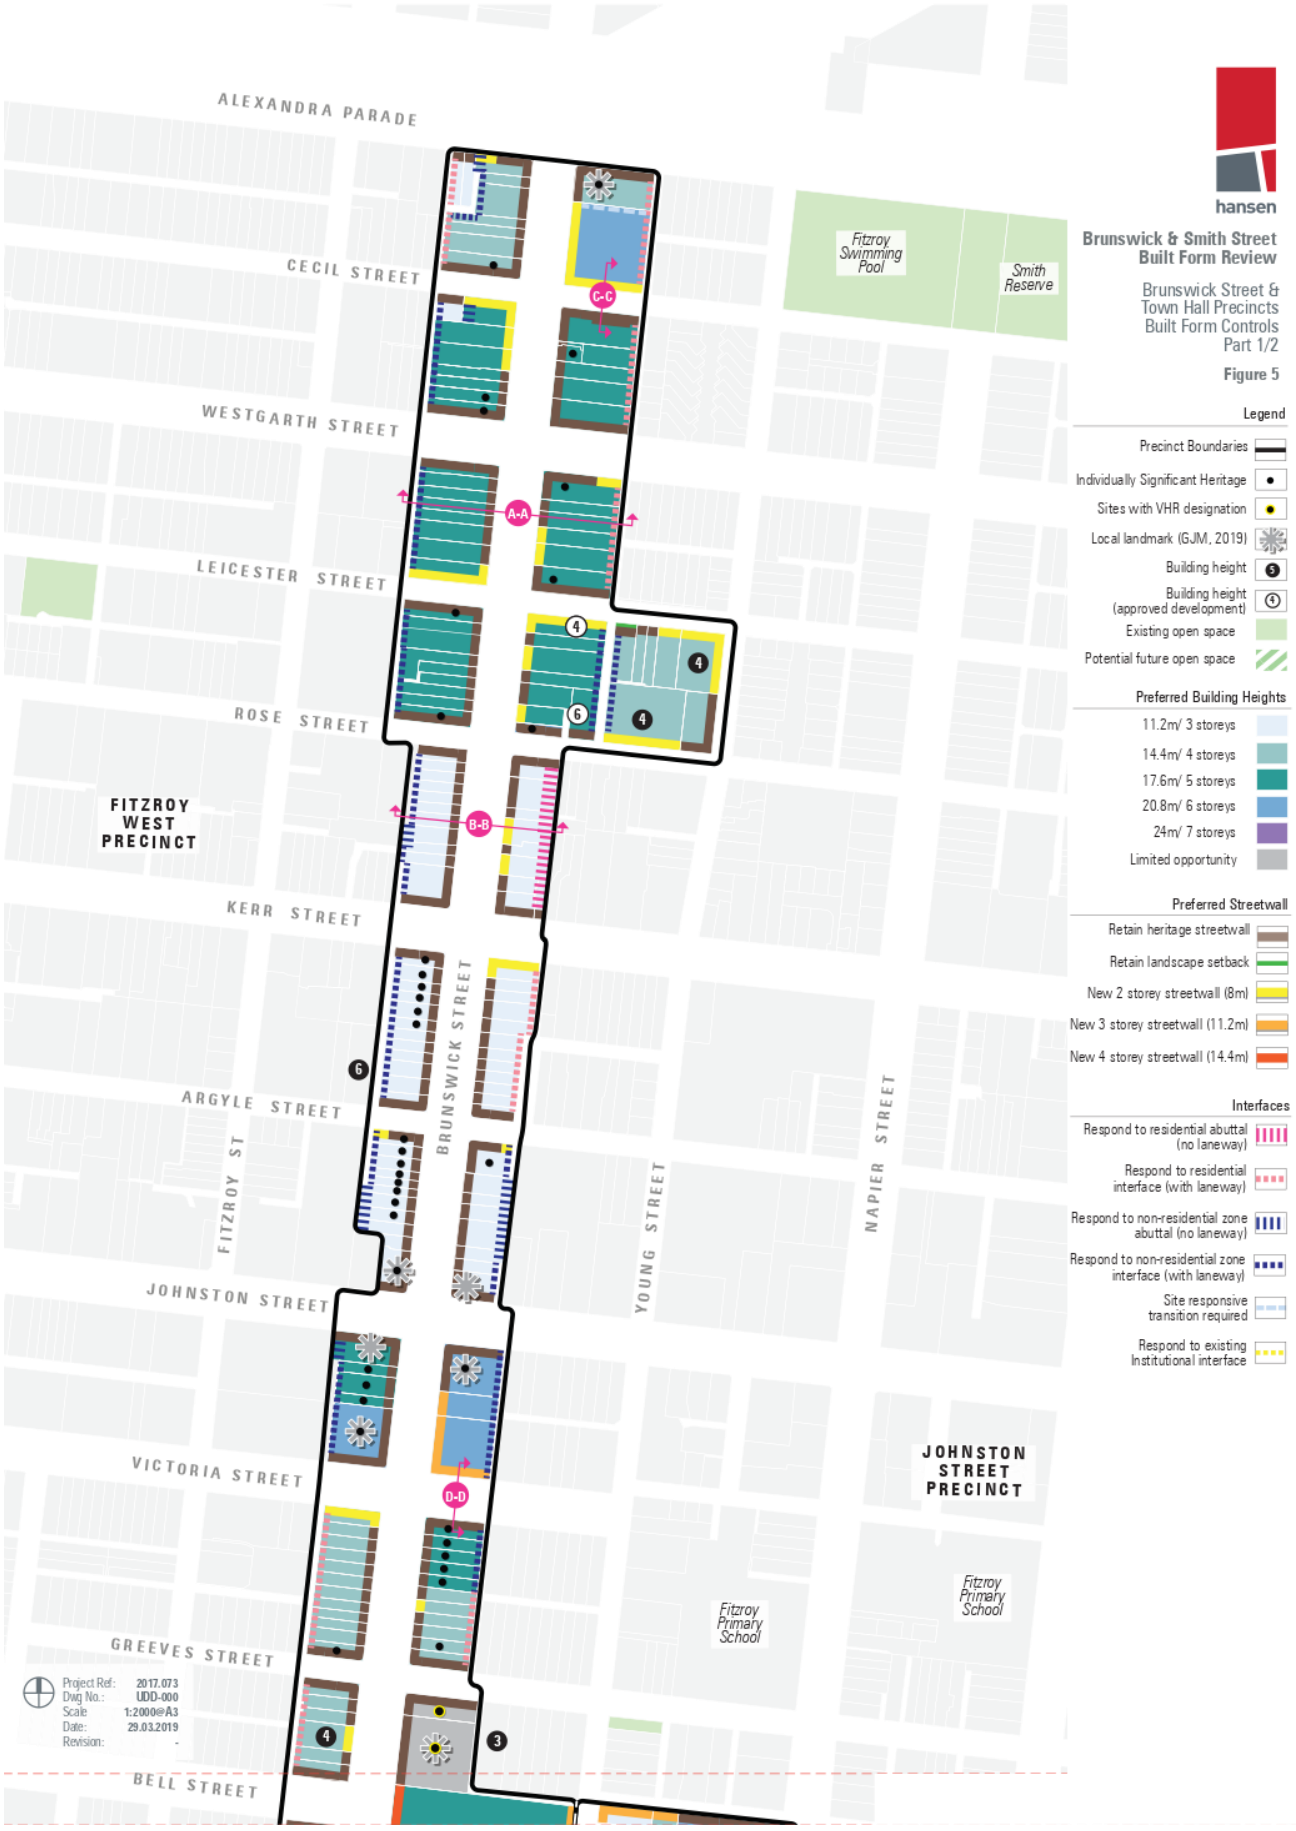
Preferred built form transition to MUZ or C1Z sites



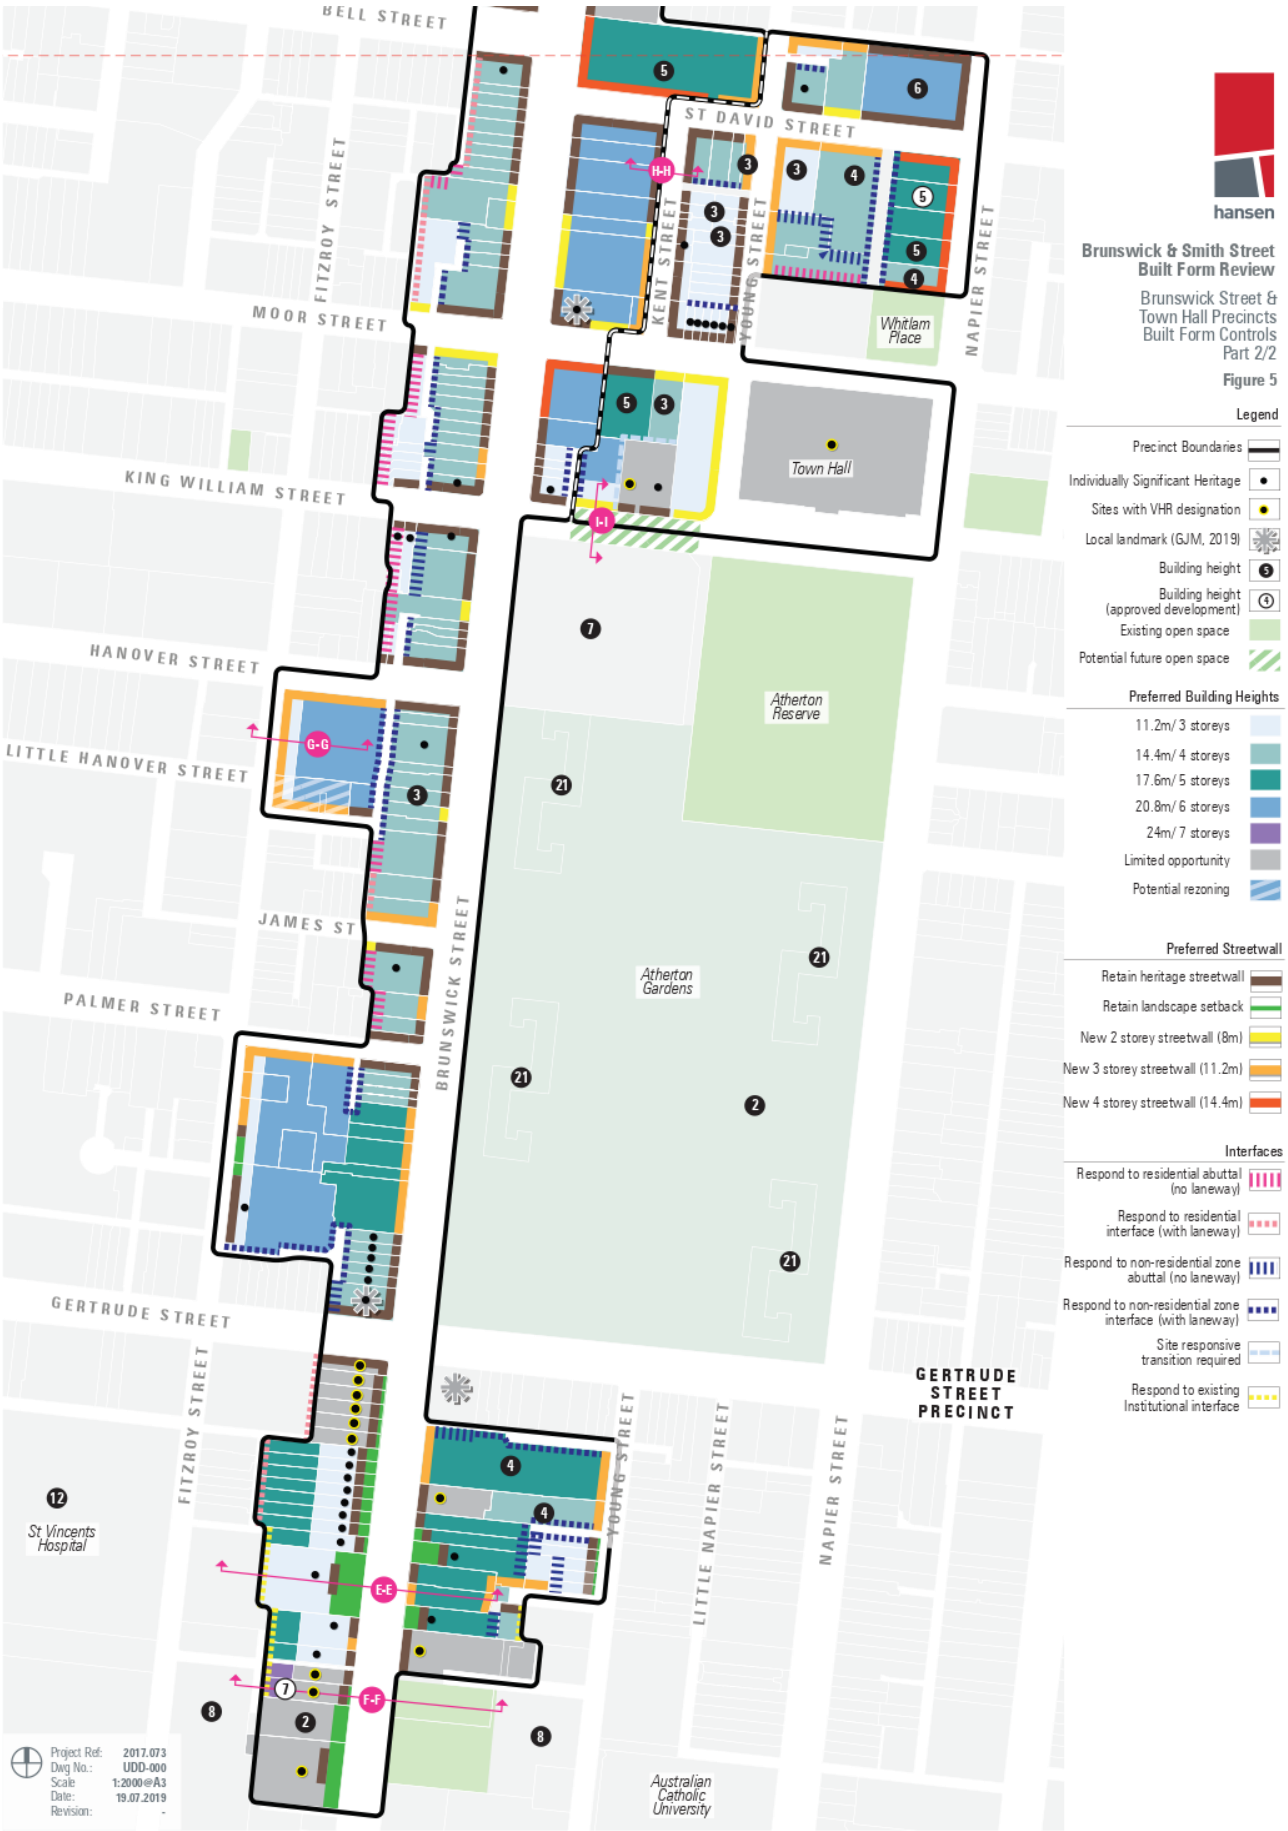
Building Separation, Amenity & Equitable Development

New development should provide a design response that considers the existing condition and future development opportunities of adjacent properties in terms of outlook, daylight and solar access to windows. Development should be setback from common boundaries to provide separation between buildings at the upper levels:

- A minimum of 4.5m from the boundary where a habitable room window is proposed;
- A minimum of 3m from the boundary where a non-habitable room window or commercial window is proposed; and
- A minimum for 4.5m from the edge of a proposed balcony or terrace.
- Where the common side boundary is a laneway, the setback is measured from the centre of the laneway.



Preferred 4.5m setback of upper levels from centreline of laneway (minimum 3m wide)



Preferred 4.5m setback of upper levels from rear boundary

Brunswick & Smith Street Built Form Review

Brunswick Street & Town Hall Precincts Built Form Controls Part 2/2

Figure 5

Legend

- Precinct Boundaries
- Individually Significant Heritage
- Sites with VHR designation
- Local landmark (GJM, 2019)
- Building height
- Building height (approved development)
- Existing open space
- Potential future open space

Preferred Building Heights

- 11.2m/ 3 storeys
- 14.4m/ 4 storeys
- 17.6m/ 5 storeys
- 20.8m/ 6 storeys
- 24m/ 7 storeys
- Limited opportunity
- Potential rezoning

Preferred Streetwall

- Retain heritage streetwall
- Retain landscape setback
- New 2 storey streetwall (8m)
- New 3 storey streetwall (11.2m)
- New 4 storey streetwall (14.4m)

Interfaces

- Respond to residential abuttal (no laneway)
- Respond to residential interface (with laneway)
- Respond to non-residential zone abuttal (no laneway)
- Respond to non-residential zone interface (with laneway)
- Site responsive transition required
- Respond to existing Institutional interface

PART 4: RECOMMENDED CONTROLS

4.1 Methodology

The formulation of future building heights and streetwall conditions within the Brunswick Street Precinct has been influenced by many factors, including:

- Planning Policy Framework;
- Local Planning Policy Framework, including Zones and Overlays;
- Practice Note No. 60 – Height and Setback Controls for Activity Centre;
- Practice Note No. 59 – The Role of Mandatory Provisions in Planning Schemes;
- City of Yarra Housing Strategy (Adopted 4 September 2018);
- Review & Development of the City of Yarra Landmarks Policy (March 2018);
- Urban Design Guidelines for Victoria, 2017;
- Anticipated scale and form of development outside the study area (i.e. within Residential and Employment Zones);
- Views to existing municipal and local landmarks from the public realm;
- Recognition of Yarra's heritage skyline;
- Recent development approvals (including those currently under-construction);
- 3D computer modelling of built form testing for the study area;
- Independent heritage advice and existing character considerations, consistent with the expert heritage advice provided by Council's heritage advisors (GJM Heritage);
- The overall Brunswick Street and Smith Street Built Form Review Background Report (November, 2019); and
- Extensive site inspections and workshops with Council's officers.
- Planning Panel Recommendations for:
  - Johnston Street Local Area Plan (C220);
  - Queens Parade Built Form Review (C231).

4.2 Assumptions

Formula for Deriving Numerical Building Heights

The maximum building heights has been calculated to a higher (than minimum) floor to floor heights in order to:

- Respond to the typical heights found within heritage buildings (between 8-11.2m);
- Accommodate for greater than minimum standards and provide flexibility for future uses;
- Allowance for other design elements to be accommodated, such as parapets, railings, etc.

The following numerical floor to floor dimensions were employed:

- Ground Floor and First Floor: 4m
- Second Floor and above: 3.2m

Note: Higher numerical floor levels for mixed use development may be required at upper levels.

Formula for Deriving Numerical Streetwall Heights

The maximum streetwall heights have been calculated based on the above floor to floor heights, plus additional height to allow for parapets, balustrades and minor architectural features.

Zero front setback

New buildings within Activity Centres and inner urban areas such as Brunswick Street should generally be built to the street frontage in order to:

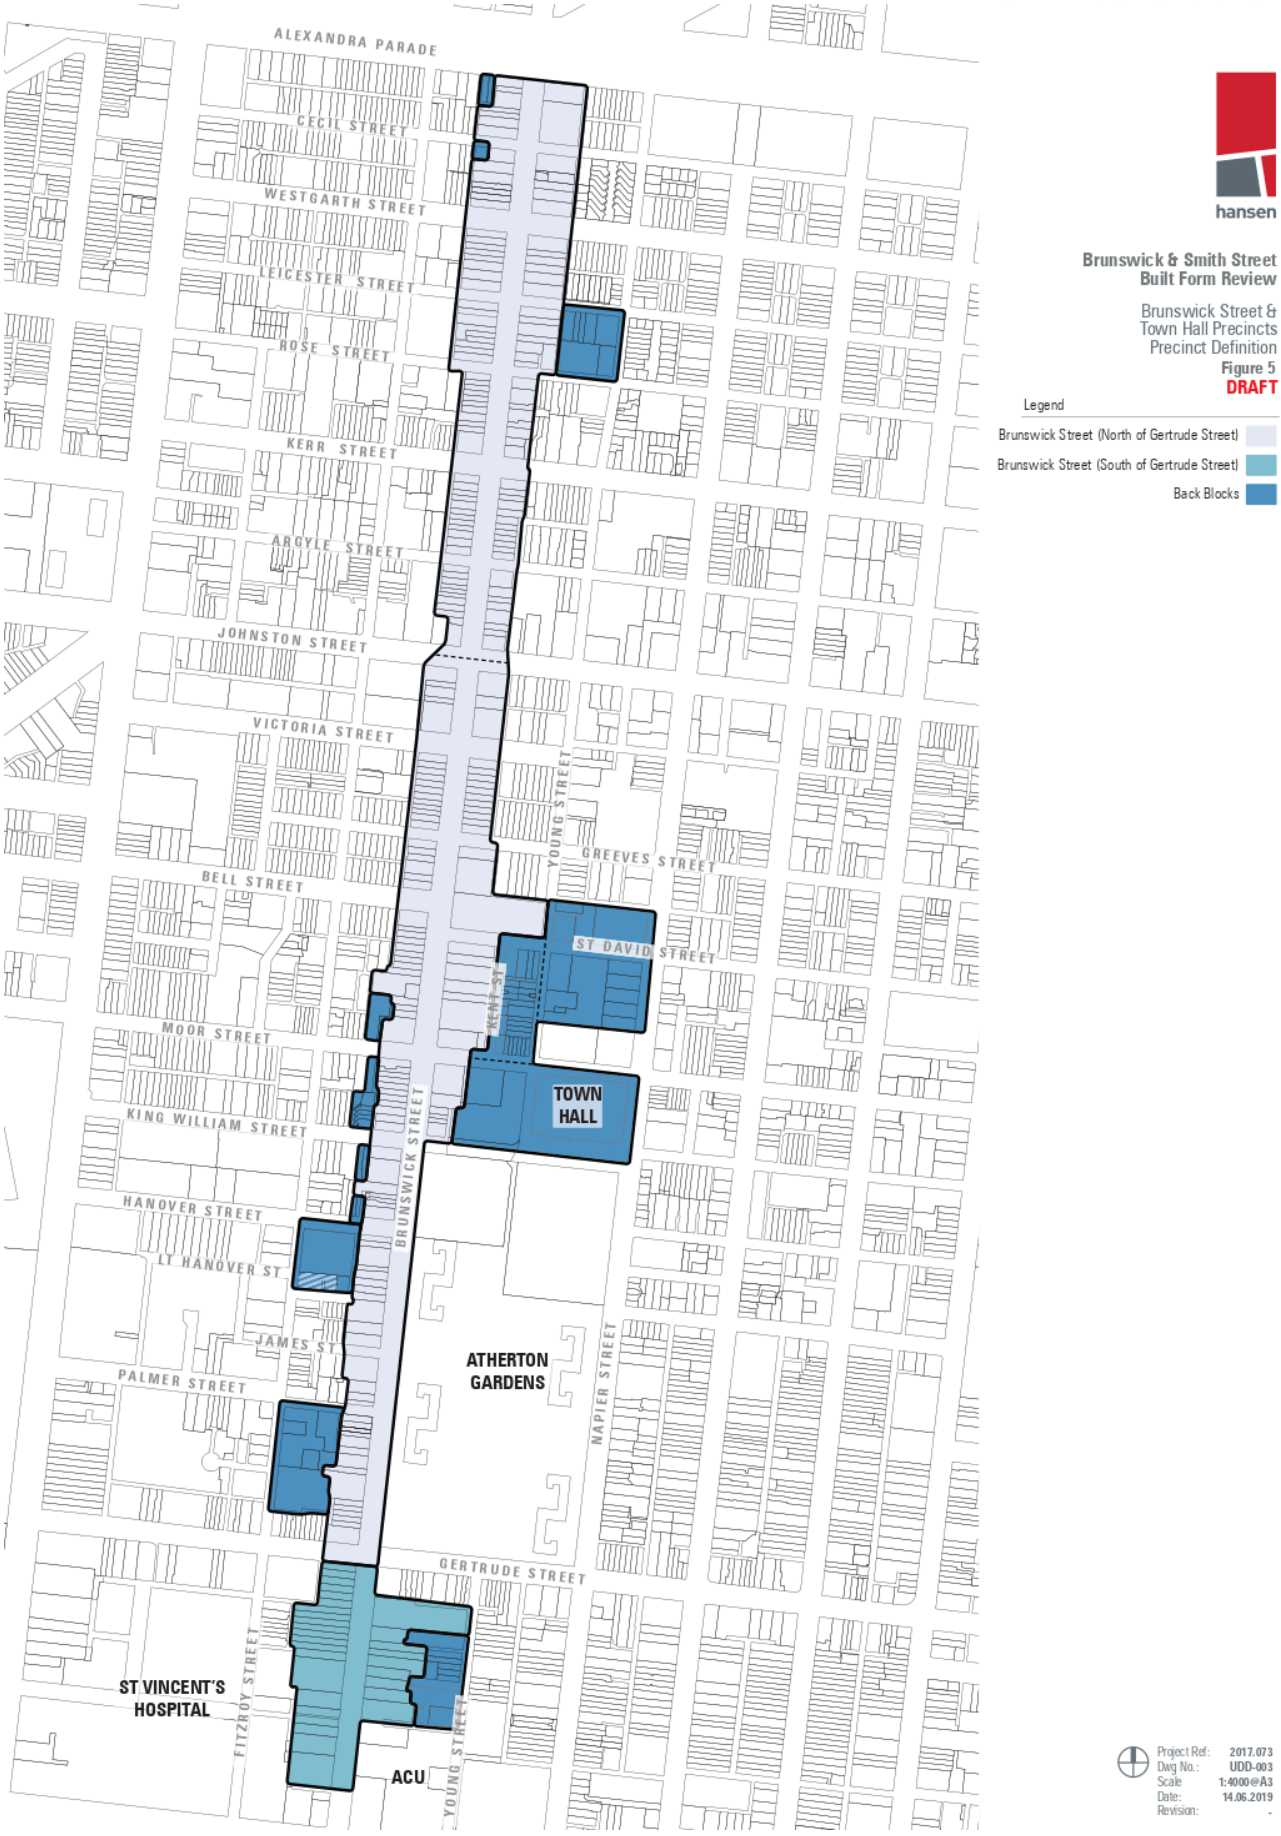
- Respond to the prevailing built form character of the area;
- Provide a clear definition at the street edge; and
- Maximise the developable area.

With the exception of retaining existing front setbacks, all new street walls within the commercial and mixed use zone should be built to boundary.

Top Floor Depth

A minimum depth of approximately 10m for the upper most level has been considered in determining overall building heights. This minimum dimension is based on a typical apartment depth, and provision of efficient access.

4.3 Precincts



Based on the linear extent of Brunswick Street and the distinction in future built form character along the corridor and to back block areas as determined by the Built Form Framework Plan the study area is divided into several precincts including:

- Brunswick Street (North of Gertrude Street)
- Brunswick Street (South of Gertrude Street); and
- Back Blocks.

PRECINCT	STREET WALLS / GROUND LEVEL SETBACKS	PREFERRED MAXIMUM BUILDING HEIGHTS
BRUNSWICK ST (NORTH OF GERTRUDE ST)	▪ Match adjoining heritage eaves/ parapet, or lower. ▪ Preserve existing buildings on VHR sites.	11.2m to 22m (3 to 6 storeys)
BRUNSWICK ST (SOUTH OF GERTRUDE ST)	▪ Retain existing front setback. ▪ Match adjoining heritage eaves/ parapet, or lower. ▪ Preserve existing buildings on VHR sites.	11.2m to 24m (3 to 7 storeys)
TOWN HALL & BACK-BLOCKS	▪ Retain existing front setback. ▪ Match adjoining heritage eaves/ parapet, or lower. ▪ 2 storeys (8m) to 3 storeys (11.2m). ▪ Preserve existing buildings on VHR sites.	11.2m to 22m (3 to 6 storeys)

The following diagram illustrates a breakdown of these precinct boundaries.

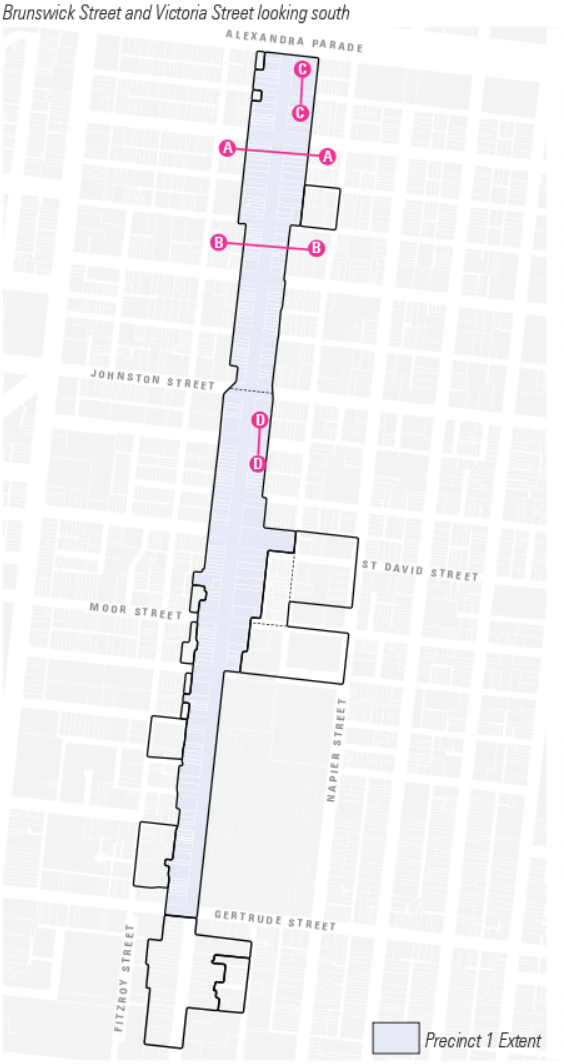
Attachment 5 - Attachment 5 - Brunswick Street Built Form Framework

PRECINCT 1: BRUNSWICK STREET, NORTH GERTRUDE STREET

This precinct comprises lots with a primary frontage to Brunswick Street between Alexandra Parade in the north and Gertrude Street in the south.

Preferred precinct character statement

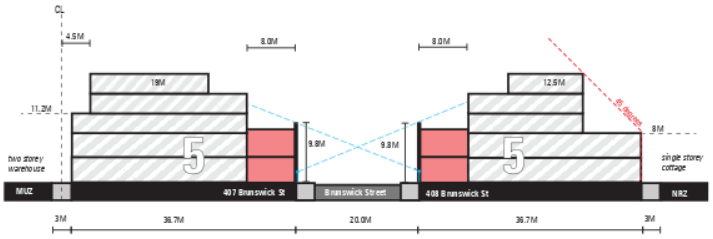
Properties fronting Brunswick Street will continue to be defined by fine grained low scaled heritage buildings. New moderate infill with be recessive in profile, befitting a 'street wall and setback' model and transition down along its residential abuttal. Where Brunswick Street intersects with east- west streets, these junctions will continue to be bookended by proud heritage forms with complementary, recessive upper levels that turn the corner, addressing both street frontages.



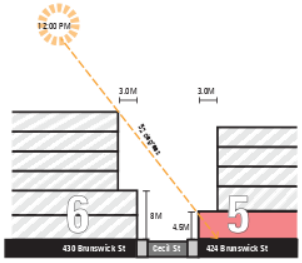
To the north of Johnston Street, the spine will reinforce the consistent street wall and subdivision grain. To the south of Johnston Street, the varied heritage street wall will be maintained, and upper levels will remain subservient in the streetscape, ensuring view lines to Municipal and Local Landmarks are preserved.

Built Form Objectives

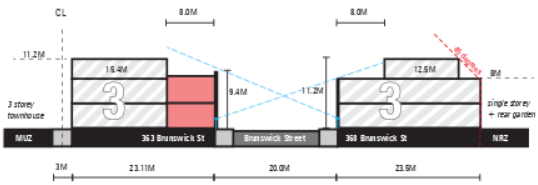
- To ensure the heritage frontage remains the visually dominant element of all development in Brunswick Street and that new development is visually recessive and does not dominate the streetscape.
- To realise a moderate mixed-use redevelopment that respects the heritage and streetscape value of the precinct.
- To support development that contributes to an active, high quality and pedestrian friendly environment.
- To enhance a consistent and orderly streetscape presentation to the north of Johnston Street.
- To maintain a diverse streetscape presentation to the south of Johnston Street.
- To ensure views to the architectural features of municipal landmarks and local landmarks are not visually cluttered or obscured.
- To minimise overshadowing impact on existing/ future open space and the opposite side of footpaths along commercial and 'green' streets.
- To ensure suitable transitions to residential interfaces.



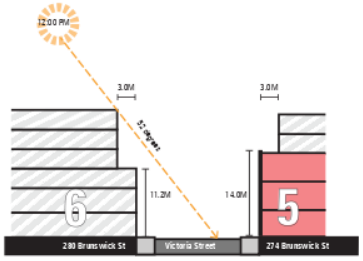
Brunswick Street and Victoria Street looking south



Guidelines



1. Establish a clear distinction between street wall and rising form behind.
2. Avoid new single storey street wall.
3. Ensure new infill street walls matches the parapet height of adjoining heritage forms.
4. Ensure new development complements heritage architectural features (grain and rhythm).
5. Ensure upper levels behind heritage street wall adopt a 'recessive' architectural language and material palette.
6. Ensure new development on corner sites is designed in the round and 'turns the corner' to address all street frontages.
7. Ensure new development avoids the presentation of overly stepped or 'wedding-cake' presentation.
8. Ensure new development maintain solar access to:
   - Brunswick Street, Johnston Street and Gertrude Street footpaths (opposite side) between 10am and 2pm at the equinox (21 September).
   - Footpaths (opposite side) of Westgarth Street, Kerr Street, Victoria Street, Bell Street, Moor Street and Fitzroy Street between 10am and 2pm at the equinox (21 September).
   - For other streets, to first floor between 10am and 2pm at the equinox (21 September).
9. Facilitate equitable development outcomes to adjacent sites through adequate building separation to side and rear boundaries.
10. Ensure exposed party walls to side boundaries are designed to be visually interesting.
11. Ensure servicing and car parking is provided from secondary side streets or rear laneways.
12. Ensure new development provides opportunities for improved passive surveillance to streets at ground and upper levels.
13. Encourage continuation of awnings over footpaths.



Brunswick Street indicative cross-section A-A

Narrow side street: Cecil Street indicative cross-section C-C

Brunswick Street indicative cross-section B-B

Wide green street: Victoria Street indicative cross-section D-D

PRECINCT 2: BRUNSWICK STREET, SOUTH OF GERTRUDE STREET

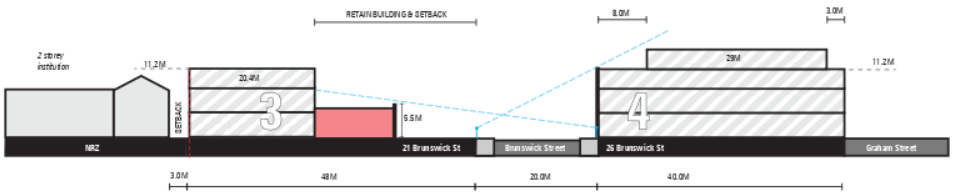
This precinct is defined by land to the south of Gertrude Street and to the north of lots fronting Victoria Parade and ACU precinct. The majority of lots have a primary frontage to Brunswick Street as well as several lots behind the Brunswick Street spine to the east with a frontage to Young Street.

Preferred precinct character statement

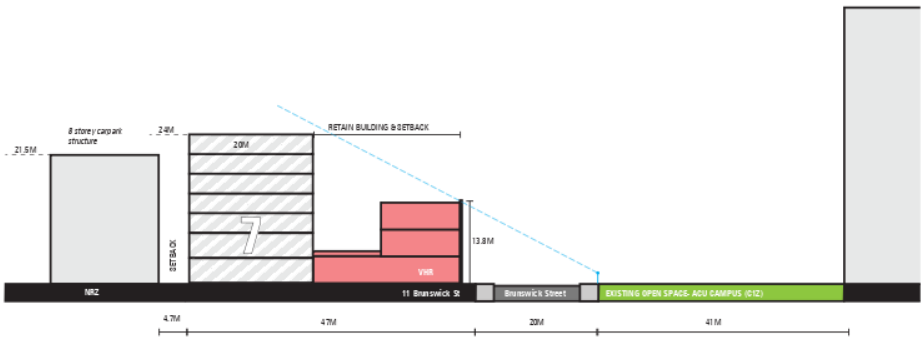
Properties fronting Brunswick Street will continue to be defined by grand heritage forms, with some ground level setbacks providing 'borrowed landscape' to the public realm. Where infill opportunity can be realised on deep allotments, it will not affect existing heritage fabric with minimal influence on the Brunswick Street skyline and streetscape. Future development will be visually recessive behind the heritage frontage, with appropriate response to its taller institutional and lower residential interfaces to the rear.

Built Form Objectives

- To ensure protection of existing built fabric on sites with VHR designation.
- To retain the heritage frontages, including street setbacks, street walls and subdivision pattern.
- To realise a moderate mixed-use redevelopment that respects the heritage and streetscape value of the precinct.
- To support development that contributes to an active, high quality and pedestrian friendly environment.
- To ensure suitable transitions to residential interfaces.
- To ensure suitable transition between existing institution precinct to the rear and the Brunswick Street frontage.



Brunswick Street and Gertrude Street looking southwest



Guidelines

1. Encourage retention and repurposing of existing built form on VHR sites.
2. Retain existing front gardens along Brunswick Street.
3. Ensure new development reinforces the domestic character of the southern part of Brunswick Street through facade articulation and material treatment
4. Ensure new infill street walls matches the parapet height of adjoining heritage forms.
5. Ensure new developments are positioned to the rear, or behind existing heritage frontage.
6. Ensure new infill street walls matches the parapet height of adjoining heritage forms.
7. Ensure new development avoids the presentation of overly stepped or 'wedding-cake' presentation.
8. Ensure new development maintain solar access to Brunswick Street footpaths (opposite side) between 10am and 2pm at the equinox (21 September).
9. Facilitate equitable development outcomes to adjacent sites through adequate building separation to side and rear boundaries.
10. Ensure exposed party walls to side boundaries are designed to be visually dynamic (to minimise visual bulk).
11. Encourage laneway extension, or widening to accommodate servicing and parking access, where existing laneway conditions are too narrow.
12. Ensure servicing and car parking is provided from secondary side streets or rear laneways.
13. Ensure new development provides opportunities for improved passive surveillance to streets at ground and upper levels.

Brunswick Street indicative cross-section E-E

Brunswick Street indicative cross-section F-F

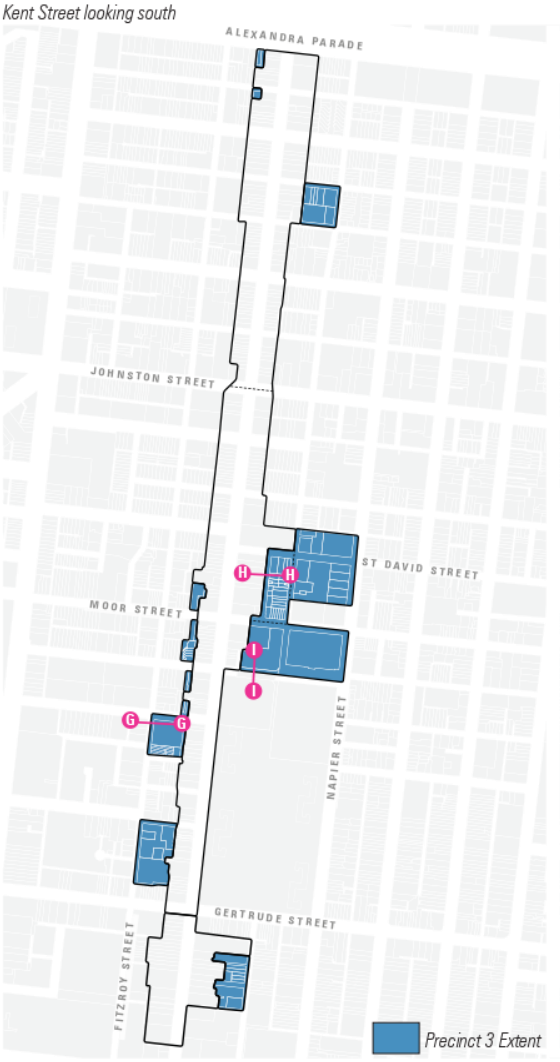
PRECINCT 3: TOWN HALL & 'BACK BLOCKS'

This precinct comprises disparate groupings of allotments, positioned behind the Brunswick Street spine which are subject to the Commercial 1 Zone and Mixed Use Zone. The key parcels of land include:

- East of Brunswick Street with frontages to Leicester, Young and Rose Streets;
- East of Brunswick Street to Napier Street, between St David Street in the north and King William Street in the south.
- West of Brunswick Street between Hanover and Fitzroy Streets; and
- West of Brunswick Street between Palmer and Fitzroy Streets.

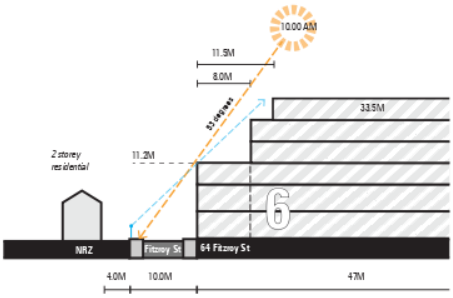
Preferred precinct character statement

Future development in the Back Block Precinct will reinforce the diversity of mixed heritage industrial and residential built form while continuing to accommodate for a recent pattern of mid-rise buildings positioned behind the Brunswick Street spine. Streetscapes within the precinct will continue to be defined by a varied pattern of fine grained dwellings, remnant warehouses with contemporary additions, including new street walls and stronger buildings on larger sites transitioning to residential interfaces.

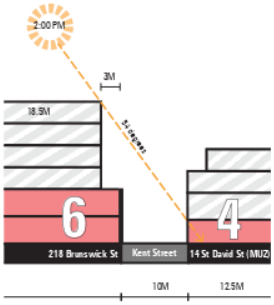


Built Form Objectives

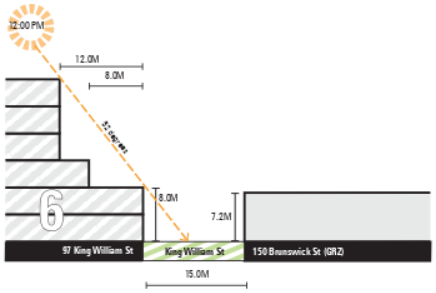
- To retain key views to the Fitzroy Town Hall (specifically the clocktower) from the corner of Young Street and Moor Street.
- To retain heritage frontages, including street setbacks and street walls.
- To realise moderate mixed-use redevelopment that respects the heritage and streetscape values of the precinct.
- To support development that contributes to a high quality, pedestrian friendly environment, behind the Brunswick Street commercial spine.
- To encourage development that is made up of parts on large, non-contributory sites to reinforce the permeability of pedestrian access and fine-grained profile of urban blocks in the precinct.
- To ensure suitable transitions to residential interfaces.



Guidelines:



Kent Street looking south



1. Ensure new development reinforces a dominant street wall presentation (where there is no heritage street wall, or street walls).
1. Encourage retention and repurposing of existing built form on VHR sites.
2. Ensure new development maintains solar access to:
   - Footpath on opposite side of Moor Street between 10 am to 2pm at the equinox (21 September).
   - First floor on opposite side of the street between 10 am to 2pm at the equinox (21 September).
   - Ensure new development minimise overshadowing of future open space between 10am and 2pm at the equinox (21 September).
3. Retain existing front setbacks including front gardens.
4. Retain existing canopy vegetation on site.
5. Ensure new development reinforces the domestic character of residential streets through facade articulation and material treatment.
6. Encourage ground level dwellings to be setback from the street frontage to accommodate new landscaping.
7. Ensure servicing and car parking is provided from secondary side streets or rear laneways.
8. Ensure new development provides opportunities for improved passive surveillance to streets at ground and upper levels.
9. Encourage streetscape improvements along Moor Street as a pedestrian priority link between Brunswick Street and Napier Street.
10. Facilitate equitable development outcomes to adjacent sites through adequate building separation to side and rear boundaries (above prescribed street wall height).
11. Ensure new development avoids the presentation of overly stepped or 'wedding-cake' presentation.
12. Encourage improvement of the public realm and investigate potential for a new public open space at King William Street reserve at the frontage of the VHR site.

Fitzroy Street indicative cross-section G-G

Narrow side street: Kent Street indicative cross-section H-H

Possible future 'green' street: King William Street indicative cross-section I-I

4.4 General Built Form Guidelines

Built Form Recommendations

A range of specific built form recommendations and design guidelines have been developed for all precincts.

These built form guidelines focus on the Brunswick Street Precinct, where future development is anticipated and design guidance is required.

Public Open Space provision

Public open space is an important element within urban areas, as is its spatial provision. There are presently no 'pocket parks' within the study area. Therefore, there is a clear lack of open space provision within this precinct. In inner urban areas such as Brunswick Street the provision of footpaths and 'pause points' at kerb outstands are important to the social health and well-being of a local community. It highlights the importance of maintaining sunlight to footpaths and kerb outstands.

Visually distinct additions and upper levels

Given the prevailing heritage character of Brunswick Street, new buildings or additions should be designed to have a visually distinctive architectural expression from the heritage element. This is in order to ensure that new form can be clearly 'read' and understood as a more recent component. It also encourages contemporary architectural responses which will contribute to the 'richness' and diversity of built form.

Lightweight materials, colours and finishes that contrast with the prevailing masonry forms are also encouraged to assist in the clear distinction between new and old, while also assist in visually recessing new forms.

Architectural Considerations

To street frontages, expansive blank walls should be avoided and where visible from within the public realm, any blank walls need to be visually divided into small elements through architectural treatments or artistic decoration to reduce visual mass.

Fenestration patterns and facade solid to void proportions need to reflect the prevailing streetscape rhythm and presentation.

New forms should 'fit' within the prevailing streetscape character. Avoid overly busy and complex architectural expressions.

Services and Vehicle access

Ensure servicing and car parking is provided from secondary side streets or rear laneways.

The consolidation of services into basement levels is highly encouraged to mitigate extent of inactive, blank walls to the public realm.

Active and Semi-Active Frontages

In Activity Centres and Mixed Use areas, buildings must provide sufficient activation at street level to foster 'life' on the street and provide opportunities to maximise safety via passive surveillance.

Along the key movement corridors active ground frontages are encouraged. This is particularly relevant for Brunswick Street, to the north of Gertrude Street.

Along local streets and mixed use areas, semi-active frontages are more appropriate. As these 'less active' frontages still maintain an appropriate level of passive surveillance, while also providing more privacy and seclusion to the inside of the building, befitting the nature of the use being either primarily office or dwelling.

Direct pedestrian entries into ground floor uses is encouraged, particular on larger sites, with broad frontages.

Upper levels also provide 'eyes on the street' and contribute to passive surveillance of the public realm. Windows and balconies that orientate towards the street are encouraged.

Recent development in Napier Street

Existing Vehicle Access Arrangements

1. Introduction

Yarra City Council has initiated Built Form Frameworks for the Brunswick Street and Smith Street Activity Centres. These Built Form Frameworks will define the preferred future built form character of the precincts and include principles, guidelines and requirements to guide future development and to manage the level of change. Importantly, these frameworks will inform the preparation of future Design and Development Overlay (DDO) controls and policy for these areas.

The frameworks provide a guide as to what developmental changes can be expected within the Brunswick Street and Smith Street Activity Centres in the future at such time that they are implemented as DDO controls and ultimately, resulting in increased development. This increase in development has the potential to pose transport challenges for all modes along the Brunswick Street and Smith Street corridors and immediate areas.

In particular, a number of traffic engineering related issues have arisen through the creation and analysis of the framework process, including:

- concern in relation to the impact that additional development may have on the transport network, including the network performance of Brunswick Street, Smith Street and the local road network,
- the need for controls to address preferred vehicle arrangements for the Brunswick Street and Smith Street Activity Centres to support the level of development being proposed and to guide decision making and policy formulation,
- the suitability of narrow laneways to provide appropriate access to new development and movement opportunities for people, cyclists, cars and service vehicles, and
- likely Department of Transport concerns relating to vehicle access arrangements to properties on Brunswick Street and Smith Street and the potential impact on the safety and efficiency of the road and tram network.

While the traffic impacts of this growth on this constrained network this is acknowledged as a consideration, there is strong and committed strategic policy support to facilitate increased commercial and residential development in the Brunswick Street and Smith Street Activity Centres. In considering the planning of similar centres across Melbourne, Planning Panels have acknowledged that "future congestion should not stifle development"[1] and the "challenge of managing the road network should not prevent the Amendment from progressing"[2].

It is important that this project recognises the network constraints, the strong strategic support for development in the precinct, and the approach of Planning Panels in the discussion and advice on the future traffic conditions and future performance of Brunswick Street, Smith Street and the local road network. In particular, this project must help to ensure that future consideration of traffic issues is focused on how best to manage the impacts of

1 Panel Report for Moreland Amendment C123

2 Panel Report for Moreland Amendment C134

future development through improved access arrangements and measures to promote sustainable and active modes of travel through new development.

Traffix Group has been engaged by Yarra City Council to undertake an assessment of the future access arrangements, prepare access and movement plans and provide input into the content of the future Design and Development Overlay to facilitate appropriate access and movement throughout the Activity Centres. The objective of the access and movement plans is to facilitate 'best practice' access controls to properties abutting Brunswick Street and Smith Street (or located within the 'study area') and specifically:

- To maximise the efficiency of the arterial road network.
- To ensure appropriately managed vehicle access is provided to properties within the Activity Centres.
- To minimise the potential for vehicle conflicts within laneways, ensuring appropriate treatments are put into place to maximise the capacity of laneways and local roads.
- To minimise impacts on tram and public transport services.
- Provide a high quality pedestrian environment along Brunswick Street and Smith Street.
- To minimise where possible the number of vehicle access points directly to arterial roads.
- Provide appropriate vehicle access to properties, including loading and waste collection considerations.

2. Scope & Methodology

The adopted methodology for undertaking this study was as follows:

- Undertake thorough site inspections of the entire study areas to document and map (with a main focus on properties abutting arterial and higher order roads):
  - existing access arrangements for each individual property,
  - existing traffic management treatments for all arterial and local roads and rear laneways within the study areas,
  - existing configuration of each road and laneway within the study areas (including carriageway width and road reservation width), and
  - foreseeable access constraints to each individual property should development occur.
- Review and categorisation of laneways into 3 categories (unconstrained, partially constrained or highly constrained) in order to better understand their potential to currently accommodate additional traffic under their existing conditions and configuration. Key factors include laneway width, laneway length, laneway connections (i.e. continuous or dead-end) and physical layout (i.e. bends within the laneway network). These factors are discussed in more detail further in the report.
- High level review of the developmental changes forecast within the Built Form Framework in regards to traffic impacts, in particular the intensity of traffic movements and vehicle circulation within the surrounding road network within the Brunswick Street and Smith Street Activity Centres.

- Review of the capacity for laneways and local roads to accommodate the forecast level of traffic based on development potential and their existing configuration.
- Review of what configuration or adjustments may be necessary to laneways or local road configurations in order to accommodate this increase in vehicle movements and to minimise potential for vehicle conflicts within the study areas. In particular, impacts on Arterial Roads to be minimised as much as practically possible.
- Liaise with stakeholders including representatives from Council to understand the relevant authority concerns and desirable access outcomes having regard to the potential impact on the safety and efficiency of the road and tram network.
- Make recommendations as to the location and form of new, altered and retained access arrangements and laneways required to provide appropriate access to future developments.
- Prepare draft wording for the traffic engineering aspects of the future Design and Development Overlay, which sets out design objectives and outcomes, permit application requirements, and decision guidelines for assessing future planning permit applications, based on the desired access outcomes for future development.

3. Policy Context

3.1. Plan Melbourne 2017-2050

Plan Melbourne is the State Government plan that will guide the growth of Melbourne city for the next 35 years. It sets the strategy for supporting jobs, housing and transport, while building on Melbourne's legacy of distinctiveness, liveability and sustainability.

The plan includes a number of key transport and urban planning objectives that the Built Form Framework aims to facilitate. The most relevant objectives are listed in the table below.

Table 1: Key Objectives of Plan Melbourne in relation to the Brunswick Street and Smith Street Activity Centres

Outcome	Directions	Policy
Outcome 2 Melbourne provides housing choice in locations close to jobs and services.	Manage the supply of new housing in the right locations to meet population growth and create a sustainable city.	Facilitate an increased percentage of new housing in established areas to create a city of 20-minute neighbourhoods close to existing services, jobs and public transport.
	Deliver more housing closer to jobs and public transport.	Facilitate well-designed, high-density residential developments that support a vibrant public realm in Melbourne's central city. Direct new housing and mixed-use development to urban renewal precincts and sites across Melbourne. Support new housing in activity centres and other places that offer good access to jobs, services and public transport

Outcome	Directions	Policy
		Provide support and guidance for greyfield areas to deliver more housing choice and diversity.
Outcome 3 Melbourne has an integrated transport system that connects people to jobs and services and goods to market.	Transform Melbourne's transport system to support a productive city.	Provide high-quality public transport access to job-rich areas. Improve arterial road connections across Melbourne for all road users. Provide guidance and certainty for land use and transport development through the Principal Public Transport Network and the Principal Freight Network. Improve the efficiency of the motorway network. Support cycling for commuting.
	Improve local travel options to support 20-minute neighbourhoods.	Create pedestrian-friendly neighbourhoods. Create a network of cycling links for local trips. Improve local transport choices.
Outcome 5 Melbourne is a city of inclusive, vibrant and healthy neighbourhoods.	Create a city of 20-minute neighbourhoods.	Create mixed-use neighbourhoods at varying densities. Support a network of vibrant neighbourhood activity centres.
	Create neighbourhoods that support safe communities and healthy lifestyles.	Improve neighbourhoods to enable walking and cycling as a part of daily life.

3.2. State Planning Policy Framework (SPPF)

Clause 18 of the SPPF details state-wide objectives, strategies and policy guidelines relating to transport, including land use and transport planning, the transport system, walking, cycling, the principal public transport network, management of the road system, car parking ports, airports and freights.

The SPPF Transport objectives that are relevant to Yarra are set out in Table 2 below.

Table 2: SPPF Transport Objectives

Clause	Objectives
18.01-1 Land Use and Transport Planning	To create a safe and sustainable transport system by integrating land-use and transport.
18.01-2S Transport System	To coordinate development of all transport modes to provide a comprehensive transport system.
18.02-1S Sustainable Personal Transport	To promote the use of sustainable personal transport.
18.02-2S Cycling	To integrate planning for cycling with land use and development planning and encourage as alternative modes of travel.
18.02-2R Principal Public Transport Network	To upgrade and develop the Principal Public Transport Network and local public transport services in Metropolitan Melbourne to connect activity centres, link activities in employment corridors and link Melbourne to the regional cities.
18.02-3S Management of the Road System	To manage the road system to achieve integration, choice and balance by developing an efficient and safe network and making the most of existing infrastructure.
18.02-4S Car Parking	To ensure an adequate supply of car parking that is appropriately design and located.

A copy of Clause 18 of the Planning Scheme is attached at Appendix A, and details the strategies and policy guidelines relating to each of the objectives listed in Table 2.

Detailed state-wide requirements in relation to car parking, loading and bicycle parking are set out at Clause 52.06, 65.01 and 52.34 of the Planning Scheme respectively.

3.3. Local Planning Policy Framework

While Clause 18 sets out the state-wide planning policy in relation to transport, each Council also sets its own local policies at Clauses 20, 21 and 22 of the Planning Scheme.

Clause 21 sets out the Municipal Strategic Statement (MSS).

Clause 21.03 sets out the vision for the municipality, as follows:

Land Use

- *The City will accommodate a diverse range of people, including families, the aged, the disabled, and those who are socially or economically disadvantaged.*
- *Yarra will have increased opportunities for employment.*
- *There will be an increased provision of public open space.*
- *The complex land use mix characteristic of the inner City will provide for a range of activities to meet the needs of the community.*
- *Yarra's exciting retail strip shopping centres will provide for the needs of local residents, and attract people from across Melbourne.*

Built Form

- *Yarra's historic fabric which demonstrates the development of metropolitan Melbourne will be internationally recognised.*
- *Yarra will have a distinctive identity as a low-rise urban form, with areas of higher development and highly valued landmarks.*
- *People will safely get together and socialise in public spaces across the City.*
- *All new development will demonstrate design excellence.*

Transport

- *Local streets will be dominated by walkers and cyclists.*
- *Most people will walk, cycle and use public transport for the journey to work.*

Environmental sustainability

- *Buildings throughout the City will adopt state-of the-art environmental design.*
- *Our natural environment will support additional species of flora and fauna.*

This vision is pursued by the objectives and strategies set out in the land use, built form, transport, environmental sustainability and neighbourhood sections under Clauses 21.04-21.08.

Clause 21.06 sets out Yarra's detailed local Transport policy. The preamble states the following:

Yarra needs to reduce car dependence by promoting walking, cycling and public transport use as viable and preferable alternatives. This is also a key message of Melbourne 2030 and fundamental to the health and well-being of the community.

While the scope of the planning scheme in managing an integrated transport system is limited, Council will work towards improving the quality of walking and cycling infrastructure as a priority. Note that the term "walking" includes people who use wheelchairs.

Parking availability is important for many people, however in Yarra unrestricted car use and parking is neither practical nor achievable. Car parking will be managed to optimise its use and to encourage sustainable transport options.

The specific objectives and strategies for Transport management in Yarra are detailed in Table 3 below.

Table 3: LPPF Transport Objectives & Strategies

Clause	Objective	Strategies
21.06-1 Walking & Cycling	To provide safe and convenient pedestrian and bicycle environments.	30.1 Improve pedestrian and cycling links in association with new development where possible. 30.2 Minimise vehicle crossovers on street frontages. 30.3 Use rear laneway access to reduce vehicle crossovers.
21.06-2 Public Transport	To facilitate public transport usage.	31.1 Require new development that generates high numbers of trips to be easily accessible by public transport.
21.06-3 The Road System & Parking	To reduce the reliance on the private motor car.	32.1 Provide efficient shared parking facilities in activity centres. 32.2 Require all new large developments to prepare and implement integrated transport plans to reduce the use of private cars and to encourage walking, cycling and public transport.
	To reduce the impact of traffic.	33.1 ensure access arrangements maintain the safety and efficiency of the arterial and local road networks. 33.2 Ensure the level of service needed for new industrial and commercial operations does not prejudice the reasonable needs of existing industrial and commercial operations to access Yarra's roads.

The City of Yarra is currently undertaking a review of a number of Municipal Strategic Statement (MSS) policy themes, including Transport.

Yarra's Planning Scheme Review – Report on Findings (October 2014) sets out the following in relation to the current Transport policy in the Planning Scheme:

> *An effective and efficient transport network is at the heart of a vibrant, equitable and prosperous municipality. In inner city environments, the management of the limited road and transport space and resources can require balancing of a number of objectives. This is a particular challenge in Yarra, due to the travel demands generated by:*
>
> - *the strategic location of the municipality on the edge of the central city*
> - *the significant and growing mobile population, and*
> - *the presence and proximity of major event attractors.*
>
> *Transport is currently addressed separately in the Context and Vision provisions of the Scheme as well as in strategy at Clause 21.06. It is also addressed in some specific policies such as the parking, access and traffic provisions of Built Form and Design Policy (Clause 22.10).*
>
> *The current policy expresses a preference to reduce car dependency and encourage walking, cycling and public transport use. This appears to have had some success, with Yarra having a higher bicycle use rate than other parts of Melbourne.*

There are still, however, inconsistencies regarding the requirement for Green Travel Plans, the use of car share schemes and reductions or waiving of on-site car parking.

Carparking was considered a particularly contested political issue in the initial consultation; any position or strategy regarding carparking is unlikely to satisfy all stakeholders. The Parking Strategy and Local Area Transport Management Policy provides a framework for the development of local area traffic management schemes.

The Scheme would be assisted with clear direction about how Council seeks to facilitate greater use of public transport, walking and cycling, and how and in what circumstances this will translate into reduced car parking, car sharing schemes and the like. The approach should include consideration of car parking in activity centres on a precinct wide basis (rather than site-by-site) as well as strategies relating to visitor car parking and increased bicycle parking.

Relevant additional policies and studies (which do not form part of the Planning Scheme) are summarised below.

3.3.1. Clause 22.07 – Development Abutting Laneways

The City of Yarra has a specific policy in relation to development abutting laneways.

The local policy identifies the need to retain existing laneways and enhance their amenity. It also states that, where appropriate, laneway access for vehicles is to be used in preference to street frontages to reduce vehicle crossovers.

Objectives

- To provide an environment which has a feeling of safety for users of the laneway.
- To ensure that development along a laneway acknowledges the unique character of the laneway.
- To ensure that where development is accessed off a laneway, all services can be provided to the development.
- To ensure that development along a laneway is provided with safe pedestrian and vehicular access.

Policy

It is policy that:

- Where vehicular movement in the laneway is expected to cause a material traffic impact, a traffic impact assessment report be provided to demonstrate that the laneway can safely accommodate the increased traffic.
- Where alternative street frontage is available, pedestrian access from the street be provided.
- Pedestrian entries be separate from vehicle entries.
- Pedestrian entries be well lit to foster a sense of safety and address to a development. Existing lights may need to be realigned, or have brackets or shields attached or additional lighting may be required.

- Lighting be designed to avoid light spill into adjacent private open space and habitable rooms.
- Vehicle access be provided to ensure ingress and egress does not require multiple vehicular movements.
- Windows and balconies overlook laneways but do not unreasonably overlook private open space or habitable rooms on the opposite side of the laneway.
- Development respect the scale of the surrounding built form
- Development not obstruct existing access to other properties in the laneway.
- Doors to car storage areas (garages) not protrude into the laneway.
- The laneway not be used for refuse storage.
- All laneway upgradings which provide improved access to the development be funded by the developer.
- The laneway meet emergency services access requirements.

3.3.2. Council Transport Statement 2006

City of Yarra's Strategic Transport Statement 2006 sets out a clear desire to reduce car dependence in the City of Yarra by promoting walking, cycling and public transport use as viable and preferable alternatives.

The Strategic Transport Statement sets out the following hierarchy of transport modes which forms the basis for decision making and actions related to transport in the City:

1. Pedestrians (including wheelchairs and walking with prams)
2. Cyclists
3. Tram
4. Bus/train
5. Taxi users/car sharers
6. Freight vehicles
7. Motorcyclists
8. Multiple occupants local traffic
9. Single occupants local traffic
10. Multiple occupants through traffic
11. Single occupants through traffic

The vision of Council's Transport Statement 2006 is ... *"to create a city which is accessible to everyone irrespective of levels of personal mobility and where a fulfilling life can be had without the need for a car"*.

There are seven key Strategic Transport Objectives (STO) to achieve this vision.

Of particular relevance is STO 5, which is to … *"ensure Council's response to parking demand is based on Yarra's hierarchy and sustainable transport principles"*.

3.3.3. Transport Statement Review 2012

The City of Yarra's Strategic Transport Statement was reviewed in 2012.

Relevant key actions include the following:

- *Develop guidelines for assessing planning permit applications for car parking dispensation.*
- *Develop guidelines for car share operators that address the issues of location, number of bays and signage so that operators are clear as to the process and responsibilities.*

3.3.4. Yarra Parking Management Strategy

The Yarra Parking Management Strategy provides the framework around Yarra's policies for parking permit schemes, parking enforcement, the provision of disability access parking, managing parking around shopping strips, signage and all other parking-related issues and topics.

Council's website states that the fundamental aims of the Strategy are:

- *to reduce the number of cars parking in Yarra,*
- *to promote public transport as an alternative to driving, and*
- *to ensure visitors contribute to the cost of providing Yarra's parking infrastructure.*

A key aim underpinning this strategy is Council's desire to promote sustainable travel, such as cycling, walking and public transport.

Action Area 4 of Council's Parking Management Strategy is an integrated approach for Municipal Parking Strategy and in particular identifies a need to further develop Yarra's policy to provide a disincentive to car ownership and use by working with other sections of Council to promote behaviour change, sustainable transport and introduce more sustainable transport infrastructure.

3.3.5. Liveable Yarra Project

In 2015 Council undertook an extensive community engagement process known as the "Liveable Yarra Project". The consultation consisted of a number of elements including a People's Panel, Advisory Committees, and Targeted Community Workshops, and covered a range of topics, one of which was "Access and Movement".

The "engagement summary" document prepared by Capire Consulting Group (January 2016) summarised the consultation in relation to access and movement as follows:

> *"Access and movement received the highest number of priority votes at 64. Actions around the improvement of cycling, walking and non-automotive transport modes were strongly supported. Panel members suggested trialling street closures to "reclaim" street share for cyclists and pedestrians. The trade-off of busier arterials was seen as largely acceptable pending the trials. Panel members were very supportive of Council efforts to lobby for public transport upgrades."*

The specific Access and Movement recommendations which were summarised in the "engagement summary" document are as set out in Table 4 below.

Table 4: Summary of Parking Recommendations from Liveable Yarra Project

Action No.	Action	Support from People's Panel
1	Articulate targets for street share. Develop a municipality wide plan for transport and access.	86% support 12% not sure 2% disagree
2	Close local (residential) streets to through traffic including living streets.	36% support 48% not sure 16% disagree
3	Increase space for pedestrians and bikes, dedicated lanes/corridors. Decrease car space on the streets.	63% support 22% not sure 15% disagree
4	Require better bicycle parking as part of major development.	76% support 14% not sure 10% disagree
5	Reduce barriers that discourage riding, improve safety, connections, lighting. Council to provide additional cycling infrastructure – a comprehensive network that consistently provides a good level of service.	75% support 18% not sure 7% disagree
6	Move away from a "predict and provide" approach to providing car parking in new development.	86% support 12% not sure 2% disagree
7	Continue to work with State Government to improve performance of current public transport infrastructure assets.	36% support 48% not sure 16% disagree
8	Continue lobbying for improved public transport (new infrastructure and services).	63% support 22% not sure 15% disagree

4. Brunswick Street/Smith Street Built Form Framework

Brunswick Street and Smith Street are important commercial and retail areas within the Yarra Local Government Area that has been identified in State and local planning policy documents as an area suitable for accommodating significant residential and commercial growth, principally through redevelopment of sites and development in new upper levels to existing buildings.

Built Form Frameworks are being prepared for the Brunswick Street and Smith Street Activity Centres. These provide recommendations in relation to building heights and setbacks, amongst other areas and will guide the future form and development in these centres.

This report informs and supports the traffic engineering aspects of the Built Form Framework. It seeks to manage the impact of new development by encouraging appropriate vehicle access outcomes, in particular the use of side and rear frontages for vehicle access instead of arterial roads. This strategy is important to promoting pedestrian and cycle friendly environments and support public transport services along these roads.

The development outcomes proposed under the Built Form Framework have been taken into account when formulating our recommendations. In particular, the envisioned development intensity abutting and accessing the local road/laneway network has been a key factor in the recommendations of this report. The main focus of this report is adjoining properties to the arterial road network and higher order roads.

5. Existing Conditions

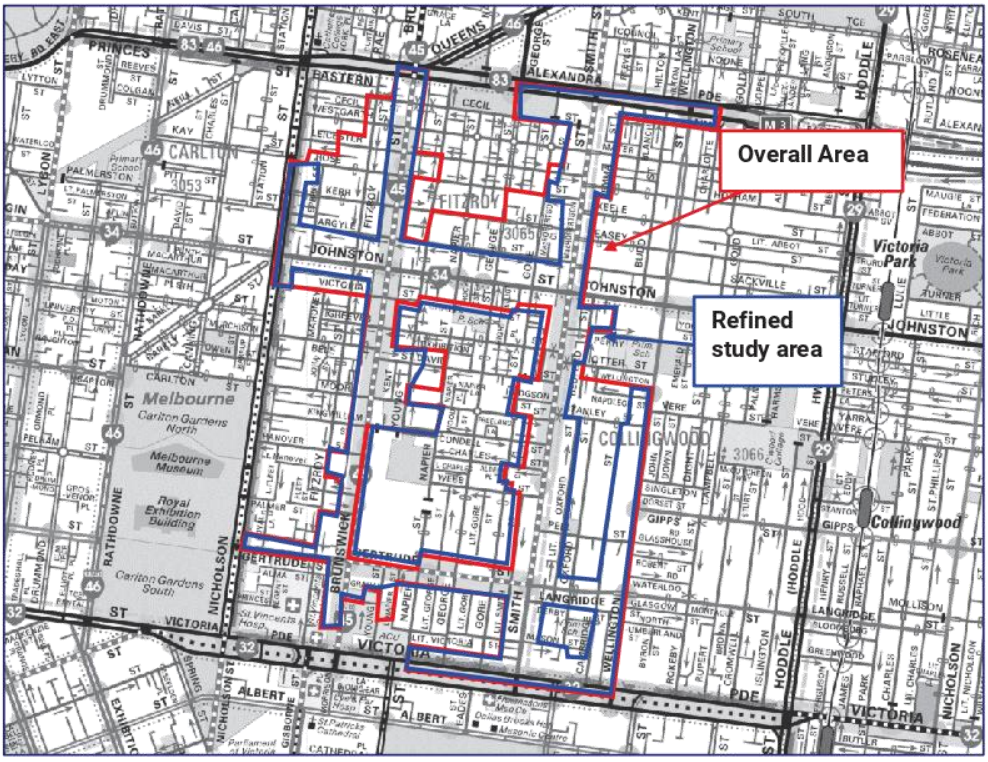
5.1. Study Areas

The study areas extend for approximately 1.7km long sections of Brunswick Street and Smith Street between Alexandra Parade and Victoria Parade. The study area also includes sections of Johnston Street, Gertrude/Langridge Street and Alexandra Parade.

This is shown in the locality plan provided on the following page at Figure 1.

Land within the study areas is generally zoned 'Commercial 1 Zone' and 'Mixed Use Zone', as shown in Figure 2. Both figures show the overall study area, in addition to the area of focus of this report, which includes all properties adjacent to arterial roads and higher order roads

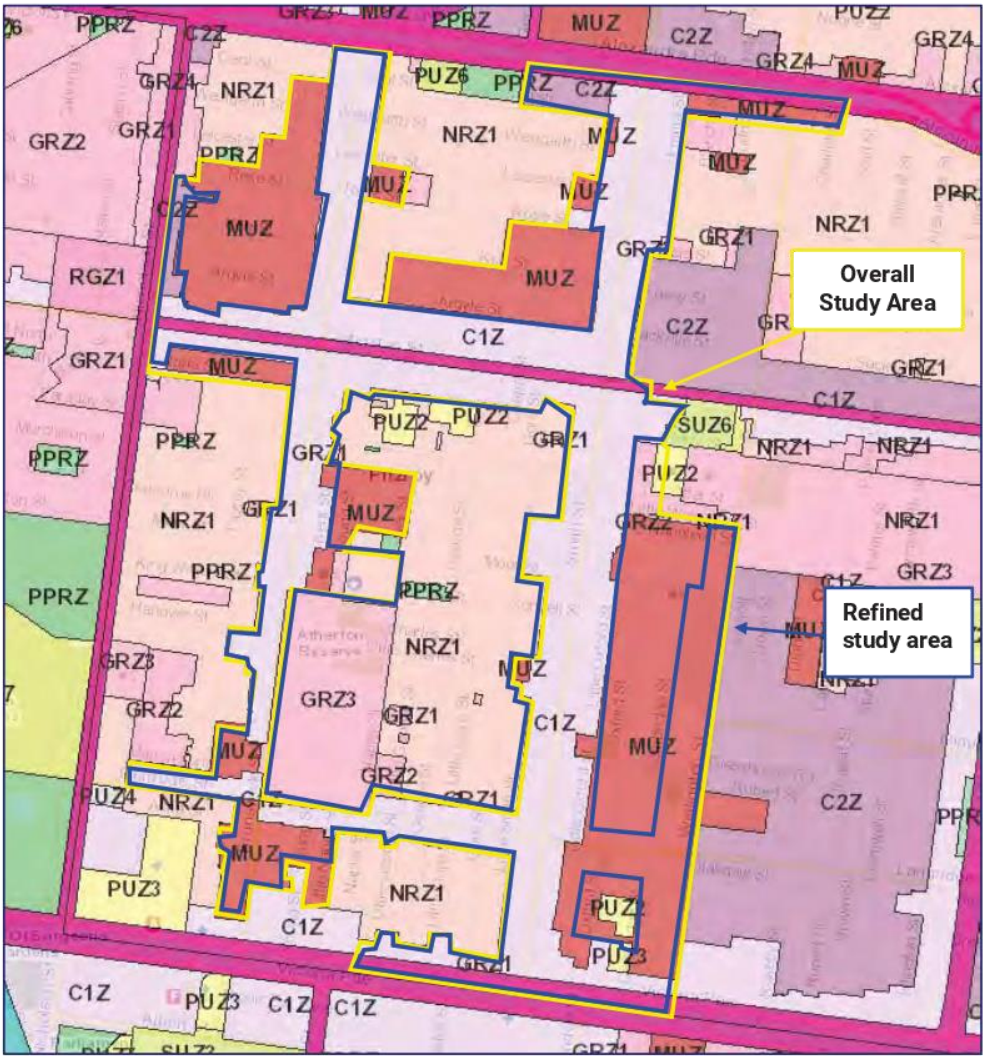
Significant land uses within the vicinity of the study area include:



- Smith Street Reserve/Fitzroy Swimming Pool, located on Alexandra Parade, between Young Street and George Street.
- Fitzroy Primary School, located on Chapel Street, between Napier Street and George Street.
- Melbourne Polytechnic (Collingwood), located east of Smith Street, between Perry Street and Otter Street.

- St Josephs Primary School, located on Wellington Street, between Perry Street and Otter Street.
- Sacred Heart Primary School, located on Young Street, between Moor Street and King William Street.
- Fitzroy Town Hall, located corner of Moor Street and Napier Street.
- Atherton Reserve, located corner of Napier Street and King William Street.
- Academy of Mary Immaculate Secondary College, located on Nicholson Street between Hanover Street and Palmer Street.
- St Vincents Hospital, located corner of Nicholson Street and Victoria Parade.
- Australian Catholic University, located corner Brunswick Street and Victoria Parade

In the wider area, the following Activity Centres and key land uses are located in close proximity to the study area:



- Carlton Gardens/Melbourne Museum, located adjacent to the study area on the west.
- The Melbourne CBD (Hoddle Grid) begins approximately 450m south-west of the study area.
- The Victoria Street Activity Centre begins approximately 550m east of the study area.
- The Melbourne Cricket Ground, located approximately 1km south of the study area.
- The Bridge Road Activity Centre, located approximately 1km south-east of the study area.

All of these areas are readily accessible from the study area via walking, cycling or a short public transport trip.

Figure 1: Locality map

Source: Planning Schemes Online

Figure 2: Land use zoning map

5.2. Road Network

The following section describes the higher order roads within the study areas. This study has also reviewed the local roads and laneways within the study area.

A detailed review of the existing traffic management measures on arterial and local roads within the study areas is provided at Appendix B.

A detailed review of the existing conditions of ROWs is included at Appendix C of this report.

A map of existing vehicle access points to properties within the study area abutting arterial roads is included at Appendix D of this report.

There are a total of 5 Council arterial roads and 4 VicRoads arterial roads (Road Zone Category 1) within the study area. These are summarised in the following table.

Table 5: Summary of Arterial Roads

Road Name	General Configuration	Speed Limit	Notes
Council Arterial Roads			
Brunswick Street	Traffic lane, parking lane and bicycle lane in each direction, separated by painted median	40km/h	Central lane shared with trams
Smith Street	Traffic lane and shared bicycle/parking lane in each direction, separated by painted median	40km/h	Central lane shared with trams
Wellington Street	Traffic lane and shared bicycle/parking lane in each direction, separated by painted median	40km/h	To the south of Gipps Street, the bicycle lane is provided via Copenhagen style lanes.
Gertrude Street	Traffic lane and shared indented parking/bicycle lane in each direction	40km/h	Central lane shared with trams, becomes Langridge Street to the west of Smith Street
Langridge Street	Traffic lane, parking lane and bicycle lane in each direction, separated by painted median	40km/h	Becomes Gertrude Street to the east of Smith Street
VicRoads Arterial Roads			
Alexandra Parade	Three traffic lanes and a parking lane in each direction, separated by a central median	60km/h	There are sections where a bicycle lane is provided, however this is not continuous
Johnson Street	A traffic lane and shared bus lane/kerbside parking lane in each direction. There is also a central contraflow traffic lane.	40km/h 7am-3am, 60km/h all other times.	AM and PM clearway restrictions apply to the south and north kerbside lanes, at which times these lanes become dedicated bus lanes

Road Name	General Configuration	Speed Limit	Notes
Victoria Parade	Three traffic lanes, a bus lane and a parking lane in each direction, separated by a central median. Tram tracks are provided within the central median.	60km/h	The bus lane is shared with cyclists.
Nicholson Street	Two traffic lanes in each direction, separated by a central tram fairway. Kerbside parking is also provided at sections of the road	60km/h to the north of King William Street, 40km/h to the south	-

5.2.1. Arterial Road Traffic Volumes

The following table sets out the Average Annual Daily Traffic Volumes of the arterial roads within the study area. This information is sourced from the VicRoads Arterial Road Database (April, 2018). Data is only available for the VicRoads arterial roads and does not include those operated by Council.

Table 6: Arterial Road Traffic Volumes (Source: VicRoads Arterial Road Database – April 2018)

Road Name	Average Annual Daily Traffic Volume
Alexandra Parade	
Btw Nicholson/Brunswick	77,000
Btw Queens/George	71,000
Btw Smith/Wellington	66,000
Johnson Street	
Btw Nicholson/Brunswick	19,300
Btw Brunswick/Smith	20,000
Btw Smith/Wellington	18,400
Victoria Parade	
Btw Nicholson/Gisborne	36,000
Btw Gisborne/Brunswick	42,000
Btw Brunswick/Lansdowne	48,000
Btw Lansdowne/Smith	40,000

Road Name	Average Annual Daily Traffic Volume
Btw Smith/Clarendon	43,000
Btw Clarendon/Wellington	46,000
Nicholson Street	
Btw Victoria/Gertrude	17,200
Btw Gertrude/Johnson	17,300
Btw Johnson/Princes	20,000

5.2.2. Traffic Conditions

Key intersections along Brunswick Street and Smith Street and the surrounding arterial road network are operating at or near capacity during peak hours. Various traffic analysis conducted by Traffix Group and other consultants have found that these intersections operate at or near capacity during the commuter peak hours, with congestion on one or more legs at various times.

The provision of Clearways at commuter peak hours along Johnson Street provides addition capacity in the peak direction, however congestion is still experienced at other times of the day and on the weekend.

5.3. Public Transport

The subject site is located in an area that is well serviced by tram, bus and rail services as follows:

- Tram Route 11 operates between West Preston and Docklands via Northcote, Fitzroy and the city and runs along Brunswick Street.
- Tram Route 86 operates between Bundoora and Docklands via Northcote, Preston Collingwood and the city and runs along Smith Street and Gertrude Street.
- Tram Route 12 operates between Victoria Gardens and St Kilda via Richmond, the city and South Melbourne and runs along Victoria Parade.
- Tram Route 109 operates between Box Hill and Port Melbourne via Mont Albert, the city and Southbank and runs along Victoria Parade.
- Tram Route 96 operates between East Brunswick and St Kilda Beach via Fitzroy, the city, Southbank and Albert Park and runs along Nicholson Street.
- Two bus routes and a night bus operate along Johnson Street (Bus Route 200 and 207, plus additionally NightBus Route 966).
- A total of 11 different bus services operate along Hoddle Street to the east of the study area, adjacent to the Victoria Parade/Hoddle Street intersection.

- Parliament Railway Station, which is a part of the City Loop, is located to the south-west of the study area.

These public transport services are shown on the Public Transport Map at Figure 3 below.

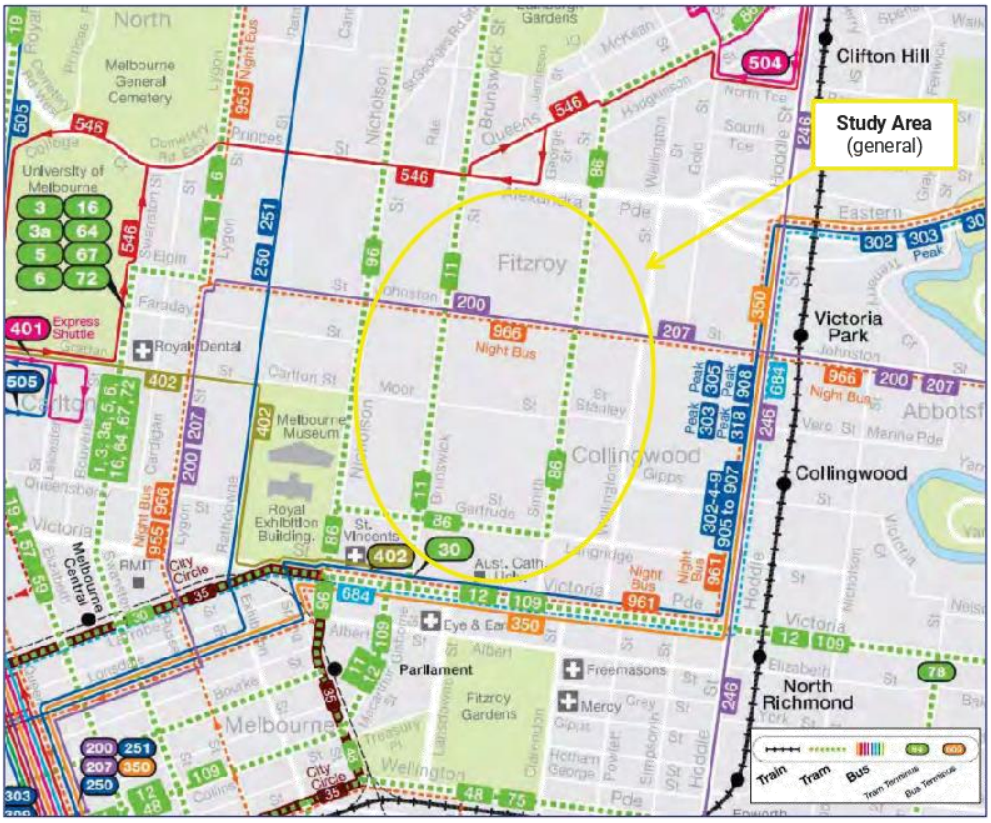

Figure 3: Public Transport Map

Source: Public Transport Victoria

5.4. Sustainable Transport Modes

The study area is well served by alternative transport modes. Figure 4 below shows the Travel Smart Map for the study area.

Source: City of Yarra

Figure 4: Travel Smart Map

5.4.1. Car Share

As shown on the TravelSmart map at Figure 4, there are a number of car share vehicles located within the study area and surrounding streets.

The provision of these car share vehicles provides drivers with a viable alternative to owning their own personal vehicle and actively encourages the use of alternative transport modes. Residents within Fitzroy and Collingwood do not need a car for everyday trips as they have convenient access to public transport and are within convenient walking and cycling distance of many activities within the Melbourne CBD and nearby Activity Centres. Car share vehicles provide a car on demand for those trips that specifically require a vehicle.

5.4.2. Cycling

Brunswick Street and most of Smith Street are nominated as an informal bicycle routes. On-road bicycle lanes are provided on several nearby roads including Napier Street, George Street, Gore Street and Wellington Street. An off-road bicycle route is also located along Hoddle Street. It is of note that Nicholson Street, Brunswick Street, Wellington Street, Alexandra Parade and Victoria Street area all part of the Principal Bicycle Network (PBN)

The high level of bicycle infrastructure within and surrounding the study area provides cyclists with convenient access to the surrounding suburbs. Wellington Street is also part of the Strategic Cycling Corridor (SCC) which the State Government is currently planning.

5.4.3. Walking

The study area is highly walkable with many everyday services and destinations within convenient walking distance. The Walkscore[3] map for Collingwood and Fitzroy is below, with most areas of Collingwood scoring well over 92 and Fitzroy scoring 99 (classified as a 'Walkers Paradise'). The Melbourne CBD, Lygon Street, Victoria Street and Bridge Road are all within a walkable distance from Brunswick Street and Smith Street.

[3] https://www.walkscore.com/AU-VIC/Melbourne/Collingwood and https://www.walkscore.com/AU-VIC/Melbourne/Fitzroy

Source: Walkscore.com

Figure 5: Walkscore Map – Collingwood and Fitzroy

5.5. Demographics

The majority of new dwellings within the study area will be apartment style dwellings. A review of car ownership statistics for 'flats units and apartments' within the suburbs of Fitzroy and Collingwood and the City of Yarra highlights the following average car ownership statistics. This data was recorded by the Australian Bureau of Statistics (ABS) in the 2016 census.

These statistics indicate that the parking requirements for dwellings set out under Clause 52.06-5 of the Planning Scheme are generally higher than the car ownership statistics for households residing within apartments in Fitzroy and Collingwood. Not only are the average car ownership rates lower than Clause 52.06-5., there is a considerable proportion of households that do not require car parking including 44-48% of one-bedroom and 31-35% of two-bedroom households.

Table 7: ABS car ownership statistics (2016) – Apartments

Type of Dwelling	Number of Cars	Fitzroy Suburb	Collingwood Suburb	Yarra LGA
Studio/Bedsit Flat/Unit/Apartment in one or more storey block	**Average no. of cars per dwelling**	**0.1**	**0.2**	**0.3**
	0 cars	86%	82%	73%
	1 car	14%	18%	25%
	2 or more cars	0%	0%	3%
1 bedroom Flat/Unit/Apartment in one or more storey block	**Average no. of cars per dwelling**	**0.6**	**0.6**	**0.7**
	0 cars	48%	44%	38%
	1 car	46%	51%	55%
	2 or more cars	6%	5%	7%
2 bedroom Flat/Unit/Apartment in one or more storey block	**Average no. of cars per dwelling**	**0.8**	**0.9**	**0.9**
	0 cars	35%	31%	26%
	1 car	52%	54%	56%
	2 or more cars	13%	15%	19%
3 bedroom Flat/Unit/Apartment in one or more storey block	**Average no. of cars per dwelling**	**1.1**	**1.0**	**1.2**
	0 cars	26%	23%	20%
	1 car	49%	56%	48%
	2 or more cars	25%	20%	25%

5.5.1. Journey to Work Data

A review of Journey to Work data for the suburbs of Fitzroy and Collingwood, the City of Yarra and the Greater Melbourne highlights the following statistics. This data was recorded by the Australian Bureau of Statistics (ABS) in the 2016 Census.

This data highlights a much stronger reliance on public transport, walking and cycling for those living (in particular) and working within the study area compared with the Melbourne metropolitan area.

Table 8: Journey to Work Data: 2016 Census, ABS

% mode of travel for 'journey to work' trip	Live within the area (i.e. place of residence)				Work within the area (i.e. place of work)			
	Fitzroy	C.wood	City of Yarra	Greater Melb.	Fitzroy SA2	C.wood SA2	City of Yarra	Greater Melb.
Car as driver	25%	27%	33%	61%	36%	48%	49%	61%
Public Transport	24%	27%	28%	15%	30%	24%	24%	14%
Walking	24%	19%	12%	3%	8%	7%	6%	3%
Cycling	8%	8%	9%	1%	6%	5%	4%	2%
Other (car passenger, motorcycle, etc.)	5%	5%	5%	6%	5%	6%	4%	5%
Other Data (worked at home, did not go to work, mode not stated)	14%	14%	13%	14%	15%	10%	13%	15%

6. Transport Impacts

The primary purpose of this study is to review the traffic engineering implications of the implementation of an amendment to the Planning Scheme, which introduces a range of built form controls to the Yarra Planning Scheme. This amendment is required to implement the recommendations of the Brunswick Street and Smith Street Built Form Review prepared by Hansen Partnership.

The key transport engineering impact of the proposed controls is the direction to use rear laneways for vehicle access to new developments wherever possible and avoid new crossovers to arterial roads within the study area. As a result, the use of the laneways with the study area will increase, in some cases substantially. This study reviews the potential impacts of new development and makes recommendations to manage the increased use of these laneways.

The following sections provide:

- An overview of the likely traffic impacts of increased development within the study area, by reviewing a case study of Victoria Street, Richmond.
- A description of why laneways should be used for vehicle access.
- An outline of the methodology behind our categorisation of laneways within the study area.
- A description of laneway characteristics and how these affect the capacity of laneways to accommodate vehicles, pedestrians and cyclists.
- A detailed description for each of the options considered to improve the laneway network.
- Analysis of the potential capacity of each laneway to accommodate additional traffic and recommendations to improve individual laneways.

6.1. Traffic Impacts Along Arterial Roads in Study Area

In order to assess the likely traffic impacts of increased development along the arterial roads within the study area, we have undertaken a case study and review of Victoria Street, Richmond. The review generally covers the period between 2006 and 2016.

Victoria Street is similar to the arterial roads within the study area in that is a key arterial road and transport link through Melbourne's inner suburbs and the CBD.

In April, 2010, Yarra City Council adopted the Victoria Street Structure Plan, a document that built on planning work that occurred between 2002 and 2010. Since that time, significant redevelopment has occurred, particularly within the eastern and western precincts identified by this structure plan.

The following reviews the changes to Victoria Street and the changes in transport along Victoria Street as a model for how the study area may evolve over time.

6.1.1. Case Study – Victoria Street Activity Centre

The number of people living within the Richmond Statistical Local Area has increased from 23,797 people in in 2001 to 26,121 in 2011[4], which is a 9.7% increase over that time period.

Yarra City Council has provided data on the increased development that has occurred directly adjacent to Victoria Street in the last 10 years. This data was sourced from the valuation and permit information data by Council and Housing Dwelling Development data provided by the State Government.

Table 9 sets out the change in dwelling numbers along Victoria Street.

Table 10 sets out the change in commercial floor space along Victoria Street.

Table 9: Change in Dwelling Numbers along Victoria Street – 2007-2016

Year	Total Dwellings	Yearly Change	Net Change Since 2007
2007	135		
2008	139	+4	+4
2009	200	+61	+65
2010	254	+54	+119
2011	347	+93	+212
2012	626	+279	+491
2013	1499	+873	+1364
2014	2119	+620	+1984
2015-2016	2490	+371	+2355

The change in dwelling density is highlighted in the following two maps.

[4] 2016 data is not available at the time of writing.

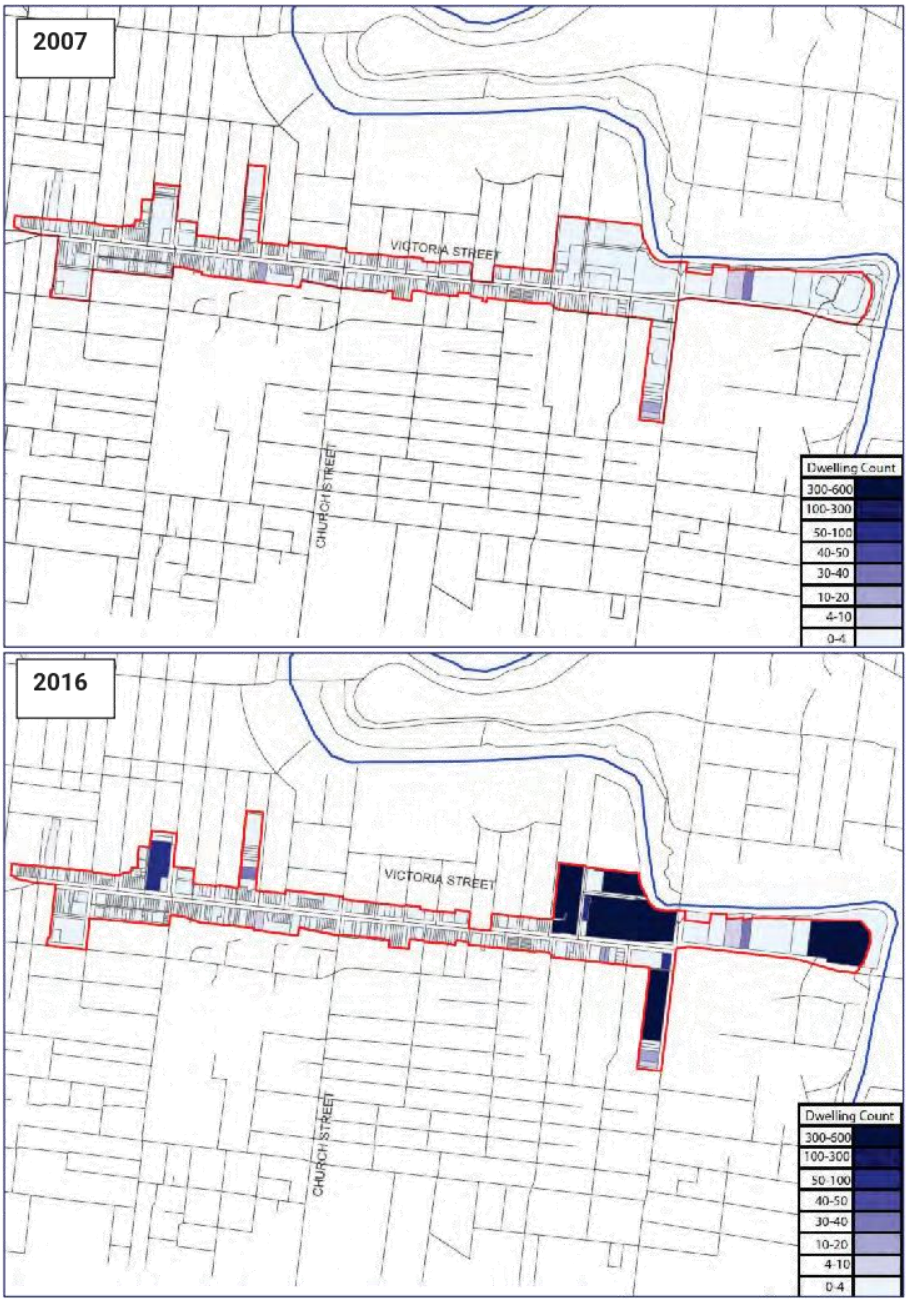

Figure 6: Change in dwelling density – 2007-2016

Table 10: Change in Commercial Floor Space along Victoria Street – 2007-2013

Year	Commercial Floor Space	Yearly Change	Net Change Since 2007
Pre-2007	46,737m^2		
2009	45,006m^2	-1,731m^2	-1,731m^2
2010	46,609m^2	1,603m^2	-128m^2
2013	42,814m^2	-3,795m^2	-3,923m^2

6.1.2. Review of Arterial Road Traffic Volumes

The following presents a review of arterial road traffic volumes over the last 10 years of available data for the three key parallel traffic routes through Richmond, Swan Street, Victoria Street and Bridge Road. This is set out in detail in Table 6.

Table 11: Arterial Road Traffic Volumes (Source: VicRoads Arterial Road Database - Feb 2017)

Road Name	Two-Way Annual Average Daily Traffic Volume[1] by Year					
	2006	2013	2014	2015	2016	Change 2006-2016
Swan Street						
Btw Church/Lennox	18,000	17,800	17,300	17,200	17,200	-800
Btw Coppin/Church	21,000	21,000	20,600	20,300	20,300	-700
Btw Burnley/Coppin	19,600	20,300	20,200	20,300	20,200	+600
Btw Madden/Burnley	15,300	15,600	15,600	15,600	15,200	-100
Victoria Street						
Btw Church/Hoddle	22,700	18,600	18,300	18,200	18,000	-4,700
Btw Burnley/Church	22,000	20,000	18,800	18,500	18,300	-3,700
Btw High/Burnley	24,000	23,000	23,000	23,000	23,000	-1,000
Bridge Road						
Btw Hoddle/Lennox	20,000	18,400	18,300	18,300	17,900	-2,100
Btw Lennox/Church	19,500	18,700	18,500	18,400	18,200	-1,300
Btw Church/Coppin	22,000	20,800	19,500	19,500	18,600	-3,400

Road Name	Two-Way Annual Average Daily Traffic Volume[1] by Year					
	2006	2013	2014	2015	2016	Change 2006-2016
Btw Coppin/Burnley	23,000	20,700	20,600	20,600	20,600	-2,400
Btw Burnley/Yarra	27,000	24,000	24,000	23,000	23,000	-4,000
Note: Annual Average Daily Traffic Volume is the sum of all traffic over the year divided by 365						

The above illustrates that arterial road traffic volumes have generally fallen between 2006 and 2016. Traffic volumes on Victoria Street in particular have fallen substantially over the last 10 years. There has not been a significant change to the traffic carrying capacity of these streets within this time period[5].

Furthermore, this decrease in traffic volumes is also reflected at key intersections during the commuter peak hours. Table 12 provides a comparison between current and historical data for two key intersections along Victoria Street and illustrates a drop in traffic volumes at these locations during peak hours. The Burnley Street/Victoria Street and Flockhart Street/Victoria Street intersections are the closest signalised intersections to where the highest level of development has occurred.

Table 12: Review of Peak Hour Traffic on Victoria Street

Intersection & Year of Survey	Two-Way Peak Hour Traffic Volume on Victoria Street	
	AM Peak	PM Peak
Flockhart Street (west of)		
2006[1]	2,203	2,267
2015[2]	1,827	1,957
Change	-376 (-21%)	-310 (-16%)
Burnley Street (east of)		
2012[3]	1,933	1,831
2016[4]	1,709	1,649
Change	-224 (-13%)	-182 (-11%)
Notes: Data collected by Grogan Richards dated 11th July, 2006. Data sourced from VicRoads by Cardno, dated 11-15th May, 2015. Data sourced from VicRoads by Traffix Group, dated 7th June, 2012. Data collected by Ratio Consultants dated 14th April, 2016.		

[5] Accessible tram stops were installed in Bridge Road in 2013 and Victoria Street in 2016, however these continue to accommodate two traffic lanes during clearway times.

6.1.3. Review of Travel to Work Behaviour from ABS Data

The following tables review the journey to work data sourced from the Australian Bureau of Statistics for the period from 2001 to 2016. Table 13 presents data for journey to work based on place of residence within the City of Yarra.

Table 14 presents data for journey to work for people working within the Richmond Statistical Local Area (workers do not necessarily need to reside within Richmond).

The data indicates a clear trend over time for a decrease in the mode share of private cars. For people living within the City of Yarra, this decrease is realised by an increase in bicycle and walking trips. This is a strong indication of local living and working locally.

For people working within Richmond, the decrease in mode share of cars is higher. The change has resulted in a significant increase in public transport use (an almost 90% increase) and to a lesser extent walking and cycling. This is reflective of residents outside of Richmond travelling further and accordingly cycling and walking in particular are not a suitable mode for these longer trips.

Table 13: Journey to Work Data - Place of Residence within City of Yarra

Mode of Travel	Year				Change 2001-2016
	2001	2006	2011	2016	
Car as Driver	48%	43%	40%	38%	-10%
Car as Passenger	4%	3%	3%	2%	-2%
P/Trans	30%	28%	30%	32%	+2%
Motorcycle	1%	1%	1%	1%	-
Bicycle	5%	8%	10%	10%	+5%
Walked	11%	15%	13%	14%	+3%
Other	1%	2%	3%	3%	+1%
Total	100%	100%	100%	100%	

Table 14: Journey to Work Data - Place of Work within Richmond SLA

Mode of Travel	Year				Change 2001-2016
	2001	2006	2011	2016	
Car as Driver	73%	67%	61%	56%	-12%
Car as Passenger	5%	4%	4%	3%	-1%
P/Trans	15%	19%	24%	28%	+13%
Motorcycle	0%	1%	1%	1%	+1%
Bicycle	1%	2%	3%	4%	+3%
Walked	5%	6%	6%	7%	+1%
Other	1%	1%	1%	1%	-
Total	100%	100%	100%	100%	

6.1.4. Change in Public Transport Services

The key public transport service for Victoria Street is tram services that run the length of the Activity Centre. Victoria Street is currently serviced by the following tram routes:

- Route 109 – service between Box Hill and Port Melbourne via the CBD.
- Route 12 – service between Victoria Gardens and St Kilda. This route commenced operation in July, 2014[6].

The changes in July, 2014 doubled the number of services between Victoria Street, Richmond and the CBD. While Tram Route 24 was removed at the same time, this service only operated during the AM and PM peak periods (approximately 7-9am and 4:30-6:30pm).

On Church Street, the peak hour only service Route 79 was terminated with Route 78 being extended to operate more than 18 hours per day.

Bus Route 684 used to operate along Victoria Street, however this service did not stop along Victoria Street (service between the CBD and Eildon via Healesville).

The key public transport service on Victoria Street is the tram services along Victoria Street and these have significantly improved in frequency over the last 10 years.

6.1.5. Increase in Bicycle Use

As set out above, the mode share of bicycles for journey to work purposes has increased from 5% to 10% by residents of Richmond and increased from 1% to 4% for employees within Richmond.

For Victoria Street, the Super Tuesday bicycle counts undertaken by Bicycle Network illustrate an increase in cycling numbers. The Super Tuesday counts are undertaken on an annual basis over the surveyed two hour, 7-9am commuter peak hour.

For the intersection of Victoria Street/Burnley Street/Walmer Street (which connects to the Capital City Trail along the Yarra River), the number of cyclists increased from 298 to 483 cyclists over the two hour period between 2011 and 2015 (62% increase).

6.1.6. Rise of Car Share

Car sharing schemes provide an alternative to car ownership for residents and actively encourage the use of alternative transport modes. Residents within Richmond do not need a car for everyday trips as they have easy access to public transport and are within convenient walking and cycling distance of many activities within the Melbourne CBD and Activity Centres. Car share vehicles provide a car on demand for those trips that specifically require a vehicle.

A study by Phillip Boyle & Associates (dated 18th June, 2015) was recently completed on behalf of the City of Melbourne, which reviewed car share policy in the City of Melbourne. This review found that car share significantly reduced car ownership and car use by members. The review identified that each new car share vehicle results in residents disposing of 10 privately owned vehicles (a net reduction of nine vehicles).

The study found that car ownership is reduced by:

- People replacing a private car with a car share membership as it is more cost-effective if you travel low kilometres (less than 15,000km per annum) and use alternative modes for many trips, and
- People who do not own a car, postpone or avoid purchasing a car by using a car share service.

In 2006, car share was in its infancy. The two leading car share company's today in Melbourne are Fleixcar (founded in 2004) and GoGet (arrived in Melbourne in 2004).

There are now multiple car share pods operated by three companies within close proximity of Victoria Street. The availability of these car share pods supports residents who do not own a car and businesses by providing a share car for work based business trips (which allows employees not to drive to work).

6.1.7. Summary of Case Study and Implications for Study Area

Based on the above, the following conclusions can be drawn from the development of Victoria Street over the last 10 years:

- Victoria Street has experienced significant development over the last 10 years, with over 3,000 new dwellings being constructed on properties that directly abut Victoria Street.
- The daily volume of traffic on Victoria Street has decreased, in some sections by up to 25%.
- Sustainable transport modes for journey to work purposes have significantly increased within the City of Yarra and Richmond for both residents and employees in Richmond.
- Public transport services (trams) on Victoria Street have doubled.
- Bicycle usage has increased significantly as a transport mode within Richmond and Victoria Street.
- Alternative transport modes such as car share vehicles have become available over time.

From the review of case study data, a modal shift is certainly occurring and it is modal shift that is accommodating the increased transportation activity within Richmond. While the population and development intensity along Victoria Street has increased, the daily traffic volumes along Victoria Street and parallel traffic routes has reduced over time and been taken up by alternative transport modes.

It is not evident from the arterial road volume data that non-local traffic is dispersing to other routes. The traffic volumes on Victoria Street, Bridge Road and Swan Street have all fallen over the last 10 years. While, locally generated traffic within Richmond would be displacing non-local or through traffic, however the main shift appears to be towards sustainable transport modes.

A key driver of this change is due to:

- Changes in land use over time along Victoria Street with a shift away from manufacturing towards service and professional industries,
- An increasing mix of land uses including a significant increase in dwellings and new mix of commercial uses in place of industrial uses, and
- A change in demographic with the gentrification of Richmond. Residents of Richmond are increasingly younger persons employed in professional industries who live and work locally (including the CBD and nearby Activity Centres). Travel by private car is not necessarily the most convenient mode of travel for many trips to either work or everyday destinations (shopping, etc.). The increased number of dwellings on Victoria Street are well served for everyday needs by a short walk to Victoria Gardens.

We are satisfied that the transport impacts of the densification of the activity centres and MUZ areas in Fitzroy and parts of Collingwood are manageable for the following key reasons:

- The Activity Centres are highly accessible by existing public transport services, which supports both residents and workers within the centre. This reduces reliance on private car travel.

- The Activity Centres benefits from close proximity to a number of other Activity Centres and the Melbourne CBD, all of which are readily accessible by alternative transport modes to a private car.
- The mix of land uses and local services within the Activity Centres support local living by residents.

6.2. Review of Car Parking Provision

In order to assess the likely traffic impacts of these redevelopments, we have primarily had regard to the proposed building heights in the absence of detailed yield calculations. We have also had regard to current trends in car parking provision and assessment within the study area.

Challenges with On-Site Car Parking Provision

It should be noted that there are substantial challenges with providing car parking on many sites within the study area. There are many sites which will be unable to provide a substantial level of car parking without lot consolidation, which will naturally lead to lower levels of traffic generation and laneway impacts.

The subdivision pattern in many cases is finely grained. Many lots are very narrow, less than 10m wide and have heritage shop frontages reliant on good walking conditions. This has practical implications for the provision of car parking on these sites.

For lots of this size, car parking can only be arranged length-wise to the site. A 5m wide site only accommodates one car space in width, a second car may be parked in tandem. A 7m wide site might accommodate 2 car spaces side by side. In either case, options of providing additional car parking via car stackers is also limited. There is unlikely to be any significant gain in a 5m wide site. A 7m wide site may increase the car parking from 2 (4 in tandem) to 4 or 5 (up to 8 in tandem).

It needs to be also recognised that for developments with access to 3m wide laneways, an increased setback is required to physically accommodate vehicle access as 3m is too narrow an access aisle for most car parking arrangements. As a general rule, new developments would typically need to setback the car parking approximately 3m from the edge of the laneway to facilitate vehicle access. This setback combined with the laneway effectively provides a 6m wide access aisle.

Sketches of arrangements are shown in the figures below.

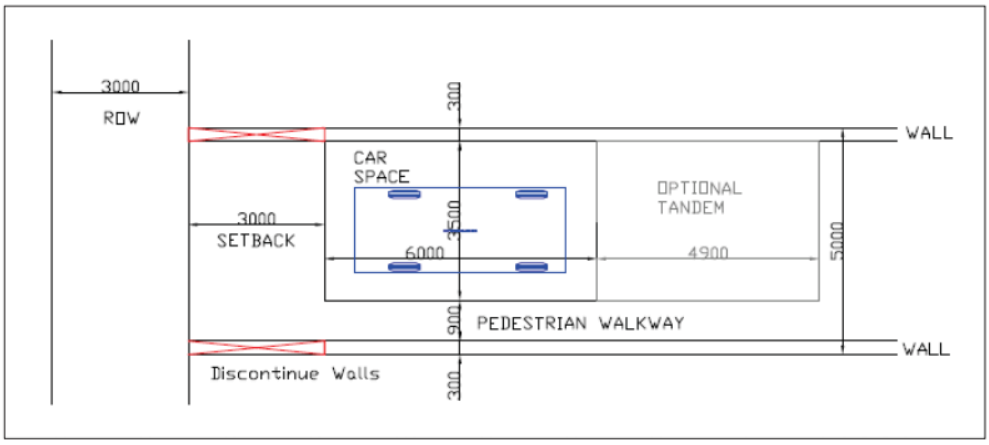

Figure 7: Example layout of a 5m wide side

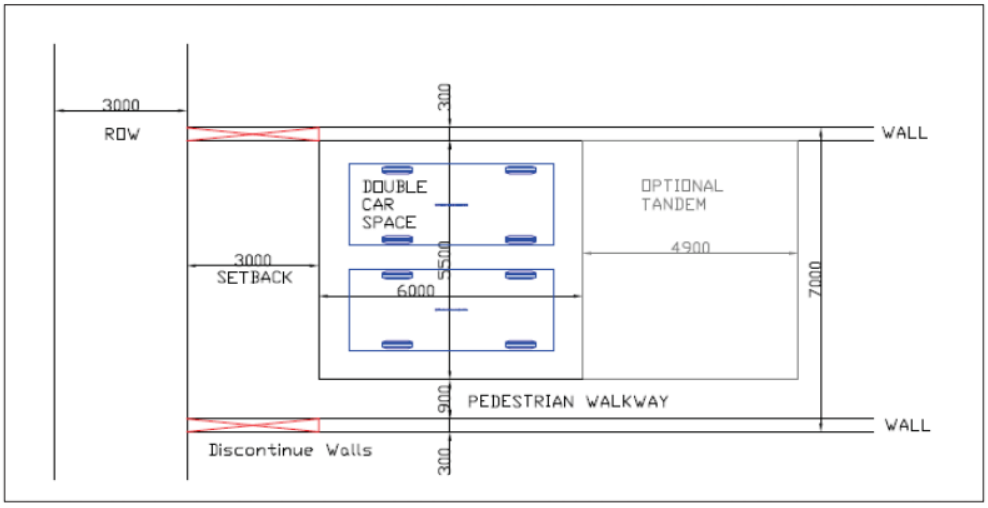

Figure 8: Example layout of 7m wide side

There is an opportunity to effectively widen the functional area of the laneways to 6m in width over time if a consistent 3m setback is applied to new developments (which is likely to be necessary for vehicle access to many individual sites in any event). It means that new developments should avoid constructing side walls out to the laneway within the 3m setback. The building could cantilever over the ground floor setback at upper floors (subject to other planning and structural requirements). However, this requirement would not be necessary in cases where adjacent sites will not be redeveloped (e.g. heritage sites).

The above two diagrams are an example of commonly seen development types in our experience. Other arrangements are possible, such as a very wide single car garage with

minimal setback. However, these examples provide a good illustration as to the type of car parking arrangements likely on the narrow sites common the study area.

Many of the lots within the study area have proposed maximum heights of 5-6 storeys, including many narrow lots. The development intensity facilitated by the height controls is generally excess of the site's ability to provide a matching level of car parking in strict accordance with current minimum Planning Scheme requirements.

Car Parking Provision

The level of car parking provided to new developments in the study area is likely to be lower than the current statutory controls, but this is not inconsistent with current Council practice and is supported through various VCAT decisions. Yarra City Council has regularly supported developments within the municipality and within the study area with minimal or even zero on-site car parking.

In our view, this should continue in the future. Providing a low level of car parking strongly supported by Yarra City Council's local planning policies and under the car parking reduction decision guidelines of Clause 52.06-5. In particular:

- Analysis of empirical data indicates that a substantial number of households within apartments do not require car parking in this area, which is reflective of the transport rich nature of the area.
- Reducing car parking, particularly for residents and staff has a positive impact on traffic conditions in the local area. Staff in particular are most likely to travel on the road network during peak hours and contribute the most to traffic congestion.
- The area is well serviced by public transport services, including train, tram and bus services.
- The area has good access to cycling infrastructure and many local destinations within easy cycling distance, including the Melbourne CBD and numerous inner-city Activity Centres.
- The area is highly walkable, with many everyday services readily accessible by walking, instead of by private car.
- There are numerous car share pods in the nearby area, providing on-demand access to a car for those trips that specifically require a car.
- There is limited long-term on-street car parking in the nearby area, which will naturally decrease over time as it has with other inner urban Activity Centres. New developments will not be eligible for car parking permits and accordingly constrained from owning cars where no on-site parking is provided.

The following provides some commentary on current trends in car parking provision within the study area.

- Based on the ABS data presented in Section 5.5.1, an average of 1 car space per apartment is broadly reflective of the current car ownership levels of households occupying apartments. However, there are many households that do not require car parking in these areas.

- Office parking is provided at a rate of 1 space per 100m^2. This rate is lower than the current statutory requirement of 3 spaces per 100m^2 under Clause 52.06-5, however it is consistent with recent planning approvals by the City of Yarra, as shown in the table below.

Development	Yield (Approx.)	Car Parking Rate
20-30 Mollison Street, Abbotsford	12,800m^2	1.10 car space per 100m^2
506-510 Church Street, Cremorne	22,000m^2	1.06 car spaces per 100m^2
484-486 Swan Street, Richmond	18,600m^2	0.82 car spaces per 100m^2
2-16 Northumberland Street, Collingwood	15,500m^2	0.88 car spaces per 100m^2
459-471 Church Street, Richmond	23,500m^2	0.86 car spaces per 100m^2

- Retail uses provide car parking only for staff, with no on-site car parking for customers. Staff parking is typically provided at a rate of 1 space per 100m^2.

  While this is lower than the current statutory car parking rate under Clause 52.06-5 (3.5 car spaces per 100m^2), this is consistent with current industry practice for retail uses within inner Melbourne. Currently, almost every retail use within the study area does not provide car parking for customers.

7. Control of Vehicle Access Locations

The following section sets out our recommendations around the provision of vehicle access points for developments within the study area.

7.1. Access Management Principles

VicRoads generally adopts the AustRoads Guide to Traffic Management with regard to its access management principles for managing the arterial road network. In particular, the AustRoads Guide to Traffic Management Part 5: Road Management sets out the following relevant guiding principles:

- *Transport and other functions served by roads, the needs of abutting land use, along with wider government strategic objectives, all influence how roads are managed. The functional classification of a road relates to its role within the road network. There are two main functions of road networks and roads:*
  - *'mobility' that is concerned with the movement of through traffic and focussed on the efficient movement of people and freight, and*
  - *'access' that relates to the ease with which traffic from land abutting roads can enter or leave the road.*
- *Recent developments in policy and strategic planning initiatives are aimed at giving greater recognition to walking activity in road and transport planning. This has arisen from policy settings in the transport and health sectors recognising the need to move towards more sustainable forms of transport (by foot, bicycle or public transport) and towards healthier activity (walking, cycling) by the community generally (AustRoads 2013a).*
- *This has led to recognition of the need for planning and providing a road network which caters for the potential increase in active travel such as walking and cycling. This is a fundamental factor for consideration in striving for balance between the mobility and access functions of roads in the network.*

Importantly, in the context of Brunswick Street and Smith Street, as inner-city areas (the south-western ends of which is less than 500m walking distance from the CBD), the move to sustainable forms of transport (foot, bicycle or public transport) has more than just health benefits. It is an integral component to the success of The Frameworks (and ultimately structure plans), having regard to the significant capacity constraints of the existing road network to accommodate additional private vehicle movements.

Accordingly, it is imperative that the planning for an increase in the density of development within the Brunswick Street and Smith Street Activity Centres is accompanied by an access management strategy that recognises the importance of these sustainable transport modes, and also plans for the inevitable increase in pedestrians and cyclists as well as improvements to the public transport network along these important corridors.

The AustRoads Guide to Traffic Management Part 5: Road Management states the following in relation to the role of different road types:

- *The primary function or balance of different functions may be reflected in the classification of a road. In its purest form, road classification may consist of two basic road types which have fundamentally different traffic and environmental goals:*
  - *arterial roads, the main function of which is to provide for the safe and efficient movement of people and freight, and*
  - *local roads, which provide direct access to abutting land uses and which contribute to the overall functioning of areas bounded by arterial roads or other barriers. The basic function of a local road is to provide a good environment in which to live or conduct a business and to enable vehicular access to abutting land.*
- *The need for access planning and management arises because vehicle movements generated by abutting properties can potentially create interruptions in the traffic flow along a road. On many roads, these interruptions are of little or no concern. However, on arterial roads carrying high traffic volumes or fast moving traffic, where traffic efficiency is of greater importance, these interruptions can create a greater risk of crashes, inefficiencies and other costs to the community. An effective access management strategy for a road or site contributes to the best outcome for the community by protecting the level of traffic service on important through traffic routes while providing road users with safe and appropriate access to adjacent land.*

These roles of the arterial road network within the study area (priority public transport route and activated pedestrian links) creates an environment which is not conducive to providing direct vehicular access to properties which could create interruptions in the flow of both vehicular and pedestrian traffic along these links.

Accordingly, taking into account Brunswick Street and Smith Street primary purpose, and noting that within the study areas the majority of properties have alternative access potential (via rear laneways and/or local roads), there should be strong policy support within any Planning Scheme amendment (such as a DDO) to guide future access to development to be via the lower order road network.

Safety

Part 13 of the AustRoads Guide to Traffic Management addresses Road Environment Safety, as follows:

- *Managing safety in the road environment means managing the risk that injury will occur, whether it arises from the behaviour of road users, the performance of vehicles or the characteristics of the road environment. Making roads safer means reducing the risk. This applies to all road users – vehicle drivers, riders, passengers, cyclists, and pedestrians.*
- *Safe operation of the road and traffic system is a fundamental goal for road designers and traffic engineers who have a prime responsibility for addressing the safety factors related directly to the road environment itself.*

Fundamental principles for managing safety in road design, traffic management and remedial treatment practice include:

- speed management,

- conflict management,
- hazard management, and
- road user information management.

In the context of managing vehicular access to Brunswick Street and Smith Street, conflict management is the primary safety principle which can be influenced.

Notably, it is important to provide a continuous safe environment for pedestrians at-grade along the Brunswick Street and Smith Street public realm, and this can be achieved by minimising (if not removing all together) intermediate private property access points.

Policy Support

Clause 22.07-1 of the Yarra Planning Scheme specifically supports the role of laneways for vehicle access.

The Yarra Municipal Strategic Statement (MSS) identifies the need to retain existing laneways and enhance their amenity. It also states that, where appropriate, laneway access for vehicles is to be used in preference to street frontages to reduce vehicle crossovers.

Council's Strategic Transport Statement sets out the following hierarchy of transport modes which forms the basis for decision making and actions related to transport in the City:

1. Pedestrians (including wheelchairs and walking with prams)
2. Cyclists
3. Tram
4. Bus/train
5. Taxi users/car sharers
6. Freight vehicles
7. Motorcyclists
8. Multiple occupants local traffic
9. Single occupants local traffic
10. Multiple occupants through traffic
11. Single occupants through traffic

Council's transport modal hierarchy for decision making places pedestrians, cyclists and trams in the top 3, and places vehicular traffic at the bottom.

This hierarchy recognises the importance of sustainable modes into the future and supports the recommended access management strategy to utilise rear laneways and side streets wherever possible. Direct access to arterial roads being a last resort (with consideration for "no parking provision" potentially being preferable for some sites), noting the importance of Brunswick Street and Smith Street for pedestrians and trams in particular.

7.2. Benefits of Limiting Vehicle Access to Arterial Roads

The principle of limiting direct vehicle access to arterial roads provides the following key benefits:

- It promotes a safe and friendly pedestrian walking environment, by reducing breaks in the footpath, reducing pedestrian-vehicle conflict points and increasing the amount of active street frontage along these streets. It also eliminates instances of vehicles blocking the footpath.
- It eliminates the potential conflict between the introduction of future accessible tram stop upgrades and property access points. The design of accessible tram stops is generally incompatible with property access points.
- It limits vehicle access to arterial roads to public road intersections, where Council and VicRoads have a greater degree of control in the implementation of traffic management measures. This improves the efficiency and safety of the road network for all users.
- The reduced number of intersections allows the concentration of effort of traffic management measures and safety improvements at a limited number of locations.
- It reduces the number of locations where right turn movements occur, thereby potentially reducing delays to trams and improving road safety.

However, the benefits of limiting vehicle access to arterial roads need to be tempered against other competing demands, including:

- For some land uses (such as supermarkets), convenient and direct access to the arterial road network is important for the viability of the use and to minimise impact on local roads.
- Access for trucks undertaking on-site loading may be a desirable outcome (although any loading facilities should be internal to the building). This includes business deliveries, waste collection and providing a loading bay for residents to move into/out of buildings. These may not be possible from within laneways for some sites and depending on the land use proposed. Such movements would be infrequent and may be necessary if alternative access is not available.
- Some sites do not have alternative access options and have existing access points to arterial roads. It is not possible to deny access to sites that already have direct access to arterial roads and do not have reasonable alternatives. However, upon redevelopment these accesses can include new controls to limit their impact, in particular left-in/left-out restrictions. A left-in/left-out restrictions results in the smallest impact on the arterial road network from an efficiency and safety perspective.

7.3. Control of Vehicle Access

The vehicle access hierarchy has been defined in accordance with the following hierarchy (from highest to lowest preference):

1. Laneways
2. Local Streets
3. Arterial Roads – no access unless there is no alternative

Arterial roads include:

- Brunswick Street
- Smith Street
- Wellington Street
- Gertrude Street/Langridge Street
- Johnston Street
- Nicholson Street
- Alexandra Parade
- Victoria Parade

It is recommended that this hierarchy is also included in the future planning controls for the study area.

In some instances, the strict use of laneways for sole vehicle access may overload the capacity of the laneways in their current form. The following section reviews the capacity of the existing laneways within the study area to accommodate additional development.

8. Right-of-Way Management

The following sections provide:

- An outline of the methodology behind our categorisation of laneways within the study area
- A description of laneway characteristics and how these affect the capacity of laneways to accommodate vehicles, pedestrians and cyclists.
- A detailed description for each of the options considered to improve the laneway network.

8.1. Categorisation of Laneways

As part of the review process of the current capacity of existing laneways to accommodate additional future development traffic volumes, we have reviewed and categorised laneways within the study areas into 3 categories (unconstrained, partially constrained or highly constrained) in order to better understand their potential to currently accommodate additional traffic under their existing conditions and configuration.

Key factors include laneway width, laneway length, laneway connections (i.e. continuous or dead-end) and physical layout (i.e. bends within the laneway network). These factors are discussed in more detail below.

The laneway assessment classified all laneways within the study area by their potential to accommodate additional traffic. Laneways have initially been classified at three levels:

Unconstrained – these laneways have very few, if any, development constraints. As a result, they are well suited to accommodating additional traffic. Changing the laneway to operate one-way (where possible) has not been considered as a constraint.

Partially Constrained – these laneways have some potential constraints that limit their capacity to accommodate traffic, however they are generally easily addressed. Common issues include insufficient width, long length and lack of splays at critical locations.

Highly Constrained – this laneway has fundamental issues that cannot easily resolved. This usually relates to very narrow laneways or heritage constraints that limit the opportunities to alter the laneways.

When assessing the capacity of laneways, a number of factors need to be considered. For most laneways, it is a combination of factors that contribute to its classification.

The key factors that influence the classification of a laneway are outlined below:

Laneway width. This is the single most important factor to the operation and capacity of a laneway. To provide a single traffic lane, a laneway should be at least 3.0m wide. A width slightly less than 3.0m (down to 2.8m) is also functional, although constrained. Laneways less than 2.8m wide are problematic for vehicle access and should be considered as pedestrian only laneways and/or have very limited development potential (it is acknowledged that some narrow laneways within the study area are in practice used for vehicle access currently).

Laneways become capable of supporting simultaneous two-way traffic at a width of 5.5m if not built up (i.e. 5.5m between walls) or 6.0m wide between building walls. This width removes most capacity constraints of laneways and effectively makes them unconstrained.

One-way or two-way operation. For single width laneways, a one-way laneway has a significantly higher capacity than a laneway permitting two-way traffic. One-way operation eliminates vehicle conflict within the laneway and can support a high level of access/development from the laneway. One-way laneways are unconstrained in this assessment.

Continuous. A continuous laneway can generally be made to operate in a one-way direction. Generally, a continuous, straight laneway was classified as unconstrained because it can be made one-way to address capacity constraints.

A dead end laneway has less capacity to handle additional traffic and the laneway cannot be made one-way to manage traffic flow. However, this factor is only relevant for single width laneways, a laneway wide enough for two-way traffic is not constrained just because it has a dead end.

Laneway Length. This factor ties into laneway width and whether it is a continuous laneway or not. A long, single width (3m up to 6.0m wide) laneway will experience a high level of vehicle conflict due to higher traffic volumes, higher development potential (more properties accessing it) and more chances of vehicles meeting the laneway.

There are no set rules regarding the 'tipping point' for when two-way traffic in a single width laneway reaches capacity. It is a combination of factors including traffic volume, configuration and length that contribute to a laneway's capacity. Laneway length is therefore a contributing factor that impacts on laneways in combination with other factors.

Physical layout. A straight laneway has the highest vehicle carrying capacity. Bends in laneways may create operational issues, particularly if:

- There are no splays around the inside corner of the bend to facilitate vehicle access. For instance, a 90° bend between two 3m wide laneways is inaccessible to vehicles without a splay.
- Due to a lack of sight distance, vehicles cannot see each other approaching the blind corner. For single lane laneways, this can be a serious issue if drivers meet near the bend, the laneways are long and there are no passing opportunities.

Number of Abutting Properties and Frontage. The number of properties and their frontages are relevant to the potential future traffic conditions of a laneway. There are a number of ways this factor can influence laneways:

- Short laneways may only serve a limited number properties and accordingly with a low development potential, a short laneway may effectively be 'unconstrained'.
- A large number of narrow lots might make widening a laneway problematic.
- If the number of abutting properties to the laneway is small, a short, narrow laneway is unlikely to be constrained.

Heritage constraints. We are not heritage experts and we have relied on information provided by Council in this regard. Properties that have heritage value may create issues in that they

may not easily be modified and this was taken into account during our initial review. Heritage properties abutting a laneway may limit options to widen the laneway.

The follow factors were not considered when assessing the development potential of laneways:

- The condition of the laneway (does it need maintenance? Is it in disrepair?).
- The material the laneway is constructed with or type of surface treatment (gravel, asphalt, bluestone, etc.).

As existing Council assets, the condition of the laneway is not especially relevant. It is Council's on-going responsibly to maintain laneways as appropriate.

Some larger developments will warrant upgrading the surface of laneways (for instance, from gravel to asphalt). However, the condition of the laneway is less relevant than its physical configuration. Council also has a number of methods of upgrading the surfaces of laneways, including as permit conditions for significant developments or special charge schemes of abutting properties. These issues are easier to resolve than physical issues with a laneway's configuration.

Summary

From the above, it is apparent that the capacities of laneways are impacted by a large number of factors. In addition, it is challenging to concisely quantify how all the various factors influence each other. There are very few 'hard and fast' rules that define when a laneway is constrained or not and accordingly, this assessment is somewhat subjective and our assessment is based on our engineering judgement and experience.

8.2. Upgrading the Capacity of Laneway

Capacity of a standard 3m wide laneway

Under Clause 56.06 of the Planning Scheme, Table C1 provides an outline of the design of roads, one of which includes an 'Access Lane', which is defined as *a side or rear lane principally providing access to parking on lots with another street frontage.* Table C1 continues on to state that an Access Lane has a traffic volume of up to 300 vehicles per day (vpd) and this is typically adopted as the environmental capacity laneway. This also represents an indicative peak volume of 30 vehicles per peak hour (two-way).

The options in terms of increasing the traffic capacity of existing laneways follows:

Conversion to one-way operation. For single-width laneways, a one-way laneway has a significantly higher capacity than a laneway permitting two-way traffic. One-way operation eliminates vehicle conflicts within the laneway and can support a high level of access/development from the laneway. The key advantages of this option are that it is usually easy to implement as it does not require/rely on additional private land. For this reason, one-way operation is our preferred solution to upgrading laneways, particular within this study area. One-way laneways are effectively unconstrained and their environmental capacity is typically taken as being in the order of 1,000 vehicles per day.

Laneway width. One of the most important factors to the operation and capacity of a laneway. To provide a single traffic lane, a laneway should be at least 3.0m wide. A width

slightly less than 3.0m (down to 2.8m) is also functional, although constrained. Laneways less than 2.8m wide are problematic for vehicle access and should be considered as pedestrian only laneways and/or have very limited development potential (it is acknowledged that some narrow laneways within the study area are in practice used for vehicle access currently).

Laneways become capable of supporting simultaneous two-way traffic at a width of 6.0m, which removes most capacity constraints of laneways and makes them unconstrained. However, widening laneways can be problematic, particularly in situations where a large number of properties front a ROW or the subdivision pattern is finely grained.

Where widening occurs, the minimum road reserve width should be 6.0m. This can be achieved by setting back buildings, which are the overhang the ROW on the levels above. It is recommended that a height clearance of 3.5m is provided in these circumstances (which is usually achievable with ground floor commercial uses).

Splays. ROWs often incorporate bends and for narrow ROWs, splays are essential to facilitate vehicle access. This study recommends a universal splay of 3m x 3m is provided on the inside of all ROW bends and intersections between two ROWs. This splay facilitates access by vehicles up to the B99 design car from AS2890.1-2004 (i.e. not trucks), which is appropriate in our view.

The shape of the splay can be vary depending on the width(s) of the intersecting ROWs. These arrangements are shown in the figures below.

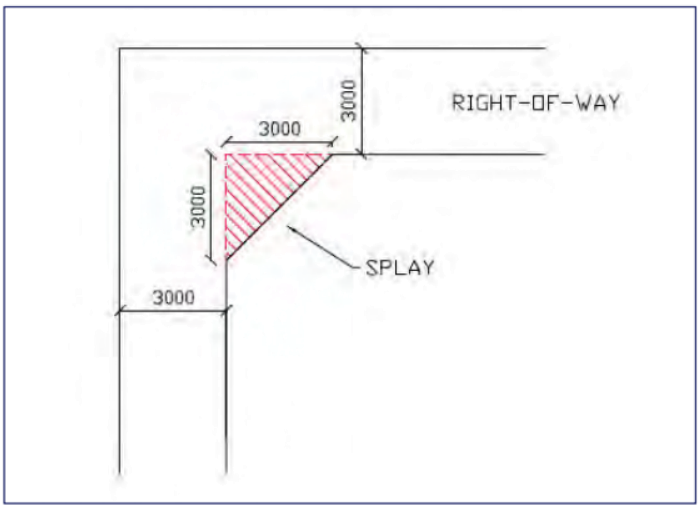

Figure 9: Standard 3m-wide ROW 90-degree Splay

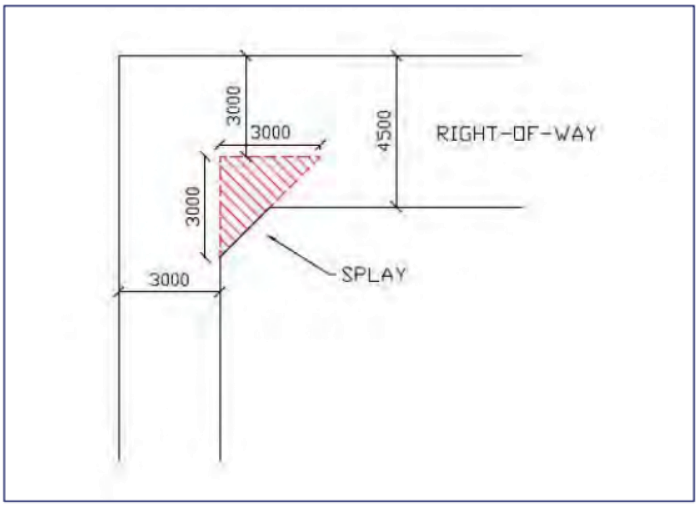

Figure 10: Non-Standard Varied-Width ROW Splay

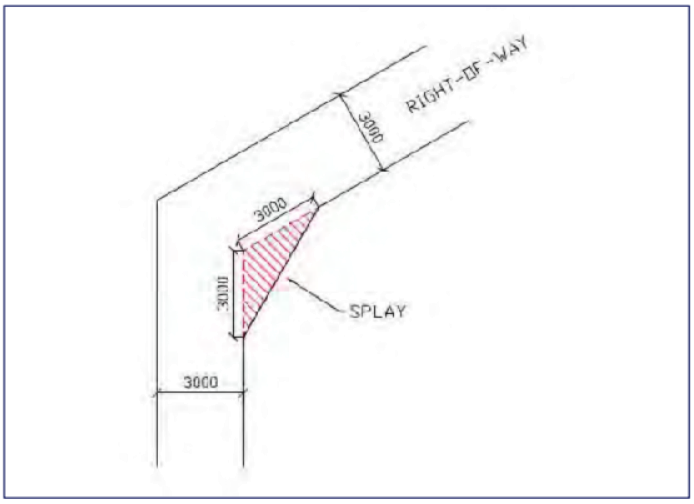

Figure 11: Standard 3m-wide ROW Non-Right-Angle Splay

Some laneways already have splays of various sizes. This study recommends that the splays available are standardised over time to be 3m x 3m.

Passing bay at entrance to laneway. In some situations, it may not be possible to widen laneways or enforce a one-way operation due to varying constraints, including dead end laneways. A potential solution is to provide for a passing bay either at the entrance to the laneway (ideally) or elsewhere along the laneway.

This passing area allows any conflicting vehicle movements to pass away from the road network and pedestrian footpaths. As a guide, Clause 52.07-9 (which applies to private

accessways) requires passing areas to be 6.1m wide for a distance of at least 7m from the major road boundary.

The width required to achieve this passing area would be required to be taken from one (or more) of the properties located on either side of the entry to the laneway. Alternatively, informal passing areas may be provided within the laneways as a result of buildings setting back their ground floor to facilitate vehicle access to and from their sites (i.e. car spaces or garages that are directly accessed from the laneway). This setback may allow for informal passing opportunities within laneways, thereby increasing the capacity of the laneway.

A passing area allows drivers to manage vehicle conflicts within laneways more easily and raises the capacity of the laneway above 30 vehicles per hour. If all properties along a laneway are required to setback to achieve a 6m width (to increase the laneway capacity), each setback incrementally increases the capacity of the laneway and over time achieves a full two-way laneway

8.3. Upgrades to Laneways to Accommodate Non-Vehicle Use

The sharing of the road space in laneways between pedestrians and vehicles is common practice and acceptable. Accordingly, there is no specific need or requirement to widen laneways to provide separate pedestrian spaces. Generally, issues only arise if laneways carry a high volume of vehicles.

For the most part, it is our view that laneways within the study areas should be used primarily for vehicle access, rather than pedestrian movement. It is our view is that in most cases, pedestrians within the activity centres should ideally be walking along the footpaths of main roads or other local roads where pedestrian amenity is higher, footpaths are wider and of higher quality and there is more activity along the street.

There are properties within the study area that may provide some uses accessed directly from laneways. For instance, dwellings that only front a laneway and rely on the laneway as their sole pedestrian access point. In these instances, new development should provide a pedestrian refuge area, which could be a separate footpath along the site's frontage or similar separation between the laneway and the building façade. A full pedestrian connection or separate footpath to the nearest road is not required, but a separate area for pedestrians to safely enter/exit a building directly fronting a laneway is necessary.

Cyclists generally don't use laneways, unless it is the final stage of their journey to a property. Most laneway surfaces can accommodate cyclists, although some bluestone laneways can be uncomfortable to use and cyclists may prefer to walk their bicycles the final stage of the journey. In our view, there is no need to upgrade laneway surfaces specifically for cyclists.

Shared Zones

There are a number of laneways within the study area that have intermediate widths (3-6m wide) that provide carriageways in the order of 3m wide and narrow footpaths (<1m) on one or both sides of the road. Often these footpaths are obstructed by poles. An example would be Little Smith Street.. These laneways would function better if reconfigured as Shared Zones. An example of which is Little Buckingham Street (between Church Street and Lambert Street) in Richmond. The essential feature of the Shared Zones is the removal of separate footpaths and provision of flush, shared surface. This provides an enhanced pedestrian environment and also assists vehicle access to abutting properties.

A shared zone is a road or network of roads where pedestrians, cyclists and vehicles shared the roadway. A shared zone provides improved amenity for pedestrians and an improved streetscape.

The *VicRoads' Supplement to Austroads Guide to Traffic Management Part 8: Local Traffic Area Traffic Management (2008) (dated October, 2015),* provides guidance as to appropriate locations for a shared zone, including design guidelines.

A summary of these guidelines is provided below:

Appropriate Locations

- Low volume streets where pedestrians outnumber motor vehicles and where the pedestrian needs are best met by walking on the roadway, and
- Where the street has been constructed or reconstructed to a sufficient degree to ensure significant visual interruption and where speed is physically restrained, and

- Where there is no cross traffic.

Inappropriate Locations

- Not suitable where traffic volumes exceed 200 vehicles in a peak hour, or over 1000 vehicles between 7am and 7pm.
- If there is a history of vehicle speed problems.
- Unprotected locations where approach speeds exceed 40-50km/h.

Design Guidelines

- The road should be discontinuous and any kerb removed to enhance the sense of equality between pedestrians and vehicles.
- Speed reduction devices installed at a spacing of approximately 40m and staggered if possible.
- Straight lengths of no more than 50m without speed reduction devices.
- Maximum design speed of 20km/h – typically either 10km/h or 20km/h.
- Entry and exit points to be clearly signed.
- No provision for traffic to flow across the path.
- Surface texture treatment in order to differentiate between the shared zone and surrounding road network.

An example of a shared zone in a laneway environment is Little Buckingham Street in Richmond. An aerial view of how this treatment has been implemented for part of the laneway (the portion which has been recently developed) and a street level view are shown at Figure 12 and Figure 13, respectively.

Figure 12: Shared Zone Example - Little Buckingham Street, Richmond

Figure 13: Shared Zone Example – Little Buckingham Street, Richmond

Other Considerations

Some consideration should be provided to allowing for 'pedestrian sight triangles' at the exit location of laneways at their intersections with roads. Under Clause 52.06 of the Planning Scheme and AS2890.1-2004, pedestrian sight triangles measuring 2.5m into the property and 2m along the property boundaries are required on both sides of a single-width accessway (i.e. 3m or similar), whilst in cases of widened accessways, a pedestrian sight triangle is only required on the departure side of the laneway. This is shown at Figure 14 below.

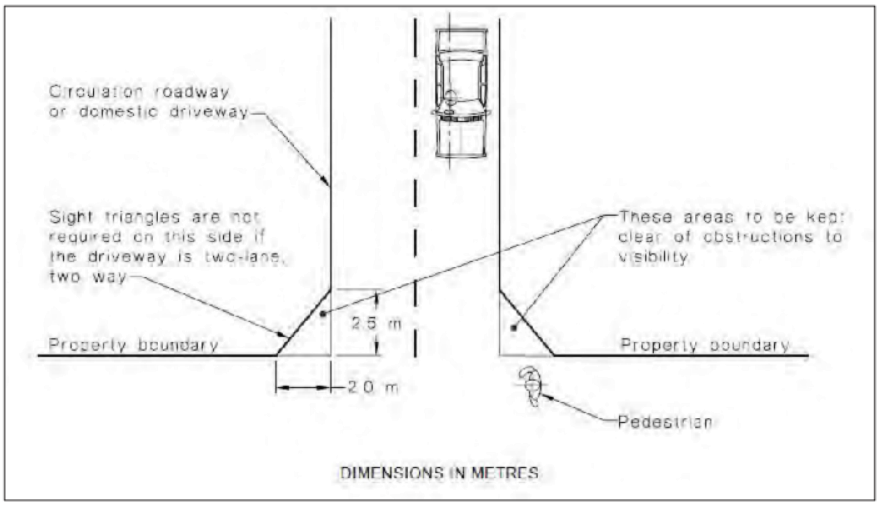

Figure 14: Minimum sight lines for pedestrian safety (Figure 3.3 - AS2890.1-2004)

Both of these standards refer to private driveways (not public roads), however the principle is a valid. It should be acknowledged that in practice, most laneways in the City of Yarra would not provide pedestrian sight triangles and that providing sight triangles may be problematic for heritage sites.

For these reasons, we have not specifically recommended splays at every ROW entrance. Splays can be required of individual sites as part of future planning permit conditions.

8.4. Recommendations

Our recommendations regarding various laneway upgrades are summarised at Table 15. The table provides the detailed reason behind the recommendations for the various laneways within the study area and references the laneways by the numbers defined in Appendix C.

Laneways not included in the following table will not need modifications, either due to already being functional for higher traffic volumes or being within areas already flagged for low development potential.

There are a couple of instances where laneways are discussed in more detail, after the table. In these cases, the issues are more complex and require further discussion.

Following this review, it is evident the recommendations for various laneways generally fall into two groups. These are described below:

One-Way Laneways

There are many laneways within the study area that run parallel with the arterial road and are relatively short in length (under 100m) and provide straight, through links between two local roads. These generally serve properties that have preferred building heights of 5-6 storeys. Examples include Laneways 1-4.

Instead of physical changes (such as widening), the recommended solution to increased traffic volumes is that these laneways are made one-way to eliminate capacity constraints. The direction of the one-way arrangement would be subject to consultation.

Council has the option to either:

- Pro-actively make these changes now, to provide certainty to all landowners and developers about the future operation of these laneways, or
- Change these laneways on a case-by-case basis as development proposal eventuate. We do not prefer this option, because it provides no certainty to developers or the community in regards to the laneway. The outcome of this uncertainty is each individual developments will apply a heterogeneous mix of solutions to improve the laneway for their individual needs and the simple solution of a one-way arrangement (avoiding land loss) is rarely implemented. As changes to one-way operation requires community consultation, there is no certainty of Council support to change a laneway to one-way if proposed by a development.

Geometrically constrained laneways

These laneways typically have physical issues such as:

- No splays on corners and limited ability to provide them with properties outside of the study area, new buildings that did not provide the splays or heritage issues.
- Limited ability to widened the ROW due to heritage issues, subdivision pattern or properties abutting the laneway falling outside the study area.
- Dead ends

Examples of this type of laneway include No. 14 and 21.

These laneways have a finite capacity that is unlikely to be improved or the solutions are unfeasible in our view. In this case, it is recommended that Council encourage limited car parking on sites relying on these laneways.

Table 15: Recommendations for ROW upgrades

ROW	Classification	Modifications	Reason
1: ROW (from Alexandra Parade to Cecil Street)	Unconstrained laneway	One-way traffic flow	The length of each of these ROWs and development potential (6 storeys) means that a one-way arrangement should be provided.
2: ROW (from Cecil Street to Westgarth Street)	Unconstrained laneway		
3: ROW (from Westgarth Street to Leicester Street)	Unconstrained laneway		
4: ROW (from Leicester Street to Rose Street)	Unconstrained laneway		

ROW	Classification	Modifications	Reason
6: ROW (from Kerr Street to END)	Partially constrained	No change recommended. Likely outcomes are abutting properties widen the ROW or provide limited car parking.	This laneway is only 2.5m wide and incapable of accommodating vehicles. However, it only abuts 3 properties and a redevelopment of these sites could modify the laneway as needed.
7: ROW (from Kerr Street to Argyle Street)	Unconstrained	One-way traffic flow	The length this ROW and development potential (5-6 storeys) means that a one-way arrangement should be provided.
9: ROW (from Johnston Street to Victoria Street)	Unconstrained laneway		
10: ROW (from Victoria Street to Greeves Street)	Unconstrained laneway		
11: ROW (from Greeves Street to Bell Street)	Unconstrained laneway		
12: Fisher Lane (from Bell Street to END)	Partially constrained	See next section for detailed discussion of modifications.	Unusual laneway layout which requires more detailed works.
13: Fisher Lane (from Moor Street to END)	Partially constrained		
14: ROW (from Moor Street to END)	Highly constrained	Allow development with no vehicle access or car parking.	Narrow 2.5m wide laneway with two 90 degree bends means that it is not a trafficable laneway in its present form.
15: ROW (from Moor Street to END)	Partially constrained	No modifications required	Buildings accessing laneway will be limited to 5-storey, which is considered appropriate given the laneway configuration
18: Brunswick Place (from south side of Hanover Street to Fitzroy Street)	Unconstrained laneway	One-way traffic flow	The length this ROW and development potential means that a one-way arrangement should be provided.
20: ROW (from Palmer Street to END)	Partially constrained	Encourage limited or no parking.	Narrow laneway at 2.75m wide, which is too narrow for regular vehicle accessway. Widening is problematic as it would require

ROW	Classification	Modifications	Reason
			multiple properties to setback on the west.
21: ROW (from Fitzroy Street to END)	Partially constrained	Encourage low car parking provision and monitor over time.	Unable to achieve two-way traffic flow given heritage buildings and other buildings outside study area.
22: Alma Street (north-south section from Gertrude Street to END)	Highly constrained	See next section for detailed works proposed.	Unusual laneway layout which requires more detailed works.
23: Alma Street (east-west section from Fitzroy Street to END)	Unconstrained laneway		
24: ROW (north-south from Alma Street)	Highly constrained		
28: ROW (from Alexandra Parade to Cecil Street)	Unconstrained laneway	One-way traffic flow.	The length of each of these ROWs and development potential (5-6 storeys) means that a one-way arrangement should be provided.
29: ROW (from ROW 28. to Young Street)			
30: ROW (from Cecil Street to Westgarth Street)			
31: ROW (from Westgarth Street to Leicester Street)			
32: ROW (from Leicester to Rose)			
33: ROW (from Kerr Street to Argyle Street)			
34: ROW (from Argyle Street to END)	Partially constrained	Encourage limited or no parking.	Narrow laneway at 2.75m wide, which is too narrow for regular vehicle accessway. Only services 3 properties.

ROW	Classification	Modifications	Reason
35: ROW (from Johnston Street to END)	Partially constrained	Encourage limited or no parking.	Narrow laneway at 2.8m wide, which is too narrow for regular vehicle accessway.
36: ROW (from Johnston Street to Victoria Street)	Unconstrained laneway	One-way traffic flow.	The length of each of these ROWs and development potential means that a one-way arrangement should be provided.
37: ROW (from ROW 36. to Young Street)			
38: ROW (from Victoria Street to Greeves Street)			
46: Macrobertsons Lane (from Kerr Street to Argyle Street)			
47: Macrobertsons Lane (from Argyle Street to Johnston Street)			
49: ROW (from Gore Street to END)	Highly constrained	Encourage limited or no parking.	Services a number of properties with development potential of 6 storeys. The laneway only provides a single lane for two-way traffic and the ability to widen it is limited due to heritage constraints and the subdivision pattern.
53: ROW (from Charles Street to Webb Street)	Unconstrained laneway	One-way traffic flow.	The length of this ROW and development potential (5-8 storeys) means that a one-way arrangement should be provided.
55: Little Smith Street (from Gertrude Street Little Victoria Street only)	Unconstrained laneway	One-way traffic flow or shared area.	The length of this ROW and development potential means that a one-way arrangement could be provided. Alternatively, the road reserve (6.2m) allows for a two-way shared zone.
59: ROW (from Emma St to Emma Street)	Partially constrained	Provide splay on southern corner No. #35 Emma St.	A splay is needed to make the ROW traversable at its southern end.

ROW	Classification	Modifications	Reason
60: ROW (from Emma Street to END)	Unconstrained laneway	Provide splay at No. 23 Emma St.	A splay is needed to facilitate access to properties around the bend.
61: ROW (from Emma Street to END)	Partially constrained	Provide splay at No. 7 Emma St.	A splay is needed to facilitate access to properties around the bend.
64: ROW (from Smith Street to END)	Highly constrained	No changes.	Extremely narrow, but serves only 1 property, so no changes required (property can provide own setback if developed).
71: ROW (from Otter Street to END)	Partially constrained	Encourage limited or no parking.	Only a short laneway serving a limited number of properties with heritage walls at entrance limiting widening opportunities.
72: ROW (from Otter Street to END)	Partially constrained	Provide passing at entrance. See next section.	High development potential (6-7 storeys), length and dead end nature means that a passing area is required.
86: ROW (from Mason Street to END)	Highly constrained	No changes required.	Laneway is non-functional given its layout. Abutting properties to upgrade it, if required.
95: ROW (from Argyle Street to END)	Partially constrained	Provide a through traffic link to Johnson Street, or encourage limited or no parking, or encourage side acces outcomes (Napier St, George St)	High development potential (9 storeys). Single width laneway with no ability to widen at entrance due to new apartment buildings.
98: ROW (from Elliot Street to Chapel Street)	Partially constrained	Encourage limited or no parking.	Narrow laneway with limited scope to remedy effectively due to fine subdivision pattern.
114: ROW (east-west ROW abutting Gertrude Street properties, Connected to Little Gore Street)	Partially constrained	No changes required.	The challenge is access around entrance to Gore Street. Due to narrow width, properties on the north side will need to be setback for vehicle access to properties, alleviating issues at the corner.

ROW	Classification	Modifications	Reason
124: ROW (from Derby Street to Victoria Parade)	Partially constrained	One-way traffic flow	This laneway is long and abuts numerous properties.

8.4.1. Fisher Lane Network

The Fisher Lane Network includes ROW numbers 12 and 13 (called Fishers Lane) and ROW 14.

An aerial photograph of this network is shown in Figure 15.

Given the lack of splay, Fishers Lane is considered a partially constrained laneway.

Given the width of ROW 14, it is considered a highly constrained laneway.

Within Fishers Lane, there are no splays on bends or intersections of the laneways. Essentially in vehicle access terms, this laneway network needs to be considered as three separate laneways connecting to Bell Street, Fitzroy Street and Moor Street, meaning that navigating the bend is not required.

For the laneway accessed via Bell Street, the two-way width of Fisher Lane to the south of the T-intersection allows for passing opportunities. Accordingly, we are satisfied that this provides opportunities to accommodate additional traffic.

Properties with access to the southern portion of Fishers Lane would take access to/from Moor Street. This section provides only a single lane for two-way traffic. However, there are only two properties abutting this laneway (within the study area) and these can manage the laneway by widening the laneway for passing opportunities, if needed.

ROW 14 is highly constrained and has limited opportunity to remedy this. Accordingly, this laneway is more suitable for lower density development, or developments without car parking.

Figure 15: Fishers Lane network

8.4.2. Alma Street network

The Alma Street network includes ROW numbers 22 and 23 (called Alma Street) and ROW 24.

An aerial photograph of this network is shown in Figure 16.

Given the lack of splay, vehicles cannot navigate the bend from one end of Alma Street to the other.

The north-south section of Alma Street is also very narrow at 2.55m wide (ROW 22), making it unsuitable for standard vehicle access. It is effectively a pedestrian only laneway.

Given the lack of the splay from Alma Street to ROW 24, ROW 24 is very difficult for vehicles to navigate.

Because of the above, sites adjoining to ROWs 22 and 24 are not suitable for vehicle access in the their current form and Council should allow no car parking to be provided on these sites.

Figure 16: Alma Street network

8.4.3. ROW 72

ROW 72 is located on the south side of Otter Street, approximately 35m east of Smith Street.

An aerial photograph of this network is shown in Figure 16.

There are a number of constraints with this laneway.

Firstly, the width of the ROW (4.25m) only allows for one-way movement. There is a heritage building on the south-western corner of the intersection between Otter Street and Smith Street. Additionally, the site at 1-3 Otter Street has a permit for a development that does not provide a setback (PLN15/0947).

Accordingly, there is no opportunity to provide a passing area at the entrance to the site.

Because of this, there will need to be passing areas provided at sections within the ROW at other properties in order to accommodate high intensity development for abutting properties.

Figure 17: ROW 72

9. Design and Development Overlay – Draft Schedule

The following section sets a series of recommendation in regards to transport engineering that could be incorporated into a Design and Development Overlay.

DDO – Fitzroy East and Johnson Street North Access Management

Schedule XX to the DESIGN AND DEVELOPMENT OVERLAY

Design Objectives

- To encourage the creation of a high-quality public realm with active street frontages at ground level.
- To ensure that vehicular access to development does not adversely impact on the amenity of neighbouring properties.
- To ensure that vehicular access to development does not adversely impact on the efficient and safe operation, and the primary pedestrian realm, along Brunswick Street, Smith Street Johnson Street, Gertrude Street, Langridge Street, Wellington Street, Alexandra Parade and Victoria Parade.

Application Requirements

An application for development of land within the precinct must include, as appropriate, the following information to the satisfaction of the Responsible Authority:

- A Traffic Engineering Report prepared by a suitably qualified traffic engineer that demonstrates how the development:
  - minimises impacts on the level of service, safety and amenity of the arterial road network (including tram services),
  - reduces car dependence and promotes sustainable transport modes, and
  - which includes an assessment of the cumulative impacts of traffic and parking in the Precinct including an assessment of the ongoing functionality of laneway/s, where applicable.

Buildings and Works

Car Parking and Access

- Car parking should be located within a basement or concealed from the public realm.
- Vehicle access should be from laneways or local streets (in that order of preference).
- Vehicular access points to Brunswick Street, Smith Street, Johnson Street, Alexandra Parade, Gertrude Street/Langridge Street, Wellington Street and Victoria Parade will not be permitted unless there is no alternative and only in instances where it is not practical to waive the car parking and/or loading requirements and facilitate waste collection on-street.

- Where developments setback from a laneway for vehicle access, this setback should provide a minimum clear laneway width of 6m along the entire length of the laneway. Developments can build over the laneway on upper floors, subject to the provision of a 3.5m headroom clearance.
- Properties on the inside corner of bends in laneways or at intersections between two laneways should provide a minimum 3m x 3m splay to facilitate vehicle access.
- Bicycle parking should be located and designed to be secure and conveniently accessible from the street and associated uses.
- Vehicle ingress and egress into development, including loading facilities and building servicing, should be designed to ensure a high-quality pedestrian amenity and limit potential conflict between vehicle movements and pedestrian activity.
- Pedestrian access to buildings should be achieved via streets and must be clearly visible, secure and have an identifiable sense of address. Residential and commercial entrances should be distinguishable from each other. Primary access from laneways should be avoided.
- Pedestrian access to laneways should be provided in a safe manner and include a pedestrian refuge or landing.

Decision Guidelines

Before deciding on an application, the responsible authority must consider, as appropriate:

- The impact on the operation of all transport modes, including public transport services, walking and cycling
- The contribution the development makes to walkability, permeability and streetscape appearance of the area.
- The layout and appearance of areas set aside for vehicular access, loading and unloading and the location of any proposed car parking.
- The cumulative impact of development on traffic and parking in the nearby area, including on the functionality of laneways.

10. Conclusions and Recommendations

Access Management Plans have been prepared for all properties identified within the Brunswick Street and Smith Street Activity Centre study areas, which includes (but not limited to) properties abutting Brunswick Street and Smith Street, to detail how vehicle access to new developments can be managed to reduce the impact of vehicle access directly Brunswick Street and Smith Street. Suitably designed and controlled vehicle access is a key component in achieving the objectives of maximising the efficiency of the arterial road network and providing a high-quality pedestrian environment.

This report also recommends a series of traffic engineering requirements for a future Design and Development Overlay.

Appendix A

Clause 18 of the Yarra Planning Scheme

Traffix Group G22790R-01B

18.01 INTEGRATED TRANSPORT

31/07/2018
VC148

18.01-1S Land use and transport planning

31/07/2018
VC148

Objective

To create a safe and sustainable transport system by integrating land use and transport.

Strategies

Develop integrated and accessible transport networks to connect people to jobs and services and goods to market.

Plan urban development to make jobs and services more accessible by:

- Ensuring equitable access is provided to developments in accordance with forecast demand, taking advantage of all available modes of transport and to minimise adverse impacts on existing transport networks and the amenity of surrounding areas.
- Coordinating improvements to public transport, walking and cycling networks with the ongoing development and redevelopment of urban areas.
- Requiring integrated transport plans to be prepared for all new major residential, commercial and industrial developments.
- Focussing major government and private sector investments in regional cities and centres on major transport corridors, particularly railway lines, in order to maximise the access and mobility of communities.

Integrate public transport services and infrastructure into new development.

Improve transport links that strengthen the connections to Melbourne and adjoining regions.

Policy documents

Consider as relevant:

- *The Victorian Transport Plan* (Victorian Government, 2008)
- *Public Transport Guidelines for Land Use and Development* (Victorian Government, 2008)

- *Principal Public Transport Network 2017* (Department of Economic Development, Jobs, Transport and Resources, 2017)

18.01-2S Transport system

31/07/2018
VC148

Objective

To coordinate development of all transport modes to provide a comprehensive transport system.

Strategies

Reserve land for strategic transport infrastructure.

Require transport system management plans for key transport corridors and for major investment proposals.

Incorporate the provision of public transport, cycling and walking infrastructure in all major new state and local government road projects.

Locate transport routes to achieve the greatest overall benefit to the community to making the best use of existing social, cultural and economic infrastructure, minimising impacts on the environment and optimising accessibility, safety, emergency access, service and amenity.

Locate and design new transport routes and adjoining land uses to minimise disruption of residential communities and their amenity.

Plan or regulate new uses or development of land near an existing or proposed transport route to avoid detriment to and where possible enhance, the service, safety and amenity desirable for that transport route in the short and long terms.

Facilitate infrastructure that connects and improves train services between key regional cities and townships and Melbourne.

Ensure that pedestrian and cyclist access to public transport is facilitated and safeguarded.

Ensure the design, construction and management of all transport modes reduces environmental impacts.

Ensure careful selection of sites for freight generating facilities to minimise associated operational and transport impacts to other urban development and transport networks.

Consider all modes of travel, including walking, cycling, public transport, taxis and private vehicles (passenger and freight) in providing for access to new developments.

Policy guidelines

Consider as relevant:

- Any applicable highway strategy published by VicRoads.

Policy documents

18.02 MOVEMENT NETWORKS

31/07/2018
VC148

18.02-1S Sustainable personal transport

31/07/2018
VC148

Objective

To promote the use of sustainable personal transport.

Strategies

Ensure development and the planning for new suburbs, urban renewal precincts, greyfield redevelopment areas and transit-oriented development areas (such as railway stations) provide opportunities to promote more walking and cycling.

Encourage the use of walking and cycling by creating environments that are safe and attractive.

Develop high quality pedestrian environments that are accessible to footpath-bound vehicles such as wheelchairs, prams and scooters.

Ensure cycling routes and infrastructure are constructed early in new developments.

Provide direct and connected pedestrian and bicycle infrastructure to and between key destinations including activity centres, public transport interchanges, employment areas, urban renewal precincts and major attractions.

Ensure cycling infrastructure (on-road bicycle lanes and off-road bicycle paths) is planned to provide the most direct route practical and to separate cyclists from other road users, particularly motor vehicles.

Require the provision of adequate bicycle parking and related facilities to meet demand at education, recreation, transport, shopping and community facilities and other major attractions when issuing planning approvals.

Provide improved facilities, particularly storage, for cyclists at public transport interchanges, rail stations and major attractions.

Ensure provision of bicycle end-of-trip facilities in commercial buildings.

Policy documents

Consider as relevant:

- *Guide to Road Design, Part 6A: Paths for Walking and Cycling*

18.02-1R Sustainable personal transport - Metropolitan Melbourne

31/07/2018
VC148

Strategies

Improve local travel options for walking and cycling to support 20 minute neighbourhoods.

Develop local cycling networks and new cycling facilities that support the development of 20-minute neighbourhoods and that link to and complement the metropolitan-wide network of bicycle routes - the Principal Bicycle Network.

18.02-2S Public Transport

31/07/2018
VC148

Objective

To facilitate greater use of public transport and promote increased development close to high-quality public transport routes.

Strategies

Maintain and strengthen passenger transport networks.

Connect activity centres, job rich areas and outer suburban areas through high-quality public transport.

Improve access to the public transport network by:

- Ensuring integration with walking and cycling networks.
- Providing end-of-trip facilities for pedestrians and cyclists at public transport interchanges.

Plan for bus services to meet the need for local travel.

Ensure development supports the delivery and operation of public transport services.

Plan for and deliver public transport in outer suburban areas that is integrated with land use and development.

Provide for bus routes and stops and public transport interchanges in new development areas.

Policy documents

Consider as relevant:

- *Public Transport Guidelines for Land Use and Development* (Victorian Government, 2008)
- *The Victorian Transport Plan* (Victorian Government, 2008)
- *Cycling into the Future 2013-23* (Victorian Government, 2012)

18.02-2R Principal Public Transport Network

31/07/2018
VC148

Strategies

Facilitate high-quality public transport access to job-rich areas.

Maximise the use of existing infrastructure and increase the diversity and density of development along the Principal Public Transport Network, particularly at interchanges, activity centres and where principal public transport routes intersect.

Identify and plan for new Principal Public Transport Network routes.

Support the Principal Public Transport Network with a comprehensive network of local public transport.

Plan for local bus services to provide for connections to the Principal Public Transport Network.

Improve the operation of the Principal Public Transport Network by providing for:

- A metro-style rail system.
- Extended tram lines and the establishment of a light rail system.
- Road space management measures including transit lanes, clearways, stops and interchanges.

18.02-3S Road system

31/07/2018
VC148

Objective

To manage the road system to achieve integration, choice and balance by developing an efficient and safe network and making the most of existing infrastructure.

Strategies

Plan and regulate the design of transport routes and nearby areas to achieve visual standards appropriate to the importance of the route with particular reference to landscaping, the control of outdoor advertising and, where appropriate, the provision of buffer zones and resting places.

Provide for grade separation at railway crossings except with the approval of the Minister for Transport.

Make better use of roads for all road users through the provision of wider footpaths, bicycle lanes, transit lanes (for buses and taxis) and specific freight routes.

Selectively expand and upgrade the road network to provide for:

- High-quality connections between Metropolitan Melbourne and regional cities, and between regional cities.
- Upgrading of key freight routes.
- Ongoing development in outer suburban areas.
- Higher standards of on-road public transport.
- Improved key cross-town arterial links in the outer suburbs including circumferential and radial movement.

Ensure access to jobs and services in growth areas and outer suburban areas by improving roads for all road users.

Improve the management of key freight routes to make freight operations more efficient while reducing their external impacts.

Ensure that road space complements land use and is managed to meet community and business needs.

18.02-4S Car parking

31/07/2018
VC148

Objective

To ensure an adequate supply of car parking that is appropriately designed and located.

Strategies

Allocate or require land to be set aside for car parking subject to the existing and potential modes of access including public transport, the demand for off-street car parking, road capacity and the potential for demand management of car parking.

Encourage the efficient provision of car parking by consolidating car parking facilities.

Design and locate local car parking to:

- Protect the role and function of nearby roads.
- Enable easy and efficient use.
- Enable the movement and delivery of goods.
- Achieve a high standard of urban design and protect the amenity of the locality, including the amenity of pedestrians and other road users.
- Create a safe environment, particularly at night.
- Facilitate the use of public transport.

Protect the amenity of residential precincts from the effects of road congestion created by on-street parking.

Make adequate provision for taxi ranks as part of activity centres, transport interchanges and major commercial, retail and community facilities.

Policy documents

Consider as relevant:

- *Public Transport Guidelines for Land Use and Development* (Victorian Government, 2008)

18.03 PORTS

31/07/2018
VC148

18.03-1S Planning for ports

31/07/2018
VC148

Objective

To support the effective and competitive operation of Victoria's commercial trading ports at local, national and international levels and to facilitate their ongoing sustainable operation and development.

Strategies

Provide for the ongoing development of ports at Melbourne, Geelong, Hastings and Portland in accordance with approved Port Development Strategies.

Identify and protect key transport corridors linking ports to the broader transport network.

Manage any impacts of a commercial trading port and any related industrial development on nearby sensitive uses to minimise the impact of vibration, light spill, noise and air emissions from port activities.

Policy documents

Consider as relevant:

18.03-2S Planning for port environs

31/07/2018
VC148

Objective

To plan for and manage land near commercial trading ports so that development and use are compatible with port operations and provide reasonable amenity expectations.

Strategies

Protect commercial trading ports from encroachment of sensitive and incompatible land uses in the port environs.

Plan for and manage land in the port environs to accommodate uses that depend upon or gain significant economic advantage from proximity to the port's operations.

Ensure that industrially zoned land within the environs of a commercial trading port is maintained and continues to support the role of the port as a critical freight and logistics precinct.

Identify and protect key transport corridors linking ports to the broader transport network.

Ensure any new use or development within the environs of a commercial trading port does not prejudice the efficient and curfew free operations of the port.

Ensure that the use and intensity of development does not expose people to unacceptable health or safety risks and consequences associated with an existing major hazard facility.

Ensure that any use or development within port environs:

- Is consistent with policies for the protection of the environment.
- Takes into account planning for the port.

18.04 AIRPORTS

31/07/2018
VC148

18.04-1S Planning for airports and airfields

31/07/2018
VC148

Objective

To strengthen the role of Victoria's airports and airfields within the state's economic and transport infrastructure, facilitate their siting and expansion and protect their ongoing operation.

Strategies

Protect airports from incompatible land uses.

Ensure that in the planning of airports, land use decisions are integrated, appropriate land use buffers are in place and provision is made for associated businesses that service airports.

Ensure the planning of airports identifies and encourages activities that complement the role of the airport and enables the operator to effectively develop the airport to be efficient and functional and contribute to the aviation needs of the state.

Ensure the effective and competitive operation of Melbourne Airport at both national and international levels.

Protect the environs of Avalon Airport so it can operate as a full-size jet airport focussing on freight, training and services.

Recognise Essendon Airport's current role in providing specialised functions related to aviation, freight and logistics and its potential future role as a significant employment and residential precinct that builds on the current functions.

Recognise Moorabbin Airport as an important regional and state aviation asset by supporting its continued use as a general aviation airport, ensuring future development at the site encourages uses that support and enhance the state's aviation industry and supporting opportunities to extend activities at the airport that improve access to regional Victoria.

Maintain Point Cook Airfield as an operating airport complementary to Moorabbin Airport.

Preserve long-term options for a new general aviation airport south-east of Metropolitan Melbourne by ensuring urban development does not infringe on possible sites, buffer zones or flight paths.

Avoid the location of new airfields in areas that have greater long-term value to the community for other purposes.

Plan the location of airfields, nearby existing and potential development, and the land-based transport system required to serve them as an integrated operation.

Plan the visual amenity and impact of any use or development of land on the approaches to an airfield to be consistent with the status of the airfield.

Plan for areas around all airfields such that:

- Any new use or development that could prejudice the safety or efficiency of an airfield is precluded.
- The detrimental effects of aircraft operations (such as noise) are taken into account in regulating and restricting the use and development of affected land.
- Any new use or development that could prejudice future extensions to an existing airfield or aeronautical operations in accordance with an approved strategy or master plan for that airfield is precluded.

Policy documents

Consider as relevant:

- *National Airports Safeguarding Framework* (as agreed by Commonwealth, State and Territory Ministers at the meeting of the Standing Council on Transport and Infrastructure on 18 May 2012)

- *Avalon Airport Master Plan* (Avalon Airport Australia Pty Ltd, 2015)
- *Avalon Airport Strategy* (Department of Business and Employment/AeroSpace Technologies of Australia, 1993) and its associated Aircraft Noise Exposure Concepts

18.04-1R Melbourne Airport

31/07/2018
VC148

Strategies

Protect the curfew-free status of Melbourne Airport and ensure any new use or development does not prejudice its operation.

Ensure any new use or development does not prejudice the optimum usage of Melbourne Airport.

Policy documents

Consider as relevant:

- *Melbourne Airport Master Plan 2013 - People Place Prosperity* (Australia Pacific Airports (Melbourne) Pty Ltd, 2013)
- *Melbourne Airport Strategy* (Government of Victoria/Federal Airports Corporation, approved 1990) and its associated *Final Environmental Impact Statement*

18.05 FREIGHT

31/07/2018
VC148

18.05-1S Freight links

31/07/2018
VC148

Objective

To develop the key Transport Gateways and freight links and maintain Victoria's position as the nation's premier logistics centre.

Strategies

Support major Transport Gateways as important locations for employment and economic activity by:

- Protecting designated ports, airports, freight terminals and their environs from incompatible land uses.
- Encouraging adjacent complementary uses and employment generating activities.

Improve the freight and logistics network to optimise freight handling and maintain the efficiency and effectiveness of the network.

Support the development of freight and logistics precincts in strategic locations along key regional freight corridors.

Plan for improved freight connections that are adaptable to commodity, market and operating changes.

Link areas of production and manufacturing to export markets.

Improve freight efficiency and increase capacity of Transport Gateways while protecting urban amenity.

Facilitate increased capacity of Interstate Freight Terminals, both in regional areas and Metropolitan Melbourne.

Ensure an adequate supply of land is zoned to allow high-volume freight customers to locate adjacent to Interstate Freight Terminals.

Minimise negative impacts of freight movements on urban amenity.

Limit incompatible uses in areas expected to have intense freight activity by identifying and protecting key freight routes on the Principal Freight Network.

Policy documents

Consider as relevant:

- *Freight Futures: Victorian Freight Network Strategy for a more prosperous and liveable Victoria* (Victorian Government, 2008)

18.05-1R Freight links - Metropolitan Melbourne

31/07/2018
VC148

Strategy

Ensure suitable sites are provided for intermodal freight terminals at key locations around Metropolitan Melbourne, particularly for the Beveridge Interstate Freight Terminal and the Western Interstate Freight Terminal.

Appendix C
Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
1: ROW (from Alexandra Parade to Cecil Street)	**Existing Conditions:** • Carriageway width – 3.4m • Traffic management – Two-way, must turn left to/from Alexandra Parade. Cecil Street is one-way westbound. • Parking – No Parking • Footpath – No footpaths • Material – Bluestone • Layout features – there is a connecting ROW to the east which is currently inaccessible. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
2: ROW (from Cecil Street to Westgarth Street)	**Existing Conditions:** • Carriageway width – 3.6m • Traffic management – Two-way, Cecil Street is one way westbound. • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
3: ROW (from Westgarth Street to Leicester Street)	**Existing Conditions:** • Carriageway width – 3.7m • Traffic management – Two-way • Parking – Car park on south side • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

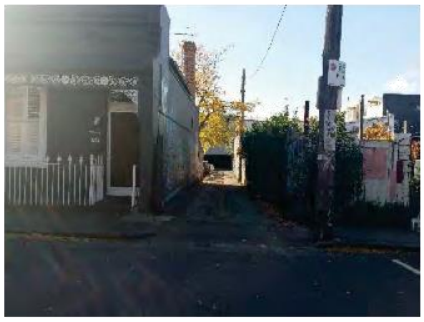
Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
4: ROW (from Leicester Street to Rose Street)	**Existing Conditions:** • Carriageway width – 3.3m-3.6m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
5: ROW (from Rose Street to END)	**Existing Conditions:** • Carriageway width – 4.6m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – property on west side of ROW is set back from property boundary **Constraints: Unconstrained laneway** • Short in length	
6: ROW (from Kerr Street to END)	**Existing Conditions:** • Carriageway width – 2.5m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – very narrow and has a gate that can be closed **Constraints: Partially constrained** • Vertically constrained • Narrow width – should be widened to at least 3m if used for vehicle access	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
7: ROW (from Kerr Street to Argyle Street)	**Existing Conditions:** • Carriageway width – 3.6m-3.95m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
8: ROW (from Argyle Street to END)	**Existing Conditions:** • Carriageway width – 3.25m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length	
9: ROW (from Johnston Street to Victoria Street)	**Existing Conditions:** • Carriageway width – 3.5m-3.7m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a connecting ROW to the west, which is gated off to the public. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	



Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
10: ROW (from Victoria Street to Greeves Street)	**Existing Conditions:** • Carriageway width – 2.95m-4.45m • Traffic management – Two-way, Greeves Street is one-way westbound. • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout Features – There is a connecting ROW to the west, with a splay provided on the northwest corner of the intersection. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
11: ROW (from Greeves Street to Bell Street)	**Existing Conditions:** • Carriageway width – 3.1m • Traffic management – Two-way, Greeves Street is one-way westbound. • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a connecting ROW on the west, with no splays provided. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
12: Fisher Lane (from Bell Street to END)	**Existing Conditions:** • Carriageway width – 2.85m-5.55m • Traffic management – Two-way • Parking – Parking provided in car park at southern end behind gate • Footpath – No footpath • Material – Bluestone • Layout Features – There is a ROW of width 3.05m on the west side of Fisher Lane which connects to Fitzroy Street to the west, and the continuation of Fisher Lane to the south. There are no splays at any of the intersections. **Constraints: Partially constrained** • Needs splays • Needs connectivity with other section of Fisher Lane	
13: Fisher Lane (from Moor Street to END)	**Existing Conditions:** • Carriageway width – 3.05m • Traffic management – Two-way, Moor Street is one-way westbound • Parking – Large car park in the middle • Footpath – No footpath • Material – Asphalt • Layout Features – There is another ROW of width 3.05m to the north. This ROW connects to Fitzroy Street in the west, and the continuation of Fisher Street to the north. There are no splays on any of the intersections. **Constraints: Partially constrained** • Needs splays • Needs connectivity with other section of Fisher Lane	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
14: ROW (from Moor Street to END)	**Existing Conditions:** • Carriageway width – 2.55m • Traffic management – Two-way, Moor Street is one-way westbound • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a zigzag bend in the ROW, with no splays provided. **Constraints: Highly constrained** • Needs splays • Narrow	
15: ROW (from Moor Street to END)	**Existing Conditions:** • Carriageway width – 3.15m to 6m (at end) • Traffic management – Two-way • Parking – No parking • Footpaths – No footpaths • Material – Bluestone • Layout features – There is a 90 degree bend in the ROW, with no splay provided. The ROW continues north-south after the bend. The ROW does not provide a connection between the two streets. **Constraints: Partially constrained** • Needs splays	
16: ROW (from King William Street to END)	**Existing Conditions:** • Carriageway width – 3.0m • Traffic Management – Two-way • Parking –No Parking • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
17: ROW (from Hanover Street to END)	**Existing Conditions:** • Carriageway width – 3.55m • Traffic management – Two-way • Parking – No Parking • Footpath – Small footpath on west side • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	
18: Brunswick Place (from south side of Hanover Street to Fitzroy Street)	**Existing Conditions:** • Carriageway width – 3.65m • Traffic management – Two-way • Parking – No Parking within ROW, however parking is available around the 90 degree bend towards the west • Footpath – Footpath available around the 90 degree bend towards the west • Material – Bluestone • Layout features – Operates as a single lane two-way ROW in a north-south direction before turning 90 degrees towards the west where two-way passing is available **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
19: ROW (from James Street to END)	**Existing Conditions:** • Carriageway width – 2.75m • Traffic management – Two-way • Parking – No Parking • Footpath – No footpaths • Material – Bluestone • Layout features – There is a 90 degree bend in the ROW for pedestrian use only **Constraints: Unconstrained laneway** • Bend only accessible for pedestrians • Suitable for properties fronting Brunswick Street	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
20: ROW (from Palmer Street to END)	**Existing Conditions:** • Carriageway width – 2.75m • Traffic management – Two-way • Parking – Parking provided in car park at southern end • Footpath – No footpaths • Material – Bluestone **Constraints: Partially constrained** • Should be 3m wide • Short in length	
21: ROW (from Fitzroy Street to END)	**Existing Conditions:** • Carriageway width – 2.7m to 3.7m. The ROW is 4.1m around the T-intersection. • Traffic management – Two-way, traffic is restricted to travel south along Fitzroy Street • Parking – No parking • Footpath – No footpaths • Material – Bluestone • Layout features – There is a kink halfway along the ROW with splays. The ROW forms a T-intersection at its end **Constraints: Partially Constrained** • Lack of passing area	
22: Alma Street (north-south section from Gertrude Street to END)	**Existing Conditions:** • Carriageway width – 2.55m • Traffic management – Not suitable for traffic movement. No vehicle access is provided to properties. • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – Narrow and bends 90 degrees at the end towards the west **Constraints: Highly constrained** • Too narrow • Limited ability to widen	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
23: Alma Street (east-west section from Fitzroy Street to END)	**Existing Conditions:** • Carriageway width – 3.6m • Traffic management – Two-way. Vehicles travelling to Fitzroy Street must travel towards the north from the ROW (one-way). • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – Bends 90 degrees at the end towards the north (not suitable for vehicle access). A north-south ROW extends from the midpoint, with splays on one corner **Constraints: Unconstrained laneway** • Short in length	
24: ROW (north-south from Alma Street)	**Existing Conditions:** • Carriageway width – 3.1m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – splays on one corner **Constraints: Highly constrained** • Lacks splays • Difficult to get into from Alma Street	
25: ROW (east-west from Fitzroy Street to END)	**Existing Conditions:** • Carriageway width – 3.0m-3.3m (around bend) • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a 90 degree bend towards the south with no splay **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
26: Princes Street (east-west from Fitzroy Street to END)	**Existing Conditions:** • Carriageway width – 4.95m (including building setback) • Traffic management – Two-way • Parking – Parking on the north side of ROW within building setback • Footpath – No footpath • Material – Asphalt & Bluestone • Layout features – Forms a T-intersection with ROW at the end in a north-south direction **Constraints: Unconstrained laneway** • Two-way traffic	
27: ROW (from Princes Street to END)	**Existing Conditions:** • Carriageway width – 6.1m (including footpath) • Traffic management – Two-way • Parking – No parking • Footpath – Footpath on west side (south of Princes Street) • Material – Asphalt & Bluestone • Layout features – Includes footpath south of Princes Street. **Constraints: Unconstrained laneway** • Two-way traffic	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
28: ROW (from Alexandra Parade to Cecil Street)	**Existing Conditions:** • Carriageway width – 3.65m • Traffic management – Two-way, must enter/exit left at Alexandra Parade. Cecil Street is one-way westbound. • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – Connects to ROW 29. on the eastern side. No splays are provided. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
29: ROW (from ROW 28. to Young Street)	**Existing Conditions:** • Carriageway width – 3.5m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout Features – Connects to ROW 28. on the western side. No splays are provided. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
30: ROW (from Cecil Street to Westgarth Street)	**Existing Conditions:** • Carriageway width – 3.5m • Traffic management – Two-way • Parking – No parking • Footpath – No Footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
31: ROW (from Westgarth Street to Leicester Street)	**Existing Conditions:** • Carriageway width – 3.6m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a connecting ROW on the east side, which connects to Young Street **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
32: ROW (from Leicester to Rose)	**Existing Conditions:** • Carriageway width – 3.7m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
33: ROW (from Kerr Street to Argyle Street)	**Existing Conditions:** • Carriageway width – 2.9m-6.7m • Trafficable Width – 2.9m-8.5m • Traffic management – Two-way • Parking – No parking • Footpath – Both sides of the road for the south section • Material – Bluestone and Asphalt • Layout features – The ROW is narrow for the norther section, but opens out into a wider ROW with footpaths and kerbing. The material also changes at this point from bluestone to asphalt. There is an east-west section at this point which connects to Young Street. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
34: ROW (from Argyle Street to END)	**Existing Conditions:** • Carriageway width – 2.5m • Traffic management – Two-way • Parking –No parking • Footpath – No footpath • Material – Gravel **Constraints: Partially constrained** • Narrow – less than 3m in width • Short in length	
35: ROW (from Johnston Street to END)	**Existing Conditions:** • Carriageway width – 2.8m • Traffic management – Two-way • Parking –No parking • Footpath – No footpath • Material – Bluestone **Constraints: Partially constrained** • Narrow – less than 3m in width • Short in length	
36: ROW (from Johnston Street to Victoria Street)	**Existing Conditions:** • Carriageway width – 2.95m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – Connects to ROW 37. on the east side, with no splays provided **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
37: ROW (from ROW 36. to Young Street)	**Existing Conditions:** • Carriageway width – 3.05m • Traffic management – Two-way, Young Street is one-way northbound • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – Connects to ROW 36. on the west end, with no splays provided **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
38: ROW (from Victoria Street to Greeves Street)	**Existing Conditions:** • Carriageway width – 3.1m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a connecting ROW on the east side, with no splays provided. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
39: ROW (from Greeves Street to Young Street)	**Existing Conditions:** • Carriageway width – 3.05m-3.8m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a 90 degree bend in the ROW, with a splay provided on the north-east corner. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
40: ROW (North-south section from King William Street to END)	**Existing Conditions:** • Carriageway width – 3.65m • Traffic management – Two-way, must travel west on King William Street as a No Through Road is to the east (bollards) • Parking – No Parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	
41: ROW (from Young Street to END)	**Existing Conditions:** • Carriageway width – 4.85m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout Features – Kink located towards the western end of ROW **Constraints: Partially constrained** • Kink • Length • Slightly less than two-way traffic	
42: ROW (from Young Street to END)	**Existing Conditions:** • Carriageway width – 3.0m • Traffic management – Two-way • Parking – No Parking • Footpath – No footpath • Material – Bluestone • Layout Features – No properties take vehicle access from the ROW **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
43: Graham Street (from Young Street to END)	**Existing Conditions:** • Carriageway width – 5.1m • Road reserves – 8.0m • Traffic management – Two-way • Parking – Parking provided on the north side on-street • Footpath – Footpaths on both the north and south side • Material – Asphalt with bluestone kerb & channel • Layout features – Operates with a single lane for two-way traffic. There is a dead-end at the western end. **Constraints: Unconstrained laneway** • Two-way traffic	
44: Duke Street (from Young Street to END)	**Existing Conditions:** • Carriageway width – 3.2m • Road reserves – 7.8m • Parking – No parking • Footpath – Footpaths on both the north and south side • Material – Bluestone slate • Layout Features – No entry authorised vehicles expected. **Constraints: Unconstrained laneway** • Short in length	
45: ROW (from Westgarth Street to Leicester Street)	**Existing Conditions:** • Carriageway width – 3.05m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

Street Name	Description	Photo
46: Macrobertsons Lane (from Kerr Street to Argyle Street)	**Existing Conditions:** • Carriageway width – 3.8m-4.05m • Traffic management – Two-way, Argyle Street is one-way westbound • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
47: Macrobertsons Lane (from Argyle Street to Johnston Street)	**Existing Conditions:** • Carriageway width – 3.45m-3.8m • Traffic management – Two-way, Argyle Street is one-way westbound • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
48: Macrobertsons Lane (from Johnston Street to END)	**Existing Conditions:** • Carriageway width – 3.1m-3.3m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
49: ROW (from Gore Street to END)	**Existing Conditions:** • Carriageway width – 2.8m-3.25m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a 90 degree bend in the ROW, with a splay provided on the southwest corner **Constraints: Highly Constrained** • Narrow • Bend • Inability to widen	
50: ROW (from Gore Street to END)	**Existing Conditions:** • Carriageway width – 2.95m • Traffic management – Two-way • Parking – Car park at east end of ROW • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short	
51: ROW (from Charles Street to END)	**Existing Conditions:** • Carriageway width – 4m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in Length • Dead End	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
52: Charles Place (from Charles Street to END)	**Existing Conditions:** • Carriageway width – 3.75m • Traffic management –Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
53: ROW (from Charles Street to Webb Street)	**Existing Conditions:** • Carriageway width – 4.05m • Traffic management – Two-way, Charles Street is one-way westbound • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
54: Little Smith Street (from Webb Street to Gertrude Street)	**Existing Conditions:** • Carriageway width – 4.5m • Road reserve – 5.8m • Traffic management – One-way southbound • Parking – No parking • Footpath – Narrow path/kerbing on both sides • Material – Asphalt • Layout features – long and narrow **Constraints: Unconstrained laneway** • One-way • Used for loading without adequate space	

Appendix C

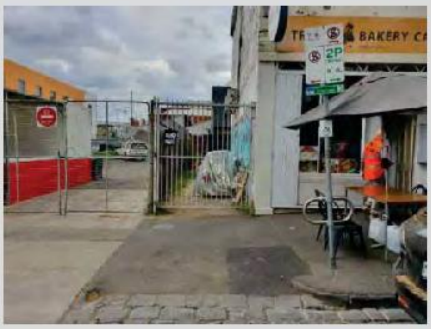
Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
55: Little Smith Street (from Gertrude Street Little Victoria Street)	**Existing Conditions:** • Carriageway width – 4.2m • Road Reserve – 6.2m • Traffic management – Two-way • Parking – No parking • Footpath – Narrow path/kerbing on both sides • Material – Asphalt **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
56: ROW (from Little Smith Street to END)	**Existing Conditions:** • Carriageway width – 3.8m • Traffic management –Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	
57: Little Victoria Street (from Little Smith Street to Smith Street)	**Existing Conditions:** • Carriageway width – 4m • Road Reserve – 6.35m • Traffic management – One-way westbound • Parking – No parking • Footpath – Footpath on both sides • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length • Continuous • One-way	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
58: Little Smith Street (from Little Victoria Street to Smith Street)	**Existing Conditions:** • Carriageway width – 3.1m-4.5m • Road Reserve – 3.1m-6.2m • Traffic management – Two-way • Parking – No parking • Footpath – Narrow path/kerbing on both sides for north-south section, none for east-west section • Material – Asphalt and Bluestone • Layout features – there is a 90 degree bend in the ROW with a narrow kink from the property on the southwest corner making it difficult to traverse. **Constraints: Unconstrained Laneway** • Short in length • Corner does not need to be traversed	
59: ROW (from Emma St to Emma Street)	**Existing Conditions:** • Carriageway width – 2.9m-3.05m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – there are two 90 degree bends on the ROW, with a splay provided for the northern bend. The southern bend does not have a splay and is difficult to traverse. There is also construction going on adjacent to the ROW. **Constraints: Partially constrained** • Lack of splay on the southern bend	
60: ROW (from Emma Street to END)	**Existing Conditions:** • Carriageway width – 2.6m • Traffic management – Two-way • Parking – There is a car park at the western end of the ROW. • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length	



Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
61: ROW (from Emma Street to END)	**Existing Conditions:** • Carriageway width – 3.05m-3.35m • Traffic management – Two-way • Parking – No parking • Footpath – No foothpath • Material – Asphalt • Layout features – there is a 90 degree bend at the end of the ROW, with no splays provided. **Constraints: Partially constrained** • Lacks splays	
62: ROW (from Keele Street to END)	**Existing Conditions:** • Carriageway width – 2.75m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Partially constrained** • Narrow – less than 3m in width	
63: ROW (from Smith Street to END)	**Existing Conditions:** • Carriageway width – 3.05m • Traffic management – Two-way • Parking – No parking • Footpath – No foothpath • Material – Concrete **Constraints: Unconstrained Laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
64: ROW (from Smith Street to END)	**Existing Conditions:** • Carriageway width – 2.2m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Unsealed • Gated entrance **Constraints: Highly Constrained** Narrow width	
65: ROW (from Easey Street to END)	**Existing Conditions:** • Carriageway width – 3.0m • Traffic management – Two-way • Parking – No parking • Footpath – No foothpath • Material – Asphalt **Constraints: Unconstrained Laneway** • Short in length	
66: ROW (from Sackville Street to END)	**Existing Conditions:** • Carriageway width – 2.9m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
67: ROW (from Sackville Street to END)	**Existing Conditions:** • Carriageway width – 3.6m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – Has a T-intersection with an east-west section. There are no splays, but the open section at the end allows for turning. **Constraints: Partially constrained** • Requires splays at T-intersection	
68: ROW (from Perry Street to Bedford Street)	**Existing Conditions:** • Carriageway width – 2.75m-3.1m, plus additional width due to property setback • Traffic management – Two-way, Bedford Street is one-way northbound. Perry Street is one-way eastbound • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – The ROW has a T-intersection on the western side. At this point there is splays on both corners. The property along the south of the ROW is also setback from its boundary. **Constraints: Unconstrained laneway** • Two-way traffic flow	
69: ROW (from Perry Street to END)	**Existing Conditions:** • Carriageway width – 3.35m • Traffic management – Two-way, Perry Street is one-way eastbound • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
70: ROW (from Bedford Street to END)	**Existing Conditions:** • Carriageway width – 3.2m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – The ROW has a 90 degree bend with a splay provided on the southeast corner. **Constraints: Unconstrained laneway** • Short in length	
71: ROW (from Otter Street to END)	**Existing Conditions:** • Carriageway width – 2.6m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – Narrow in width **Constraints: Partially constrained** • Narrow – less than 3m in width • Short in length	
72: ROW (from Otter Street to END)	**Existing Conditions:** • Carriageway width – 4.25m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – Long ROW with large amount of vehicle access. **Constraints: Partially constrained** • Needs widening or passing area • Length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
73: ROW (from Stanley Street to END)	**Existing Conditions:** • Carriageway width – 2.75m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length • Narrow – but existing property setback makes width acceptable	
74: ROW (from Stanley Street to END)	**Existing Conditions:** • Carriageway width – 6.05m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length	
75: ROW (from Little Oxford Street to END)	**Existing Conditions:** • Carriageway width – 3m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Concrete **Constraints: Unconstrained laneway** • Short in length	
76: ROW (from Little Oxford Street to END)	**Existing Conditions:** • Carriageway width – 3.45m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
77: Oxford Place (from Little Oxford Street to END)	**Existing Conditions:** • Carriageway width – 5m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length	
78: ROW (from Peel Street to END)	**Existing Conditions:** • Carriageway width – 4.3m • Road Reserve – 6.25m • Traffic management – Two-way • Parking – No parking • Footpath – Narrow footpath/kerbing on both sides • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length	
79: ROW (from Little Oxford Street to END)	**Existing Conditions:** • Carriageway width – 3.65m-4.45m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a slight kink in the ROW, with a splay provided. **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
80: ROW (from Little Oxford Street to END)	**Existing Conditions:** • Carriageway width – 3.8m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – There is a 90 degree bend in the ROW, with a splay on the southeast corner **Constraints: Unconstrained laneway** • Short in length	
81: ROW (from Little Oxford Street to END)	**Existing Conditions:** • Carriageway width – 4.25m-7.65m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length • Two-way for parts	
82: ROW (from Langridge Street to Derby Street)	**Existing Conditions:** • Carriageway width – 3.05m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
83: ROW (from Derby Street to END)	**Existing Conditions:** • Carriageway width – 2.95m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt **Constraints: Unconstrained laneway** • Short in length	
84: ROW (from Oxford Street to END)	**Existing Conditions:** • Carriageway width – 4.1m-5.7m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – there is a T-intersection at the west end, with enough space to manoeuvre corners **Constraints: Unconstrained laneway** • Short in length • Wide enough to turn	
85: ROW (from Mason Street to END)	**Existing Conditions:** • Carriageway width – 3.3m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Unsealed road **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
86: ROW (from Mason Street to END)	**Existing Conditions:** • Carriageway width – 3.1m-3.45m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – concrete • There is a kink section in the middle, with splays provided at each turn **Constraints: Highly Constrained** • Bend • Inability to widen	
87: ROW (from Kerr Street to Spring Street)	**Existing Conditions:** • Carriageway width – 4.15m-4.3m • Traffic management – Two-way • Parking – No Parking • Footpaths – No footpaths • Material – Bluestone • Layout features – There is a 90 degree bend in the ROW, with no splay provided **Constraints: Unconstrained laneway** • Short in length	
88: Johnston Place (from Johnston Street to END)	**Existing Conditions:** • Carriageway width – 4.3m • Road reserve – 5.85m • Traffic management – Two-way • Parking – No parking • Footpaths – No footpaths • Material – Bluestone • Layout features – there is a section of low lying vegetation of the east side of the ROW **Constraints: Unconstrained laneway** • Short in length • Two-way	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
89: ROW (north-south section from Johnston Street to Victoria Street)	**Existing Conditions:** • Carriageway width – 4.4m-4.6m • Traffic Management – Two-way • Parking – Car park on west side of mid-point • Material – Bluestone • Layout features – There is a connecting ROW to the east of the east which provides access to Fitzroy Street. No splays are provided, but the property to the south of the intersection is set back. Access to Johnston Street is provided via the private car park to the west. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
90: ROW (East-West section from ROW 86. to Fitzroy Street)	**Existing Conditions:** • Carriageway width – 6.1m • Traffic management – Two-way • Parking – Car park to the west end of ROW • Footpaths – No footpaths • Materials – Bluestone • Layout features – connected to ROW 86. at the west end. Access to Johnston Street is provided via the private car par to the west. **Constraints: Unconstrained laneway** • Two-way	
91: Harrison Place (from Spring Street to END)	**Existing Conditions:** • Carriageway width – 3.1m • Traffic management – Two-way • Parking – No Parking • Footpath – No footpath • Material – Bluestone • Layout features – There are 2 short ROWs on the north and south side of Harrison Place, with no splays provided at either **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
92: ROW (from west side of Fitzroy Street to END)	**Existing Conditions:** • Carriageway width – 3.2m • Traffic management – Two-way • Parking – Parking for adjacent properties along south side of ROW • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	
93: ROW (from Fitzroy Street to Argyle Street)	**Existing Conditions:** • Carriageway width – 3.15m-3.25m • Traffic management – Two-way • Parking – No Parking • Footpath – No footpaths • Material – Bluestone • Layout features – There is a 90 degree bend in the ROW, with no splay provided **Constraints: Unconstrained laneway** • Two short lengths	
94: ROW (from Hertford Street to END)	**Existing Conditions:** • Carriageway width – 2.75m – but hard to tell with construction occurring • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Partially Constrained** • Short • Narrow – however current construction may affect width	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
95: ROW (from Argyle Street to END)	**Existing Conditions:** • Carriageway width – 4m • Traffic management – Two-way, Argyle Street is one-way eastbound • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Partially Constrained** • Needs widening • High development potential	
96: ROW (from Rochester Street to END)	**Existing Conditions:** • Carriageway width – 2.8m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a connecting ROW to the north, with no splays provided at the intersection, however, properties on the south are set back. **Constraints: Partially constrained** • Narrow – less than 3m width • Short	
97: ROW (from George Street to END)	**Existing Conditions:** • Carriageway width – 3.1m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
98: ROW (from Elliot Street to Chapel Street)	**Existing Conditions:** • Carriageway width – 2.7m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Partially constrained** • Narrow – less than 3m width • Short	
99: ROW (from Johnston Street to END)	**Existing Conditions:** • Carriageway width – 3.2m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short	
100: Royale Lane (from Gertrude Street to Palmer Street)	**Existing Conditions:** • Carriageway width – 3.9m • Road reserve – 4.55m • Traffic management – Two-way • Parking – No parking • Footpath – Narrow path/kerbing on the east side • Material – Asphalt • Layout features – Connects to Marion Lane to the east, with a splay provided on the northeast corner **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
101: Marion Lane (from Royal Lane to Fitzroy Street)	**Existing Conditions:** • Carriageway width – 3.2m-6m • Traffic management – Two-way, Fitzroy Street is one-way southbound • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – Narrow at the east end, but widens out to allow vehicle passing **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
102: ROW (from Gertrude Street to Marion Lane)	**Existing Conditions:** • Carriageway width – 3.7m-3.8m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – Intersects with Marion Lane, with little sight distance to see incoming traffic/pedestrians. **Constraints: Unconstrained laneway** • Short in length	
103. ROW (from Young Street to END)	**Existing Conditions:** • Carriageway width – 3.55m • Traffic management – Two-way, Young Street is one-way northbound • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
104: Little Napier Street (from Gertrude to Little Victoria Street)	**Existing Conditions:** • Carriageway width – 3.7m • Road Rerseve – 5.2m • Traffic management – One-way northbound • Parking – No parking • Footpath – Narrow kerbing/path on both sides • Material – Asphalt **Constraints: Unconstrained laneway** • Already one-way	
105: ROW (from Little Napier to Napier)	**Existing Conditions:** • Carriageway width – 3.95m • Traffic management – Two-way, Little Napier is one-way northbound • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	
106: ROW (from Napier Street to Little George Street)	**Existing Conditions:** • Carriageway width – 3m • Traffic management – Two-way, Little George is one-way northbound • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout Features – connects to Little George Street in the east, with a splay provided on the northwest corner **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
107: Little George Street (from Gertrude Street to Webb Street)	**Existing Conditions:** • Carriageway width – 3.75m • Road Reserve – 5.05m • Traffic management – One-way, northbound • Parking – No parking • Footpath – Narrow path/kerbing on each side • Material – Bluestone • Layout features – Connects to ROW 106. on the west side, with a splay on the northwest corner. **Constraints: Unconstrained laneway** • Already one-way	
108: Little George Street (from Gertrude Street to Little Victoria Street)	**Existing Conditions:** • Carriageway width – 3.2m • Road Reserve – 4.6m • Traffic management – One-way northbound • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – Has a connecting ROW on the west side, with no splays provided **Constraints: Unconstrained laneway** • Already one-way	
109: ROW (from George Street to END)	**Existing Conditions:** • Carriageway width – 2.9m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
110: ROW (from George Street to END)	**Existing Conditions:** • Carriageway width – 2.8m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	
111: ROW (from Gore Street to END)	**Existing Conditions:** • Carriageway width – 3.7m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	
112: ROW (east-west ROW abutting Gertrude Street properties, Connected to Little Gore Street)	**Existing Conditions:** • Carriageway width – 4.15m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – T intersection with Little Gore Street, which has a width of 4.3m (plus kerbing). Kerbing splays on southeast corner. **Constraints: Partially constrained** • Length of little Gore Street • Lacks passing opportunities	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
113: ROW from Emma Street to Blanche Street)	**Existing Conditions:** • Carriageway width – 2.8m • Traffic management – Two-way, No entry from Alexandra Parade to both Blanche Street and Emma Street. Right turns are also not permitted from these streets to Alexandra Parade • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a connecting ROW to the south, with splays provided on both corners at the intersection **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
114: ROW (from Blanche Street to Budd Street)	**Existing Conditions:** • Carriageway width – 3m • Traffic management – Two-way, No entry from Alexandra Parade to both Blanche Street and Budd Street. Right turns are also not permitted from these streets to Alexandra Parade • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a connecting ROW to the south, with a splay provided on the southeast corner. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
115: ROW (from Budd Street to Wellington Street)	**Existing Conditions:** • Carriageway width – 3.05m • Traffic management – Two-way, No entry from Alexandra Parade to Budd Street. Right turns are also not permitted from Budd Street to Alexandra Parade • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a connecting ROW to the south, with a splay provided on the southeast corner. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	
116: ROW (from Wellington Street to Charlotte Street)	**Existing Conditions:** • Carriageway width – 3.15m • Traffic management – Two-way, No entry from Alexandra Parade to Charlotte Street. Right turns are also not permitted from Charlotte Street to Alexandra Parade • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a connecting ROW to the south, with no splays provided. **Constraints: Unconstrained laneway** • Could be made one-way • Continuous	

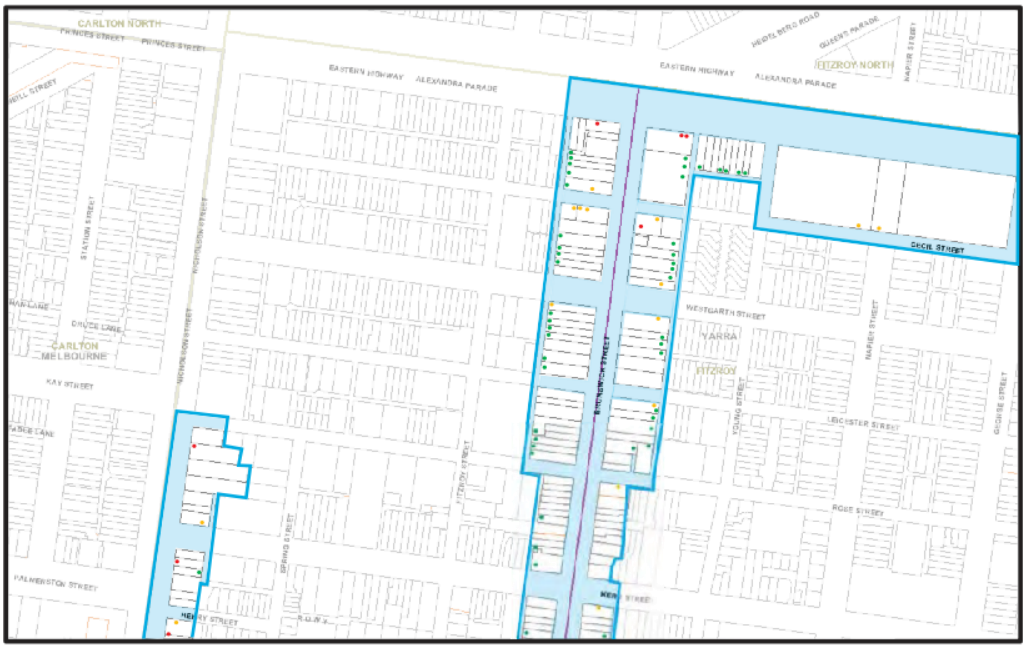
Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network

Street Name	Description	Photo
117: ROW (from Napier to END)	**Existing Conditions:** • Carriageway width – 3m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone • Layout features – There is a 90 degree bend with no splay provided **Constraints: Unconstrained laneway** • Short in length	
118: ROW (from George Street to END)	**Existing Conditions:** • Carriageway width – 3.55m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Bluestone **Constraints: Unconstrained laneway** • Short in length	
119: ROW (from Little Victoria Street to END)	**Existing Conditions:** • Carriageway width – 3.2m-3.65m • Traffic management – Two-way • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – There is a 90 degree bend, with a splay provided on the northwest corner **Constraints: Unconstrained laneway** • Short in length	

Appendix C

Brunswick Street & Smith St Activity Centre Traffic Study: Existing Road Network



Street Name	Description	Photo
120: ROW (from Mason Street to END)	**Existing Conditions:** • Carriageway width – 4m-6.2m • Road Reserve – 4.9m • Traffic management – Two-way • Parking – No parking • Footpath – Footpath on west side • Material – Asphalt • Layout features – There is a T-intersection at the south end of the ROW, with an open car park section which allows for turning **Constraints: Unconstrained laneway** • Wide road, which allows easy manoeuvrability	
121: ROW (from Mason Street to END)	**Existing Conditions:** • Carriageway width – 4.2m-4.45m • Traffic management – Two-way, Mason Street is one-way eastbound • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – There is a 90 degree bend at the south end of the ROW, with an open car park section which allows for turning **Constraints: Unconstrained laneway** • Short in length	
122: ROW (from Derby Street to Victoria Parade)	**Existing Conditions:** • Carriageway width –3.55m • Traffic management – Two-way, vehicles must enter/exit left at Victoria Parade • Parking – No parking • Footpath – No footpath • Material – Asphalt • Layout features – Long and has a large number of vehicles taking access **Constraints: Partially constrained** • Length • Should be one-way • High development potential

Smith Street, looking south from outside 208 Smith Street.

Version	Draft	Final Draft
Issue Date	28.06.2019	26.11.2018

** Note: This Draft document is a part only of a broader Built Form Review for the Brunswick Street and Smith Street Activity Centres : Built Form Review. It is a component part of a broader body of work that sets out a future proposition for two of Yarra's key Activity Centre spines and their adjoining mixed use precincts.*

Preamble

The following urban design report has been prepared for the City of Yarra as the basis for an urban design vision for the Smith Street Activity Centre Spine. It sets out a preferred built form framework underpinned by an integrated urban design and heritage assessment.

The report has been prepared by a multidisciplinary team comprising Hansen Partnership (Urban Design) and GJM Heritage (Heritage) with the support of City of Yarra's internal working group.

The study area is identified in Figure 1.

This report sets out the rationale for proposed built from controls for Smith Street and is underpinned by key components, namely:

Part 1: Brunswick & Smith Context

Part 2: Smith Street Precinct : Influences

Part 3: Smith Street : Built Form Proposition

Part 4: Recommended Controls

The report is part of a broader Built Form Review.

Oblique View of the Study Area and Surrounding Context

PART 1
BRUNSWICK ST & SMITH ST CONTEXT

The Brunswick Street and Smith Street Built Form Review seeks to set a clear framework for future change within two of Yarra's key Activity Centres and their adjoining Mixed Use area. Planning policy identifies such Activity Centres as areas for accommodating growth and change. Therefore, these are the areas that must be carefully planned and managed in order to accommodate progressive change while protecting (or indeed enhancing) existing established character and heritage values.

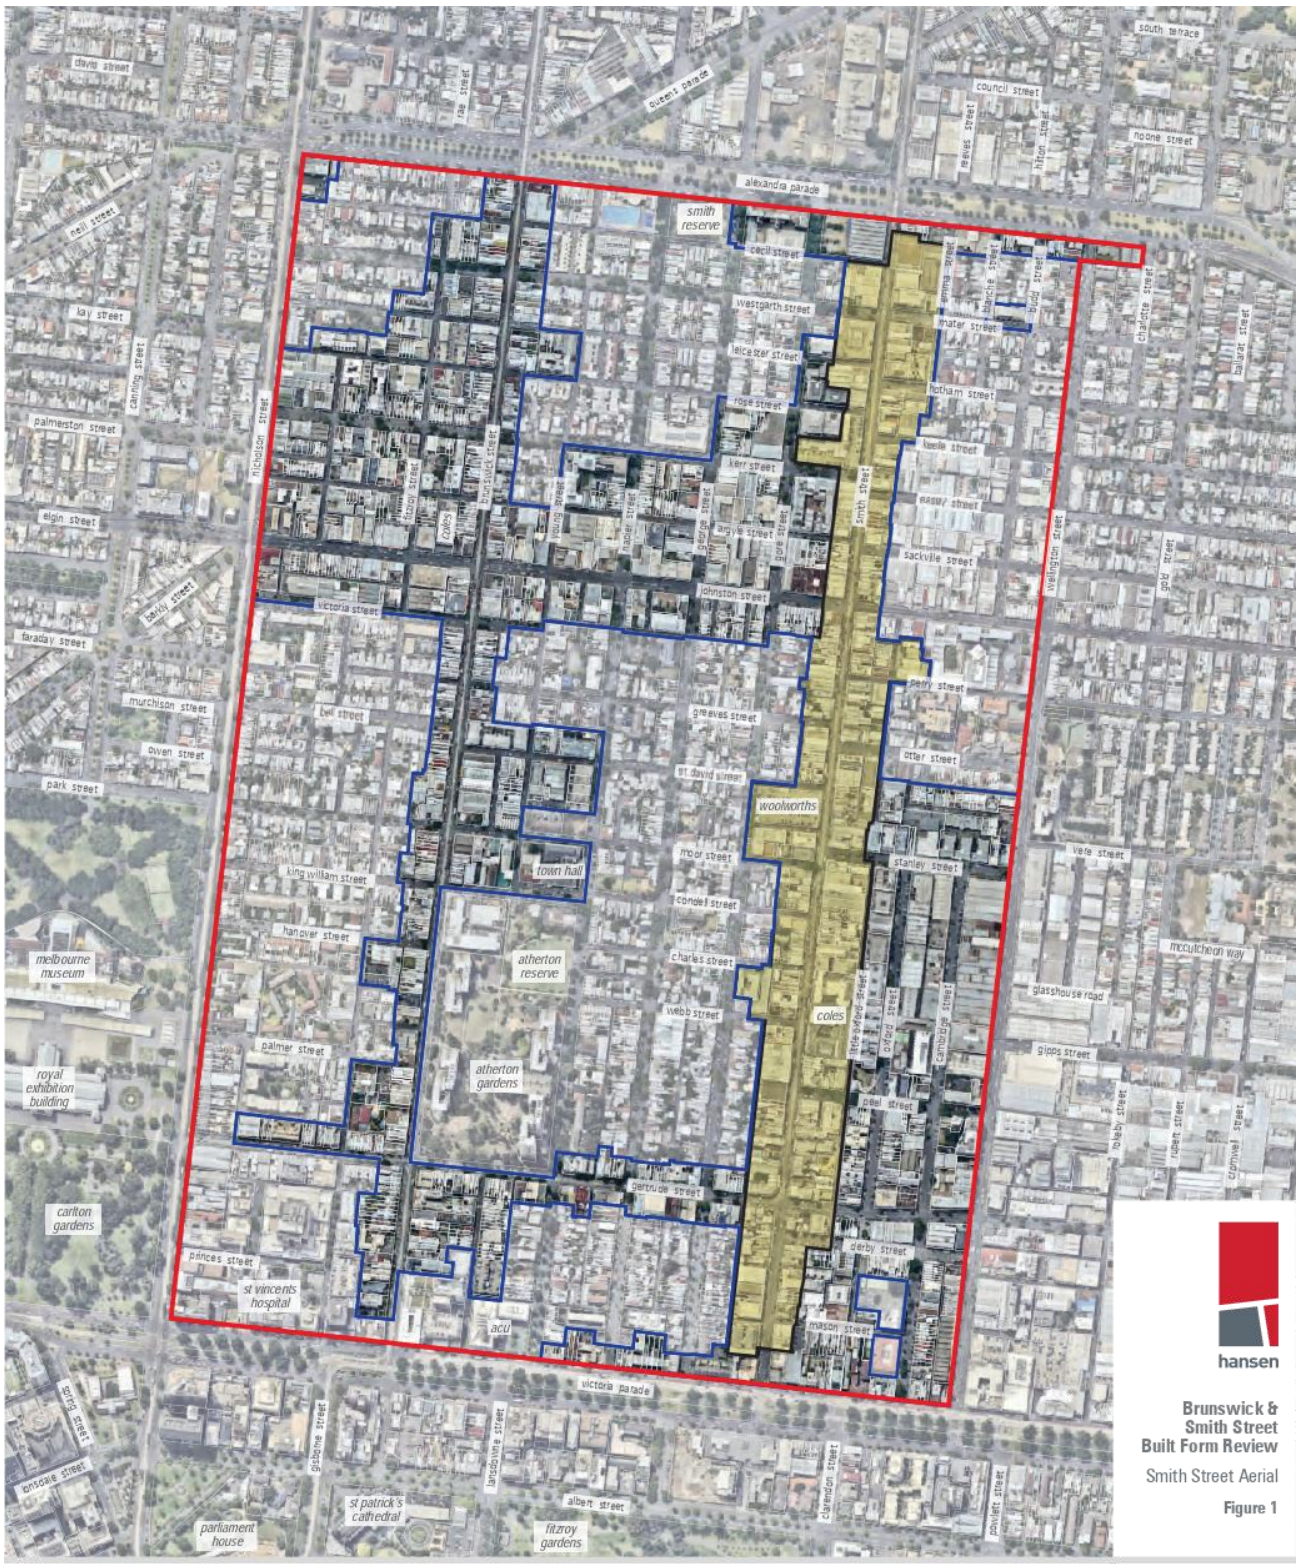
The project was initiated in May 2017 and encompasses large areas bound by Alexandra Parade (to the north), Victoria Parade (to the south), Wellington Street (to the east) and Nicholson Street (to the west).

As part of the process extensive analysis of the existing conditions was undertaken and documented within an overall Background report. This comprehensive analysis identified and divided the overall Review Area into ten 'place specific' precincts. Furthermore, a series of guiding objectives were identified to be contemplated across ten defined precincts.

This report addresses the Smith Street Precinct. The Brunswick Street, Town Hall Precinct and Gertrude Precinct reports are also being prepared in 2019. A Collingwood Precinct report was prepared in June 2018 and a Johnston St Precinct, Fitzroy East Precinct report were completed in June 2019. The remaining five other precincts will be addressed in subsequent reports.

1.1 Overarching Built Form Objectives

The following 8 objectives have been identified:



Objectives:

1. Recognise and carefully manage potential in key areas within the Activity Centres.
2. Highlight the character distinctions between the different retail streets and mixed use precincts within the Activity Centres.
3. Reinforce the traditional Victorian cityscape of heritage streetscapes as dominant elements, including significant corner elements and identified local landmarks.
4. Ensure continued diversity through sensitive infill within traditional Victorian streetscapes.
5. Shape the retail streets and mixed use areas to ensure a high quality, people-oriented public realm.
6. Ensure development encourages walking, cycling and public transport usages through layout and design responses.
7. Ensure new development is sustainable and adaptive over time.
8. Manage the built form profile of new development to avoid adverse impact to surrounding areas, including heritage places, streetscapes and residential interfaces.

View looking north along Smith Street.

Attachment 7 - Attachment 7 - Smith Street Built Form Framework

10 Precincts

The 10 precincts within the Brunswick & Smith Street Built Form Review are:

- Precinct 1: Brunswick Street (B);
- Precinct 2: Smith Street (S);
- Precinct 3: Gertrude Street (G);
- Precinct 4: Johnston Street (J);
- Precinct 5: Fitzroy West (FW);
- Precinct 6: Fitzroy East (FE);
- Precinct 7: Collingwood (C);
- Precinct 8: Town Hall (TH);
- Precinct 9: Alexandra Parade (A); and
- Precinct 10: Victoria Parade (V).

This report addresses Precinct 2: Smith Street (S).

1.2 Brunswick & Smith Built Form Precincts

Based on the initial analysis phase of the project the following Precincts were identified spatially as relatively coherent parts. The Precincts are largely defined by function as either:

- an Activity Spine;
- a Mixed Use Area; or
- a Boulevard.

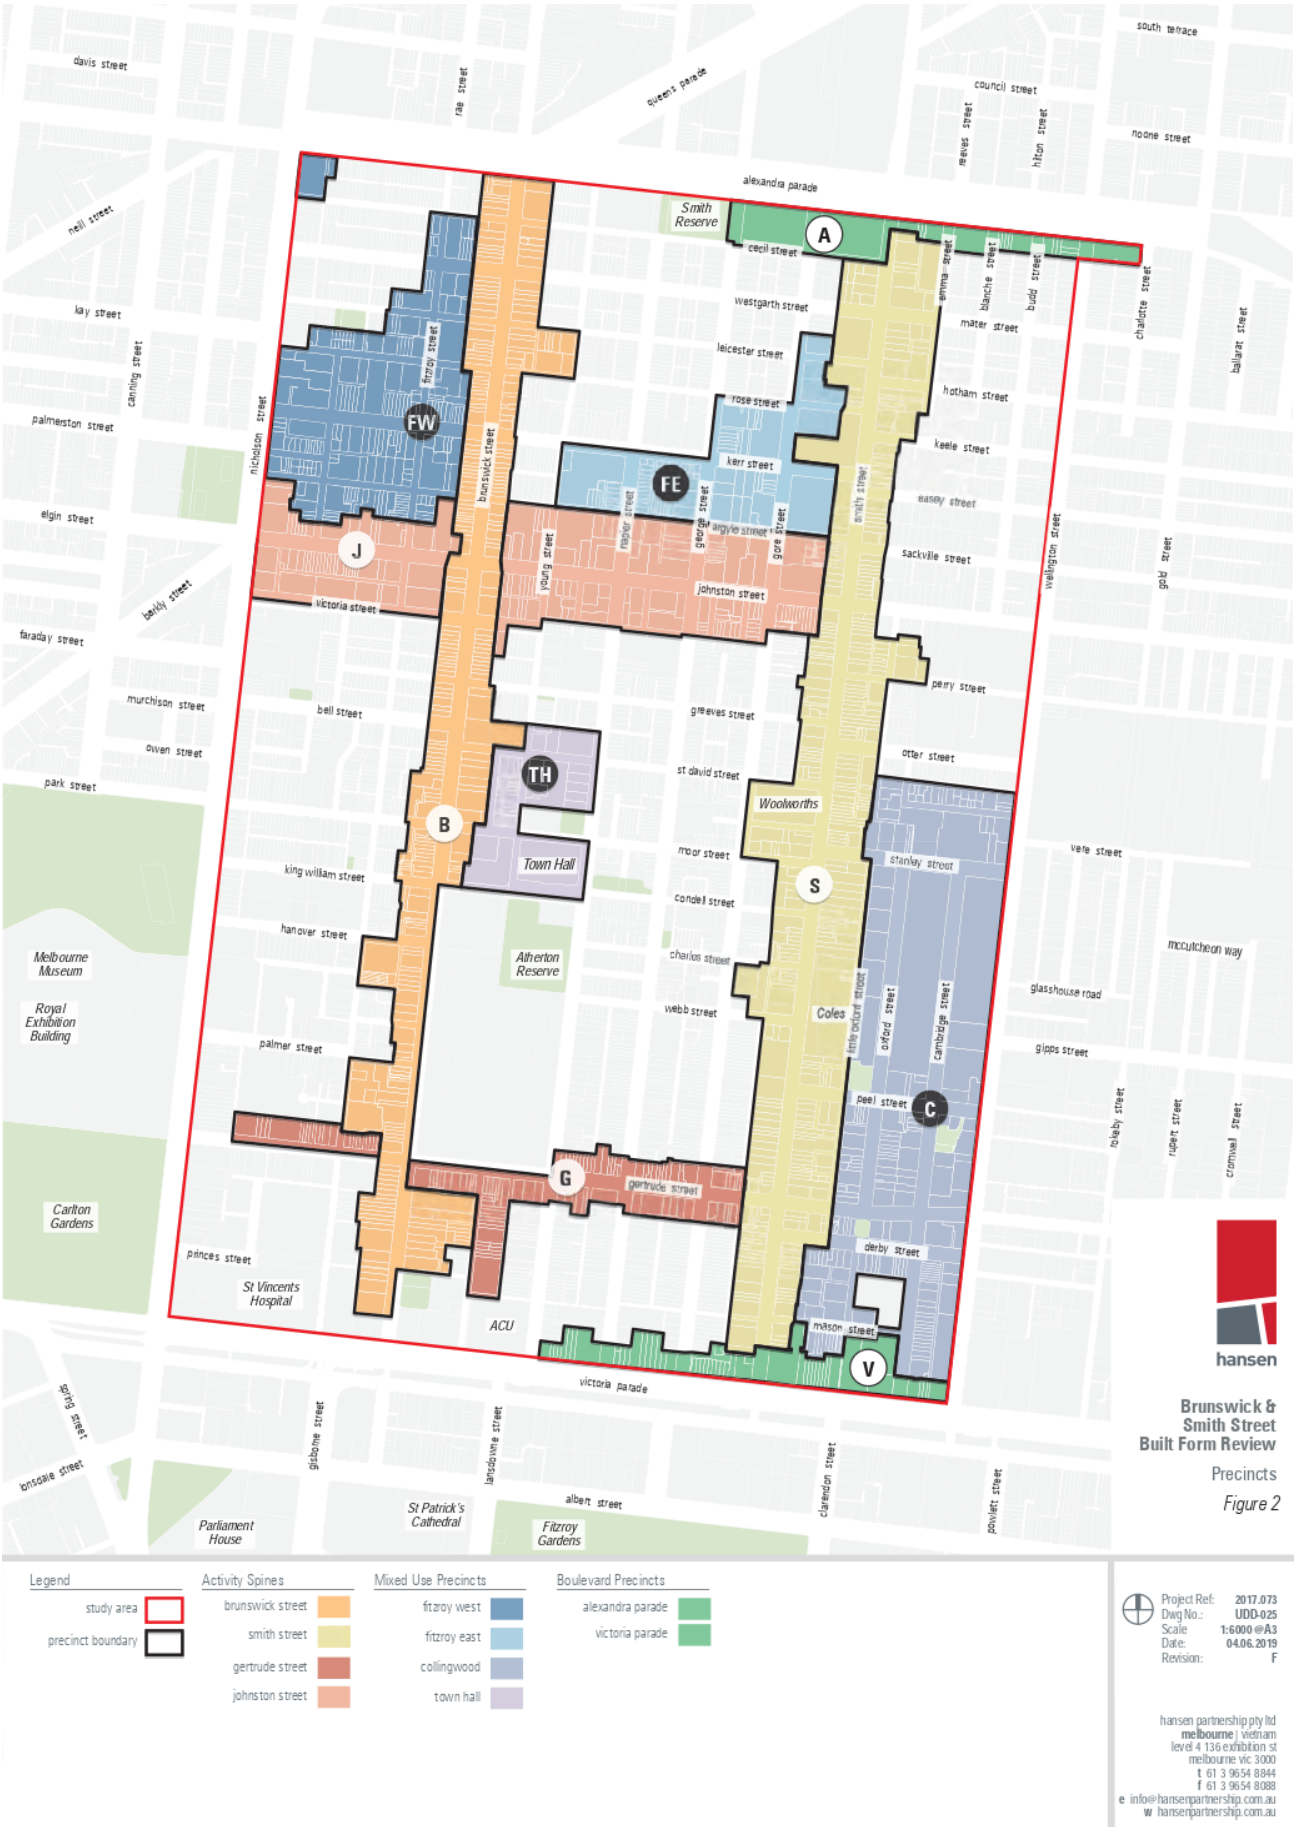
Activity Spines

The Activity Spines are defined by the 'traditional' retail and commercial functions along the four main streets within the review area of:

- Brunswick Street;
- Smith Street;
- Gertrude Street; and
- Johnston Street.

Mixed Use Areas

The Mixed Use Areas are defined by the mixed use functions present in the non-residential land located generally in local streets, behind the Spines. The four renewal areas within the review area are:



- Fitzroy West;
- Fitzroy East;
- Collingwood; and
- Town Hall.

Boulevards

The Boulevards are the non-residential land to the northern and southern edges of the review area which front the broad road corridors of:

- Alexandra Parade; and
- Victoria Parade.

Attachment 7 - Attachment 7 - Smith Street Built Form Framework

PART 2: PRECINCT INFLUENCES

Smith Street is one of the City of Yarra's Major Activity Centres and a key metropolitan activity spine with a long retail tradition and largely intact heritage character. The street defines the boundary between the suburbs of Fitzroy and Collingwood and is hemmed in by predominately Fitzroy residential properties and diverse Collingwood residential, mixed use and former industrial properties to either side. The overall streetscape character is diverse, comprising sections of highly consistent heritage scale and rhythm, sections defined by the strong profile of prominent heritage retail buildings and areas to the northern end where contemporary, renewal and taller forms have emerged.

The extent of the linear Smith Street Precinct is set out in Figure 3.

Boundary Description

This precinct encompasses the commercial properties which line Smith Street, bound by Victoria Parade in the south and Alexandra Parade in the north. The eastern extent of the precinct in defined by the extent of the C1Z and the western edge is also generally defined by the extent of C1Z and three discrete pockets of MUZ land.

Built Form Character

Smith Street is a unique Activity Centre spine with a particularly strong north-south visual framework informed continuous segments of traditional and largely intact heritage retail buildings typically extend from anchoring key intersections such as Johnston and Gertrude Streets, before variation is presented by punctuations of 'grand retail' forms, remnant of the historical department store typology. Medium rise apartment forms set behind traditional street walls represents an emerging character of change, particularly north towards Alexandra Parade.

The corridor benefits from a series of important local landmarks, typically occurring at corners which act as important wayfinding elements through the precinct. Other local landmarks occur mid-block, some of which are located at the termination of perpendicular streets, increasing the visual extent and influence of these buildings, such as the Victorian Heritage Registered Post Office. The topography gently falls north of Johnston Street, resulting in the taller contemporary forms generally sited within the line of traditional 2 storey parapets in long distant corridor views from higher land south of Johnston Street. While the corridor is largely defined by long segments of fine grained allotments, the precinct presents a number of anomalous larger sites accommodating warehouses found both along the spine as well as in the adjacent 'back-blocks.'

Recent Smith & Co, development

Attachment 7 - Attachment 7 - Smith Street Built Form Framework

2.1 : Foundations

Setting an agreed vision for this section of Smith Street must be underpinned by an understanding of its diverse conditions, including the fabric of existing and approved buildings and relevant 'foundation' influences as set out in Figure 4 and as follows:

Topography & Views

Along much of the Smith Street corridor, topography is relatively flat with the exception of a noticeable fall in the section north of Johnston Street down to Alexandra Parade. While, landform does fall considerably from west to east to either side of Smith Street. The west comprises the residential streets of Fitzroy 'perched' on higher ground in contrast to the 'Collingwood Slope' and predominantly former industrial land to the east. As a result views along the side streets are terminated by Smith Street frontages of the opposite side. However, from along Smith Street distant views towards the east are available.

Off-set side streets

A legacy of the area's initial subdivision and development pattern, with Smith Street defining the then eastern edge of Melbourne's first 'planned' suburb (Fitzroy) and evolving in a less controlled pattern Collingwood. As a result, there is limited direct connectively (both physical and visual) across Smith Street except of the main roads of Gertrude/Langridge Street and Johnston Street (and Westgarth -Mater Streets). This street pattern of terminating T-intersections with Smith Street reinforces the street's role and function as the primary activity and movement 'spine' for the neighbourhoods to either side.

Northern End

There is opportunity for development at the northern end of Smith Street (north of Argyle-Sackville Streets) in response to generally larger lots and limited heritage fabric, reinforced by the lack of the Heritage Overlay. To the north of Argyle Street, properties on the western side of Smith Street are strongly influenced by their industrial past and along the eastern side (north of Keele Street) is an emerging strip of prominent contemporary mixed use developments with clear street wall definition and setback taller form. Further consolidation of this northern end presents considerable opportunity for development of a commemorate scale.

Grand Retail Legacy

The central section of Smith Street (between Gertrude and Johnston Streets) was at the turn of the 20th Century Melbourne's premier retail destination. Dominated by the grand department store buildings of Foy and Gibson and Patersons, the emergence of the Coles Variety store and serviced by cable trams Smith Street was booming. The street blocks reflect this legacy with the provision of Little Smith Street and Little Oxford Street which mimic the big and little street arrangement of the CBD. Although some of these significant retail buildings have been lost, their built form legacy remains evident as Smith Street comprises a streetscape diversity of prominent grand buildings interspersed with traditional heritage shop fronts.

View north along Smith Street towards Johnston Street and low lying land beyond.

Terminating view along Leicester Street, looking east towards Smith Street.

Prominent recent developments defining northern end of Smith Street.

Former Foy and Gibson department store at 145 Smith Street.

Southern End

The prevailing Smith Street character dissipates to the south of the Gertrude/Langridge Street junctions and retail activity wanes due to the lack of tram provision. On approach to Victoria Parade to built form comprises a relatively consistent 2 storey street wall and rhythm although the architectural detail is less prominent with the presentation of simple façades and the presence of a few warehouse forms.

Local landmarks

Like many traditional high streets, Smith Street comprises a number of local landmarks which act as wayfinding devices along it's length. These more distinct and noticeable buildings often relate to more 'civic' services, articulate corners and punctuate the streetscape with distinguishing architectural features. Along Smith Street, 12 such 'local landmark' buildings have been defined in collaboration with GJM Heritage and are as follows:

- The Gasometer Hotel - 484 Smith Street;
- Former State Saving Bank - 337 Smith Street;
- The Birmingham Hotel - 333 Smith Street;
- Corner shop - 257 Smith Street;
- Ackman's Furniture Warehouse facade (Woolworths) - 243-247 Smith Street;
- Paterson Furniture Warehouse - 231 Smith Street;
- Former Post Office - 174-180 Smith Street;
- Patersons Building - 173-181 Smith Street;
- Former Union Bank Building - 165-167 Smith Street;
- The Grace Darling Hotel - 114 Smith Street;
- Foy & Gibson Store - 145 Smith Street; and
- Stanford Block - 119-129 Smith Street.

Key Junctions

The precinct comprises several prominent junctions along the Smith Street spine, which act as important gateway elements and anchor sections of the streetscape. Key junctions include the boulevard bookends of Victoria and Alexandra Parades to either end, with notable junctions of Gertrude/Langridge Streets and Johnston Street which are anchored by consistent streetscapes and corner forms and define the central section of Smith Street.

Movement Corridors

Smith Street is the primary movement corridor and spine for the Precinct. It comprises main north-south movements for pedestrians, cyclists, and vehicles. North of the Gertrude/ Langridge Street junction it also comprises public transport provision, accommodating Tram Route 86. The provision of kerbside parking restricts vehicle movements to a single lane (in each direction), with cars and trams sharing the lane. This leaves limited move for cyclists and slows traffic speeds and discourages through traffic movements. Designated north-south cycle movements are encouraged to either side of the Precinct along Napier and Wellington Streets.

Buildings along the western side of Smith Street, looking south.

Local landmark, the former Ackman's Furniture Warehouse - now Woolworths.

Junction of Gertrude/Langridge and Smith Streets.

Tram route 86 along Smith Street.

Adjoining Built Form Precincts

As a narrow linear corridor, Smith Street traverses varied abutting conditions to either side and along its length. To the west, on higher ground sit residential streets of Fitzroy fronting predominantly north-south tree lined streets of Gore and George Streets. To the east, is the 'Collingwood Slope' which is located within the Collingwood Precinct and dominated by the former industrial Foy and Gibson complex which presents a robust but consistent built form. Both the Gertrude Street and Johnston Street Precincts terminate into the Precinct at east-west main street spines. North of Johnston Street the abutting conditions become more varied to either side with mixed use and commercial abuts transitioning to residential streets on approach to Alexandra Avenue.

Borrowed Landscape Amenity

The Smith Street spine is devoid of street trees between Gertrude/Langridge Streets and Johnston Street. The southern and northern end comprise provision of relatively recent street trees, which are yet to mature and become a prominent visual component of the streetscape. The central section of Smith Street 'borrows' some landscape amenity from the established street trees within the 'green streets' of Moor, Stanley and Peel Streets which project into the Smith Street streetscape and are reinforced at ground level through the provision of expanded public realm provision.

Heritage

The vast majority of the precinct is subject to the Heritage Overlays (HO333 and HO464), comprising individually significant and contributory buildings of varying typologies including fine grain shops, former department stores, bank buildings, corner pubs and a few former factories. Several buildings of individual significance are subject to a site-specific Heritage Overlay including the 15-17 Bedford Street (HO95), 33-47 Bedford Street (HO96), 2 Derby Street (HO99), The Grace Darling Hotel (HO135), Former Post Office (HO136), 2 Stanley Street (HO137), 165-169 Smith Street (HO187). While the HO extents across most of the Precinct, there are notable clusters of buildings north of Johnston Street which comprise non-contributory buildings.

Traditional Shop fronts

Located in clusters along Smith Street and to either side of the key junctions of Gertrude/Langridge and Johnston Street and attached rows of intact, heritage shop fronts which present a highly consistent streetscape character and build from rhythm. These sections of Smith Street are distinct from other more diverse parts of the streetscape.

Looking south along Little Oxford Street, abutting the Foy and Gibson complex.

Established street trees within Condell Street projecting into Smith Street.

The Grace Darling Hotel (HO135).

Consistent traditional shopsfronts along Smith Street to south of Perry Street.

Recent Development Trends

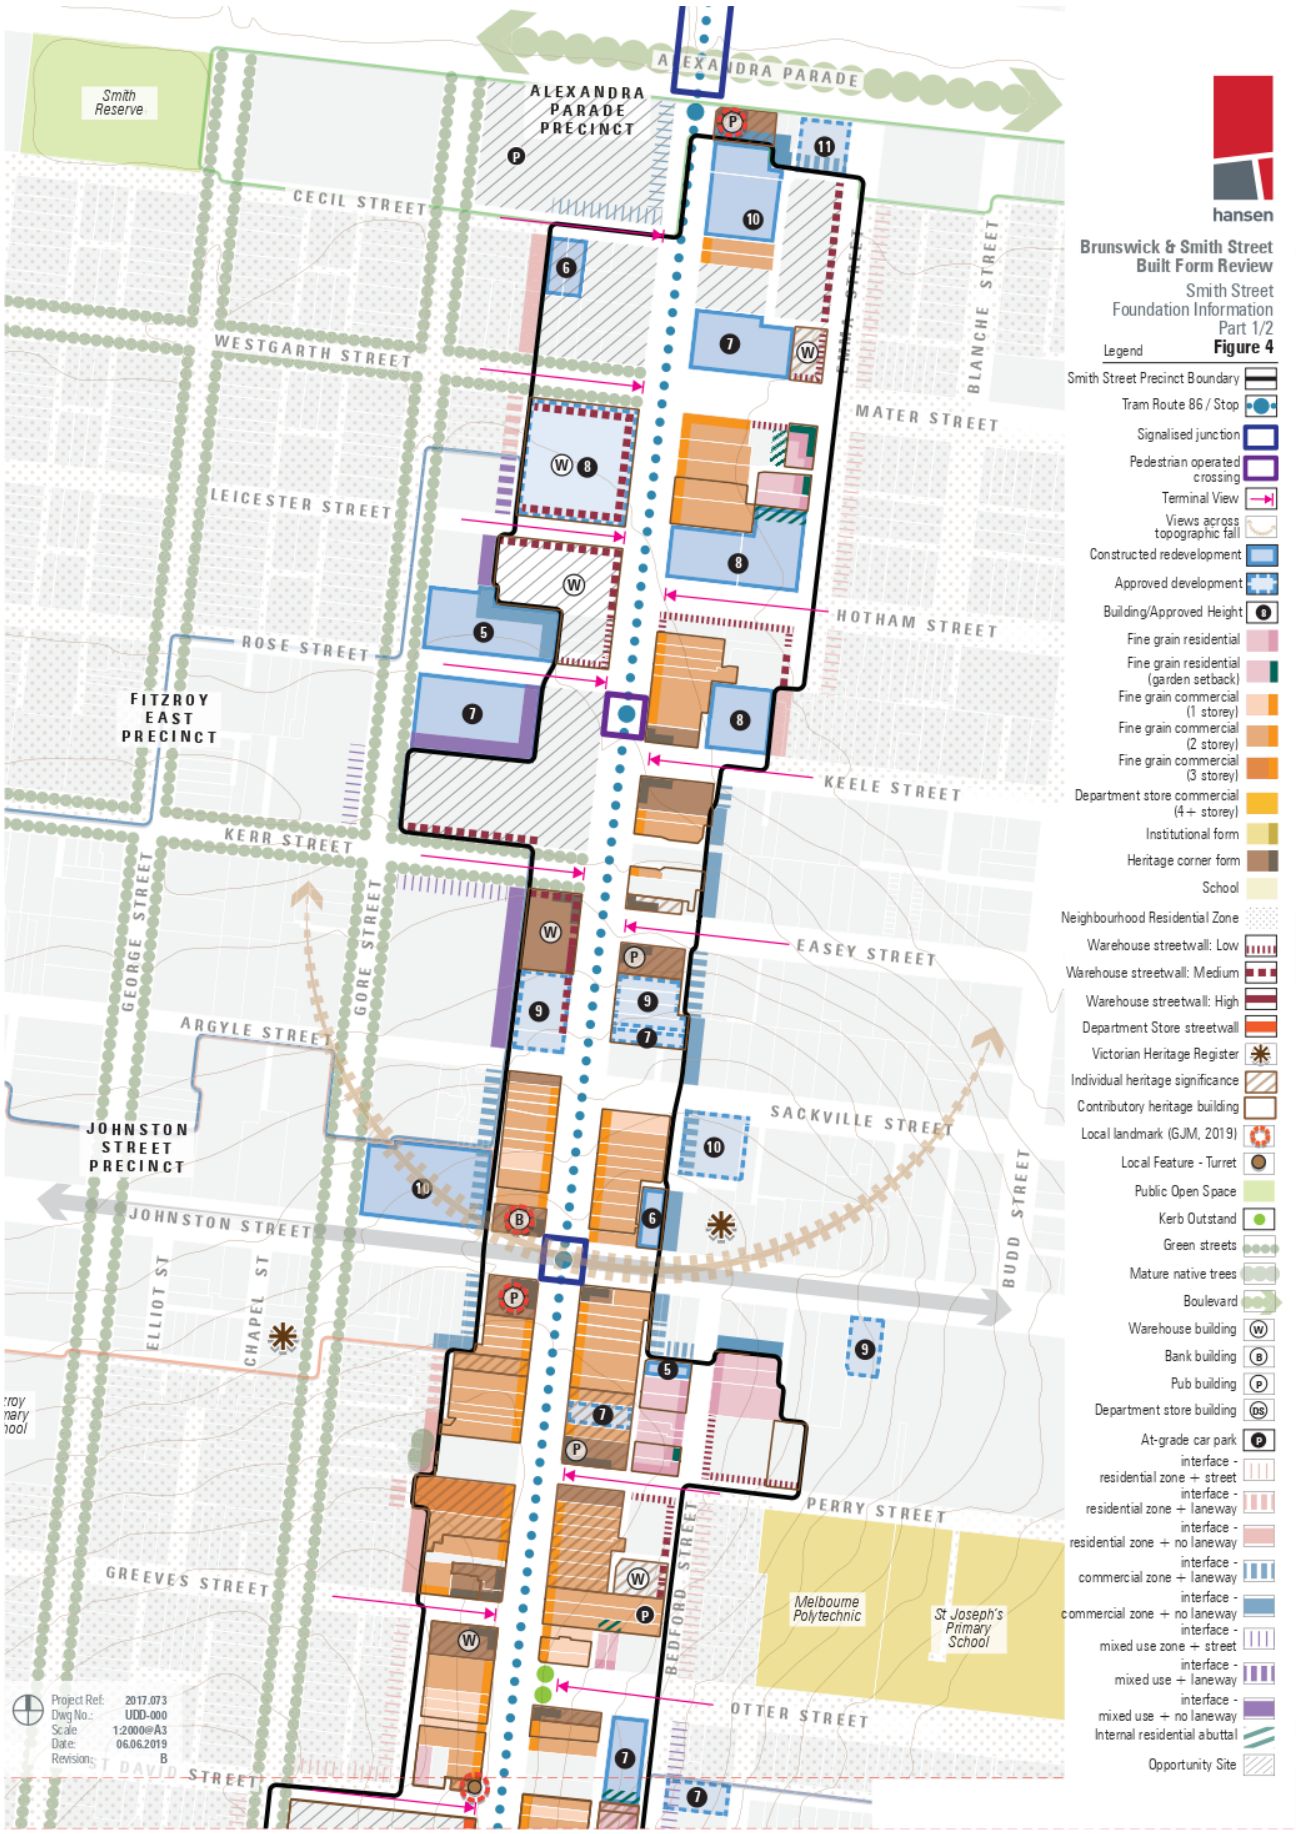
Substantial medium to high density development has occurred along the corridor, particularly to the northern end with forms ranging in scale from 7 to 10 storeys. In the central section of Smith Street development has been far less frequent and generally limited to upper level additions. The key exception being the significant mixed use development (Smith & Co) comprising a Coles supermarket on a large consolidated site which presents a varied 2-3 storey street wall and overall scale of 6 to 8 storeys. Recent planning permit approvals within the Precinct are typically 6 to 9 storeys and there has been a single 7 storey development in the stretch, south of Gertrude Street.

Open Space

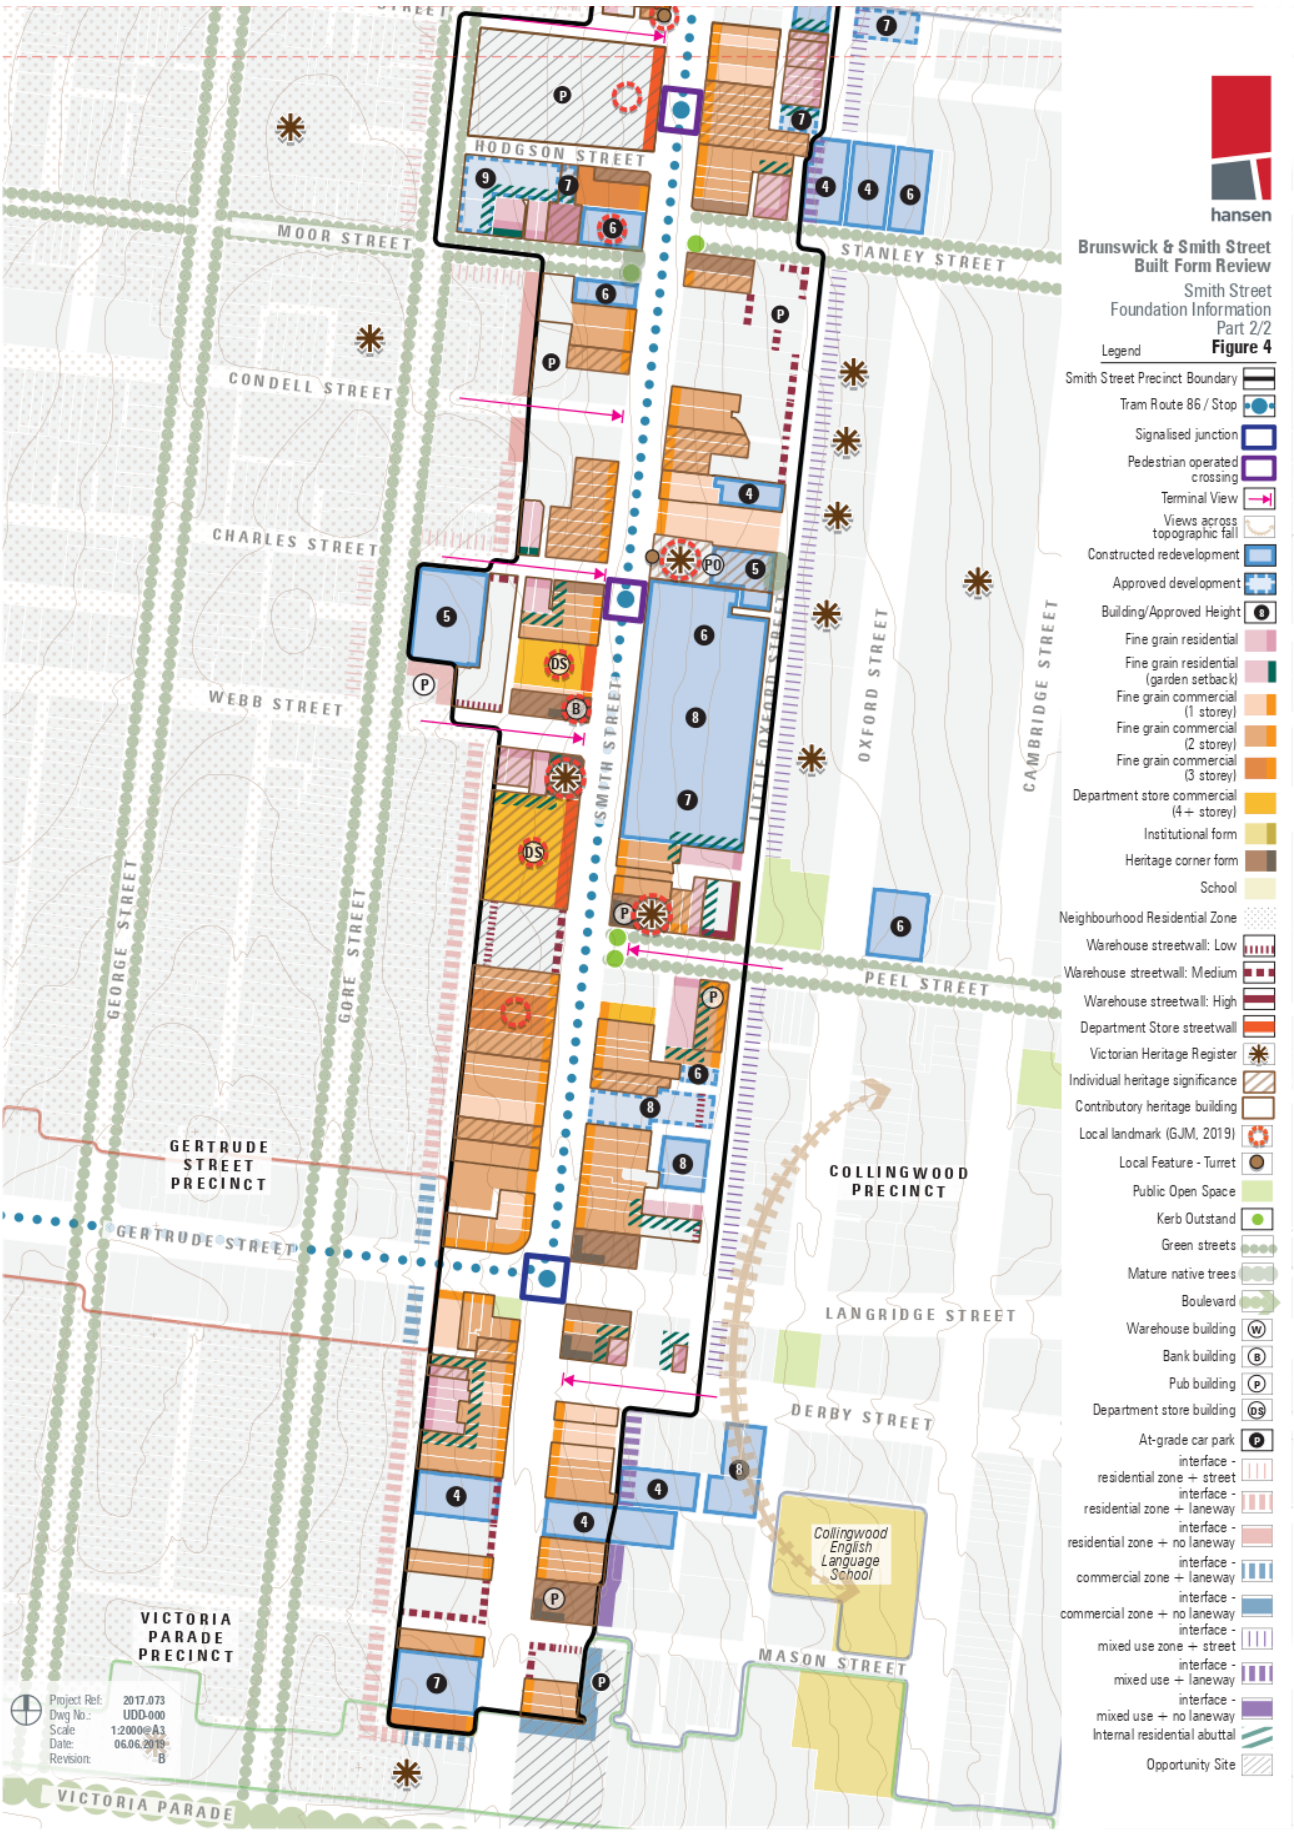
There is a lack of notable open space in the Precinct. The nearest public open spaces are the pocket parks to the east, within the 'Collingwood Slope' and Smith Reserve, to the north and west. Therefore, the importance of the expanded public realm provision at 'green street' junctions with Smith Street is heightened. This provision of corner 'pause places' occurs at the junctions of Peel, Stanley, Otter and Moor Streets with Smith Street. Maintaining solar access to these locations will be important to ensuring their continued utilisation.

There is also a perceived public open node at the corner of Gertrude and Smith Street, however this open corner which comprises public benches and landscape provision is privately owned and utilised primarily for advertising purposes.

'You and I' 7 storey development at 450 Smith Street.



Expanded public realm incorporating flexible seating at Otter Street.



Privately owned 'public' space at 246-248 Gertrude Street.

Attachment 7 - Attachment 7 - Smith Street Built Form Framework

Attachment 7 - Attachment 7 - Smith Street Built Form Framework

2.2 : A Smith Street Precinct Built Form Framework

In response to these foundation matters, a Built Form Framework has been advanced to reinforce indicative locations for varying level of change within the locality. A Framework is not definitive (like a Built Form Control Plan). It seeks to identify 'gestures' that shape the look and feel of the city. In this instance, the framework recognises the importance of the following attributes- Refer to Figure 4:

Grand Retail

Central to the Smith Street spine and the strongest built form legacy of its rich history is the presence of grand retail buildings which project above the predominant datum of otherwise finer grain 2 storey shop fronts. These former large format stores are all located on the western (Fitzroy) side of the street and are all defined as local landmarks, given the presence within the broader streetscape. This section of Smith Street has always been the 'core' of activity along the corridor, confirmed by the positioning of the former Post Office and heritage bank buildings and still contains the main retail anchors and associated activity.

Order

Positioned beyond the central section of Smith Street and anchored by the key east-west main road interfaces are stretches comprising a consistent streetscape character of predominantly traditional 2 storey shop fronts. Comprising a fine grain rhythm with continuous street wall provision and verandahs to Smith Street resulting in a uniform presentation with individual façades being defined by subtle changes in colour, material and architectural features.

Capacity

These 'bookend' precincts lack heritage fabric and control present along the remainder of the Smith Street spine. Located to the periphery, at either end of the street and in proximity to the broad boulevards of Alexandra and Victoria Parades they are also distinguished from the more consistent sections due to the broader lots, comprising either heritage factory forms and warehouses. Both these precincts already contain recent developments which seek to provide a streetscape response, while also providing rising forms above.

Heritage Values

The precinct has considerable heritage values, comprising large stores, the post office, banks, heritage factories, corner hotels. The buildings are mainly located within the middle section of the corridor, between Gertrude/Langridge Street and Johnston Street junctions and on the western side of the street. Given the broad heritage control and street wall definition, there is potential for moderate infill for much of the Smith Street spine. However, there is no heritage control at either end of the corridor, which provides greater opportunity for infill development to occur.

Former Paterson Furniture and former Ackman's Furniture stores.

Former Foy and Gibson and Patersons Buildings on western side of Smith Street.

Consistent heriage shopfront presentation to western side of Smith Street.

Former MacRobertson factory towards northern end of Smith Street.

Allotment Depth and Width

The precinct has a moderate level of growth opportunity in response to its generally consistent rhythm of block sizes and heritage/ residential abuttal constraints. The level of moderate growth is apparent along the majority of the spine and overall scale will be particularly influenced by lot depth and rear interface factors. In contrast, to either end of the corridor significant infill can occur in response to larger lot sizes and as landform falls away to the north.

Large Non-Contributory Sites

Are generally larger, non-contributory sites which contain wider than normal frontages and also often occupy corner positions with secondary street addresses. Along Smith Street, they also tend to terminate views from side streets. These subdivision attributes are favourably to future development. They are also sites that have not recently been developed. Therefore, clear built form guidance will be required to ensure that future forms on these sites, which more likely to experience built form change in the short to medium term is critical to ensure that the prevailing and valued streetscape character is respected.

Back Blocks

Behind the Smith Street spine are discrete pockets of 'back block' sites which front side streets or parallel 'little streets'. Traditionally these areas have serviced as an informal transitional area, between the rear of 'main street' forms and abutting residential or industrial areas. While these areas can accommodate new forms their development opportunity is strongly influenced by the proximity and sensitive of neighbouring properties beyond the Precinct. The existing hierarchy of primary and secondary street addresses will assist in managing future 'fronts' and 'backs', of development contributing to the strengthening of pedestrian activity to the Smith Street spine.

Junctions

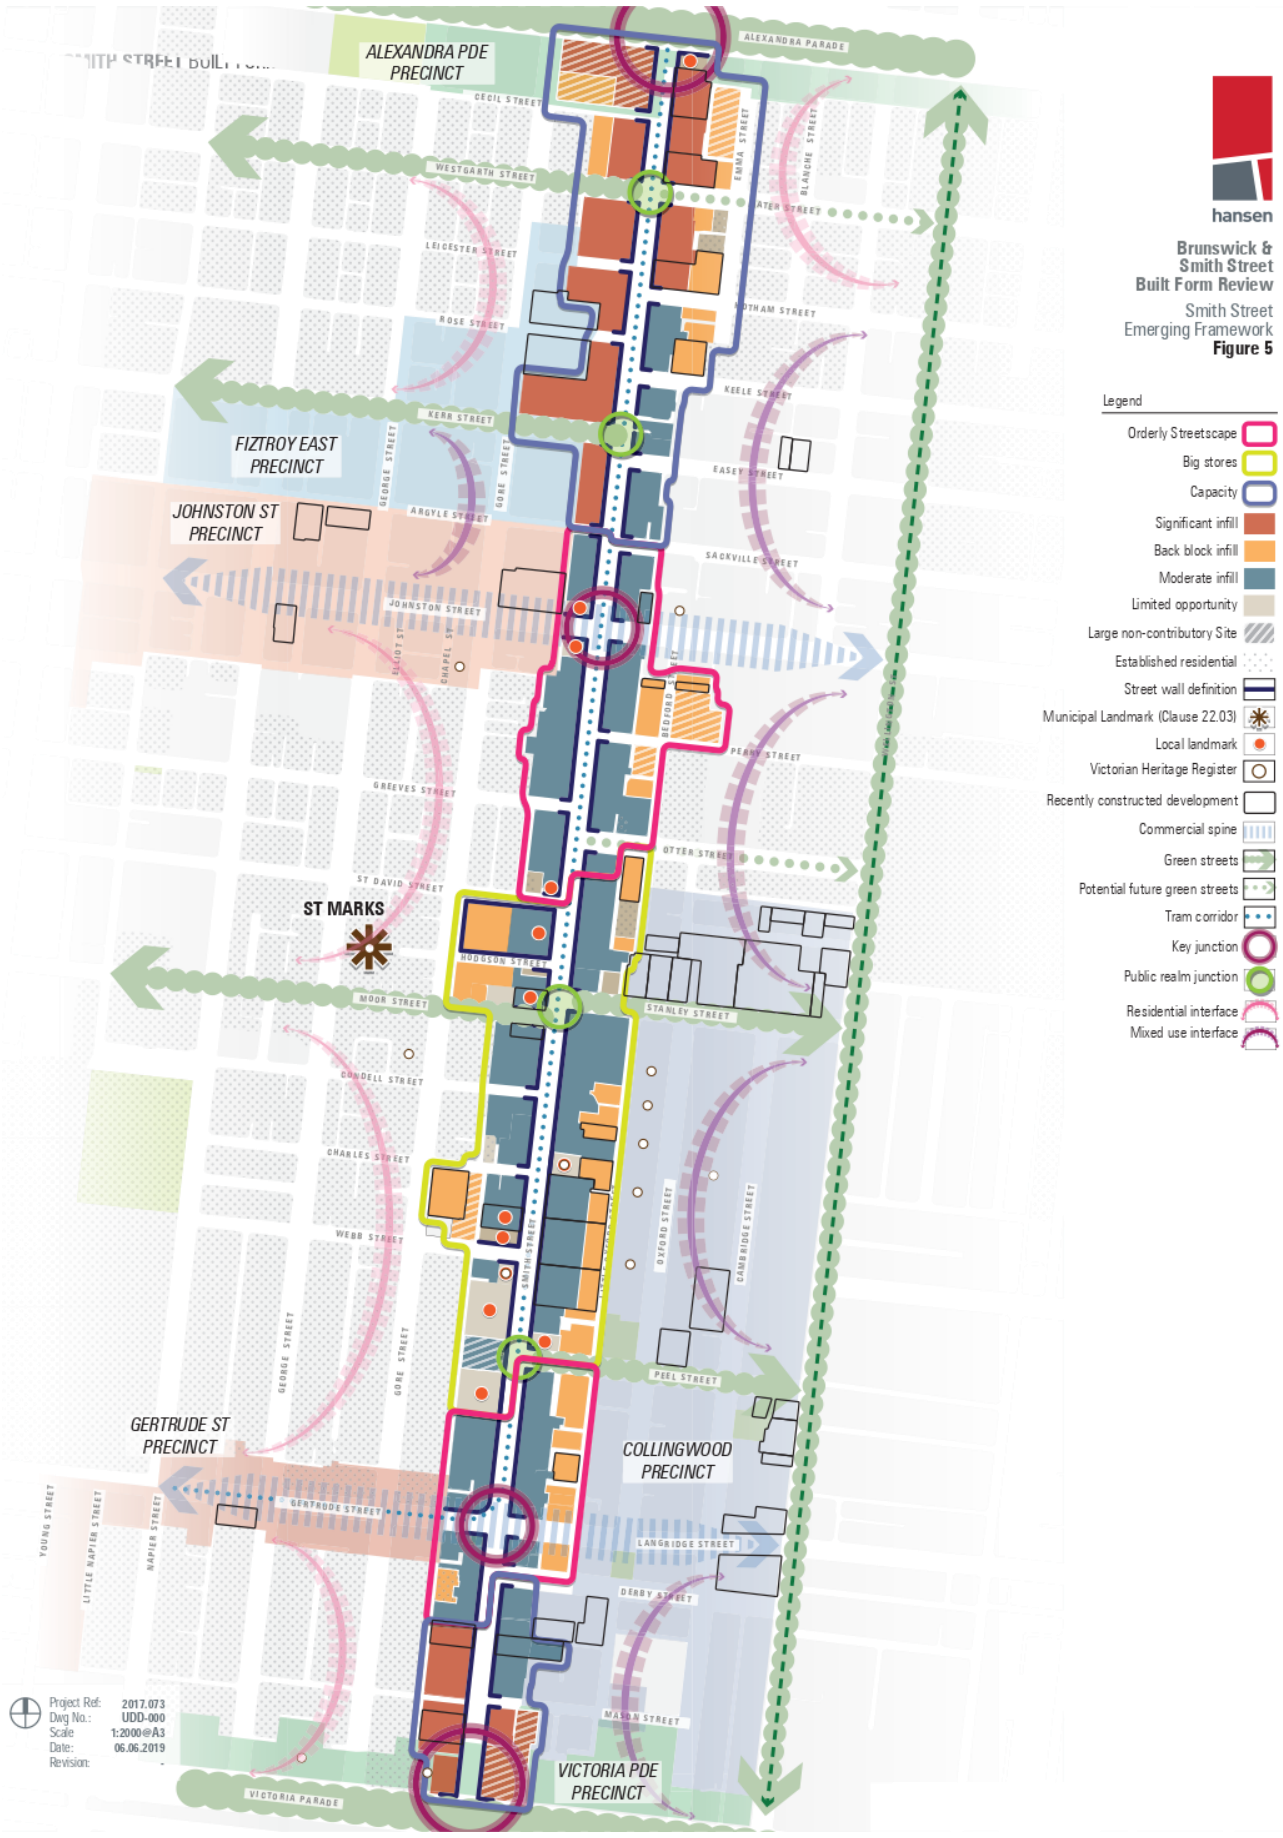
Future built forms can contribute to junction definitions to assist with wayfinding and sense of place. Where Smith Street intersects with other 'main streets' at Gertrude/ Langridge Street and Johnston Street, future forms should be shaped to retain primacy of local landmarks when viewed in the round. Higher pedestrian footfall can also be expected along these commercial streets, where pedestrian amenity (solar, sense of enclosure and ground level activation) should be prioritised.

Green Streets

The Precinct is punctuated by the east-west 'green street' of Peel, Stanley, Moor, Kerr and Westgarth Streets, all comprise 20m road reserves and are defined by the large established canopy trees. The junction of these higher amenity streets are acknowledged through the provision of kerb extensions and public nodes or 'pause places'. It is imperative that future development continues to support high pedestrian movement. Opportunity to realise additional 'pause places' at Kerr and Westgarth Streets should be investigated as part of future Smith Street improvement.

Northern end of Smith Street, comprising varied lot sizes and associated form.

Junction of Gertrude and Smith Street.



Built form transition to Emma Street 'back block.'

Green Street - Moor Street, looking east towards Smith Street

Attachment 7 - Attachment 7 - Smith Street Built Form Framework

Given this Framework for change, the following future character statement is recommended.

Future Character Statement

Smith Street will continue to be a notable retail street, reflecting its rich history and largely intact heritage fabric. The northern and southern ends of the street have the greatest capacity for change, given larger lots sizes and less intact heritage values. The streetscape is diverse and varies from a low rise, fine grained character to a stronger profile defined by prominent retail buildings. These diverse 'shifts' in the streetscape character are to be retained and reinforced.

Future development in Smith Street will complement existing heritage values by the established reflecting streetscape rhythm and adopting a respectful scale and profile. Overall, future development along the street will retain the sense of openness and high public realm amenity.

Framework Principles

In response to the varied urban fabric of the precinct, the following future built form character principles apply.

This includes:

1. Recognise development opportunity on large, non-heritage sites and at both ends of Smith Street
2. Protect prominence of local landmarks
3. Reinforce consistent and orderly streetscape presentation around Gertrude and Johnston Street junctions
4. Retain prominence of heritage department stores
5. Maintain solar access to the opposite footpaths along the commercial spine and green streets
6. Acknowledge existing and approved development
7. Transition to the residential edges

PART 3: BUILT FORM PROPOSITION

The Built Form Proposition has been derived from the Framework, which was informed by the Foundation and underpinned by the overall background analysis. The **Smith Street Built Form Proposition** sets street by street parameters for the precinct's evolution. The parameters identified are neither fixed or absolute, but intended as benchmarks to guide change. They are represented in Figure 6 and are derived from the following basis.

- Heritage Input;
- Municipal Housing Strategy;
- Precinct Character;
- Solar Access;
- Terminal Views;
- Local Views and Vistas;
- Heritage Streetwall & Upper Levels;
- New Streetwall & Upper Levels;
- Upper Level Setbacks;
- Upper Level Expression;
- Heritage frontage;
- Transitions;
- Residential Interfaces;
- Non-residential Interfaces (including laneway); and
- Building Separation, Amenity & Equitable Development.

The rationale for height parameters is outlined as follows:

3.1 Basis of Height Parameters

Heritage Input

GJM Heritage provided extensive heritage input based on comprehensive analysis comprising:

- The heritage grading of each property within the Heritage Overlay;
- The currency of the existing Statements of Significance;
- Confirmation of places with Victorian Heritage Register nomination;
- Identification of local landmarks; and
- Recommended built form parameters to appropriately manage development within the heritage context.

Refer to GJM Heritage report for details.

Housing Strategy

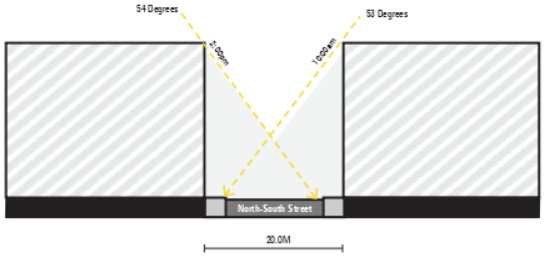
The Smith Street corridor is predominantly designated for moderate change, with the exception of the northern end, which is identified for high change.

Precinct Character

Key characteristics that distinguish the Smith Street precinct are attributed to intact heritage fabric and perpendicular 'green' streets. Diversity in built form is attributed to a variation in the subdivision pattern, land use function and built form typology (dwellings, traditional shop fronts or warehouses). The built form presentation is varied and comprises a mix of fine grain residential, recent apartment buildings and department store forms. New development should seek to respond to the unique contextual characteristics and respond to particular sensitivities as required.

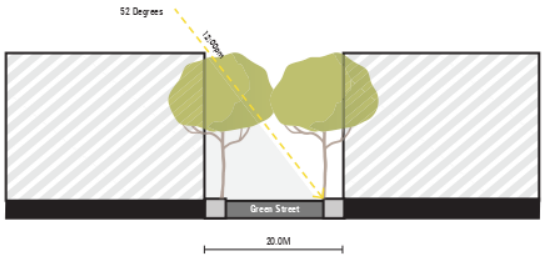
Smith Street, looking north from Keele Street

Solar Access



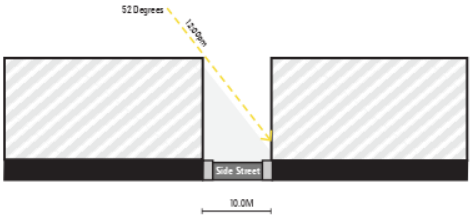
In inner urban areas such as Fitzroy and Collingwood, access to sunlight is an important consideration. Therefore, future urban form should protect sufficient solar access to key public realm and open spaces to ensure 'life and attraction' at the street level for residents and visitors.

The Urban Design Guidelines for Victoria contains the following relevant Objectives and Guidelines:



- *'Objective 5.1.3 To ensure buildings in activity centres provide equitable access to daylight and sunlight', and*
- *'5.1.3a Locate and arrange the building to allow daylight and winter sun access to key public spaces and key established street spaces.'*

Along the Smith Street Precinct, we recommend the following solar access measures to avoid, or minimise overshadowing outcomes, measured on 22 September (equinox):



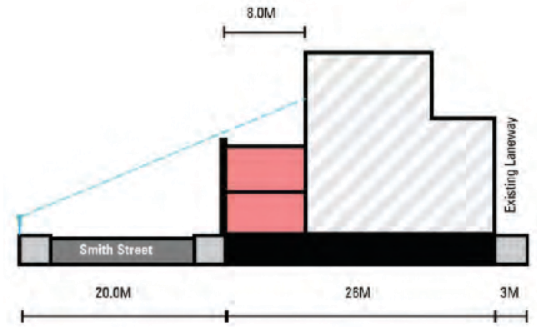
- Along Smith Street (commercial street): avoid overshadowing of western footpath (3m from property boundary) from 10am onwards.
- Along Smith Street (commercial street): avoid overshadowing of eastern footpath (3m from property boundary) before 2pm onwards.
- Along 'green streets' (refer to Figure 4): avoid overshadowing of southern footpath (3m from property boundary) between 10am to 2pm.
- Along side streets (within the study area): avoid overshadowing above the ground floor of buildings. On narrower perpendicular side streets, some overshadowing of footpath (south side) is inevitable. It was determined that protection of solar access to first floor should be supported.
- Along side streets (outside the study area): avoid overshadowing of footpaths to opposite side of the street between 10am to 2pm.

10am and 2pm exquinox solar angles along 20m wide Smith Street

12pm exquinox solar angle along 20m wide 'Green Streets'

12pm exquinox solar angle along 10m wide side streets

Local Views and Vistas



According to the Yarra Landmarks policy, there are no local views or vistas identified within the precinct. However, the presence of corner buildings is a characteristic of Smith Street, therefore retaining views to and 'space' behind these prominent corner forms is important to ensure they retain their prominence and 'hold' the corner. The following corner heritage buildings have been identified within the Smith Street precinct:

- Former State Savings Bank;
- The Birmingham Hotel;
- Shop at 257 Smith Street;
- Former National Bank of Australia;
- Former Union Bank; and
- The Grace Darling Hotel.

Heritage Street wall & Upper Levels

GJM has also provided heritage input for appropriate upper level setback to heritage buildings, which seek to reinforce the objectives found in Clause 22.02 and 22.10. A default 8m measurement (to the new built form and balcony line) is applied to all sites fronting Commercial Streets including Smith Street, Johnston Street and Gertrude Street. This is to ensure adequate protection of the primary heritage 'volume' and local landmark features (including chimneys, and exposed roof forms) often found at the junction of these streets. The default upper level setback will also protect facade articulation in the streetscape elevation with spatial separation between the street wall frontage and recessive upper levels (behind).

Where opportunity for taller development exists behind the heritage volume, an upper level setback greater than 8m will be 'required' (as an absolute parameter) in addition to consideration of a sensitive architectural design treatment (massing, form and materiality) to ensure the new form does not visually compete with the heritage element.

Cross-section of rescessive form behind heritage frontage

New Street wall & Upper Levels

In urban areas, almost all urban design guidelines seek to introduce a 'street wall' and 'upper level front setback' measure. The purpose for such a distinction and separation is to ensure predominance of the 'traditional' forms and parapets within the streetscape, while enabling provision of new and increased heights in a recessive order. Upper level setbacks also retain a sense of openness to the street, which are prominent in a pedestrian's field of vision and reinforce the traditional street wall scale. Within the study area, there is extensive heritage fabric which is to be retained and enhanced. The recommended built form parameters for heritage sites draw on the provisions of Clause 22.02 and 22.10 (refer Heritage Street wall).

Along Smith Street, heritage streetwalls vary in height, comprising sections of consistent heritage forms and noticeable shifts in profile between traditional commercial shopfronts and prominent department store forms. To respond to these different streetscape characteristic a new streetwall should match the adjoining heritage forms, whilst a variation of up to 1 storey (lower) is possible in a more 'diverse' streetscape. Importantly, new street wall should not result in diminishing the heritage quality of the streetscape.

For sites with the opportunity to establish a continuous new street wall (that responds to its abutting heritage walls) and recessive upper levels, recommendations are derived from other Planning Scheme Amendments, associated Panel reports as well as recent heritage advice from GJM Heritage.

It is preferred that new built form reinforce the established urban form patterns that are distinctive to Smith Street, comprising streetwalls and recessive upper levels. The visual distinction between street walls and upper levels is an important consideration. For this reason, a 'default' 8m setback along Commercial Streets and a minimum 3m* will be applicable to new form to:

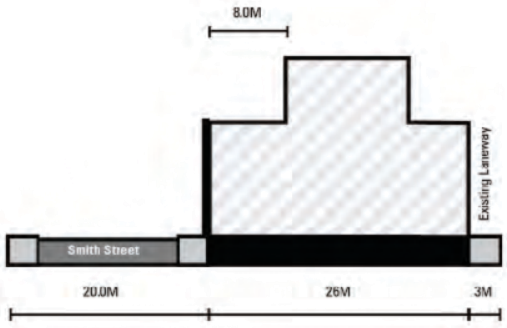
- Provide a clear separation between streetwall and upper forms;
- Ensure new upper form do not visually dominate streetscapes;
- Create consistent upper level setbacks along streetscapes that comprise a mix of heritage and non-heritage forms; and
- Reinforce the visual dominance of streetwalls.

**We note that from heritage perspective, a 6m setback is preferred.*

Upper Level Setbacks

In urban areas, almost all urban design guidelines seek to introduce a 'streetwall' and 'upper level front setback' measures.

The purpose for such a distinction and separation is to ensure predominance of the 'traditional' forms and parapets within the streetscape, while enabling provision of new and increased heights in a recessive fashion. Upper level setbacks also retain a sense of openness to the street, which are prominent in a pedestrian's field of vision and reinforce the traditional streetwall scale.



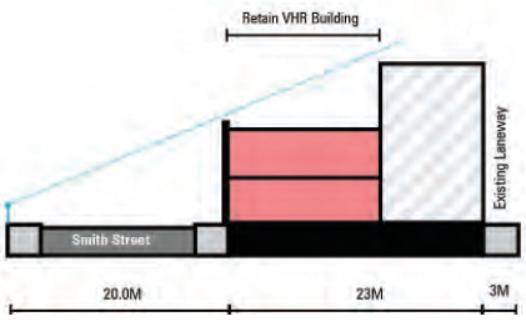
Along Smith Street there is extensive heritage fabric which is to be retained and enhanced. The recommended built form parameters for heritage sites draw on the provisions of Clauses 22.02 and 22.10 (refer Heritage Streetwall), recommendations from other PSAs and associated Panel reports and recent heritage advice from GJM Heritage.

The recommendations for non-heritage sites seeks to provide a clear distinction between streetwall presentations and upper forms, to reinforce the visual dominance of streetwalls (refer New Streetwall).

Upper Level Expression

The design of upper levels of new development should:

- Be well articulated and break up the building mass;
- Distinguish between the lower and upper levels through materials and articulation;
- Be designed so that side walls are articulated and read as part of the overall building design and not detract from the streetscape when viewed from direct and oblique views along the streetscape; and
- Provide passive surveillance of adjacent streets and public open space.



Preferred upper level setback above new street wall

Heritage frontage

Based on an understanding of heritage advice and the distinct built form character to the south of Gertrude Street, the following parameters guide the preferred built form response for heritage frontages in this area:

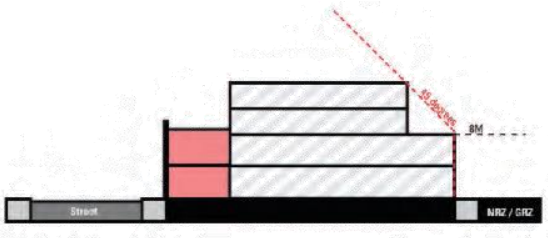
- Buildings subject to the Victorian Heritage Register should generally remain unchanged (aside from restoration).
- Where new buildings are proposed on VHR sites, they are to be positioned behind existing structures, ensuring heritage frontages are not concealed by new forms from streetscape views.

Cross-section of concealed form behind VHR frontage

Transitions

Transitions in scale are an existing characteristic of the broader Fitzroy and Collingwood area. There are many examples of older commercial or warehouse forms side by side with fine grained dwellings. In this context a change in streetwall height of one storey is common within the streetscapes of the precinct.

In order to maintain this characteristic of gradual variation, particularly within the streetwall, new buildings must contain a streetwall that matches the height of any abutting heritage streetwall/building, or is no greater than one storey higher in order to maintain the prevailing streetscape character and streetwall modulation.



Larger sites may be able to accommodate for gradual transitions through recessive upper levels and transition in scale in response to abutting heritage forms. In order to avoid undesirable 'wedding cake' forms, minimal 'steps' in built form massing is encouraged. Transitions in scale should, as a minimum, occur in paired levels.

On sites which directly abut single storey heritage forms and existing private open spaces a more tempered built form transition is recommended to ensure new form sensitively responds to the existing abuttal.

Residential Interface (including laneway)

Most residential properties are generally located to the east and west and are separated from the study area by a laneway, or street. There are instances where the study area has a direct abuttal to residential properties (ie. between Cecil & Westgarth Streets and between Moor & Charles Streets) with shared side boundaries. These common boundaries are mostly defined by building sideages, or party wall (1-2 storeys). Direct abuttal to private open space exists but is limited.

Along both interfaces, we recommend a 8m (2 storey) form at the interface, with any built form above set back within a 45 degree built form envelope to protect residential amenity.

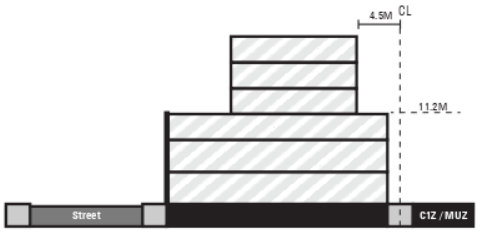
Cross-section of built form transition to residential zoned land

Smith Street, looking north from Condell Street

Non-residential Interfaces (including laneway)

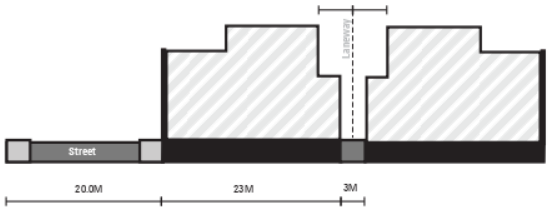
Built form needs to respond to laneway interfaces. Within the study area the existing laneways, their function, widths and arrangements vary. New development will need to appropriately address both the existing laneway condition as well as adjacent properties. Therefore, we recommend:

To laneway abuttals new development should present a maximum 11.2m (3 storey) form at the interface, with any built form above set back 4.5m from the centreline of the laneway of up to 5 storeys.



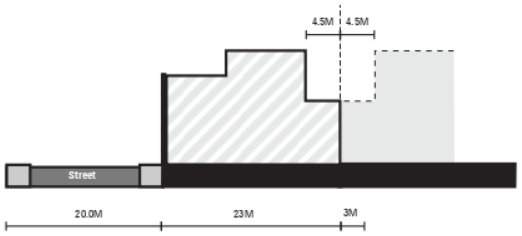
Building Separation, Amenity & Equitable Development

New development should provide a design response that considers the existing condition and future development opportunities of adjacent properties in terms of outlook, daylight and solar access to windows.



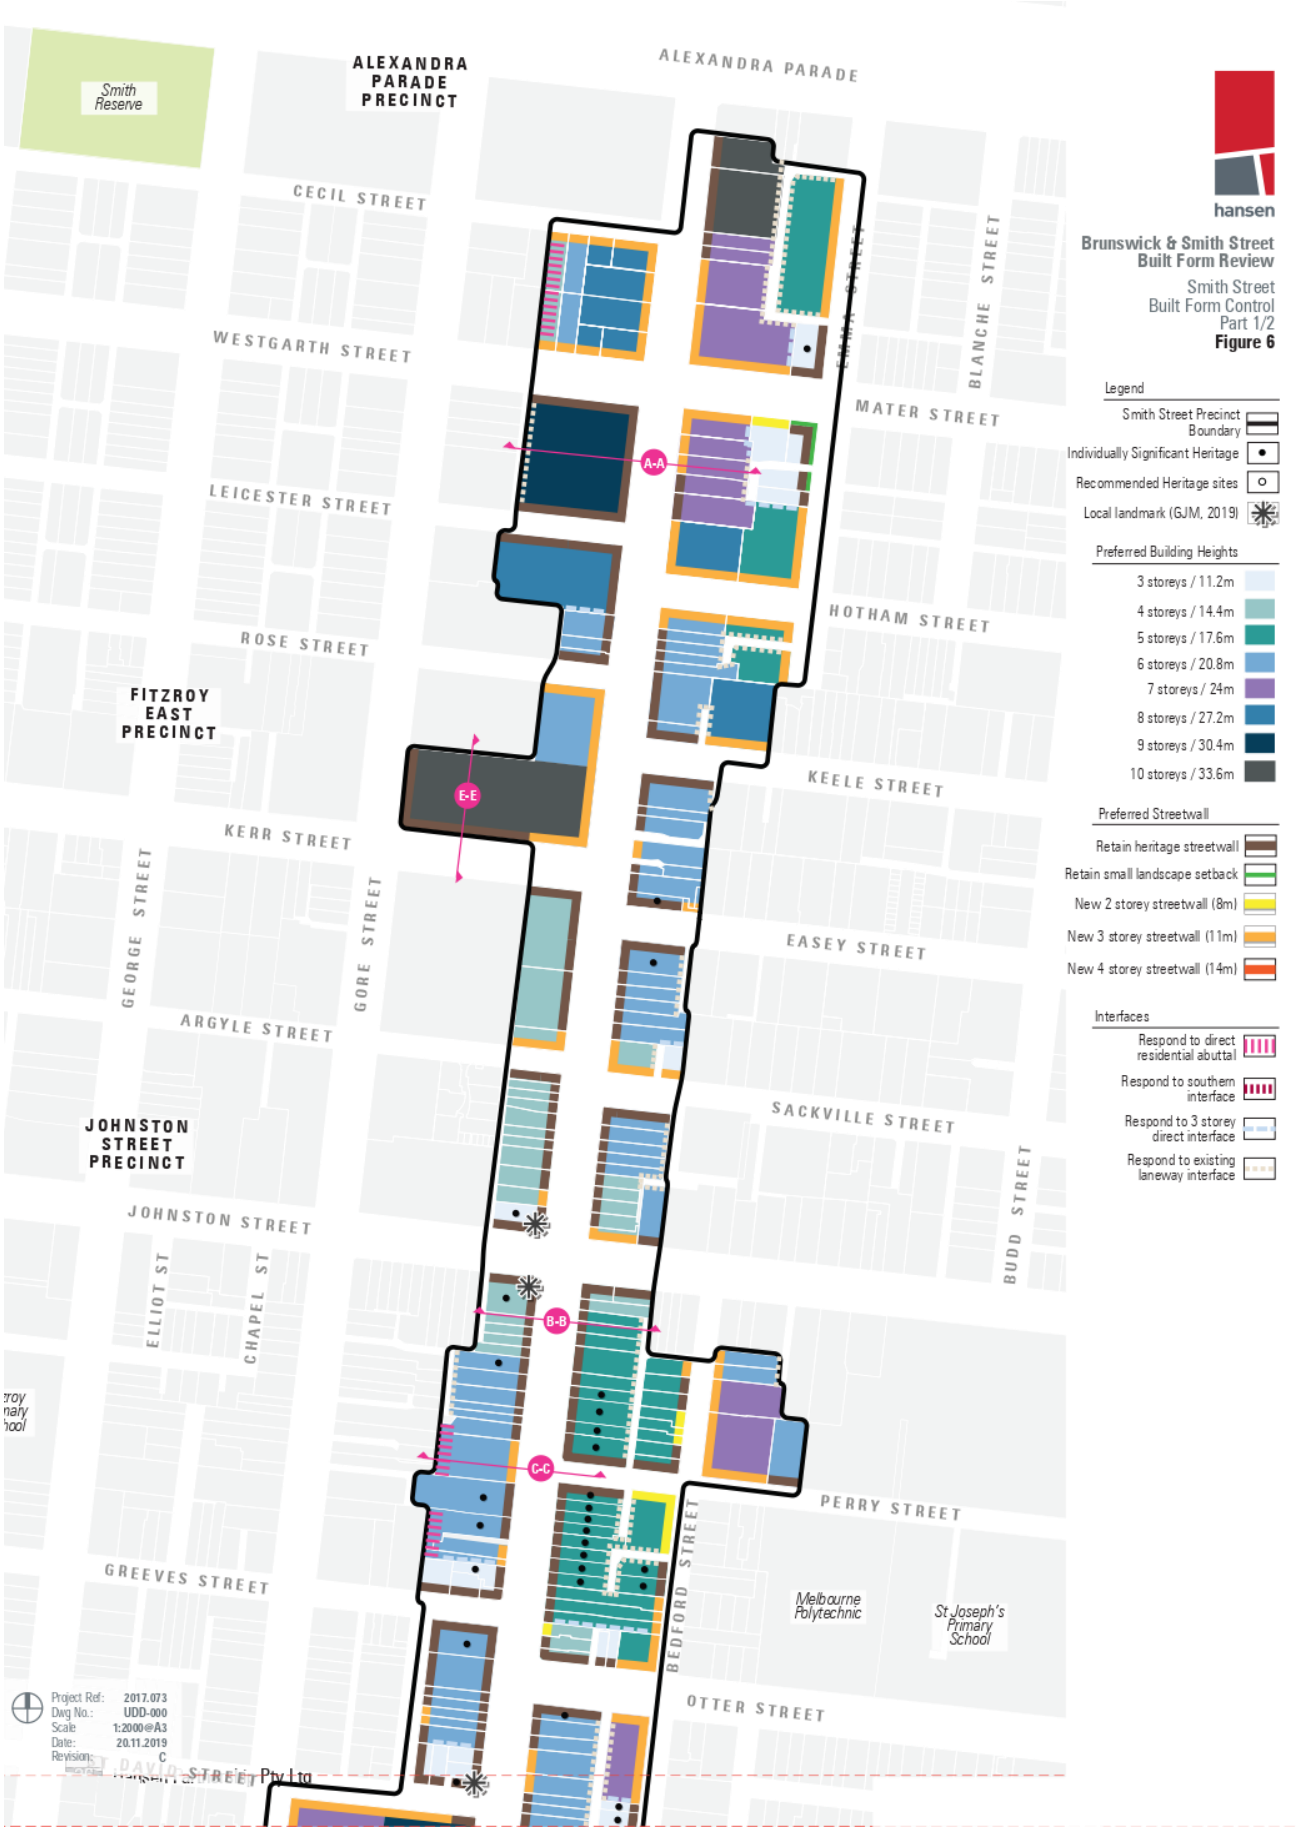
Development should be setback from common boundaries to provide separation between buildings at the upper levels:

- a minimum of 4.5m from the boundary where a habitable room window is proposed;
- a minimum of 3m from the boundary where a non-habitable room window or commercial window is proposed; and
- a minimum for 4.5m from the edge of a proposed balcony or terrace.

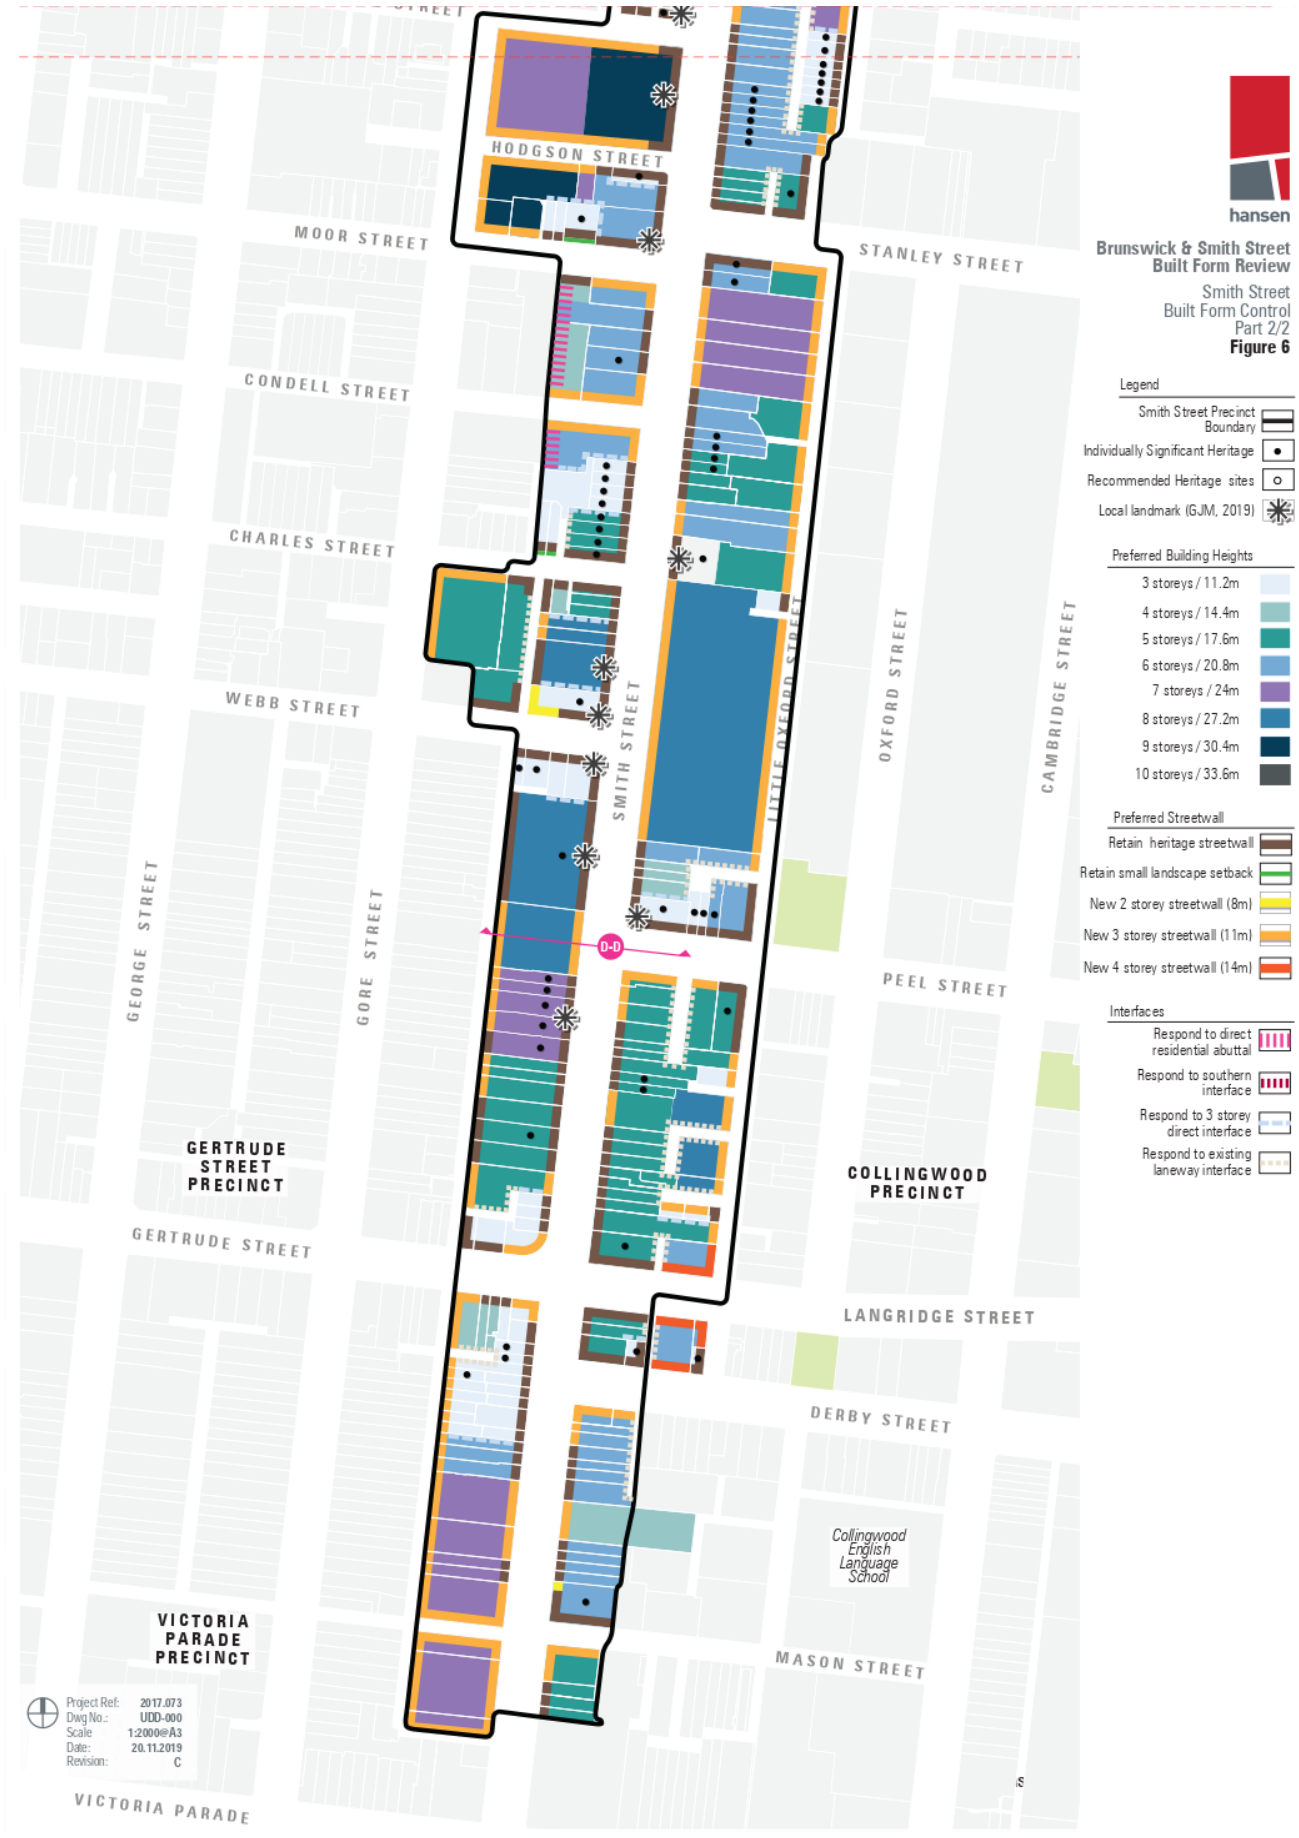


Where the common side boundary is a laneway, the setback is measured from the centre of the laneway.

Preferred built form transition to MUZ or C1Z sites



Preferred 4.5m setback of upper levels from centreline of laneway (minimum 3m wide)



Preferred 4.5m setback of upper levels from rear boundary

Attachment 7 - Attachment 7 - Smith Street Built Form Framework

Attachment 7 - Attachment 7 - Smith Street Built Form Framework

PART 4: RECOMMENDED CONTROLS

4.1 Methodology

The formulation of future building heights and streetwall conditions within the Smith Street Precinct has been influenced by many factors, including:

- Planning Policy Framework;
- Local Planning Policy Framework, including Zones and Overlays;
- Practice Note No. 60 – Height and Setback Controls for Activity Centre;
- Practice Note No. 59 – The Role of Mandatory Provisions in Planning Schemes;
- City of Yarra Housing Strategy (Adopted 4 September 2018);
- Review & Development of the City of Yarra Landmarks Policy (March 2018);
- Urban Design Guidelines for Victoria, 2017;
- Anticipated scale and form of development outside the study area (i.e. within Residential and Employment Zones);
- Views to existing landmarks from the public realm;
- Recognition of Yarra's heritage skyline;
- Recent development approvals (including those currently under-construction);
- 3D computer modelling of built form testing for the study area;
- Independent heritage advice and existing character considerations, consistent with the expert heritage advice provided by Council's heritage advisors (GJM Heritage);
- The overall Brunswick Street and Smith Street Built Form Review Background Report (November 2019); and
- Extensive site inspections and workshops with Council's officers.
- Planning Panel Recommendations for:
  - Johnston Street Local Area Plan (C220);
  - Queens Parade Built Form Review (C223).

4.2 Assumptions

Formula for Deriving Numerical Building Heights

The maximum building heights has been calculated to a higher (than minimum) floor to floor heights in order to:

- Respond to the typical heights found within heritage buildings (between 8-11m);
- Accommodate for greater than minimum standards and provide flexibility for future uses;
- Allowance for other design elements to be accommodated, such as parapets, railings, etc.

The following numerical floor to floor dimensions where employed:

- Ground and First Floor: 4m
- Second Floor and above: 3.2m

Note: Higher numerical floor levels for mixed use development may be required at upper levels.

Formula for Deriving Numerical Streetwall Heights

The maximum streetwall heights have been calculated based on the above floor to floor heights, plus additional height to allow for parapets, balustrades and minor architectural features.

Zero front setback

New buildings within Activity Centres and inner urban areas such as Smith Street should generally be built to the street frontage in order to:

- Respond to the prevailing built form character of the area;
- Provide a clear definition at the street edge; and
- Maximise the developable area.

With the exception of retaining small front setbacks to heritage dwellings all new building within the commercial and mixed use zone should have a zero street setback.

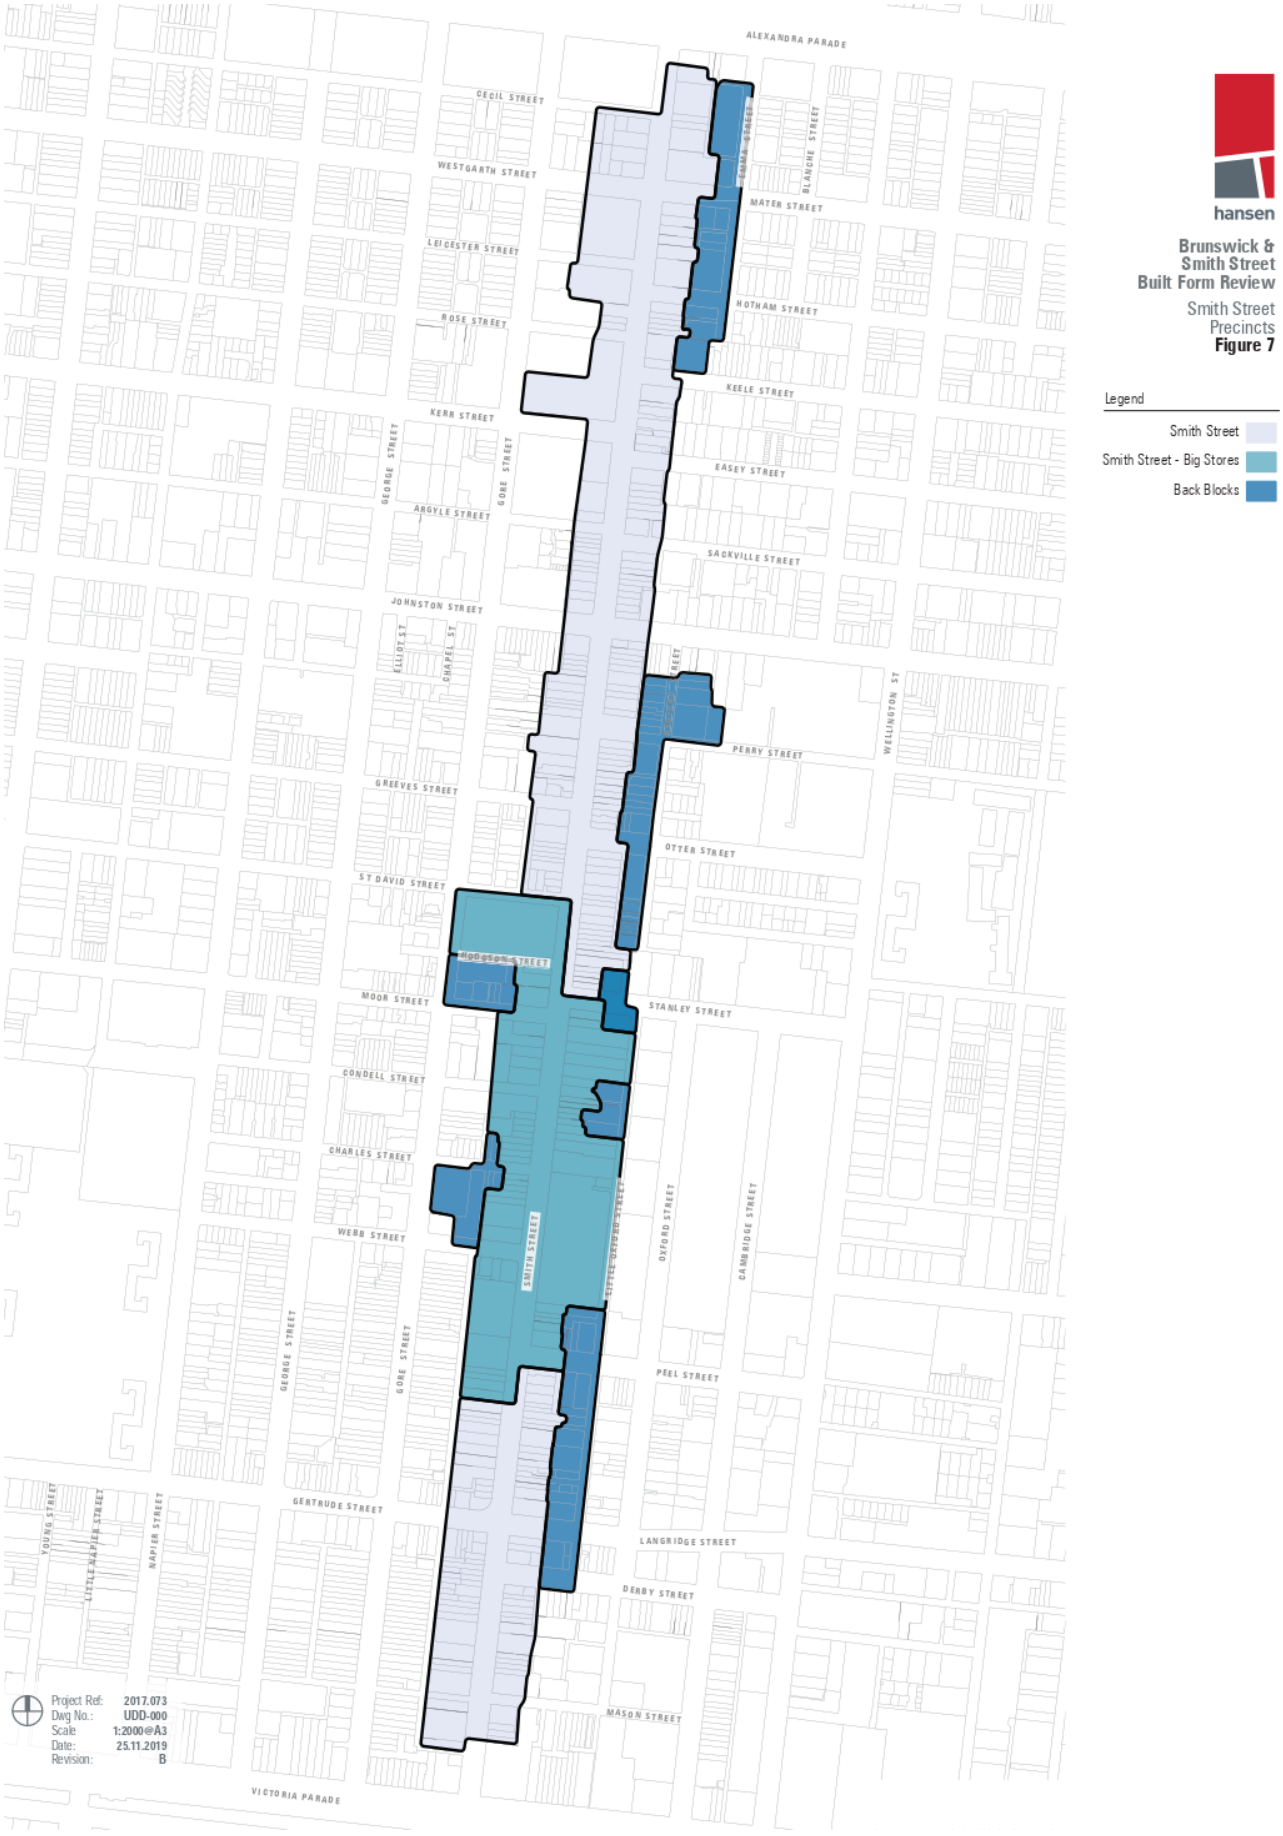
Top Floor Depth

A minimum depth of approximately 10m for the upper most level has been considered in determining overall building heights. This minimum dimension is based on a typical apartment depth, and provision of efficient access.

4.3 Precincts

Based on the linear extent of Smith Street and the distinction in future built form characteristic along the corridor and back block areas (as determined by the Built Form Framework Plan), the study area is divided into several precincts as follows:

- Smith Street
- Smith Street - Big Store; and
- Back Blocks.



The following table provides a concise breakdown of these precinct and key built form parameters.

Proposed Building Heights

PRECINCT	STREET WALLS / GROUND LEVEL SETBACKS	PREFERRED MAXIMUM BUILDING HEIGHTS
SMITH ST	▪ Match adjoining heritage eaves/parapet, or lower. ▪ Where there is no adjoining heritage street wall, maximum 11.2m.	11.2m to 32.8m (3 to 10 storeys)
SMITH ST - BIG STORE	▪ Match adjoining heritage eaves/parapet to a maximum of 11.2m. ▪ Preserve existing buildings on VHR sites.	11.2m to 29.6m (3 to 9 storeys)
BACK-BLOCKS	▪ Retain existing front setback; ▪ Match adjoining heritage eaves/parapet, or lower; or ▪ 3 storey (11.2m) to 4 storey (14.4m).	11.2m to 32.8m (3 to 9 storeys)

The following diagram illustrates a breakdown of these precinct boundaries.

Attachment 7 - Attachment 7 - Smith Street Built Form Framework

PRECINCT 1: SMITH STREET

This precinct comprises lots with a primary frontage to Smith Street, between Alexandra Avenue to St David Street-Stanley Street (in the north) and 119 Smith Street-Peel Street to Victoria Parade (in the south), excluding the corner Alexandra Avenue corner sites.

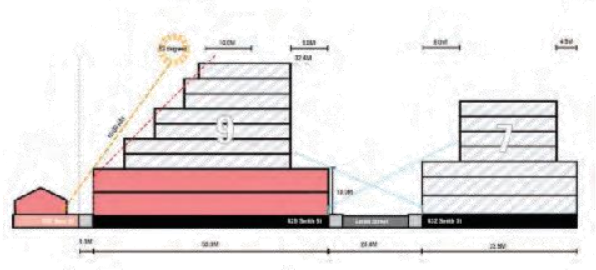
Preferred precinct character statement

Properties fronting Smith Street will continue to be defined by fine grained low scaled heritage buildings. New moderate infill with be recessive in profile, befitting a 'street wall and setback' model and transition down along its residential abuttal. Where Smith Street intersects with east- west streets, these junctions will continue to be defined by proud heritage forms with recessive upper levels that turn the corner, addressing both street frontages.

To the northern and southern ends of Smith Street, acknowledge development opportunities will manifest with rising forms set back behind the prevailing street wall profile.

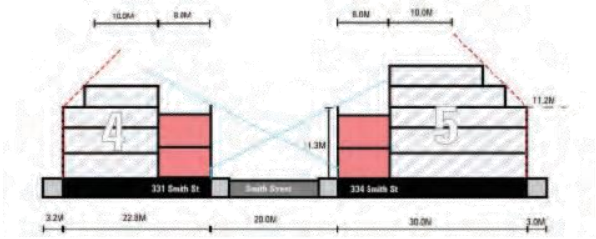
To either side of the main street junctions, reinforce the consistent and orderly street wall character.

Built Form Objectives



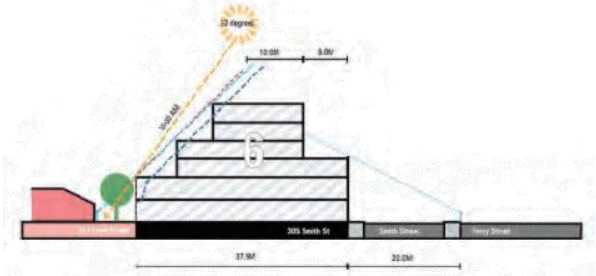
- To ensure the heritage frontage remains the visually dominant element of all development in Smith Street and that new development is visually recessive and does not dominate the streetscape.
- To acknowledge development potential on larger sites unaffected by the Heritage Overlay.
- To realise a moderate mixed-use redevelopment that respects the heritage and streetscape value of the precinct.
- To support development that contributes to an active, high quality and pedestrian friendly environment.
- To enhance a consistent and orderly streetscape presentation to the either side of the Johnston Street and Gertrude-Langridge Street junctions.
- To maintain a diverse streetscape presentation to the northern and southern ends of Smith Street.
- To ensure views to the local landmarks are maintained and highlighted.
- To minimise overshadowing of existing open space and footpaths along commercial and 'green' streets.
- To ensure suitable transition along its residential interface.

Guidelines

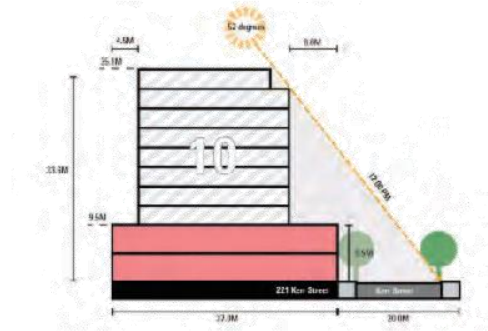


1. Establish a clear distinction between street wall and rising form behind.
2. Avoid new single storey street walls.
3. Ensure new infill street walls matches the parapet height of adjoining heritage forms.
4. Ensure new development complements heritage architectural features (grain and rhythm).
5. Ensure upper levels behind heritage street wall adopt a 'calm' architectural language and material palette.
6. Ensure new development on corner sites is designed in the round and 'turns the corner' to address all street frontages.
7. Ensure new development avoids the presentation of overly stepped or 'wedding-cake' presentation.
8. Ensure new development maintains solar access to:

- Smith Street, Johnston Street and Gertrude Street footpaths (opposite side) between 10am and 2pm at the equinox (21 September).
- Footpaths (opposite side) of Westgarth Street, Mater Street Kerr Street, Otter Street, Stanley Street and Derby Street between 10am and 2pm at the equinox (21 September).
- For other streets, to first floor between 10am and 2pm at the equinox (21 September).



9. Facilitate equitable development outcomes to adjacent sites through adequate building separation to side and rear boundaries.
10. Ensure exposed party walls to side boundaries are designed to be visually interesting.
11. Encourage laneway extension. or widening to accommodate servicing and parking access, where existing laneway conditions are too narrow.
12. Ensure new development provides opportunities for improved passive surveillance to streets at ground and upper levels.
13. Encourage continuation of awnings over footpaths.



Smith Street Indicative cross-section A-A

Smith Street Indicative cross-section B-B

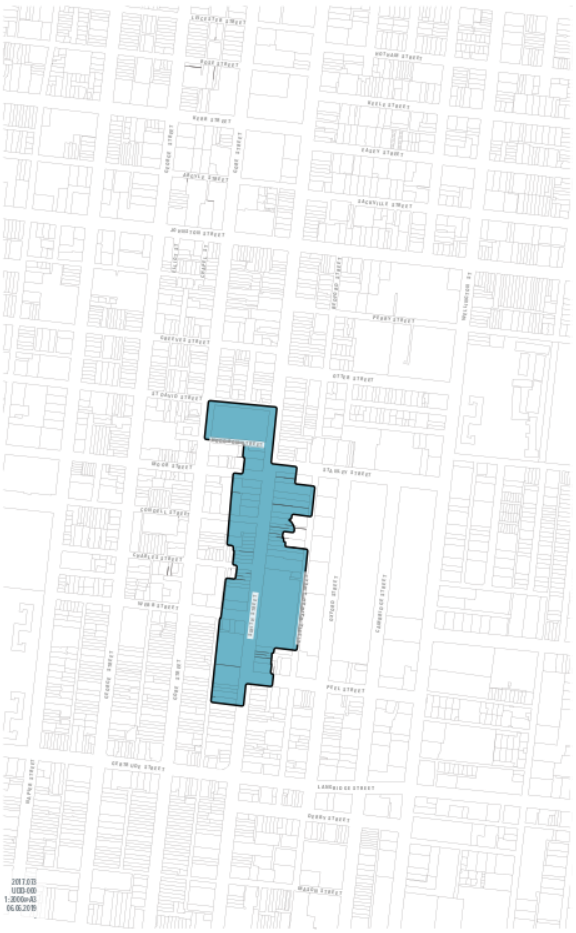
Smith Street Indicative cross-section C-C

Kerr Street Indicative cross-section E-E

PRECINCT 2: BIG STORES

This precinct is defined by the presence of the grand retail forms which reflect Smith Street's history as Melbourne's premier retail destination and presence of major Department Stores. This precinct comprises lots with a primary frontage to Smith Street, between St David Street-Stanley Street (in the north) and 119 Smith Street-Peel Street (in the south).

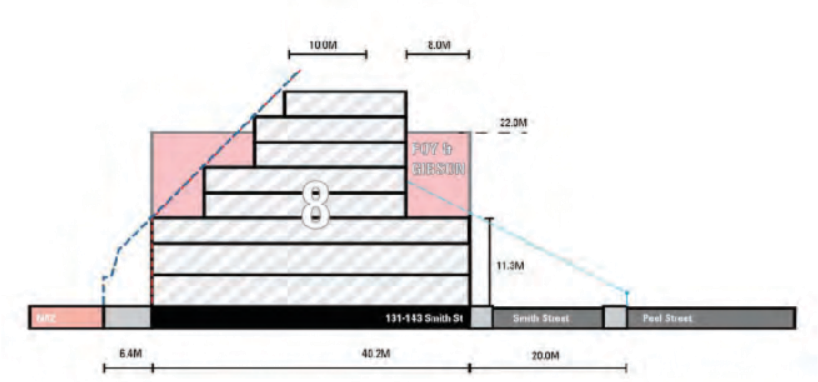
Preferred precinct character statement



The Smith Street spine will continue to be defined by the grand punctuating forms of the heritage Department Store buildings. The prominence of these façades and varied heritage street walls will be maintained with low to mid-rise infill development that is be subservient in the streetscape, ensuring view lines to local landmarks and the profile of Department Stores is preserved.

Where Smith Street intersects with side streets, these junctions will continue to be bookended by proud heritage forms with complementary and recessive upper levels that turn the corner to address both street frontages.

Built Form Objectives



- To protect existing built form fabric with VHR designation.
- To maintain a diverse streetscape presentation and visual prominence of the heritage Department Stores.
- To ensure the heritage frontage remains the visually dominant element of all development in Smith Street and that new development is visually recessive and does not dominate the streetscape.
- To realise a moderate mixed-use redevelopment that respects the heritage and streetscape value of the precinct.
- To support development that contributes to an active, high quality and pedestrian friendly environment.
- To ensure views to the local landmarks are maintained and highlighted.
- To minimise overshadowing impact on existing open space and footpaths along commercial and 'green' streets.
- To ensure suitable transition along its residential interface.

Guidelines

1. Encourage retention and repurposing of exiting built forms on VHR sites.
2. Ensure that new street walls are subservient to the prominent heritage department stores.
3. Encourage new upper level development to be set back behind new or heritage street walls to preserve the prominent sheer profiles of the heritage department stores.
4. Ensure new infill street walls match the parapet height of adjoining heritage forms – except heritage department stores.
5. Ensure new development avoids the presentation of overly stepped or 'wedding-cake' presentation.
6. Ensure new development maintains solar access to:
   - Smith Street footpath (opposite side) between 10am and 2pm at the equinox (21 September).
   - Footpaths (opposite side) of Peel Street between 10am and 2pm at the equinox (21 September).
   - For other streets, to first floor between 10am and 2pm at the equinox (21 September).
7. Facilitate equitable development outcomes to adjacent sites through adequate building separation to side and rear boundaries.
8. Ensure exposed party walls to side boundaries are designed to be visually interesting.
9. Encourage laneway extension. or widening to accommodate servicing and parking access, where existing laneway conditions are too narrow.
10. Ensure new development provides opportunities for improved passive surveillance to streets at ground and upper levels.
11. Encourage continuation of awnings over footpaths.

Smith Street Indicative cross-section D-D

PRECINCT 3: BACK BLOCKS

This precinct comprises a dispirate grouping of linear parcels located behind the Smith Street spine, within the Commercial 1 Zone and Mixed Use Zone. The key parcels of land are:

- East of Smith Street with frontages to Emma, Mater, Hotham, Keele and Sackville Streets;
- East of Smith Street with frontages to Bedford, Perry, Otter, Stanley, Little Oxford, and Peel Streets; and
- West of Smith Street with frontages to St David, Hodgson, Gore, Moor, Charles and Webb Streets.

Preferred precinct character statement

Future development will continue the pattern of recent mid-rise development, behind the Smith Street spine, retaining visual prominence of the heritage fabric. These backstreet streetscapes will be diverse and varying from low rise, fine grain residential to a stronger profile defined by contemporary buildings and transition down along the various residential edges.

Built Form Objectives

- To retain the heritage frontages, including street setbacks and street walls.
- To realise a moderate mixed-use redevelopment that respects the heritage and the individual streetscape character.
- To support development that contributes to an active, high quality and pedestrian friendly environment.
- To encourage development that is made up in parts on prime sites to reinforce the permeability and fine-grained profile of urban blocks in the precinct.
- To ensure suitable transition along its residential interface.

Guidelines

1. Ensure new development reinforces a dominant street wall presentation (where there is no heritage street wall, or street walls).
2. Ensure that new development on corner sites address multiple street frontages by 'turning' the corner.
3. Ensure new development maintain solar access to:
   - Footpath on opposite side of Emma Street between 10am to 2pm at the equinox (21 September);
   - Footpaths (opposite side) of, Mater, Otter, Stanley, Peel and Derby Street between 10am and 2pm at the equinox (21 September).
   - For other streets, to first floor between 10am and 2pm at the equinox (21 September).
4. Retain existing front setbacks including front gardens.
5. Retain existing canopy vegetation on site.
6. Ensure new development reinforces domestic character of residential streets through facade articulation and material treatment.
7. Ensure new development provides opportunities for improved passive surveillance to streets at ground and upper levels.
8. Facilitate equitable development outcomes to adjacent sites through adequate building separation to side and rear boundaries (above prescribed street wall height).
9. Ensure new development avoids the presentation of overly stepped or 'wedding-cake' presentation.

4.4 General Built Form Guidelines

Built Form Recommendations

A range of specific built form recommendations and design guidelines have been developed for all precincts.

These built form guidelines focus on the Smith Street Precinct, where future development is anticipated and design guidance is required.

Public Open Space provision

Public open space is an important element within urban areas, as is its spatial provision. In inner urban areas such as Smith Street the provision of small public parks is important to the social health and well-being of a local community. There are presently no 'pocket parks' within the study area. Therefore, there is a clear lack of open space provision within this precinct.

Visually distinct additions and upper levels

Given the prevailing heritage character of Smith Street, new buildings or additions should be designed to have a visually distinctive architectural expression from the heritage element. This is in order to ensure that new form can be clearly 'read' and understood as a more recent component. It also encourages contemporary architectural responses which will contribute to the 'richness' and diversity of built form.

Lightweight materials, colours and finishes that contrast with the prevailing masonry forms are also encouraged to assist in the clear distinction between new and old, while also assist in visually recessing new forms.

Architectural Considerations

To street frontages expansive blank walls should be avoided and where visible from within the public realm, any blank walls need to be visually divided into small elements through architectural treatments or artistic decoration to reduce visual mass.

Fenestration patterns and facade solid to void proportions need to reflect the prevailing streetscape rhythm and presentation.

New forms should 'fit' within the prevailing streetscape character. Avoid overly busy and complex architectural expressions.

Active and Semi Frontages

In Activity Centres and Mixed Use areas, buildings must provide sufficient activation at street level to foster 'life' on the street and provide opportunities to maximise safety via passive surveillance.

Along the key movement corridors active ground frontages are encouraged. However, this precinct does not comprise any such key corridors.

Along the local streets and within the mixed use area semi-active frontages are more appropriate. As these less active frontages still maintain an appropriate level of passive surveillance to occur, while also providing more privacy and seclusion to the inside of the building, befitting the nature of the use being either primarily office or dwelling.

Direct pedestrian entry into ground floor uses is encourage, particular on larger sites, with broad frontages.

Upper levels also provide 'eyes on the street' and contribute to passive surveillance of the public realm. Windows and balconies that orientate towards the street are encouraged.

Brunswick Street & Smith Street Built Form Review:

JOHNSTON ST
BUILT FORM FRAMEWORK

Prepared by **Hansen Partnership**
in conjunction with **GJM Heritage**
for **City of Yarra**
June 2019

Contents

Preamble 3
Part 1 : Brunswick & Smith Context 5
Part 2 : Johnston St Precinct Influences 8
Part 3 : A Built Form Proposition 18
Part 4 : Recommended Controls 26

* Note: This Draft document is a part only of a broader Built Form Review for the Brunswick Street and Smith Street Activity Centres : Built Form Review. It is a component part of a broader body of work that sets out a future proposition for two of Yarra's key Activity Centre spines and their adjoining mixed use precincts.

Western section of Johnston Street looking east towards Smith Street

Version	Draft	Final Draft
Issue Date	16.04.2019	28.06.2019

Preamble

The following urban design report has been prepared for the City of Yarra as the basis for an urban design vision for the Johnston Street (west) corridor, located between Nicholson Street and Smith Street. It sets out a preferred built form framework underpinned by an integrated urban design and heritage assessment.

The report has been prepared by a multidisciplinary team comprising Hansen Partnership (Urban Design) and GJM Heritage (Heritage) with the support of City of Yarra's internal working group.

The study area is identified in Figure 1.

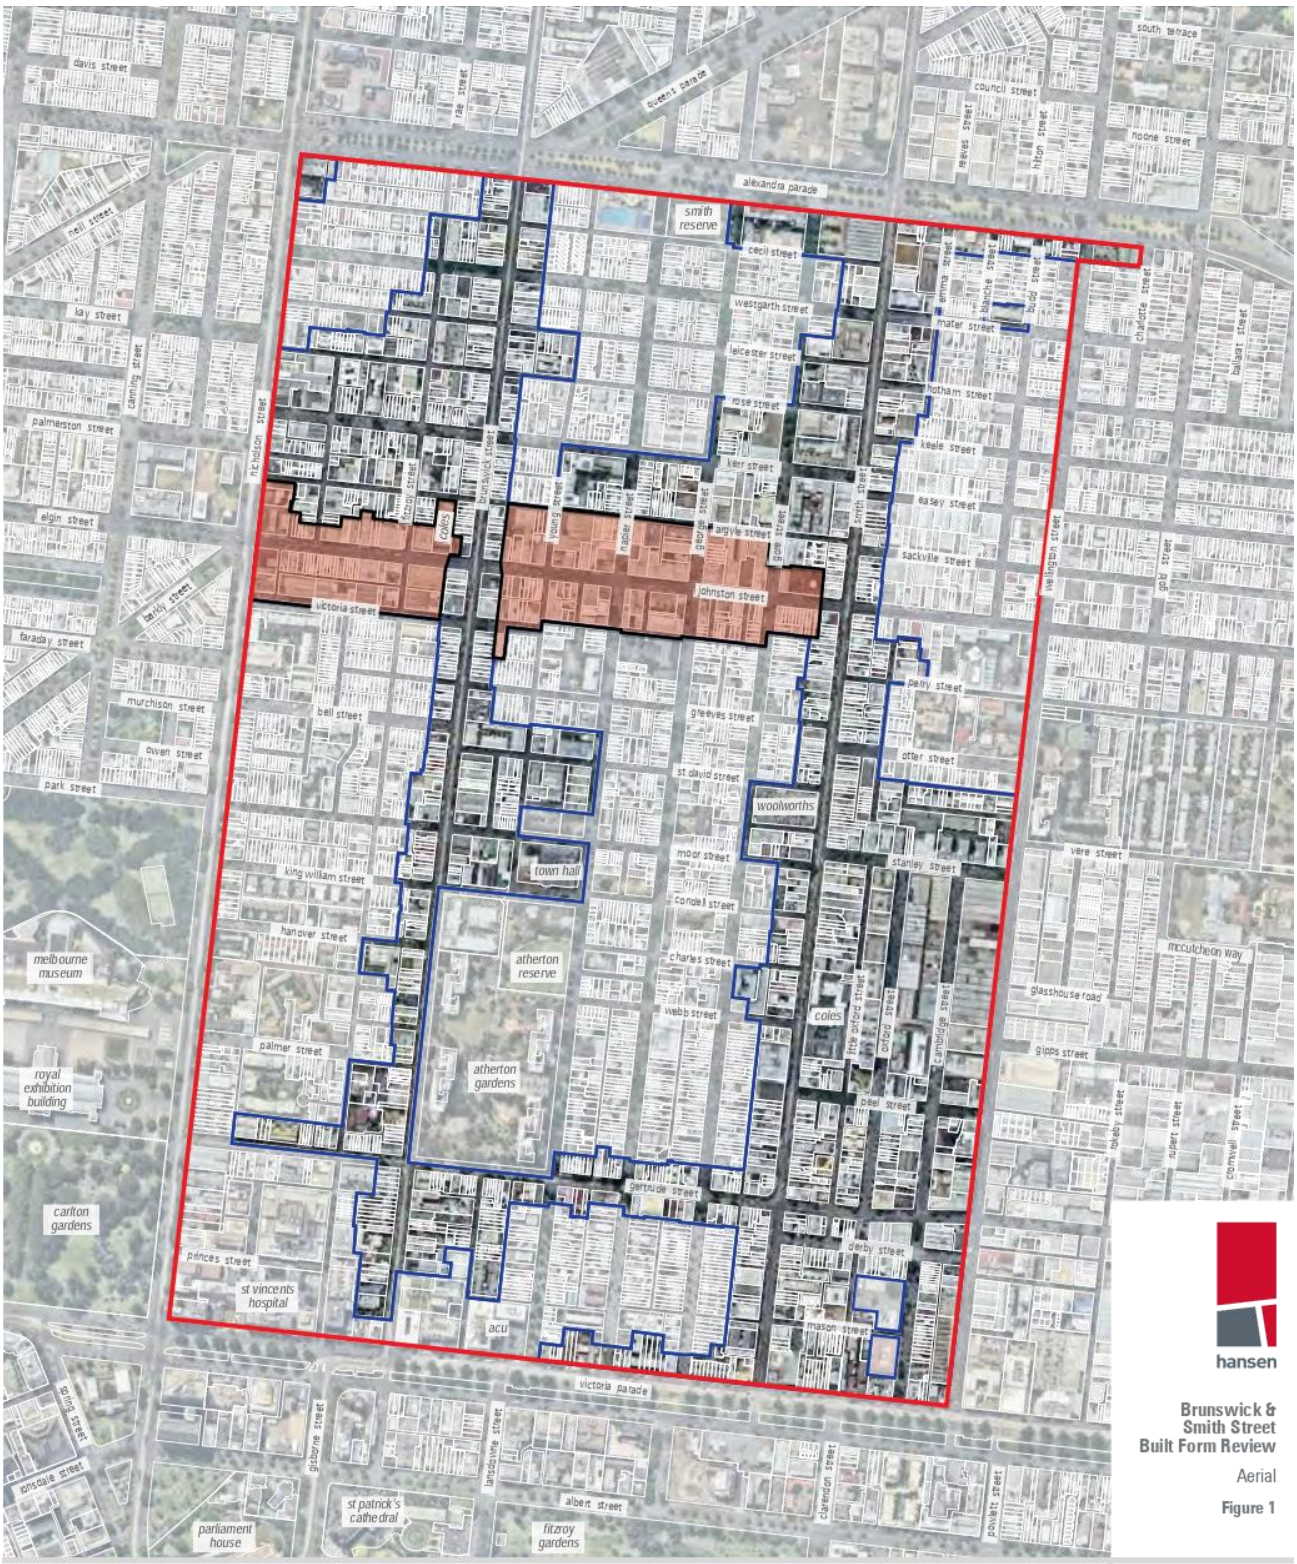
This report sets out the rationale for proposed built from controls for Johnston St and is underpinned by key components, namely:

Part 1: Brunswick & Smith Context

Part 2: Johnston Street Precinct : Influences

Part 3: Johnston Street : Built Form Propositions

Part 4: Recommended Controls



The report is part of a broader Built Form Review.

Note: Throughout this report the precinct is refered to as Johnston St, while the street is referred to as Johnston Street.

Oblique aerial of Johnston Street Precinct and surrounding context

Attachment 8 - Attachment 8 - Johnston Street Built Form Framework

Part 1 :

BRUNSWICK & SMITH CONTEXT

The Brunswick Street and Smith Street Built Form Review seeks to set a clear framework for future change within two of Yarra's key Activity Centres and their adjoining Mixed Use area. Planning policy identifies such Activity Centres as areas for accommodating growth and change. Therefore, these are the areas that must be carefully planned and managed in order to accommodate progressive change while protecting (or indeed enhancing) existing established character and heritage values.

The project was initiated in May 2017 and encompasses large areas bound by Alexandra Parade (to the north), Victoria Parade (to the south), Wellington Street (to the east) and Nicholson Street (to the west).

As part of the process extensive analysis of the existing conditions was undertaken and documented within an overall Background report. This comprehensive analysis identified and divided the overall Review Area into ten 'place specific' precincts. Furthermore, a series of guiding objectives were identified to be contemplated across ten defined precincts.

A Collingwood Precinct report was prepared in June 2018.

The Johnston St and Fitzroy East Precincts where prepared in tandem, given the somewhat merged condition between the mixed use Fitzroy East pocket and commercial zone along the eastern section of Johnston Street.

This report addresses the Johnston St Precinct. The remaining seven other precincts will be addressed in subsequent reports.

1.1 Overarching Built Form Objectives

The following 8 objectives have been identified:

Objectives:

1. Recognise and carefully manage potential in key areas within the Activity Centres.
2. Highlight the character distinctions between the different retail streets and mixed use precincts within the Activity Centres.
3. Reinforce the traditional Victorian cityscape of heritage streetscapes as dominant elements, including significant corner elements and identified local landmarks.
4. Ensure continued diversity through sensitive infill within traditional Victorian streetscapes.
5. Shape the retail streets and mixed use areas to ensure a high quality, people-oriented public realm.
6. Ensure development encourages walking, cycling and public transport usages through layout and design responses.
7. Ensure new development is sustainable and adaptive over time.
8. Manage the built form profile of new development to avoid adverse impact to surrounding areas, including heritage places, streetscapes and residential interfaces.

Southern Johnston Street streetscape between Nicolson and Brunswick Streets

1.2 Brunswick & Smith Built Form Precincts

Based on the initial analysis phase of the project the following Precincts were identified spatially as relatively coherent parts. The Precincts are largely defined by function as either:

- an Activity Spine;
- a Mixed Use Area; or
- a Boulevard.

Activity Spines

The Activity Spines are defined by the 'traditional' retail and commercial functions along the four main streets within the review area of:

- Brunswick Street;
- Smith Street;
- Gertrude Street; and
- Johnston Street.

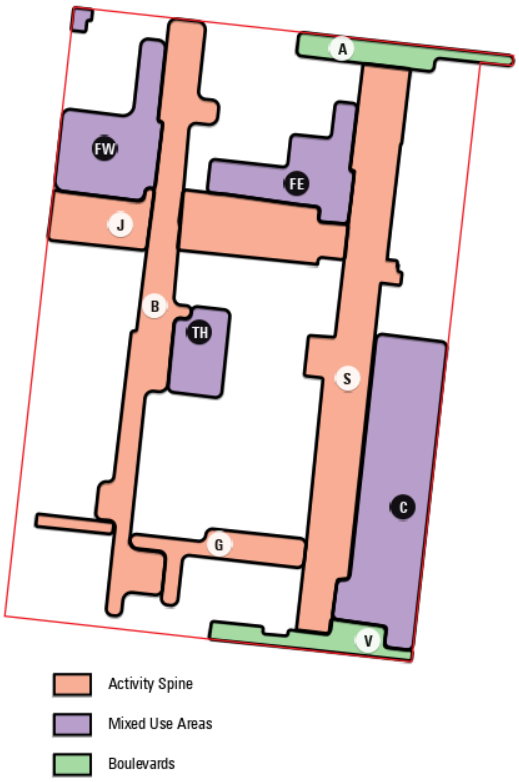
Mixed Use Areas

The Mixed Use Areas are defined by the mixed use functions present in the non-residential land located generally in local streets, behind the Spines. The four renewal areas within the review area are:

- Fitzroy West;
- Fitzroy East;
- Collingwood; and
- Town Hall.

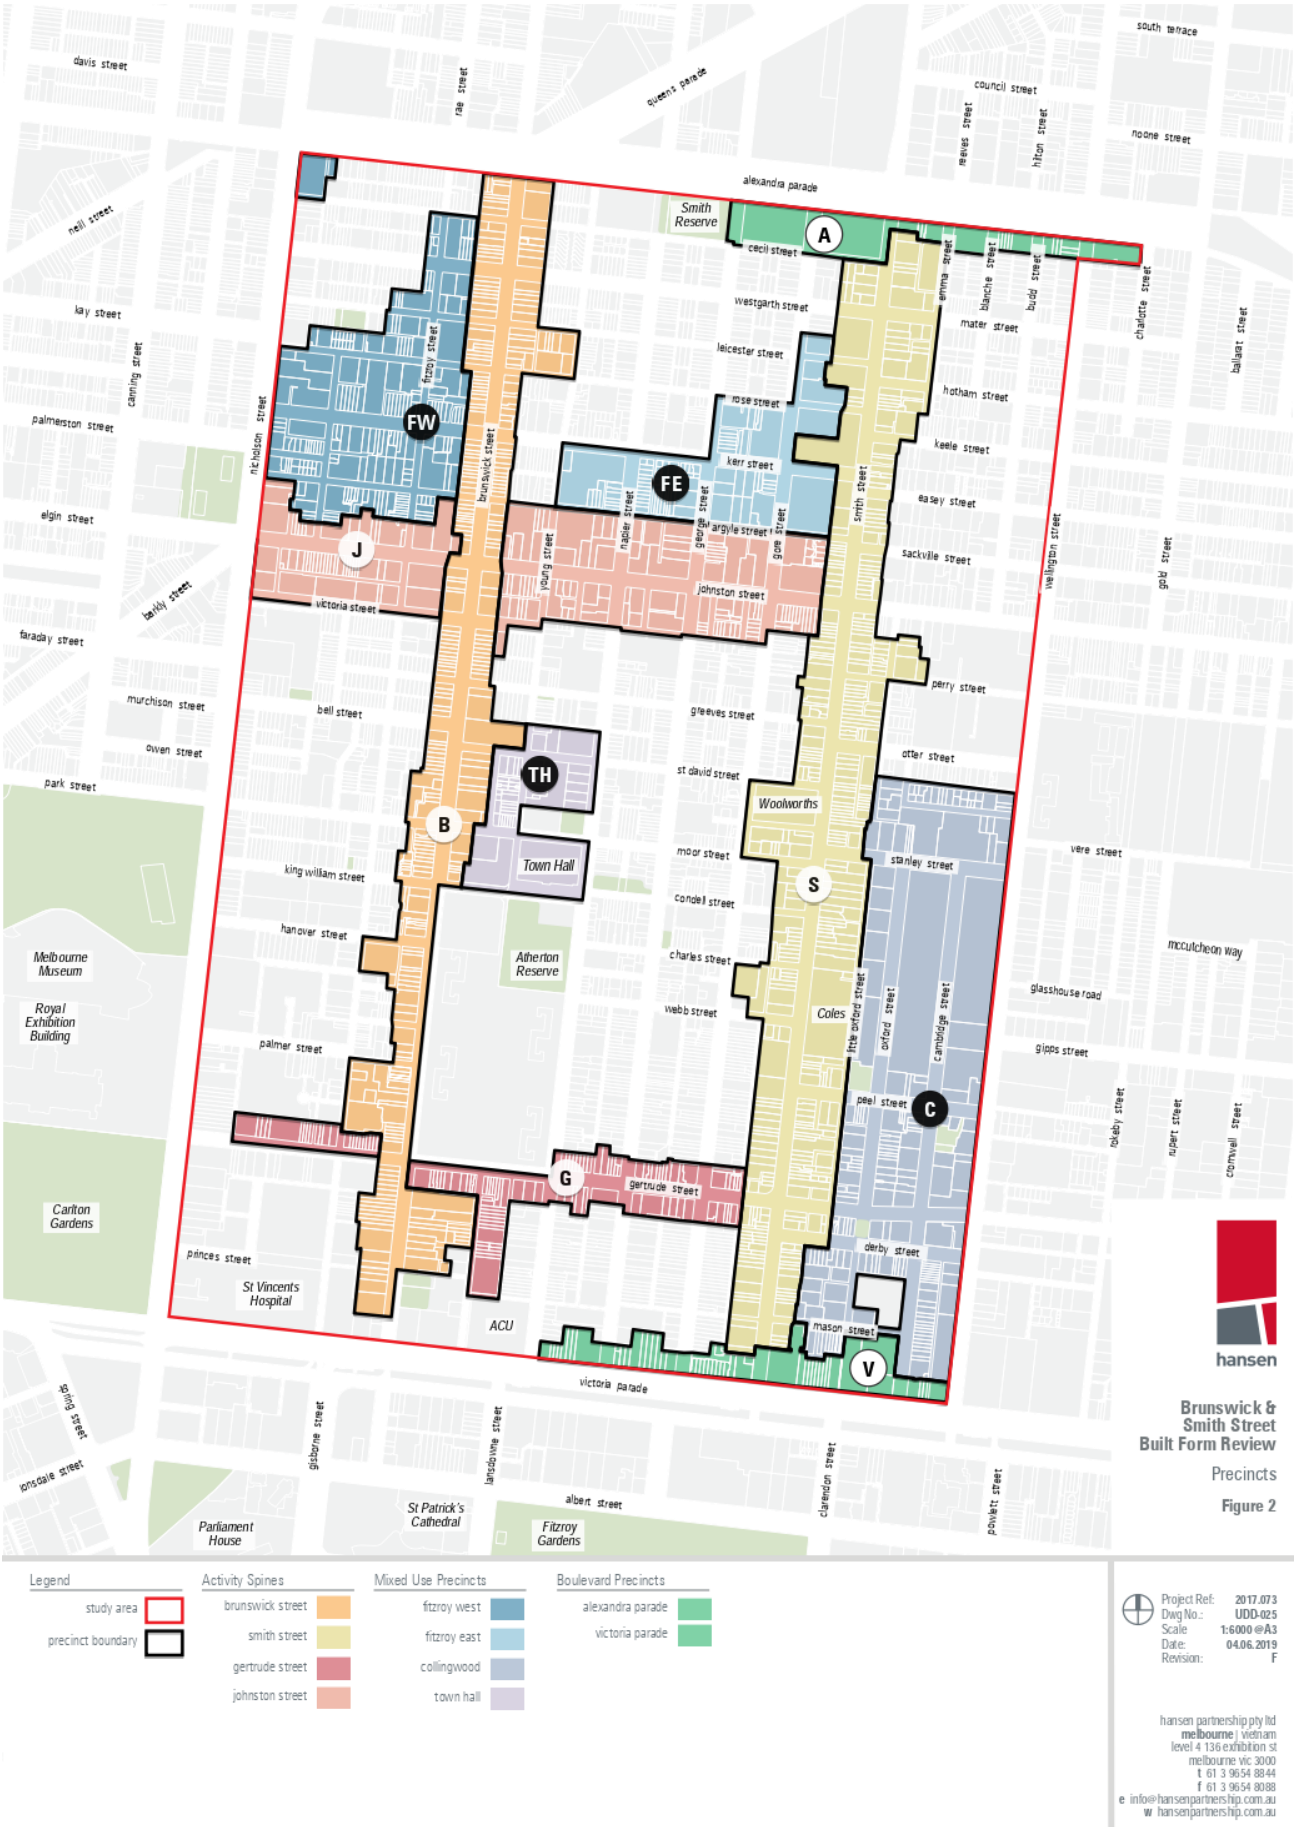
Boulevards

The Boulevards are the non-residential land to the northern and southern edges of the review area which front the broad road corridors of:



- Alexandra Parade; and
- Victoria Parade.

10 Precincts



The 10 precincts within the Brunswick & Smith Street Built Form Review are:

- Precinct 1: Brunswick Street (B);
- Precinct 2: Smith Street (S);
- Precinct 3: Gertrude Street (G);
- Precinct 4: Johnston Street (J);
- Precinct 5: Fitzroy West (FW);
- Precinct 6: Fitzroy East (FE);
- Precinct 7: Collingwood (C);
- Precinct 8: Town Hall (TH);
- Precinct 9: Alexandra Parade (A); and
- Precinct 10: Victoria Parade (V).

This report addresses Precinct 4: Johnston Street.

Attachment 8 - Attachment 8 - Johnston Street Built Form Framework

Part 2 :

JOHNSTON ST INFLUENCES

Johnston St today is a mixed urban area, main street corridor defined by the coexistence of heritage shopfront forms, new apartment developments and remnant Victorian era cottages and corner pub buildings. These prevailing elements sit side by side with more modest 20th Century forms that is 'ripe' for renewal.

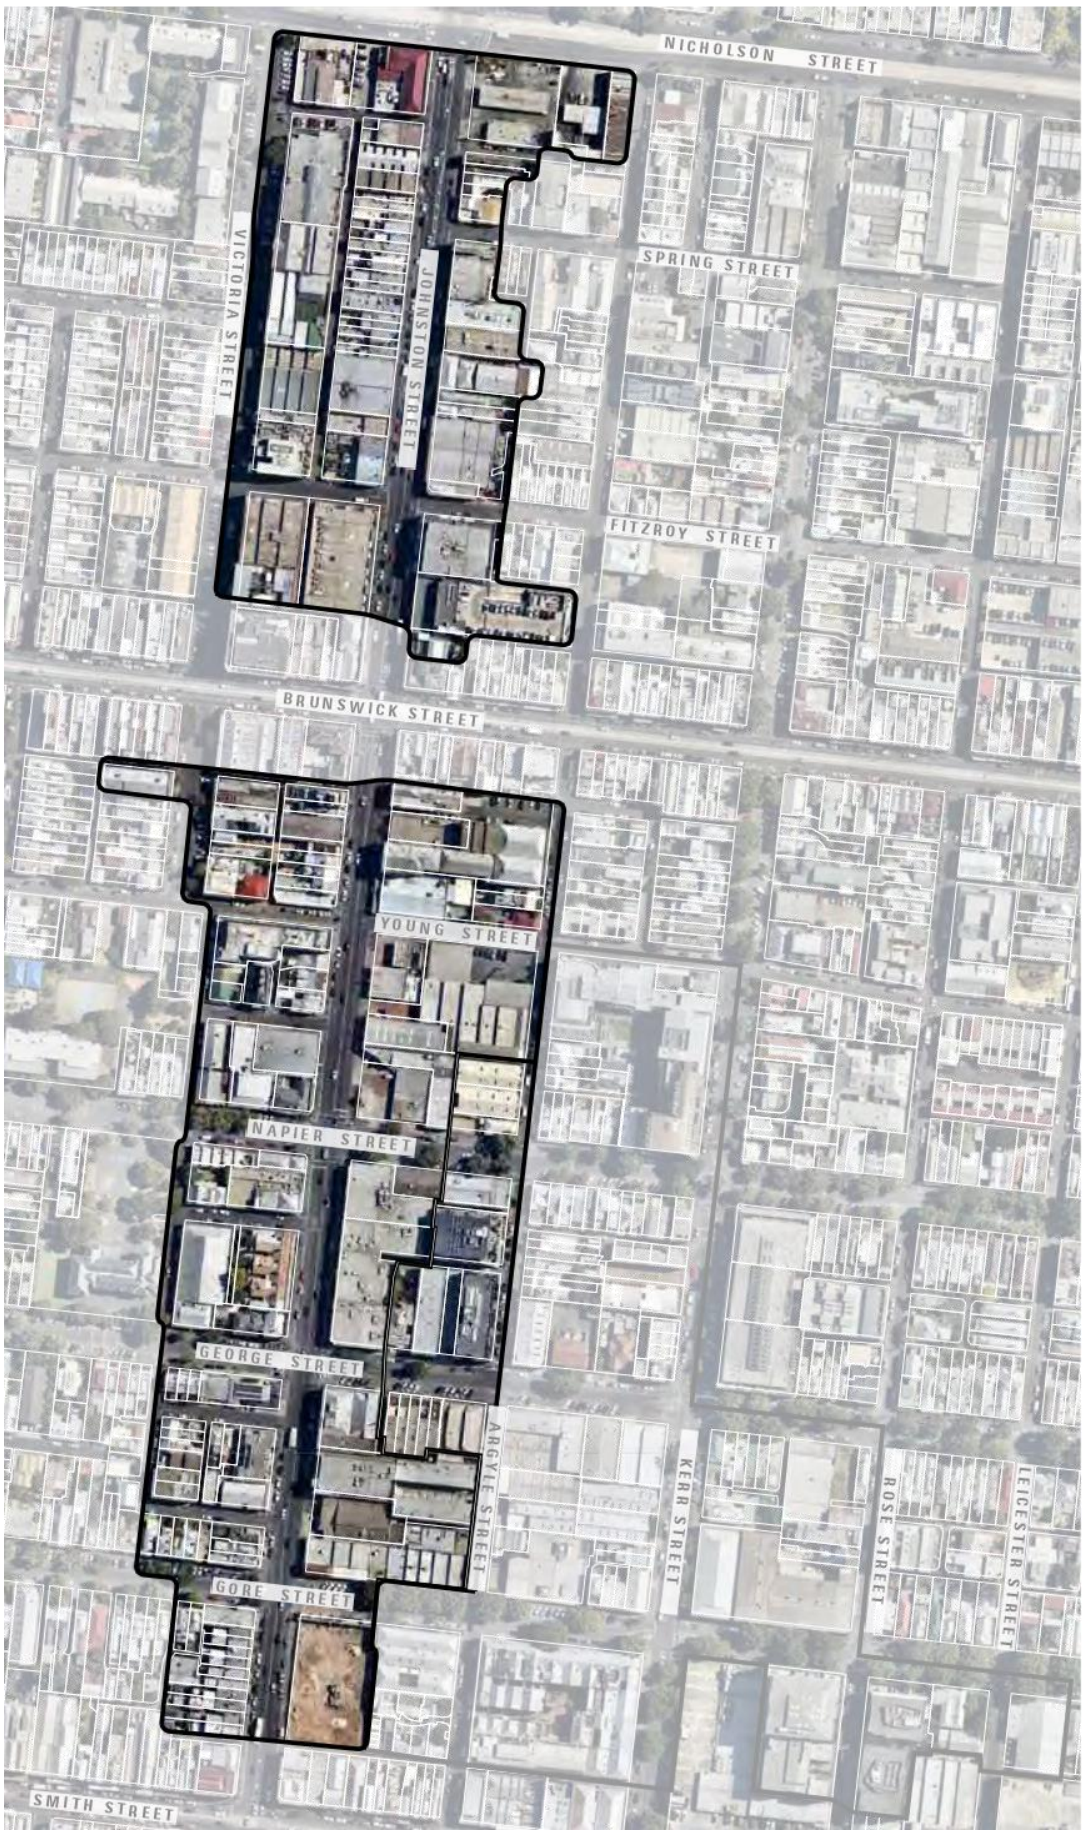
The extent of the Johnston St Precinct is set out in Figure 3 and includes sections of the following streets:

- Johnston Street;
- Victoria Street;
- Spring Street;
- Fitzroy Street;
- Young Street;
- Napier Street;
- George Street;
- Elliot Street;
- Chapel Street; and
- Gore Street.

Boundary Description

This precinct encompasses all Commercial 1 Zoned land which fronts both sides of Johnston Street, as well as the Mixed Use properties along the northern side of Victoria Street. The western extent is defined by Nicholson Street and the eastern extent is defined by the rear of properties which front the western side of Smith Street. The southern extent is defined by the non-commercial zones and the northern extent is defined by the edge of the Commercial 1 Zone.

Built Form Character



The Johnston Street precinct, between Smith and Nicholson Streets is a critical opportunity spine in Fitzroy and part of the long corridor linking Johnson Street East (in Collingwood) with Elgin Street (within the City of Melbourne) to the west. This particular section of Johnson Street is mixed in profile with two very distinctive portions. Firstly, an eastern area (between Smith and Brunswick Streets) which comprises some deep former industrial lots and a mixed arrangement of retail, residential and contemporary infill. Secondly, a smaller western area (between Brunswick and Nicholson Streets) comprising typically fine-grained traditional retail stock and some important heritage elements, most notably at the Nicholson Street junction and extending southward along Victoria Street. Both precincts are 'hemmed in' by sometimes delicate residential stock principally to the south and more mixed fabric to its north. Johnston Street crosses (on a perpendicular alignment) the key Smith Street and Brunswick Street activity spines and offers long terminal views is to the west to the municipal threshold and uphill towards the University of Melbourne.

For a more detailed description of existing conditions refer to section X of the Background report.

Diverse southern side of Johnston Street, between Hertford and Young Streets

Johnston Street Precinct Boundary

Figure 3

Legend

Johnston Street Precinct boundary

Project Ref: 2017.073
Dwg No.: UDD-026
Scale 1:2000@A3
Date: 14.06.2019
Revision: C

2.1 : Foundation

Setting an agreed vision for this section of Johnston Street and Fitzroy East must be underpinned by a critical understanding of its diverse conditions, including the fabric of existing and approved buildings and relevant 'foundation' influences as set out in Figure 4 and as follows:

Topography & Views

The precinct has relatively limited topographic features, the most notable characteristic being a slight incline on the Smith Street approach from the west, before gradually falling toward the Yarra River to the east. This subtle rise offers long range views along the Johnston Street spine towards Parkville in the west, punctuated by the Redmond Barry building at the University of Melbourne, and terminated by dense vegetation straddling the Yarra River, with the Dandenong Ranges visible in the background to the east.

Grid Street Network

The precinct is defined by the east-west orientation of Johnston Street anchoring a varied grid pattern with a clear street hierarchy, with Johnston Street as the main street defined by its arterial road function and associated activity. The 20m wide movement corridor of Johnston Street is of the same width as the distinct north-south oriented green streets of Napier, George and Gore Streets and the east-west oriented Kerr Street. While secondary streets of 10m in width include Young Street, Spring Street, Fitzroy Street and Argyle Street. Urban blocks on the northern side of Johnston Street are more consistent in order when compared to those on the southern side, particularly east of Brunswick Street, comprising a mix of fine grain and broad frontage lots. A number of laneways provide rear access to commercial and residential allotments, some of which terminate mid-block and others continue through to parallel and adjacent streets.

Key Junctions

The precinct comprises several prominent junctions along the Johnston Street spine which act as important gateway elements and create a clear division in built form character and rhythm. Key junctions include Nicholson Street to the west of the precinct, with the eastern side of the junction located in the City of Melbourne as well as Brunswick Street and Smith Street, both critical transport and pedestrian movement nodes. Other notable junctions are positioned to the north of Johnston Street, along the grid network with defining corner buildings and breaks in canopy vegetation.

Subdivision Pattern

The street, block and lot pattern across the Review Area is varied and diverse. Varying from a section of consistent, fine grain lots along the southern side of Johnston Street, towards Nicholson Street that are serviced by a rear laneway, to areas of highly varied and irregular lots to the east of Brunswick Street. While, on the northern side of Johnston Street the subdivision is generally comprising of larger and broader lots, except for the scattered provision of fine grain residential parcels.

Distant view along Johnston Street to the Dandenong Ranges

View along Johnston Street towards Redmond Barry building

Tankerville Hotel at corner of Nicholson Street and Johnston Street

Fitzroy Post Office at corner of Brunswick Street and Johnston Street

Movement Corridors

Napier Street is a significant cycle corridor through Fitzroy extending from Gertrude Street in the south and terminating at Fitzroy Swimming Pool in the north at Alexandra Parade. This is an important link in the context of metropolitan Melbourne as it provides efficient and safe cycle access parallel to the busy tram and vehicle corridors of Nicholson, Smith and Brunswick Streets, connecting with dedicated cycle paths outside of the municipality.

Adjoining Built Form Precincts

The proximity of the Smith and Brunswick Street Activity Centre spines is notable within the context of built form character and legibility throughout the precinct. The Smith Street spine is located to the eastern interface of the precinct (on higher ground) and the Brunswick Street spine divides Johnston Street into two distinct components, comprising varied grain and heritage values. Both streets provide a vibrant main street condition comprising significant heritage assets at intersecting junctions.

Johnston Street Activity Spine

The Johnston Street Activity Spine is an important corridor in the context of the Major Activity Centre. Traversing through Brunswick and Smith Streets, the corridor comprises a mix of fine grain retail premises, large format commercial premises and late night venues inviting a mix of pedestrian activity along its extent. There are a number of distinctions and 'shifts' in the Johnston Street corridor, with a different streetscape character evident to either side of Brunswick Street. While relatively void of street trees or weather protection, the streetscape is still a popular pedestrian link between key destinations throughout Fitzroy and Collingwood. It also accommodates numerous bus routes, reinforcing its through traffic movement within the broader main road network.

Green Streets

The linear north-south streets of Napier, George and Gore Streets as well as the east-west aligned Kerr Street comprise significant mature canopy vegetation (typically deciduous Plane Trees) within the road reserve, enclosing the streetscape. These streets are a stark contrast to other streets within the precinct, which typically have limited street trees and vegetation.

Heritage

Most of the precinct is subject to the Heritage Overlay (HO334), comprising individually significant and contributory buildings of varying typologies including fine grain shops, dwellings, warehouses and pubs. Several buildings of individual significance are subject to a site-specific Heritage Overlay including the Former Avon Butter Factory (HO471), and Holyrood Terraces (HO168-170). While the HO extends across most of the Precinct, notably there are numerous clusters of lots, particularly between Brunswick and Smith Streets to the north of Johnston Street, which comprise non-contributory buildings.

Nicolson Street tram corridor

Brunswick Street spine, looking south across Johnston Street

Gore Street looking south towards Rose Street

Former Avon Butter Factory at corner of Nicholson Street and Victoria Street

Traditional Fine Grain

Rows of continuous cottages and retail buildings of heritage significance are a defining characteristic throughout the precinct. This includes along the Johnston Street spine (particularly to the south) as well as the residential blocks to the north of Argyle Street. These forms create a distinctive character and present stark transitions to neighbouring sites.

Prominent Corners

There are several corner sites along the Johnston Street spine (to the south) comprising prominent heritage forms (of individual significance). These two storey forms present ornate parapet treatments which mark their prominent corner positions and are identified as local landmarks. This includes Tankerville Hotel on Nicholson Street, Fitzroy Hotel on Napier Street and Rochester Hotel on George Street. Other prominent corners include the Marquis of Lorne Hotel on George and Kerr Streets as well as significant heritage forms on all 4 Brunswick and Johnston Street corners.

Recent Development Trends

Substantial medium to high density development has occurred throughout the precinct, particularly on consolidated sites with limited heritage constraints. Development ranges in scale from 4 to 6 storeys in side streets up to 10 storeys along the Johnston Street spine (under construction). Recent planning permit approvals in the precinct are typically 6-8 storeys in height.

Open Space

There is a lack of notable public open space in the precinct. The Fitzroy Primary School provides a reprieve in built form with generous open space for students, but is located just outside the precinct. The nearest public open spaces are generally found across Nicholson Street spread across Carlton. Council have ambitions for a new public open space provision within the precinct.

Attachment 8 - Attachment 8 - Johnston Street Built Form Framework

2.2 : A Johnston St Change Framework

In response to these foundation matters, an Urban Design Framework has been advanced to reinforce indicative locations for varying level of change within the locality. A Framework is not definitive (like a Built Form Control Plan). It seeks to identify 'gestures' that shape the look and feel of the city. In this instance, the framework recognises the importance of the following:

Corridor Effects

While this precinct represents a least two distinctive parts, a framework envisages a sense of continuity and a corridor effect defining the urban form relationship between Smith and Nicholson Streets assisting and consolidating the connection of the Activity Centre. This area, comprising two large urban precincts and eight to ten urban blocks is clearly distinctive from the undulating topography of Johnston Street in Collingwood leading with slope down to Hoddle Street and beyond. It is also distinctive from land beyond the City of Yarra to the west leading uphill and Elgin Street. A corridor effect does not require 'consistency', indeed considerable variety is intended on either side of Johnston Street to the east as distinct from more uniform response in the west.

Heritage values

The precinct contains a number of notable 'runs' of attached intact retail (and also residential) streetscapes. These are most apparent on the south side of Johnston Street to the east, but also occupy both sides of Johnston Street to the west. These important factors shape future form with respect to streetscape presentation and overall capacity for change. Johnston Street East (south side) is unique in that it presents at least eight intersections/junctions which makes the realization of a consistent form difficult. The south side of Johnston Street East can therefore be variable in between the individual heritage contributors. Johnston Street West is quite different, it comprises particularly long urban blocks and only one cross intersection. In this context of continuous streetscape form to both sides allows for connectivity between heritage street walls, with the necessary punctuation at the important heritage corner elements on Nicholson Street.

Growth Opportunities

A rare precinct on Johnson Street (north) between Young and Gore Streets (generally bound to the north by Argyle Street) has the opportunity for more substantial change as indicated by a suite of current approvals and the occurrence of remnant industrial parcels across entire urban blocks. While this area is currently affected by a Heritage Overlay, few legitimate heritage values exist. However, this particular locality does not have potential for unbridled growth – given the urban blocks and the important streetscapes as well as the principal Johnston Street spine. They also represent locations that must embody transitions to the more sensitive northern neighbours.

Non-heritage forms on the north side of Johnston Street (West)

Continuous heritage fabric along the southern side of Johnston Street (East)

Corners

The definition of street junctions and local corners assists in the legibility of the area. In Johnston Street, the passage past Smith, Brunswick and Nicholson Streets is each 'marked' with notable retail, bank or hotel buildings that assist in placemaking. Corners are particularly important on the south side of Johnston Street East as they hold locations for notable heritage hotel buildings and other corner features which define the local skyline. The passage of major north-south green streets (Napier, George and Gore Streets) also provide the opportunity for pedestrian crossing and identity links in these locations. Corners are less important in the western precinct, except at the Nicholson Street junction with a serve as a key demarcate of the municipal edge and the major Nicholson Street threshold.

Street width to building height relationships

The relationship between building heights (and street presentation) to street width is a strong defining element of the character and 'sense of place'. In mixed use or commercial spines such as Johnston Street, a more prominent character is expected to encourage a proportional relationship between buildings and streets. This is to create a balance between openness and enclosure from within the public realm. In order to maintain a comfortable street environment and an appropriate 'sense of enclosure', a 1:1 relationship between the overall building height and width of the street is recommended as the basis for defining building heights. Importantly, the east-west alignment of the streetscape means that street wall treatments and overall heights above should not overshadow south side footpath to ensure a high amenity public realm.

Secondary Streetscapes

Unlike other commercial spines, a number of urban blocks within this precinct have secondary addresses to streetscapes located parallel to the Johnson Street spine. Including Chapel and Victoria Streets to the south and Argyle Street to the north. While some allotments that front Johnston Street extend the full depth to a secondary street, others are subdivided with a principal address to the secondary street. It is imperative that there is distinction between an urban form that front Johnston Street and the principal retail- mixed use spine, and the form that addresses the secondary streets. The nature of this condition will change subject to existing form – for example, the former industrial format in Victoria Street is distinctive to the green civic qualities south of Chapel Street (including the Primary School grounds).

Approved-constructed developments

This precinct has already been subject to a considerable degree of development and change, including a suite of approved and now constructed development of between 4 to 10 storeys in scale. A number of these elements are not new, however some are approved but not yet realised. These development envelopes (while often approved by VCAT) are relevant factors in contemplating the opportunity for continued infill along the Johnston Street spine. Almost all approved developments along Johnston Street employ a traditional street wall, with setbacks to rising form above. This model is appropriate as a continued response along the corridor.

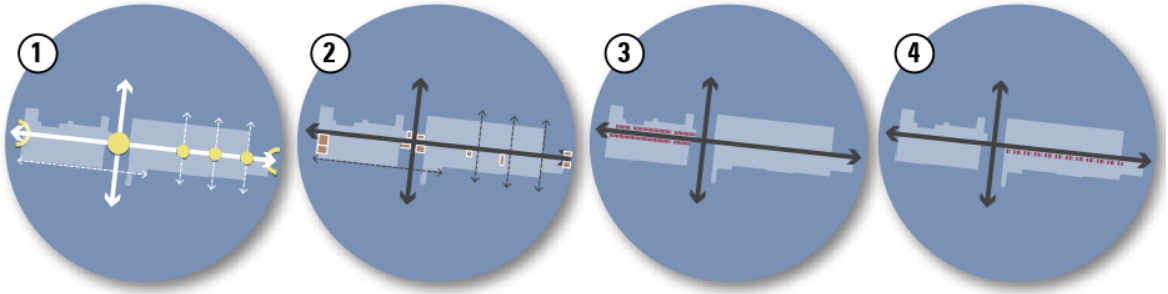
Attachment 8 - Attachment 8 - Johnston Street Built Form Framework

Given this 'Framework' for change, the following future character statement is recommended.

Future Character Statement



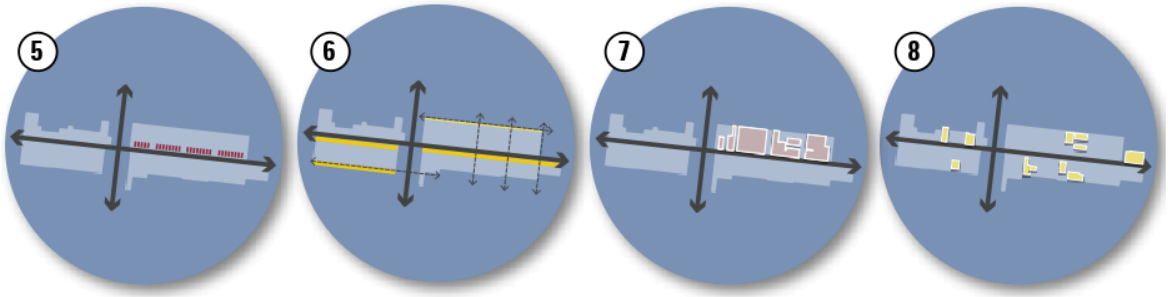
Johnston Street, between Smith and Nicholson Streets is a decidedly mixed corridor comprising a suite of different development opportunities, grounded in the traditional urban block subdivision format of land. The north side of Johnston Street, between Smith and Brunswick Streets has the greatest capacity for change, with future form occupying almost entire urban blocks that are not affected by heritage values or remnant buildings of any notable quality. This provides an opportunity for a new mixed-use model that is compliant to the Johnston Street frontage, but also inviting the through block connectivity and side street address. The south side of Johnston Street, between Smith and Brunswick Streets is decidedly mixed with at least eight intersecting perpendicular streets providing a combination of traditional hotel corner buildings, attached retail and residential stock and opportunities for subtle infill in transition to the residential and civic land to the south. Johnston Street between Brunswick and Nicholson Streets and the municipal threshold demands a more consistent approach, the street wall connectivity linking existing remnant heritage forms on both sides of the street. This strip must carefully integrate with mixed commercial and institutional forms located to the north and south, Argyle and Victoria Streets respectively, with a key point of demarcation that Nicholson Street, with a heritage values on the south side may be offset by future form of note on the northern junction. The corridor is unified, not by any consistent built form response (indeed it is defined by is clearly by variance), but by consistent of visual profile and pedestrian realm that links the Smith Street ridgeline with the Nicholson Street junction.

The western precinct will continue to present an orderly and more consistent streetscapes defined by retained heritage fabric that should remain the dominant future character element. The Victoria Street former industrail forms can support complementary 'pop-up' forms, while upper levels to Johnston Street to be setback to maintain the visual prominent of the streetwall.

The eastern precinct is more diverse and can support stronger form along the northern side of Johnston Street, while the southern side will remain mixed and more modest in scale.

In response to this distinction in urban fabric of the precinct the future built form character will seek to build on this diversity.

This includes:



Strengthen key junctions and urban corridors.

Protect prominent heritage corner forms.

Reinforce the consistent fine grain presentation along Johnston Street (West).

Foster diversity along the southern side of Johnston Street (East).

Encourage strong street definition along the northern side of Johnston Street (East).

Maintain solar access to the southern footpath along Johnston Street.

Realise development opportunity on large non-heritage sites.

Acknowledge existing and approved development.

Part 3 :

A BUILT FORM PROPOSITION

The Built Form Proposition has been derived from the Framework, which was informed by the Foundation and underpinned by the overall Background analysis.

The Johnston St Built Form Proposition sets street by street parameters for the precinct's evolution. The parameters identified are neither fixed or absolute, but intended as benchmarks to guide change. They are represented in Figure 6 and are derived from the following basis.

- Heritage Input;
- Street Character;
- Street Proportions;
- Solar Access;
- Transitions;
- Slope;
- Local Views and Vistas
- Heritage Streetwall & Upper Levels;
- New Streetwalls & Upper Levels;
- Upper Level setbacks;
- Upper Level Expression;
- Main Street Corners;
- Street Corners;
- Building Separation, Amenity & Equitable Development;
- Residential Interfaces;
- Public Open Space Interface; and
- Service Laneway Interfaces.

3.1 Basis of Height Parameters

Heritage Input

GJM Heritage undertook extensive heritage analysis which considered:

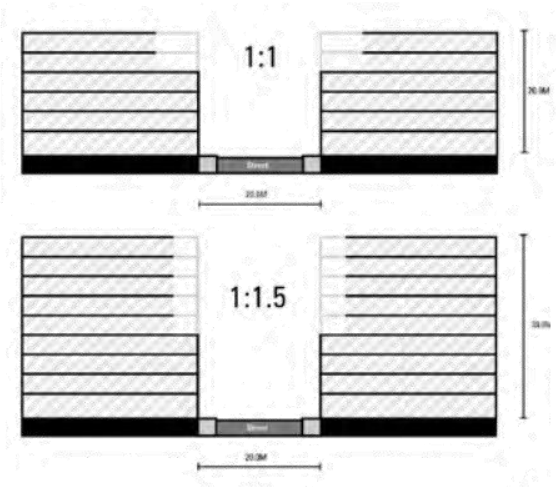
- The suitability and extent of the Heritage Overlays;
- The heritage grading of each property within the Heritage Overlay;
- The currency of the existing Statements of Significance;
- Places which may warrant nomination to the Victorian Heritage Register; and
- Recommended built form parameters to appropriately manage development within the heritage context.

Refer to GJM Heritage report for details.

Street Character

The existing streetscape character of Johnston Street is classified into two distinct sections and associated built form character, with a consistent and fine grain character to the west of Brunswick Street consisting of predominantly fine grain and continuous 2 storey streetwall. While, to the east of Brunswick Street, on larger and broader allotments Johnston Street comprises a more varied and diverse built form.

A key characteristic of the Johnston St Precinct is its continuous streetwall. New buildings should seek to sensitively respond to the surrounding streetscape context.



Johnston Street streetscape, looking east from George Street toward's Smith Street

Street Proportions

Default preferred maximum building heights have been derived in relation to the adjoining street width. This has been based on considerable analysis and documentation of the existing relationships throughout the broader study area, which has shown there to be a strong correlation between the width, function and character of the street to the height and profile of the buildings which line it. Based on analysis , a 1:1 ratio (between street width and building height) suitably balances a street edge definition and outdoor amenity. Therefore, as a starting point, the preferred overall building height of new forms can be determined by the width of the street. The size and depth of allotments and lack of sensitive interfaces was another factor when considering an increase in the default ratio as small and shallow lots would not be able to accommodate taller forms. We suggest the following:

- Up to 1:1 – Default street width to overall building height ratio
- Up to 1:1.5 – Increased street width to overall building height ratio (main street corridors with moderate size lots)
- Up to 1:2 – Maximised street width to overall building height ratio (main street corridors at key junction locations, terminal vistas with moderate to large size lots)

Therefore, the preferred maximum heights have a strong correlation between the street widths and the street's function and character. However, in order to respond to the prevailing streetwall scale, set backs to upper levels are required. They are also determined by the size and depth of lots, noting need for rear boundary transition conditions.

20m wide Johnston Street, looking east

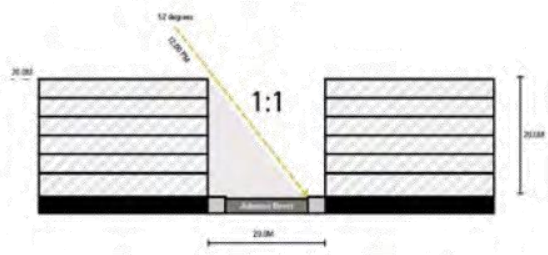
10m wide Argyle Street, looking east

Solar Access

In inner urban areas such as Johnston St, access to sunlight is an important element. Therefore, the need to provide sufficient solar access to the public realm is vital to the 'life' and attraction of the street for people and businesses.

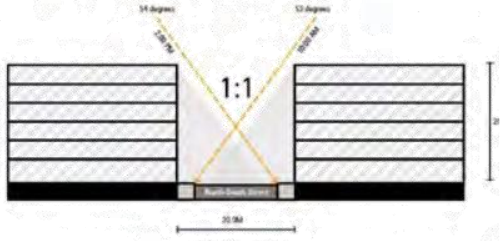
The *Urban Design Guidelines for Victoria* contains the following relevant Objective and associated guideline.

> *'Objective 5.1.3 To ensure buildings in activity centres provide equitable access to daylight and sunlight', and*
>
> *'5.1.3a Locate and arrange the building to allow daylight and winter sun access to key public spaces and key established street spaces.'*



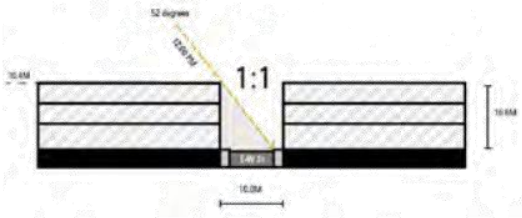
In Johnston St we recommend applying the equinox solar access test to streets to avoid overshadowing:

- the southern Johnston Street footpath between the 10am and 2pm;
- the western footpath from 10am onwards; and
- the eastern footpath before 2pm.

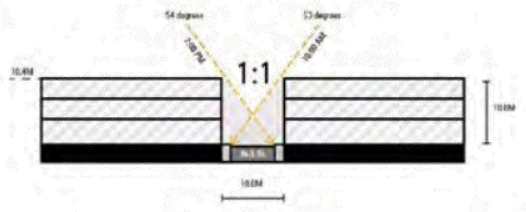


In order to provide appropriate levels of amenity to the various street conditions it was determined to maintain solar access to key pedestrian areas, being the southern footpath along Johnston Street and Victoria Street. While on narrower side streets it was determined to protect solar access to first floors.

There are no existing public open spaces within the Johnston St precinct which require protection from overshadowing and this highlights the importance of the public realm as public space. However, it was determined to protect the abutting Primary School grounds. Therefore, we recommend that development should not cause additional overshadowing of the following open spaces between 10am and 2pm at the equinox:



- Fitzroy Primary School (outdoor play area).



12pm equinox solar angle along Johnston Street

10am and 2pm equinox solar angles along north-south 20m wide street

12pm equinox solar angle along east-west 10m wide street

10am and 2pm equinox solar angles along north-south 10m wide street

Transitions

Transitions in scale are an existing characteristic of the Johnston St spine. There are examples of older 2 storey shop forms side by side with either single storey cottages or more recent 3 storey streetwall forms. A change in streetwall height of one storeys is therefore present along the Johnston Street corridor. However, given the street's main road function and linear nature, a future more consistent streetwall character is preferred.

In order to enhance the prevailing streetwall profile, particularly within the section of Johnston Street, to the west of Brunswick Street and along Victoria Street, new buildings must contain a streetwall that matches the height of any abutting heritage streetwall/building in order to maintain the prevailing streetscape character and streetwall modulation. Within the section of Johnston Street, to the east of Brunswick Street new buildings must contain a streetwall that either matches the height of any abutting heritage streetwall/building or is no greater than one storey higher in order to maintain the prevailing streetscape character and streetwall modulation.

Larger sites may be able to accommodate for gradual transitions through recessive upper levels and transition in scale in response to abutting heritage forms. In order to avoid undesirable 'wedding cake' forms, minimal 'steps' in built form massing is encouraged. Transitions in scale should as a minimum occur in paired levels or storeys.

On sites which directly abut single storey heritage forms and existing private open spaces a more tempered built form transition is recommended to ensure new form sensitively responds to the existing abuttal.

Slope

The Johnston St precinct is relatively flat, therefore the need for new built form to respond to slope is minimal.

Regardless, buildings should respond to the local topography. New buildings and streetwall presentations, particularly on sites with broad street frontages must 'step' ground floors to respond to the street level.

Buildings and sites which 'span' an entire urban block and contain frontages to more than one street should be designed to ensure that any change in topography between the different streets is responded to within the design and floor levels to ensure new buildings address street frontages at natural ground level.

Local Views and Vistas

There are no local views or vistas identified within this precinct that warrent specific protection. However, the presence of corner buildings is a key characteristic of Fitzroy, therefore retaining views to and 'space' behind these prominent corner forms is important to ensure they retain their prominence and 'hold' the corner. The following corner heritage buildings have been identified within the Johnston St precinct:

- The Tankerville Hotel;
- The Town Hall Hotel; and
- The Rochester Castle Hotel.

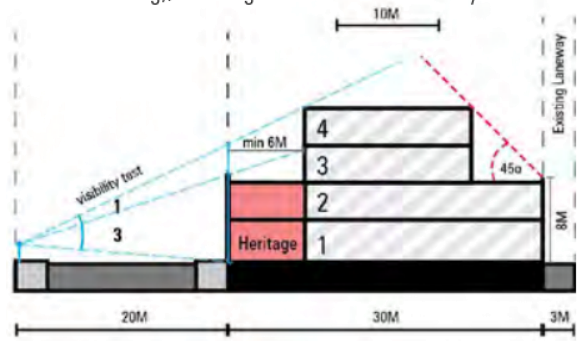
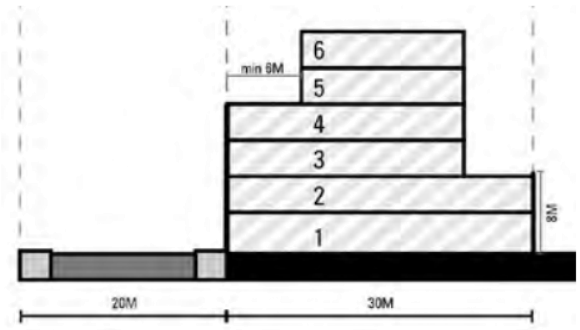
The Town Hall Hotel on corner of Johnston Street and Napier Street



Heritage Streetwall & Upper Levels

The extent of visible upper levels to heritage sites was determined by GJM Heritage and seeks to reinforce the provisions of Clauses 22.02 and 22.10. It was advised to apply a 'default' 1/3 - 2/3 visibility (sightline) test for heritage places from the opposite side of the street at standing eye level, with the appropriate visual presence of new built form deemed to 1/3 of the built form mass.



A 'default' minimum setback distance of 6m (to the new built form and balcony line) is suggested from the hertiage facade. This allows for the preservation of the heritage 'volume' and ensures a viable facade articulation treatments in the streetscape elevation with spatial separation between the streetwall frontage and recessive upper levels (behind).

From a heritage perspective it is preferable to retain the 'heritage fabric' of the heritage form and not just the façade. This includes retaining visible chimneys and roof forms, while ensuring that any new upper levels are visually subservient to the heritage fabric.

The minimum 6m dimension accords with the 1/3 - 2/3 visibility test and generally allows for the retention of the entire 'front room' of the forms (assuming it is either a traditional shopfront form or a dwelling), including its roof form and chimneys.

Cross-section of visibility test to upper level form behind heritage frontage

Cross-section of recessive upper level form behind new frontage

New Streetwall & Upper Levels

The visual distinction between streetwalls and upper levels is also important in relation to new streetwalls.

A 6m setback to upper levels above a new streetwall is also encouraged to all 20m wide streets to:

- provide a clear separation between the streetwall and upper forms;
- ensure new upper form do not visually dominate the streetscapes;
- create consistent upper level setbacks along streetscapes that comprise a mix of heritage and non-heritage forms; and
- reinforce the visual dominance of streetwalls.

The visual distinction between streetwalls and upper levels is less important in the narrow side street, within the commercial spine. This is because traditionally these side street locations often contain the sheer side presentation of buildings that front the main street spine and therefore comprise a more robust streetscape character.

A 3m setback to upper levels above new streetwall is encouraged to the narrower 10m wide side streets.

Upper Level Setbacks

In urban areas, almost all urban design guidelines seek to introduce a 'streetwall' and 'upper level front setback' measures.

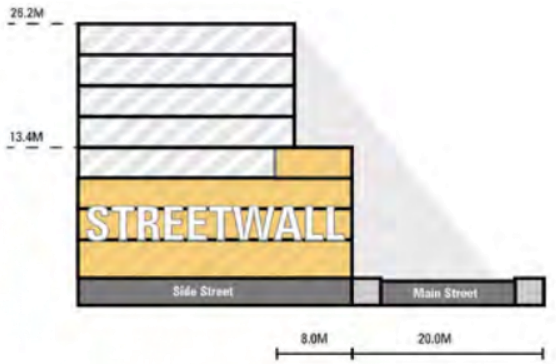
The purpose for such a distinction and separation is to ensure predominance of the 'traditional' forms and parapets within the streetscape, while enabling provision of new and increased heights in a recessive fashion. Upper level setbacks also retain a sense of openness to the street, which are prominent in a pedestrian's field of vision and reinforce the traditional street wall scale.

In Johnston St there is extensive heritage fabric which is to be retained and enhanced. The recommended built form parameters for heritage sites draw on the provisions of Clauses 22.02 and 22.10 (refer Heritage Streetwall), as well as recommendations from other PSAs, their associated Panel reports and recent heritage advice from GJM Heritage.

The recommendations for non-heritage sites seeks to provide a clear distinction between streetwall presentations and upper forms, to reinforce the visual dominance of streetwalls (refer New Streetwall).

Upper Level Expression

The design of upper levels of new development should:



- be well articulated and break up the building mass;
- distinguish between the lower and upper levels through materials and articulation;
- be designed so that side walls are articulated and read as part of the overall building design and not detract from the streetscape when viewed from direct and oblique views along the streetscape; and
- provide passive surveillance of adjacent streets and public open space.

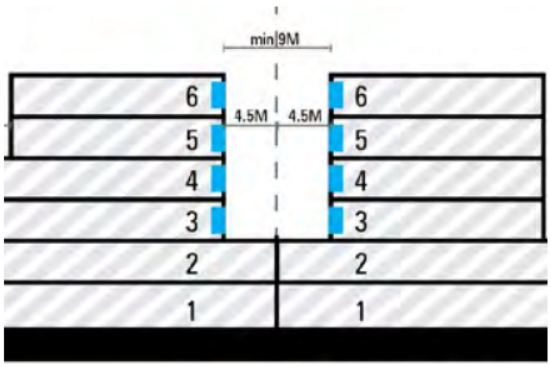
Main Street Corners

The streetwall presentation along 'main streets' (Johnston Street) needs to appropriately, 'turn the corner' into the 'side street' and transition to a different and often lower streetwall profile. New development should return the main street streetwall around the street corner and into the local street for a length of approximately 8m or to the nearest property boundary (if less than 8m).

Street Corners

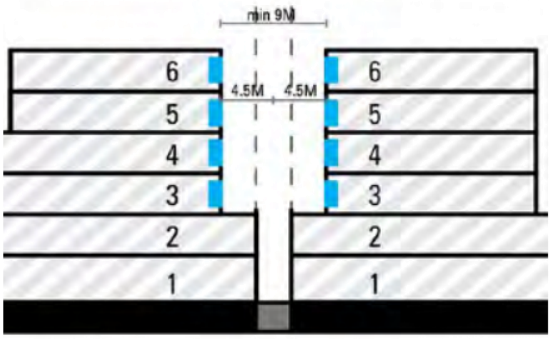
Similar to main street corners, streetwall presentation along local streets also needs to 'turn the corner' and transition appropriately. Given Fitzroy's local street network comprises both 20m and 10m wide streets it is often the case that streetwalls in wider streets are higher and streetwalls in narrower streets are lower. A sensitive streetwall transition is sought at these corner locations. New development should return the wider street's streetwall around the street corner and into the narrower street for a length of approximately 8m or to the nearest property boundary (if less than 8m).

Elevation of side street frontage showing streetwall transition to corner



Building Separation, Amenity & Equitable Development

New development should provide a design response that considers the existing condition and future development opportunities of adjacent properties in terms of outlook, daylight and solar access to windows.



Development should be setback from common boundaries to provide separation between buildings at the upper levels:

- a minimum of 4.5m from the boundary where a habitable room window is proposed;
- a minimum of 3m from the boundary where a non-habitable room window or commercial window is proposed; and
- a minimum for 4.5m from the edge of a proposed balcony or terrace.

Where the common side boundary is a laneway, the setback is measured from the centre of the laneway.

Cross-section of minimum 4.5m setback from habitable room window from common boundary at uypper levels

Cross-section of minimum 4.5m setback from habitable room window from centre of a laneway at upper levels

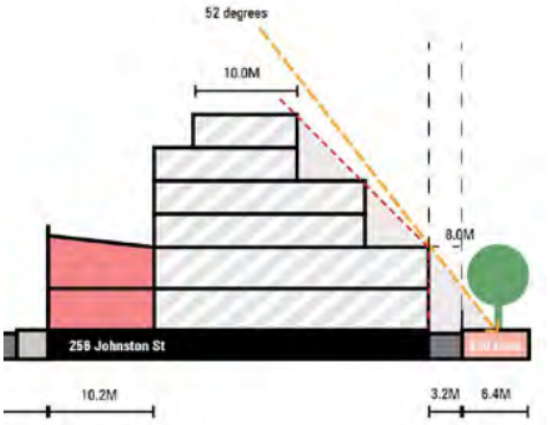
Service Laneway Interfaces

Built form needs to respond to laneway interfaces. Within the Johnston St Precinct the existing laneways, their function, widths and arrangements vary considerably. New development will need to appropriately address both the existing laneway condition as well as adjacent properties. Generally, the most sensitive laneway interfaces occurs on the south side of east-west laneways, given potential amenity impacts of properties to the south. In particular, the east-west laneway which runs between Johnston Street and Victoria Street properties is important, due primarily to its length.

Sunlight to any existing habitable room windows and balconies (on the south side) should be maintained.

Therefore, we recommend:

- To laneway abuttals new development should present a maximum 10.4m (3 storey) form at the interface, with any built form above set back 4.5m from the centreline of the laneway; and
- To the east-west laneway (behind 252-264 Johnston Street) new development should present a maximum 10.4m (3 storeys) from the interface, with any built form set back within a 45 degree built form envelope. In order to respect the abutting dwellings within the NRZ.

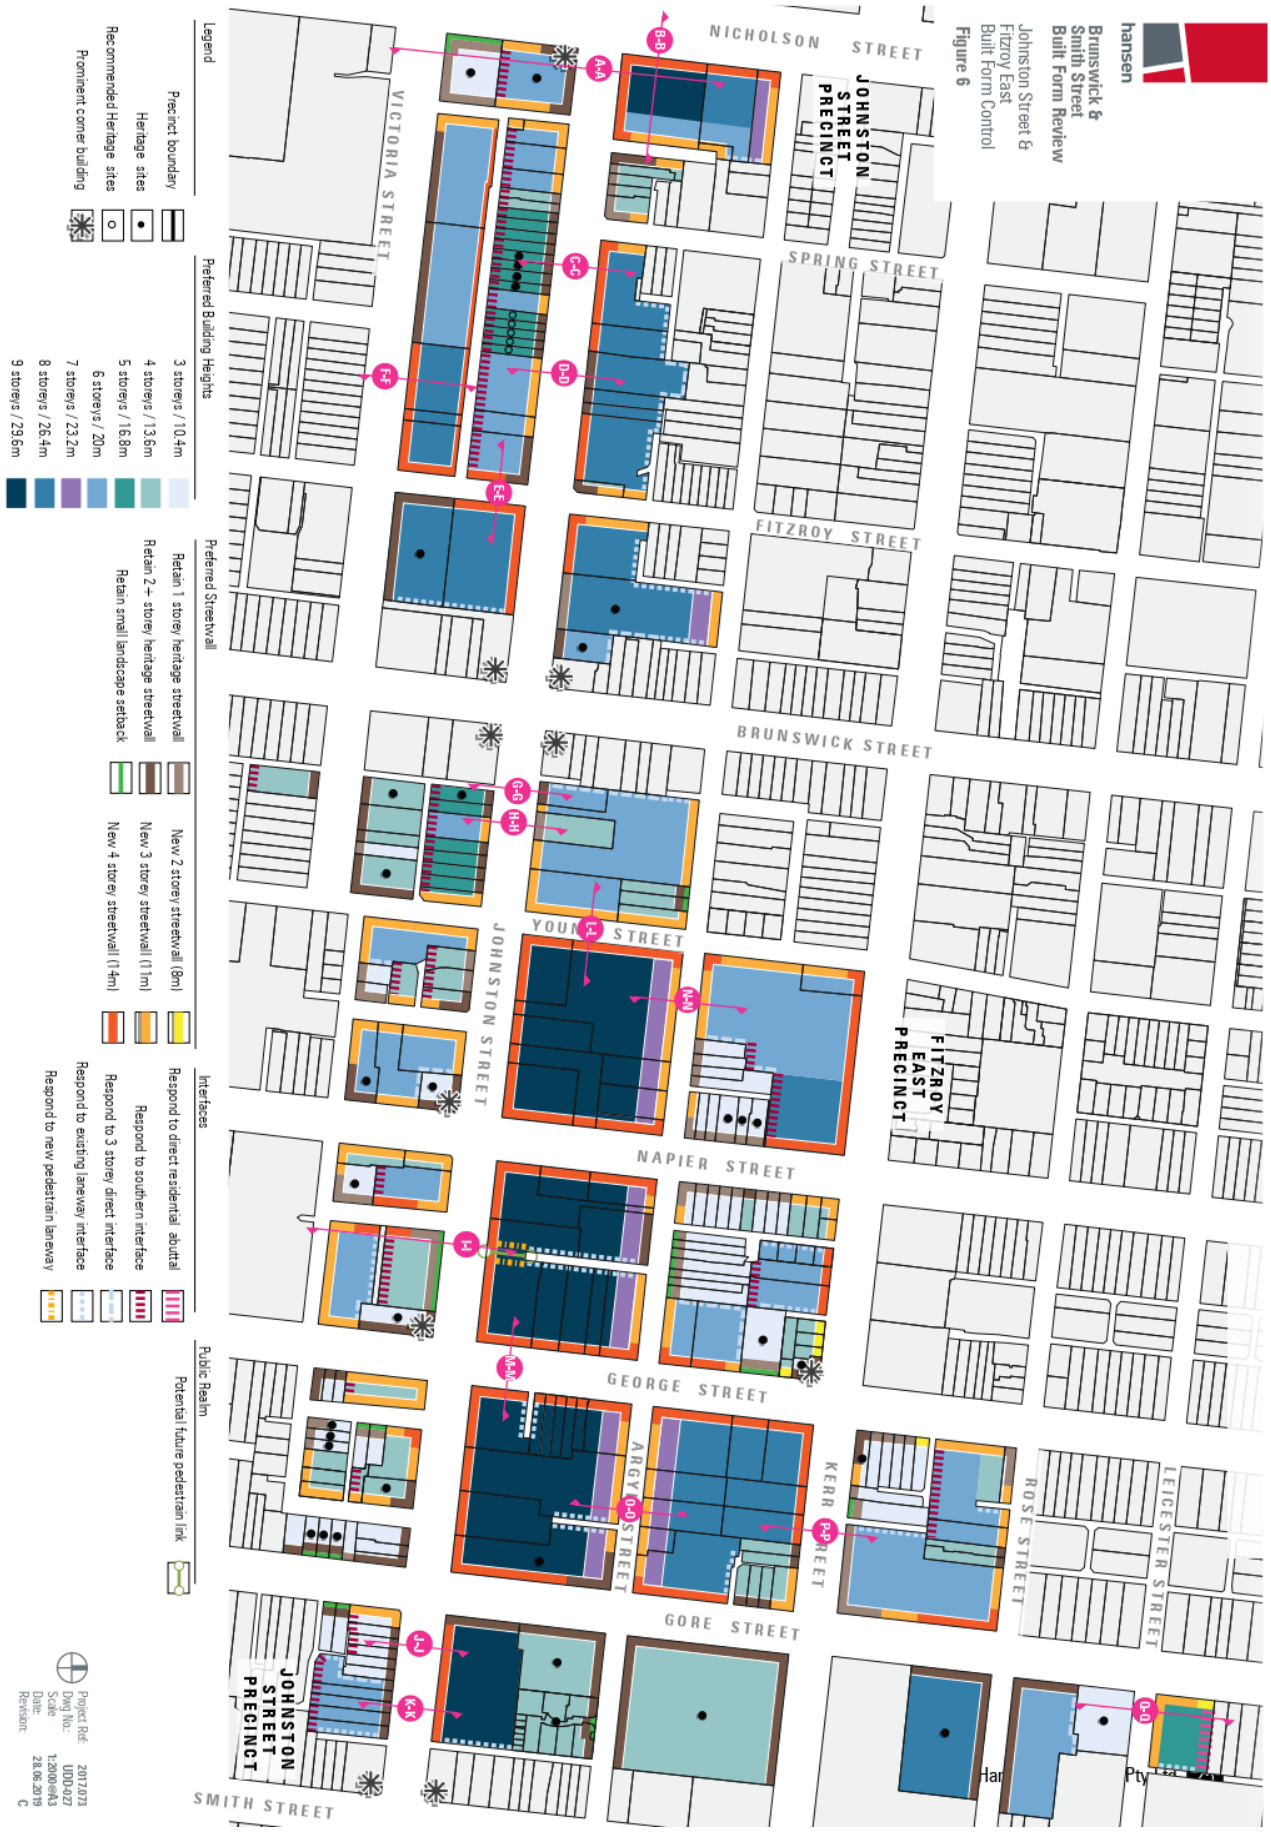


Cross-section of east-west laneway response to existing habitable room windows and balconies

Residential Interfaces

New development that is adjacent to a low-scale residential interface should:

- provide a transition in scale towards the property boundary with low-scale residential properties;
- seek to minimise presentation of visual bulk; and
- seek to minimise overshadowing impacts to secluded private open spaces.



Cross-section of built form transition to NRZ land to south

Public Open Space Interface

New development should provide a suitable scale and transition at the interface with areas of open space ensuring that buildings do not visually dominate the public open space, whilst providing a sense of passive surveillance and visual interaction at lower levels. However, this precinct does not contain or abut any such public open space.

Attachment 8 - Attachment 8 - Johnston Street Built Form Framework

Part 4 :

RECOMMENDED CONTROLS

4.1 Methodology

The formulation of future building heights and streetwall conditions within the Johnston St Precinct has been influenced by many factors, including:

- Planning Policy Framework;
- Local Planning Policy Framework, including Zones and Overlays;
- Practice Note No. 60 – Height and Setback Controls for Activity Centre;
- Practice Note No. 59 – The Role of Mandatory Provisions in Planning Schemes;
- Urban Design Guidelines for Victoria, 2017;
- Anticipated scale and form of development outside the study area (i.e. within Residential and Employment Zones);
- Views to existing landmarks from the public realm;
- Recognition of Yarra's heritage skyline;
- Recent development approvals (including those currently under-construction);
- 3D computer modelling of built form testing for the study area;
- Independent heritage advice and existing character considerations, consistent with the expert heritage advice provided by Council's heritage advisors (GJM Heritage);
- Extensive site inspections and workshops with Council's officers;
- The overall Background report (dated X); and
- Consideration of the Johnston Street (C220) Panel report.

Assumptions

Formula for Deriving Numerical Building Heights

The maximum building heights has been calculated to a higher than minimum floor to floor heights in order to:

- Respond to the typical heights found within heritage buildings (between 8-11m);
- Accommodate for greater than minimum standards and provide flexibility for future uses; and
- Allowance for other design elements to be accommodated, such as parapets, railings, etc.

The following numerical floor to floor dimensions where employed:

- Ground Floor: 4m
- First Floor and above: 3.2m

Note: Higher numerical floor levels for mixed use development may be required at upper levels.

Formula for Deriving Numerical Streetwall Heights

The maximum streetwall heights have been calculated based on the above floor to floor heights, plus additional height to allow for parapets, balustrades and minor architectural features.

Zero front setback

New buildings within Activity Centres and inner urban areas such as Johnston St should generally be built to the street frontage in order to:

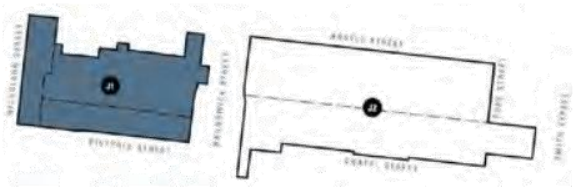
- Respond to the prevailing built form character of the area;
- Provide a clear definition at the street edge; and
- Maximise the developable area.

With the exception of retaining small front setbacks to heritage dwellings all new building within the commercial and mixed use zone should have a zero street setback.

Top Floor Depth

A minimum depth of approximately 10m has been used for the upper most level. This minimum dimension is based on a typical apartment depth, and provision of efficient access.

Upper Level Depth



A minimum depth of approximately 18m has been used for the upper levels. This minimum dimension is based on a typical apartment building arrangement, with a central corridor and apartments to either side.

4.2 Precincts

The preceding 'proposition' indicated that the Johnston St Precinct comprises two distinct precincts (sub-precincts).

These two precincts are distinctly different and primarily are defined by their heritage stock, land uses and subdivision pattern and are as follows:

- **Johnston St 1 (J1)** between Nicholson and Brunswick Streets; and
- **Johnston St 2 (J2)** between Brunswick and Smith Streets.

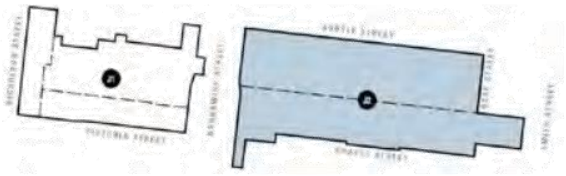
Johnston St 1 (J1)

Johnston St 1 is defined by more intact and consistent built form section of Johnston Street, to the west of Brunswick Street.

Built Form Objectives

- To sensitively 'mark' the western end of Johnston Street and lead into the main street character.
- To enhance the prevailing heritage 2 storey streetwall character along Johnston Street and contribute positively to the urban and traditional heritage shopfront character of a Fitzroy main street.
- To encourage sensitive infill and recessive upper level additions behind retained heritage facades and forms.
- To retain, enhance and incorporate the existing heritage streetwalls into future redevelopment to retain the prevailing streetscape character and built form rhythm.
- To protect solar access to southern footpath of Johnston

Non-heritage 2 storey streetscape on south side of Johnston Street



Heritage and non-heritage streetscape on the north side of Johnston Street

Non-heritage office building 'ripe' for redevelopment
